Dr. Galambos attributes the dependence that local governments place on this revenue source to "the failure of most Southern states to permit local governments to levy taxes sufficient to obtain needed revenues."

According to Anthony, the report grew out of "a conviction that state and local governments were not adequately equipped because of outmoded tax structure" to deal with many of the public needs that are unmet.

The study doesn't offer specific legislative remedies. Rather, says Anthony, its concerns are "tax equity for the sake of simple justice, and finally, as a means to make the South a more liveable region for all."

Fairest in the South

Virginia and North Carolina emerge from a survey sponsored by the Southern Regional Council as the Southern states with the fairest tax structures. Nevertheless, hard pressed by rising costs of government for rising populations, they should heed recommendations of the research consultant, Dr. Eva Galambos.

Increased use of the income tax with more progressive rates at both state and local levels provides the major possibility of reform of Southern tax structures, which now lean heavily on regressive sales and property taxes, she advises.

She notes that the Federal income tax system is progressive in that tax rates increase with income. Sales taxes, increasingly the most important source of state revenue, are typical of regressive taxation, which means that the impact of the tax decreases as income rises.

Regressive taxation and inadequate state services go hand in hand, Dr. Galambos observes. "It is in the South that public education suffers the most from insufficient financing. . .that public assistance to welfare recipients is the least . . . that living conditions in mental and penal institutions are the most wretched."

Among Southern states, only Texas and Virginia had a lower sales tax bill than the national average. Only North Carolina and Virginia exempt prescription medicine. "The states with more poor people make fewer allowances," Dr. Galambos notes.

In only two Southern states, Virginia and North Carolina, is the income tax of major importance. In Virginia it accounted in 1967 for 30.3 per cent of the total state tax take; in North Carolina, 22.4, which also was the national average. Next highest were South Carolina, 15.8, and Georgia, 15.1. At the bottom were Louisiana, with 5.2, and Mississippi, 3.4.

In income tax receipts per $1,000 personal income, Virginia scored $16.55 and North Carolina, $16.66, both above the national average of $13.33. North Carolina was the only Southern state that met the standard of the Advisory Commission on Intergovernmental Relations that a state income tax should produce the equivalent of 20 per cent of the Federal personal income tax collections.

Only one Southern city, Gadsden, Alabama, uses a city income tax; and Dr. Galambos observes that although there is talk everywhere of providing cities with authority for new taxes, the talk centers on increasing sales taxes. An exception, again, is the Old Dominion, where the Virginia Municipal League, prodded by Norfolk City Manager Thomas Maxwell, is pressing the General Assembly to permit cities to impose a local income or payroll tax.

North Carolina and Virginia are among five Southern states that supplement estate taxes with inheritance and gifts taxes. But their per-capita property taxes—Virginia, $74.20; North Carolina, $58.62 are low compared to the national average, $132.81. Among Southern states, Virginia is third in line after Florida, $113.15, and Texas, $104.91. For nine Southern states, the per-capita figures are less than half the national average.

Dr. Galambos stresses that equalized property assessments would not only raise the potential of the tax on real estate but would distribute the burden more equitably. Her survey shows that effective assessment ratios within metropolitan areas invariably exceed assessments on a statewide basis. In Virginia the assessment ratio for all types of property averages 32.9 for metropolitan areas compared to 29.9 statewide. In North Carolina the gap is even wider, 53.5 for the metropolitan areas, 48 statewide.

In charges and fees for services, the national average is $25.63 per $1,000 personal income. Among the Southern states, only Virginia, with $22.28, and North Carolina, $24.24, have lower charges than the national average.

The tax structures of the two neighboring states seem among those best able to adjust demands of rising populations, public expectations, and government costs with shrinking sources of revenue.

Dear Dr. Galambos

Enclosed is an editorial drawn from your very valuable study of the state tax structures in the South. If at any time you update your findings, I would be pleased to have the results. So far as I know, yours is the first survey to relate the tax efforts of the Southern states.

Sincerely

Guy Friddell

Poor Carrying Burden of Taxes in South

Labor, Rights Group Attack Systems Favoring Rich, Industry

By Bruce Galphin
Washington Post Staff Writer

News Analysis

ATLANTA, Nov. 27 — The South is the poorest section of America. And yet the poor here pay a greater share of state and local taxes than anywhere else in the country.

Regressive tax structures in most southern states add a serious burden to the task of breaking the poverty cycle.

Yet southern lawmakers often built the trap with good intentions. As farm jobs evaporated throughout the forties and fifties, officials enacted broad concessions to attract new business. The poor, in effect, paid the bill.

Only now are labor and civil rights groups and other spokesmen for the poor seriously challenging the proposition that the road to industrialization must be paved with tax concessions. Only now are they beginning to win a few battles against regressive taxation.

These conclusions are based on a study financed by the Southern Regional Council plus interviews with tax officials, labor leaders civil rights activists, legislators and the author of the SRC report, Dr. Eva Galambos.

Widely Tapped Source

The sales tax is the most widely used source of state revenue in the country. It is also the classic example of a regressixe tax — one that hits the poor proportionately harder than the rich.

Except for rent, nearly everything a poor person buys is sales-taxed—food, clothing, furniture and sometimes transportation. The rich, on the other hand, spend a considerable portion of their income on investments, and services, which usually are not sales-taxed.

"It is ironic," Mrs. Galambos wrote, "that the lowest income states make the greatest use of those taxes which weigh most heavily on the poor."

In Mississippi, where per capita income is the lowest in the nation, state and local general sales taxes produce $31 for every $1,000 of personal income. That is more than double the national average.

In nine of the 11 states of the Old Confederacy, Mrs. Galambos reported, the sales tax burden exceeds the national average. (Texas and Virginia are the exceptions.)

But the pattern of regressive taxation does not end there.

Poor Are Burdened

It is also well documented that selective sales taxes — on such items as cigarettes, gasoline and alcohol — burden the poor more than the rich. A University of Georgia study last year showed that Georgia families with incomes below $1,000 a year on average paid twice as much per dollar of income in selective sales taxes as those with incomes over $15,000.

In all 11 Old South states, the burden of selective sales taxes is higher than the national average.

Property taxes also are regressive, Mrs. Galambos said, in the sense that a poor homeowner spends a greater portion of his income on his house than a rich man.

Homestead exemption accentuates the regressive nature of property tax. The poorest families usually rent, and unless they live in public housing, the full property tax — without the homestead exemption — is hidden in their rental fees.

The poor homeowner suffers in another sense because some southern states assess different kinds of property at different rates.

In Alabama, for instance, residential property on average was on tax books at 22 per cent of market value, but farmland at only nine per cent.

Shelters For Wealthy

Lower farm assessments, Mrs. Galambos wrote, might appear to be a break for poor farmers but often "provide tax shields for more wealthy landowners who are thus allowed to shift local tax burdens back upon the state."

Vast pulpwood forest holdings in Georgia are cases in point. Until recently such valuable property was returned at a tiny fraction of true worth.

The opposite of regressive taxation is progressive taxation, in which rates rise with income—such as the federal income tax. But as a rule, southern states de-emphasize income taxation.

Texas and Florida don't even levy state income taxes, and in none of the other nine states does the tax rate progress beyond seven per cent for personal income or six per cent for corporate income.

Only North Carolina and Virginia exceed the national average in state income tax collected per dollar of income.

Southern states also fall far behind the rest of the nation in another area of progressive taxation — the so-called death taxes: estate, inheritance and gift.

The most glaring examples of tax favoritism in the South, however, are the special concessions made to new industry. These include both outright property tax exemptions and tax-exempt government-supported bonding authorities that build plants for lease to corporations.

Alabama, Arkansas, Louisiana, Mississippi and South Carolina grant property tax moratoriums of from five to 10 years to new industry.

"Louisiana goes so far as to permit a 'Council on New Industry' to lure new establishments by negotiating contracts to meet the best tax offer received in any competing state," the SRC report said.

(Special benefits to new industry also are granted by states outside the South, but the greatest concentration is here.)

The pattern of regressive taxation in the South has many roots.

One obviously is the fierce competition in the past three decades for new industry at a time when agricultural jobs were vanishing.

But tax-writers may seriously have misread what kind of tax laws substantial businesses want. "I don't think tax exemption has anything to do with it," said Georgia Revenue Commissioner Peyton S. Hawes, a former legislative leader.

Georgia, he observed, has offered no tax moratorium — yet has made major strides in industrial development. (Many Georgia counties have created tax-exempt bonding authorities to build plants for new business, however.)

Tax concessions can be dangerous because they encourage other states to go one better.

Mrs. Galambos also doubts whether low personal income tax rates are much of an inducement to new industry. "Business doesn't have much of an ax to grind about personal income tax," she said.

Tax xtructures reflect not only the legislatures that wrote them but also the dominant lobbying forces.

Since tax laws generally are modified gradually rather than totally revamped in one session, the basic patterns of most tax laws were designed in the days of severe malapportionment and of low Negro voter participation.

Thus they tend to reflect rural interests — such as low rates for farm taxes — and the interests of the businesses who were most influential several years ago.

Until very recently, neither civil rights nor labor organizations had much influence in southern legislatures. Even now they don't begin to match the power of banks, insurance companies or big landholders.

Unionism still is weak in most of the South. "We have very little impact on legislation where we have few members," conceded Georgia AFL-CIO Civil Rights Director Al Kehrer.

Sales Tax Advocates

"Even though it has been redistricted, the legislature still has not put together a combination of urban legislators who are friendly to progressive taxation. Even here in Atlanta, many legislators accept the Chamber of Commerce point of view and are gung-ho for sales taxes," he added.

But Kehrer sees some change.

Taxation was one of the issues in the recent Atlanta mayor's race. Winner Sam Massell favored a city income tax, which is progressive, while opponent Rodney Cook proposed the relatively regressive payroll tax as a new revenue source.

"We were able to make a dent in the working class vote with this issue," Kehrer asserted.

He also cited referenda in North Carolina earlier this month in which voters in about four-fifths of the counties rejected an extra penny in sales tax to be used by local governments.

A combination of labor and civil rights organizations waged a successful campaign against the proposal.

"Our education campaign is beginning to register," said North Carolina NAACP President Kelley Alexander. "It just doesn't register with poor people why they should pay more taxes when they don't get equality in distribution of services.

"We're meticulously examining bond issues, too, to see what we get out of it. The old way just won't work any more," Alexander said.

Income Tax Credits

"We're never going to pass a sales tax increase in this state unless you have some kind of (tax) credit for the poor," said Georgia State Rep. Gerald T. Horton of Atlanta.

Income tax credits or rebates are a reform increasingly being discussed among lawmakers in many states. Georgia's Tax Revision Commission recommended such a step only a few days ago.

Under the plan, the poorer the taxpayer, the more credit he would get for sales tax payments. In the case of a citizen too poor to pay an income tax return, there would be outright rebates.

This system, used in Iowa, "has transformed a regressive sales tax into a proportional burden on income," Mrs. Galambos said.

"With the credit," said Georgia Revenue Commissioner Hawes, "I think that the sales tax is a fair tax."

The tax tide certainly has not been reversed in the South. As recently as this summer, the South Carolina legislature turned once more to the sales tax as a major source of new revenue.

But where the issue has been drawn and publicized, there appears to be a search for more progressive alternatives.

BUFFALO 3rd world

BUFFALO, N.Y. (LNS)—Tossing smoke bombs and firecrackers, Third World students at the University of Buffalo totally disrupted classes in their continuing "unconditional war" against the university's administration.

ROTC classes at Buffalo were held under guard this week in defense against Revolutionary Dance class 1776 which has snake-danced through ROTC classes regularly for the last month, making normal functioning impossible.

The city of Buffalo is under fire. At neighboring Buffalo State Teachers College a strike was called in conjunction with the one being held at UB. The demands at Buffalo are extensive, including a $50,000 reparations demand from the College Student Association (the "legitimate" student government) for "cultural exploitation of Third World peoples during their many years on this campus," and the University's "unconditional commitment" to abolition of "individual and institutionalized racism" on campus.

Grover Cleveland H.S., the city's largely black and and brown high school, was the scene of clashes with police as kids and cops fought in the street. Police rioted outside a high school dance one night, and before it was over 200 kids had learned about fighting with the law. A few days later students were beaten by police and 16 were arrested as they also tried to strike their school.

White students at UB, in a radical caucus, marched through the University's classrooms chanting "Open it up or burn it down!" and "Nixon's Army, Mitchell's Law/ain't no match for Peoples' War!," disrupting *all* classes in progress. This demonstration culminated in a solidarity rally under Third World leadership at which 600 to 1000 students from Buffalo, Buffalo State and the high schools, as well as welfare mothers and members of the Buffalo community, massed in strength. It was after this rally that smoke bombs and firecrackers verified the students' intentions of not letting business go on until their demands are met.

more & more

SAN FRANCISCO (LNS)—Thousands of Army Reservists and National Guardsmen are saying "no" to the Vietnam war.

Their revolt comes in the form of a petition now being circulated quietly at Reserve and National Guard drills throughout the country. The petition urges immediate withdrawal of all American troops from Vietnam and from countries like Thailand, Laos, and Bolivia that may become the Vietnams of the 1970s.

"Response has been tremendous," said a spokesman for the GI Association, a San Francisco antiwar group which organized the petition campaign. "Guys are signing this that you'd never think would sign anything. There's a lot of pent-up frustration here."

The GI Association expects to have five to ten thousand signers of the petition by Dec. 5. The final total will be announced shortly thereafter—possibly in connection with a GI oriented December Moratorium.

At present the petition's organizers are trying to reach all possible signers. Reservists and National Guardsmen are urged to sign the antiwar petition and send it to the GI Association, PO Box 31387, San Francisco, Calif., 94131. Copies should be circulated at Reserve drills and passed to friends in other units. For more information, write to the above address or call 415-843-7180.

The full text of the petition follows:

We, the undersigned, are officers and enlisted men of the United States military Reserve forces.

We wear the same uniform as the American troops being killed and maimed every day in Vietnam. We want those soldiers home—alive.

We demand total withdrawal of *all* of our fellow American soldiers from Vietnam *now*. Not just combat troops, not just ground troops; *all* troops.

We demand total withdrawal now of all the American soldiers advising the armies of dictatorships throughout Latin America and Asia. We don't want Guatamala, Thailand or Bolivia to become the Vietnams of the 1970s. One Vietnam is enough, too many people have been killed already to preserve America's overseas empire.

As men who have served in the armed forces, we have seen first hand the dangerously growing power of American militarism. As soldiers and as citizens we believe we have a special obligation to speak out against it.

say NO to the WAR

TAXES: regressive = oppressive

Every so often somebody makes a study which proves conclusively that Georgia's tax structure is regressive. What that means is that state and local taxes, considered as a whole, fall proportionately heavier on low- and middle-income people than on the rich.

The last such study was the one made by Dr. James A. Papke, research director of the Georgia Tax Revision Study Commission, about a year ago. Papke proposed changes which would have made the tax structure slightly less regressive, altho not really progressive. Governor Maddox took Papke's proposals to heart and proposed some of them to the General Assembly, but the lawmakers gave the Maddox-Papke package short shrift.

Comes now *The Tax Structure of the Southern States: An Analysis*, by Dr. Eva Galambos, a report made for the Southern Regional Council. It is a clear, concise, incisive, well-documented study which demonstrates conclusively once again that Georgia's tax structure—and the tax structures of other Southern states—are regressive. It recommends changes which would make them less regressive.

Southern tax structures are regressive, this report states, because of their heavy reliance on general sales taxes, selective sales taxes on such items as tobacco, gasoline and alcoholic drinks, and property taxes. All of these are levied without regard to ability to pay, and therefore fall hardest on low-income and to a lesser extent middle-income people. Comparatively little revenue is raised, on the other hand, by progressive taxes—personal and corporate income taxes, graduated according to ability to pay—and the "death" taxes—gift, estate, and inheritance. And even when income taxes are used by Southern states, they often are not very steeply graduated.

Regressive tax structures are not confined to the South. In 1967, general and selective sales taxes represented 58 per cent of total state taxes in the 50 states, while progressive taxes accounted for only 25 per cent, the Galambos study shows. But as a group, Southern tax structures are more regressive than the national average. In Georgia, sales taxes accounted for 68.8 per cent of total state taxes in 1967; in Mississippi, 77.9 per cent; only in Louisiana, North Carolina and Virginia did sales taxes account for a smaller proportion of total state taxes than the national average. The regressiveness is compounded by the fact that per capita income in the South is lower than in every other part of the U.S.

The Georgia sales tax was found to vary in its impact from a 4.7 per cent burden on families with less than $1,000 income to 1.8 per cent for incomes of $15,000 and over.

Income tax collections, relative to total available income, were found to be generally lower in the southern states than for all states levying an income tax. Southern states also obtained a lower percentage of their total taxes from the generally progressive "death" taxes than is true nationally.

Taxes on businesses, which produced 17 per cent of state tax collections nationally in 1967, produced 13.3 per cent in Georgia. Despite the enormous postwar business growth nationally and in the South, the study found that the proportion of total state and local taxes derived from business dropped 2.2 per cent from 1957 to 1962. That is partly due to the lightening of business taxes by state and local governments seeking to attract new industries, in which competition Southern states have been among the most active. Given the revenue crisis now faced by most state and local governments, reductions in business taxes must be made up somewhere else, usually via the regressive sales tax.

Property taxes accounted for 66 per cent of all revenues raised by local governments from their won sources in 1967. "Property taxes are generally considered to be regressive largely because the value of the housing unit constitutes a lower percentage of higher incomes than of lower incomes," Galambos says. They are often passed on by landlords to tenants in the form of higher rents, altho the landlord, not the tenant, is allowed to deduct the property tax from his income to reduce his income tax liability. The landlord benefits further from the homestead exemption ($2,000 in Georgia).

The Galambos study is a good, readable introduction for the layman to the existing tax structures of the Southern states. It is disappointing, however, in two respects: its failure to explain *why* Southern tax structures are so regressive (which SRC Executive Director Paul Anthony, in the introduction, says is "beyond the scope of the present study"), and its tepid recommendations for reform.

The question of "why?" is undoubtedly complex and deeply rooted in the South's history. One factor which should be considered is the white racism which has divided white and black working people in the South. This division, exacerbated by demagogues from Watson to Wallace, undoubtedly has made it easier for the upper-class politicians to pass the tax burdens on down to working people. The Galambos study does not mention racism (or black people) at all. Hopefully, the next study of the South's regressive tax structure will consider this and other factors and try to explain the *why?*

On conclusions: Like Papke, Dr. Galambos shies away from the radical conclusions which follow logically from her data. The study clearly leads to the conclusion that the most equitable, progressive tax structure would be one based entirely on the most progressive taxes: steeply graduated personal and corporate income taxes and the death taxes. All regressive taxes, especially sales taxes, should be abolished. Instead, Dr. Galambos meekly recommends "increased use of the income tax with more progressive rates at both state and local government levels"; tax credits and rebates to offset the regressive effects of property and consumer taxes on low income families; and equalized property assessments. Whether because of a failure of nerve or a desire to stay within the limits of the immediately possible, Dr. Galambos' tepid conclusions vitiate an otherwise incisive study.

The larger question is whether such inequities in taxation are inevitable, even necessary, in a system based on the wide disparities of wealth and power which characterize Amerikan capitalism. Dr. Galambos implies that they are not, but a lot of us are beginning to wonder.

—bob goodman

TO BE BLACK AND AT EMORY

Emory is a racist university. This was what the May demonstrations last year forced the administration to stand up and say. But admission and absolution are not, as Emory is slowly learning, the same thing.

With this year's cessation of the Rockefeller Grant scholarships for disadvantaged students, and with the failure of the administration to have prepared alternatives for this program, President Atwood's commitment "to recruit more, admit more, and matriculate more" Black students has been put to the test.

The students were not long in noting this failure and made, in the form of a Student Center board resolution, an instant play for the administration's full attention. They recommended that the scheduled million-dollar renovation of the student center building (AMB) be postponed one year, the money invested, and the projected profits be used for black scholarships. Several members of the faculty of the economics department and business school reviewed the possibllities and presented an argument supporting this action and estimating the net return at approximately $45,000.

Following this, the student government passed two resolutions: one, (with constant optimism that a public statement of commitment on the part of the administration would be meaningful) urging a resolution by the president and board of trustees of their intent to pledge funds; and the other, supporting the Student Center Board resolution, and encouraging other efforts to raise funds.

Meanwhile, a faculty resolution was passed unanimously for the faculty-based Committee on Admissions and Scholarships to request from Atwood additional University funds over the projected budget to support a black scholarship program, at least at the present level of funding. A second proposal was presented asking review of budget priorities and suggesting top priority in allocation of resources to at least cover the loss of the Rockefeller Grant.

In a statement to the faculty on these resolutions, President Atwood replied that he would recommend to the Trustees at the next meeting in January that Emory "continue to award scholarships in the same way and at least the same level as under the Rockefeller Grant." He added that he would "recommmend to the Board of Trustees that we try first to marshal all available resources of new money, either from outside the University or raised specifically for this purpose by students and others. If additional funds beyond these are necessary, they are to be allocated as a top priority from any incremental budgeting income available next year."

While one may consider it a victory to see a top university official take heed of what's blowing in the wind, it's dangerous to consider the battle the war. Atwood has yet to see the Board of Trustees, for instance. But of deeper, more underlying importance, this action has obscured a vital defeat in the student-faculty struggle to gain a meaningful voice in the administration of the University. When Nick Garin and Dave Taylor of the Student Center Board went to the Development Committee with their resolution they were turned away with the argument that priorities were not determined by Development. (They're only following the orders to Build Buildings.) Priorities are determined Further Up.

Which brings up the real problem: only Further Up is privy to the Budget. This means only that those who determine priorities are allowed to see and consider the priorities. Which means that the students and faculty are still able only to lay on the line those concerns that involve them, their student center, or their salaries, and cannot seriously probe the budget for possibilities of other areas of varying relevance to the purpose of the University.

So Atwood can offer to allocate in this order: New money from outside, money raised by students, and when all else fails, a reconsideration of Priorities in the Budget. By the same people who always consider them.

Also, it must be pointed out that even if the Trustees come through, only the status quo will be maintained. The goal of all these endeavors is to regain the amount of the Rockefeller grant. This was pointed out by James Brown of the Black Student Alliance, that the ultimate concern of any established system is to preserve the status quo. This once meant the systematic exclusion of all Black students. It's now evident that a few Black students can be absorbed relatively painlessly, but its impossible to imagine a reconsideration of the *whole function of an educational institution.* To be able, for instance, to distinguish the difference between lowering standards and adjusting them to meet the needs of both the students and the society.

Or to grasp that it is the function of the University, not the students and the faculty, to correct the failures of its own institutions. To plunder the needs of these central elements of the University is to display a very perverse conception of what a university is for. The students and faculty themselves don't realize this contradiction in their offer to sacrifice these vital interests.

In the meantime, the struggle continues. The student-faculty coalition has circulated petitions that the budget be made open to the public. And the Martin Luther King Scholarship fund, begun three years ago and nearly depleted, has been revitalized by an Ad Hoc committee which is getting into the Late Planning and Early Active stages of some rather remarkable and promising programs. Organizations which have never so concerned themselves are sending in resolutions and planning fund-raisings. The Black Student Alliance has requested that all money raised by students be put in the MLK fund. And Emory's Black Administrator, Marvin Arrington, is developing a plan, with the aid and support of the Black Student Alliance which will involve summer transitional programs and yearly transitional programs with lightened school loads and tutorials for some 30-35 students.

Southern states' tax policies place extra burden on the poor

A study of taxes in the Southern states by the Southern Regional Council finds that the South is bound to a system that places a disproportionate tax burden on poor and middle-income citizens.

The report by Dr. Eva Galambos, an Atlanta research consultant in fiscal problems, notes that regressive sales taxes represent 58.1 per cent of state taxes nationally, and in the South from a low of 46.8 per cent in Virginia to 77.9 per cent in Mississippi. Both general and selective sales taxes are included.

The South places "less reliance on progressive taxes," based on ability to pay. Nationally, states with income taxes draw 22.4 per cent of their revenue from this tax. In the South, only Virginia, with 30.3 per cent, exceeds this average.

Unequal assessments mark the greatest failure in property tax administration, according to Dr. Galambos. "All the states," she observes, "in effect, grant a property tax subsidy to farm and vacant land owners through unrealistically low valuations."

LOCAL GOVERNMENTS gain revenue from charges and fees for services far in excess of the national 23.5 per cent average. In Alabama 42.9 per cent of local financing comes from this source. Local governments in Georgia have an average of 40.6 per cent followed by South Carolina (37.7 per cent) Florida (36.0 per cent) North Carolina (35.6 per cent) Louisiana (31.1 per cent) Texas 29.4 per cent), and Virginia (21.9 per cent).

Dr. Galambos attributes local dependence on this revenue source to "the failure of most Southern states to permit local governments to levy taxes sufficient to obtain needed revenues. It is also an indication of the inadequate sharing of state taxes derived from other sources."

The report "grew out of a conviction that state and local governments were not adequately equipped because of outmoded tax structures to deal with a host of unmet public needs."

Among priorities which suffer most from insufficient financing in the South, the council named public education, public assistance, and mental and penal institution reform.

The study does not offer specific legislative remedies. Its concerns are "tax equity for the sake of simple justice and . . . as a means to make the South a more livable region."

THE COUNTIL concluded its annual meeting in November by reaffirming "our belief that the South and the nation must work . . . as one people in an integrated society free from discrimination." It saw a trend in the national government.

SRD – Tax Chgs

Tax Structure In South Hits Low & Middle Incomes

A study of the tax structure of the southern states released today by the Southern Regional Council finds that the South is bound to a system of taxation that places a disproportionate burden on poor and middle income citizens.

The report, written by Dr. Eva Galambos, an Atlanta research consultant specializing in fiscal problems, notes that regressive sales taxes, which weigh most heavily on lower income groups, represented 58.1 percent of state taxes nationally. In the southern states this figure ranges from a low of 46.8 percent in Virginia to 77.9 percent in Mississippi. Both general and selective sales taxes are included in the total.

By contrast, to the South's heavy emphasis on sales taxes is "lesser reliance on progressive taxes, or taxes based on ability to pay." Nationally, states with income taxes draw 22.4 percent of their revenue from income taxes. In the South only Virginia with 30.3 percent exceeds this national average.

Unequal assessment levels mark the greatest failure in property tax administration, according to Dr. Galambos. "All the states," she observes, "in effect, grant a property tax subsidy to farm and vacant land owners through unrealistically low valuations by assessors."

Local governments gain revenue from charges and fees for services far in excess of the national 23.5 percent average. In Alabama 42.9 percent of local government financing comes from this source. Local governments in Georgia are next with an average of 40.6 percent followed by South Carolina (37.7 percent), Florida (36.0 percent), North Carolina (35.6 percent), Louisiana (31.1 percent), Texas (29.4 percent) and Virginia (21.9 percent). Dr. Galambos attributes the dependence that local governments place on this revenue source to "the failure of most southern states to permit local governments to levy taxes sufficient to obtain

Continued On Page Eight

(Continued From Page One)

needed revenues. It is also an indication of the inadequate sharing of state taxes derived from other sources."

According to Paul Anthony, executive director of the council, the report "grew out of a conviction that state and local governments were not adequately equipped because of outmoded tax structure to deal with a host of unmet public needs." Among priorities which suffer most from insufficient financing in the South, Anthony named public education, public assistance, mental and penal institution reform. The study does not offer specific legislative remedies. Rather, Anthony observes, its concerns are twofold: "tax equity for the sake of simple justice, and finally, as a means to make the South a more livable region for all."

THE MOBILITY OF THE TENNESSEE VALLEY EMPLOYED LABOR FORCE

1957 - 1963*

by

Wesley G. Smith and Roger A. Matson

Introduction

Any regional development program, whether specifically intended to or not, affects manpower requirements, types of education and skills required by the area's labor force, and thus the need to investigate the interrelationships between manpower availability, incomes, and the side effects of a development program, not only in the area in which the program is being carried out, but also in other areas affected by the program through migration.

Unfortunately, until rather recently, specific manpower data have not been available which would allow us to answer questions such as: Where do migrants entering a region's labor force come from? Where do persons go when they leave the region? What effect does a development program in region A have on the labor force in regions B, C, D, and E? In other words, what are the social costs and benefits to regions from economic development schemes both inside and outside the area in question.

---

*Certain data used in this publication were derived from computer cards furnished by the Social Security Administration. The authors did not at any time have access to nor did they receive any information relating to specific individuals or reporting units.

**Wesley G. Smith and Roger A. Matson are economists with the Tennessee Valley Authority.

Presented at the Symposium on Assessing Social Costs sponsored by the Civil Service Commission and The Association for Public Program Analysis, Washington, D. C., June 16, 1969.

Fortunately we now have available Social Security data that allow us to study the labor force of a given area along with data for other areas. This new data source now allows us to provide answers to some questions that have until now been unanswerable because of lack of mobility data.

This paper, which is part of a larger study we are currently conducting, presents some results based on Social Security data. In terms of the present study, we are really just starting our investigations with respect to the magnitude of what we eventually hope to do and to learn, not only for the Tennessee Valley but for other areas in the United States.

We will first discuss gross and net changes that took place in the Tennessee Valley labor force between 1957 and 1963. In the discussion which follows, we account for those forces causing change, including in- and out-migration, and new entries into and retirement from the labor force. Second, we follow the 1957 Tennessee Valley labor force to determine where these <u>same</u> individuals were by 1963, what their incomes were in 1957 and 1963, and whether persons who migrated to a different geographic region increased incomes more than those who remained in the Valley. Third, we trace the 1963 Tennessee Valley labor force back to 1957 to determine the former location of these same individuals in 1957. We also compare the 1957 and 1963 incomes of in-migrants with those of out-migrants and non-movers. Figure 1 defines the geographic regions used in this study.

Objectives

The objectives of this study were to answer the following questions:

1. How much turnover occurred in the labor force of the Tennessee Valley in the six years between 1957 and 1963?

2. What proportion of the 1963 Tennessee Valley labor force was composed of workers who had migrated from jobs in other sections of the country to jobs within the Valley?
3. What proportion of the 1963 labor force was composed of new workers who were not employed anywhere in 1957?
4. Who are the out-migrants, how many are there, and where do they move to when they leave the Tennessee Valley?
5. Who are the in-migrants, how many are there, and where were they employed before they migrated to the Valley?
6. Did persons who changed location of employment between 1957 and 1963 improve incomes? If so, by how much?
7. How do incomes of in-migrants and out-migrants compare with those of persons employed in the Tennessee Valley in both 1957 and 1963?

Source of Data

The results presented in this paper are from a larger study on mobility and migration of the Tennessee Valley labor force which is currently being conducted by the authors. The information on which this paper and the larger study are based was obtained from the U. S. Social Security Administration's one-percent sample of "Old Age and Survivors Disability Insurance" (OASDI) data from the Administration's Continuous Work History Sample. This sample is on a continuous register basis which means that persons included in one year are also included in all subsequent years regardless of their present employment status. In other words, the data allow us to follow the same individuals over a period of years with respect to location of employment at the county level, industry of employment,

and income from each job each year. The data are therefore ideally suited for labor mobility-type studies because they allow us to determine the geographic origins and destinations of the employed labor force of a specific area (region) over a given period of time. In the present study the region is the Tennessee Valley, and the time span, between 1957 and 1963.

Definitions

Appendix 1 provides a list of definitions of terms we will use to describe the Tennessee Valley labor force. In this study, a covered employee is one who is covered by Social Security laws. A retiree is one who was covered by Social Security laws in 1957 but not at any time in 1963. An entrant is one who was covered by Social Security laws in 1963 but was not covered by Social Security laws in 1957. Our definition of the Tennessee Valley labor force for 1957 and 1963 includes only those persons employed for wages who were covered by Social Security laws in 1957 and/or 1963 regardless of location of employment in either year. A non-mover is defined as a person employed in the Tennessee Valley in both 1957 and 1963 who was covered by Social Security in both years. An out-migrant is defined as a person who changed from covered wage employment within the Tennessee Valley in 1957 to covered wage employment outside the Valley by 1963. An in-migrant is just the opposite.

Changes in the Number of Covered Employees in the Tennessee Valley Labor Force between 1957 and 1963

Table 1 summarizes changes that occurred in the Valley's labor force between 1957 and 1963. The period 1957 to 1963 was one of significant industrialization and employment growth in the Valley. In 1957 there were 936,700 persons in covered wage employment in the Tennessee Valley.

By 1963, the number of covered wage employees had risen to 1,142,000 individuals, which represents a net gain of 22 percent in the number of OASDI covered wage employees in the Valley in just six years.

Looking at the components of change in the labor force as shown in Table 1, it can be seen that although retirement was a very important source of loss of workers, accounting for 25 percent of the total 1957 labor force by 1963, the number of new entrants coming into the labor force was far greater than the number of retirees who had left the labor force by 1963. New entrants were responsible for adding 403,500 new employees to the labor force between 1957 and 1963 compared to a loss of 237,900 employees due to retirement. In fact, new entrants since 1957 accounted for over one-third (35.3 percent) of the 1963 labor force.

Similarly, although out-migration accounted for a loss of 160,300 employees between 1957 and 1963 (which amounted to 17.1 percent of the 1957 labor force), there was a corresponding gross increase of 200,000 persons due to in-migration, so that on balance there was a net increase of 39,700 persons due to net in-migration. It should be remembered that in-migrants left covered jobs in other sections of the country to take covered jobs in the Valley. The reverse is true for out-migrants.

To summarize, because the number of new entrants exceeded the number of retirees, and the number of in-migrants exceeded the number of out-migrants, the Valley's labor force increased during the period 1957-1963.

Table 1 also provides information on a sex/race basis for each of the components of change discussed above. One of the statistics that stands out most clearly is that the covered labor force of the Tennessee Valley is predominantly non-Negro (white). Negroes comprised only 10

percent of the covered labor force in 1957 and even less in 1963--8.4 percent. Of the net increase of 205,300 workers in the labor force between 1957 and 1963, 99 percent were whites. White male employment increased by 114,000 during this period, while white female employment increased by 90,000 persons.

In-migration by white males was very significant during the period; whereas, it was quite moderate for white females. However, the large number of white female entrants into the labor force was a very significant source of female workers and was even larger than the number of new entrants for white male workers. This partly reflects the changing attitudes toward the employment of married females outside the home and the fact that jobs for females were being formed at a very much faster rate in the Valley than were those for males.

One of the more surprising facts shown in Table 1 is that even though the total number of in-migrants exceeded the number of out-migrants and even though there was a very large number of white female entrants into the labor force, more white females left covered employment in the Tennessee Valley for covered jobs in other regions between 1957 and 1963 than came into the Valley from other regions. While the net out-migration by Negroes might be expected, the fact that there was also a small net out-migration by white females during a period of rapid increase in white female employment was surprising.

In summary, the OASDI data in Table 1 show that the majority of growth in the Valley's labor force between 1957 and 1963 came from new white entrants plus a net in-migration of almost 43,000 white males.

Geographic Location of the 1957 Covered Labor Force by 1963

Because the OASDI data allow us to trace the same individuals over time and space, it is possible to determine the 1963 location of employment of persons who worked in the Tennessee Valley in 1957. This is shown in Figures 2 and 4. Only 58 percent of the 1957 labor force was still employed in the Valley by 1963. (These are shown as non-movers in Figure 2.) On the other hand, 17.1 percent of the 1957 labor force (or 160,300 individuals) had found covered wage employment in a different geographic region by 1963; 26,600 had migrated to the West (including military); 29,200 had migrated to the North, while 104,500 had found employment in the Southeast. The remaining 25.4 percent of the 1957 labor force had no covered employment by 1963 (were retirees by our definition).

Geographic Location of the 1963 Labor Force in 1957

Figures 3 and 5 show the 1957 location of persons employed for wages in the Tennessee Valley in 1963. As would be expected, the largest single source of 1963 workers were persons who were also employed in the Valley in 1957 (were non-movers). Even so, non-movers made up only 47.2 percent of the 1963 labor force while new entrants made up 35.3 percent. The relative importance of new entrants compared to non-movers is seen by the following statistic: For every 100 non-movers who were employed in the Tennessee Valley in both 1957 and 1963, 75 new workers entered the labor force during this period.

The balance of the 1963 labor force (17.5 percent of the total labor force) was accounted for by in-migrants. Rate of in-migration was highest from the Southeast. A total of 96,200 persons, or 8.4 percent of the total 1963 labor force, was composed of in-migrants from the Southeast;

53,900 workers, or 4.7 percent of the labor force, were in-migrants from the North, and 49,900 persons, or 4.4 percent, were in-migrants from the West (including military).

Net Change in the Valley's Labor Force as a Result of Migration

Table 2 shows the net change as a result of migration between 1957 and 1963 in the Tennessee Valley labor force. Overall, there was a net loss of 8,300 persons to the Southeast because more persons out-migrated to the Southeast than in-migrated from the Southeast. This was true for each sex/race class. Conversely, there was substantial net in-migration by white males from the North and West--a net of 24,900 white male workers migrated from the North and 20,100 from the West (including military) between 1957 and 1963.

Although there was a net in-migration of 39,700 persons during this period, it should be noted that over 80 percent of the net increase of 205,300 persons in the labor force between 1957 and 1963 was due to net entry of new workers into the labor force (shown as net gain from no covered employment in Table 2).

We now turn to an examination of incomes and change in incomes of migrants and non-movers.

1957 and 1963 Incomes of Migrants and Non-movers

Out-migrants. We first discuss the 1957 and 1963 incomes of out-migrants and change in incomes of out-migrants between 1957 and 1963. In all cases, incomes have been deflated to a 1957 base. White males who were employed in the Tennessee Valley in 1957 but who had migrated North by 1963 increased mean incomes by $1,765 or by 59 percent between 1957 and 1963 (Table 3). Those who migrated West increased incomes by $1,915 or 94

percent, and those who migrated to the Southeast by $1,209 or 43 percent. For white male out-migrants, the move to a different part of the country was apparently extremely profitable. The very large increase in incomes for white males migrating West is partly explainable by the fact that they were younger[1] and had much lower incomes in 1957 than those who migrated to the North or Southeast. For Negro males, those who migrated North increased mean incomes by $953 (or 70.6 percent) while those who migrated West increased mean incomes by $1,111 or 112.7 percent. In contrast, Negro males who migrated to the Southeast increased incomes by only $389 or 23 percent. Comparing the 1957 and 1963 incomes, as well as the change in income of Negro versus white males, it will be seen that on the average, 1963 mean incomes of Negroes were still about one-half those of whites following the move. Thus, although Negro males who migrated North or West increased incomes greatly, they did not increase them sufficiently to increase their relative position with respect to white male out-migrants. In fact, the absolute dollar difference in income between white and Negro male out-migrants was greater in 1963 after the move than when both groups were employed in the Tennessee Valley in 1957. This was equally true regardless of the region to which the migrants moved.

Increases in mean income between 1957 and 1963 for white female out-migrants were also greater both on a percentage or absolute dollar basis than was true for Negro females. Again, the absolute dollar difference in mean incomes of white female out-migrants compared with Negro female out-migrants was greater by 1963 following the move than when the same persons were employed in the Tennessee Valley in 1957. The plain fact is that both

---

1. Based on OASDI data on distribution of income by age as derived from the larger study mentioned earlier.

the 1957 and 1963 mean incomes of Negro female out-migrants were extremely low when they were employed in the Tennessee Valley or after they migrated to a different region. Their mean incomes were less than $1,000 per year in the Tennessee Valley in 1957 and less than $1,400 per year in the new region in 1963.

In-migrants. On the whole, in-migrants increased incomes less between 1957 and 1963 than did their counterpart out-migrants. As in the case of out-migrants, those migrating to the Tennessee Valley from the West were younger and had lower incomes in 1957 than those who migrated from the North or the Southeast. Also, for males, many were probably returning from military service and therefore their incomes would be expected to increase significantly by changing to civilian employment. Too few Negroes in-migrated to provide reliable estimates of change in income for Negro in-migrants between 1957 and 1963 except for those from the Southeast.

White male in-migrants who were employed in the North in 1957 but moved to the Tennessee Valley by 1963 increased mean incomes by only $495 or 11.3 percent between 1957 and 1963. However, they had much higher mean incomes in both 1957 and 1963 than did in-migrants from the Southeast or the West. Negro males who migrated to the Valley from the Southeast by 1963 increased incomes by only $98 or six percent.

Comparing the gains in income made by white male in-migrants from the North with those of out-migrants, one wonders if many of the in-migrants from the North were not former residents who had earlier migrated North and who moved back to the Tennessee Valley when better paying jobs became available in the 1957-1963 period. Unfortunately, in this study, the OASDI data do not go back prior to 1957 and so we have no way of

knowing whether many in-migrants were former residents of an earlier period who were forced to migrate to obtain a job or improve income.

Incomes of Migrants in Relation to Those of Non-Movers

Some of the questions we set out to answer in this study were: Who are the movers? Are they low income or high income persons? How do incomes of migrants compare with those of non-movers? In this section, we use level of income as a proxy for level of skill or education and compare incomes of migrants with those of non-movers in order to determine whether between 1957 and 1963 the Valley lost or gained in its income-earning potential through migration.

Looking first at out-migrants, it will be seen that for each sex/race group shown in Table 3, 1957 incomes of out-migrants were lower than those of non-movers. In other words, persons with lower incomes and presumably lower education and/or skill levels left the Valley for jobs elsewhere, while those with higher incomes (and presumably high skill levels) remained in the Valley's labor force.

By 1963, out-migrants had increased incomes much more than had non-movers, except in the case of Negro males who migrated to the Southeast. Except for white males who migrated North, the increase in income gained by out-migrants was not sufficient to bring their incomes up to the 1963 level for non-movers. This fact substantiates the premise that the majority of out-migrants tended to be lower skilled workers than non-movers.

One other point should be made before leaving out-migrants, which is, that for Negroes as a whole, out-migration did not improve their relative income position compared to their white counterparts regardless of the area to which the migrant moved, even though Negroes who migrated experienced larger income gains than those who did not.

Turning now to in-migrants, it is seen that both the 1957 and 1963 mean incomes of white male in-migrants from the North were significantly higher than mean incomes of non-movers or of in-migrants from the Southeast or West. Presumably white male in-migrants from the North possessed higher skills than did non-movers or in-migrants from other regions. If this assumption is correct, it is difficult to understand why white male in-migrants from the North increased incomes so very little in relation to other groups. A possible explanation is that these in-migrants were nearer the peak of their earning potential after the move, based on 1963 wage levels in the Valley, than was true for non-movers or in-migrants from the Southeast or West. Alternatively, many may have been former residents who had migrated North and who moved back to the Valley when better paying jobs became available.

Since the largest net change through migration occurred as a large net gain of white males from the North, the Tennessee Valley gained substantially in earning power from the exchange of low income out-migrants for high income in-migrants from the North. The unweighted increase in earning power to the economy of the Tennessee Valley due to net in-migration from all regions amounted to $209 million[1] in 1963.

Incomes of Entrants and Retirees

Table 4 shows the 1957 annual mean income of persons employed in 1957 but who were not in the covered labor force at any time in 1963 (retirees) and the 1963 incomes of persons in the covered labor force in 1963 but not in 1957 (entrants). 1957 incomes of persons not in the labor

---

1. Calculated on the basis of multiplying 1963 mean income for each race and sex group in Table 3 times the net gain due to migration for each race and sex group in Table 2.

force in 1963 were much lower than incomes of out-migrants or non-movers. Except for white males, 1957 incomes of persons not in the covered labor force by 1963 were not much higher than welfare or retirement payments. Hence, they would have little incentive to stay in the labor force. Although not presented in this paper, other OASDI data show that less than 40 percent of all male retirees were 60 years old or older by 1963--64 percent were less than 60 years old in 1963. Such persons are really "dropouts" from the labor force rather than what one normally thinks of as a retiree. With such low 1957 incomes as shown in Table 4, it is not surprising to find such persons had dropped out of the labor force by 1963.

Mean annual incomes of new entrants in 1963 were also very low. Most, but not all new entrants were young people probably entering the labor force for the first time. For males, 64 percent were 18 to 24 years old in 1963. Hence, their incomes would be expected to be lower than those of older workers already established in a job. However, one would not expect their incomes to be as low as is shown in Table 4--less than $1,500 in 1963 for the combined weighted annual income of all new entrants!

When compared to non-movers in the same sex/race group, incomes of new entrants ranged from a low of 41 percent for Negro males entering the labor force to a high of 53 percent for Negro females. The very low wages of new entrants suggest that most must have been either part-time employees who were in school the major part of the year or that they were marginal employees who had only occasional work in low-wage occupations in 1963. Similarly, the low annual incomes of retirees suggest that the majority of retirees must have also been marginally employed in 1957.

If, on the other hand, the majority of new entrants were full-time rather than part-time employees, their very low incomes may have caused wages paid to non-movers to be lower in 1963 than in other regions simply because such a large proportion of the 1963 labor force was composed of new entrants at such low income levels.

Conclusions

The high rates of entry, retirement, and migration shown in this study carry very significant implications to leaders and policy-makers for planning manpower and regional development programs. It was found that the Tennessee Valley gained in its income-generating capacity between 1957 and 1963 through (1) the in-migration of skilled workers, particularly from the North, who filled jobs that Valley residents were presumably unqualified to fill, and (2) the out-migration of low income (poor) people who presumably had few skills and who undoubtedly worsened the economic position of the receiving area to which they moved. If the income problems of the Tennessee Valley and the Southeast are to be lessened rather than shifted to other regions through migration, and if we assume that level of income is a fair proxy for level of skills, then there is a great need for improving the training and skills of the resident labor force in the Valley and the Southeast if persons from these areas hope to compete with in-migrants for high-wage jobs in the future.

The outstanding fact shown in this study is that given a concerted effort, because of the high rate of entry and the subsequent rapid rate of turnover in the labor force between 1957 and 1963, the "home-grown" labor force could be significantly upgraded and made more competitive in a very short period of time.

Appendix 1.

Definitions

Covered Wage Employee - A person employed for wages whose job is covered by social security laws.

In-Migrant- A person who changed from covered wage employment outside the Tennessee Valley in 1957 to covered wage employment within the Valley in 1963.

Out-Migrant - A person who changed from covered wage employment within the Tennessee Valley in 1957 to covered wage employment outside the Valley in 1963.

Entrant - A person without covered wage employment in 1957 but with covered wage employment in 1963. Persons without covered wage employment include the self-employed, students, those not in the labor force, the unemployed, and others without covered wage employment.

Retiree - A person with covered wage employment in 1957 but without covered wage employment in 1963. The term retiree includes deceased and unemployed individuals in addition to persons who have retired.

Non-Negro - All persons classified other than Negro. The terms "white" and "non-Negro" will be used interchangeably.

Employed Labor Force - All persons employed for wages whose job is covered by social security laws.*

Migration - The term migration will be used to designate movement from one geographic area to another.

Non-Mover - The term non-mover will be used to define persons employed in the Tennessee Valley in both 1957 and 1963.

---

* Social security laws cover approximately 90 percent of all wage employees at the national level.

Table 1.

Changes in the Number of Covered Employees in the Tennessee Valley Labor Force

Between 1957 and 1963 by Sex and Race

Sex/Race Classification	1957 Tennessee Valley Labor Force	Increases and Decreases 1957-1963					1963 Tennessee Valley Labor Force
		Retirees	In-Migrants	Out-Migrants	Entrants	Net Change

OFFICE OF THE BOARD OF DIRECTORS

February 2, 1970

Mr. Emory Via
Director of Resources Development
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Emory:

I hope that you and any other members of the staff who are available can get up for a discussion of various approaches to resource development problems sometime within the next few weeks.

I think we can leave the date to your convenience if you check within these possibilities: the week of February 16, the period of February 24-27, or March 2-5, 1970. I am sure that we can arrange to have some of our appropriate staff members available on any of those dates.

Cordially,

Frank

Frank E. Smith
Director

February 12, 1970

Mr. Frank E. Smith, Director
Office of the Board of Directors
Tennessee Valley Authority
Knoxville, Tennessee 37902

Dear Frank:

Thanks for your invitation to visit with selected TVA staff and for your speedy attention to the problems of dates.

There are several of us interested in coming up, perhaps as many as five or six. After jugling schedules here it now seems that March 5 would be a good date for us. It would be our plan to get into Knoxville on the evening of March 4 and be ready the next morning at your convenience.

Please let me know any particulars we need about when and where we should make our appearance.

We greatly appreciate your interest in arranging the visit for us and look forward to it.

Sincerely,

Emory F. Via, Director
Resources Development Center

Dr. Emory F. Via, Director
Resources Development Center
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Emory:

I am glad to know that some of the other members of the staff are going to accompany you on your visit to TVA on Thursday, March 5.

We will try to have some interesting discussions for you and an opportunity to inquire about specific ideas that may be of value to the Southern Regional Council program.

I suggest that you and your group plan to be at my office at 9:00 a. m. on March 5. We will have a varied program, including lunch, and plan to be through with it around 4:00 p. m. My office is in the New Sprankle Building (Room 405), located at 508 Union Avenue.

Cordially,

Frank

Frank E. Smith

MEMORANDUM

TO: Reece Cleghorn, Kitty Griffith, Art Campbell, Bob Anderson, Paul Anderson, James N. Wood,

FROM: Emory F. Via, Director, Resources Development Center

- o -

We will leave for Knoxville and our visit with TVA sometime after noon on Wednesday. The trip takes about 4½ hours. We can decide whether to break the trip at Chattanooga at dinner or to leave early enough for dinner in Knoxville. Any suggestions as to this.

We have reservations at the Admiral Ben Bow Inn for Wednesday night to be held for possible late arrival.

Frank Smith and staff will expect us at his office at 9:00 a.m. on Thursday. We will take two cars (Emory's and Jim's). I will let you know who is going in which car and we will probably visit around on the return trip.

SUMMER SCHEDULE FOR G E D TESTING 1969

June 3/4	July 22/23
June 17/18	August 12/13
July 8/9	August 26/27

The above dates are all on Tuesday and Wednesday.
It takes two days to take the test. Testing begins at 9:00 A.M.
There will be no test given in the month of September

GENERAL INFORMATION

Two days are required to complete the G E D test. The first day of testing involves English and social studies; the second day consists of testing in science, literature, and mathematics. Testing sessions begin each scheduled testing date at 9 a.m. Since the G E D is an untimed test, individuals finish at different times. The examiner will close the testing session at 4:30 p.m. A birth certificate or other proof of identity and age must be presented to the G E D examiner before entering the testing room.

RESERVATIONS BY PHONE

1. Read the information sheet.
2. Choose one of the test dates listed below.
3. Call the G E D Testing Office at 758-9451.
4. Reserve a test date with the G E D secretary.

TEST DATES		STARTING TIME	ENDING TIME(APPROXIMATE)
Jan.	9/10	9 a.m.	4 p.m.
Jan.	30/31	9 a.m.	4 p.m.
Feb.	13/14	9 a.m.	4 p.m.
Feb.	27/28	9 a.m.	4 p.m.
March	13/14	9 a.m.	4 p.m.
March	20/21	9 a.m.	4 p.m.
April	17/18	9 a.m.	4 p.m.
May	1/2	9 a.m.	4 p.m.
May	15/16	9 a.m.	4 p.m.

IF you are eligible for G E D testing and have a reservation, report to Atlanta Area Tech and enter the front of the main building near the flag pole. Be seated in Room B-19, the Administration Office, until the examiner calls for G E D examinees.

IF you have a reservation and cannot attend, please call the G E D Testing Office and cancel.

IF you are under 20 years of age, you must obtain "special permission". (See the enclosed instructions.)

IF you are repeating a test, see the retesting policy on the enclosed sheet.

GED TESTING CENTER
ATLANTA AREA TECHNICAL SCHOOL
1560 Stewart Avenue, S. W.
758-9451

I. Eligibility for taking the GED Test

1. An applicant must have passed his 20th birthday to be eligible for GED testing at Atlanta Area Technical School.
2. He must present one of the following as proof of age and identity: Service discharge papers, voter registration form, income tax receipt, W-2 form, driver's license.
3. Applicants must pay the $5 testing fee at the school on the testing date.
4. Applicants under the age of 20 must have special permission to take the GED test. (A Special Sheet of instructions to obtain this permission is enclosed.) Applicants who are under 20 years of age must presents a letter of "special permission" from the State Dept. of Education to the GED Examiner.
5. REPEAT TEST - If an applicant has had the GED test before and is repeating he must wait 6 months before a "RETEST." (RETESTING POLICY is on separate sheet of instructions.)
6. Must be a legal resident of Georgia.

II. Description of the GED Test

The GED test is composed of 5 main parts - each part requiring approximately 2 hours to complete: however, this an untimed test which allows an individual to work at his own rate. The parts are as follows:

1. Correctness and Effectiveness of Expression (English Grammar)
2. Interpretation of Reading Material in the Social Studies
3. Interpretation of Reading Material in the Natural Sciences
4. Interpretation of Literary Materials (Literature)
5. General Mathematical Ability

III. Length of the GED Test

The applicant should be prepared for two consecutive days of testing. It is necessary to complete all five parts of the test when the testing session is begun.

IV. Reference Books

The following reference books are often used in preparing for the GED test:

1. High School Equivalency Diploma Test by Arco Publishing Co. (This book can be purchased at our bookstore for $4.)
2. High School Entrance Examination by Gruber Publishing Company.
3. Barrons "How to Prepare for Entrance Examinations" by Peters Publishing Company.
4. High School text books.

V. Everyone must pay a testing fee of $5.

VI. Test Results

A report of your test results is mailed to you approximately two weeks after testing. Test scores will not be given by telephone.

KEEP THIS SHEET FOR YOUR INFORMATION

HOW TO OBTAIN SPECIAL PERMISSION TO TAKE THE G E D TEST FOR UNDER AGE APPLICANTS

Anyone under the age of twenty must have permission from the Adult Education Unit State Department of Education before he will be permitted to take the G E D Test.

SPECIAL PERMISSION MUST BE OBTAINED FROM THE STATE DEPARTMENT OF EDUCATION: Address correspondence to Mrs. Catherine Kirkland, Coordinator of Adult Education, 156 Trinity Avenue, Educational Annex Building, Atlanta, Georgia 3030, Telephone No. 688-2390 Ext. 443 or 444.

1. When requesting permission, send letter in the applicant's own handwriting. In this letter to the State Department of Education, explain where you last attended school, the date of your withdrawal, and the reason for your withdrawal. Also give the last grade you completed and the reason you wish to take the G E D Test. Enclose a copy of your birth certificate or some means of verification of birth date. This will be returned to the applicant.

2. A letter of recommendation from the last principal, counselor or employer of the applicant must be enclosed with the letter mentioned above. It should include reasons and recommendation for the applicant to take the test.

3. Permission cannot be granted to anyone less than seventeen years of age or to anyone who has been enrolled in a high school within six months prior to the request for permission.

If permission is granted and tests are passed, the applicant will not receive his equivalency certificate until he reaches the age of twenty; however, he will receive a copy of his scores from the testing center. A person must be a legal resident of Georgia or have attended Georgia schools. It is the applicant's responsibility to see that all required information is received by Mrs. Kirkland's office.

AN UNDERAGE APPLICANT MUST HAVE THIS SPECIAL PERMISSION LETTER WITH HIM WHEN HE COMES TO TAKE THE TEST AT THE G E D TESTING CENTER, ATLANTA AREA TECH, 1560 STEWART AVE., S.W. ATLANTA, GEORGIA.

****

RETESTING POLICY

IF ONE HAS FAILED PART OF THE TEST AND WISHES TO BE RETESTED, HE MUST WAIT SIX MONTHS IF HE NEEDS TO BE RETESTED BEFORE THE SIX MONTHS WAITING PERIOD, HE MUST HAVE A LETTER OF WAIVER OF THE WAITING PERIOD FROM MRS. CATHERINE KIRKLAND, 156 Trinity Street, Educational Annex Building, Atlanta Georgia 30303, Telephone No. 688-2390 Ext 443 or 444. THIS LETTER MUST BE PRESENTED AT THE G E D TESTING CENTER ON THE DATE OF THE RETESTING. He also must bring a copy of his previous G E D Test scores.

* * *

AUTO MAKERS beat the bushes to staff their booming plants.

Wall St. Jnl. 1/25/66

For the first time since the palmy days of 1955, car companies are recruiting workers in the South for Michigan plants. Pontiac recruiting teams have toured Kentucky and West Virginia, hiring as many as 200 a week. Buick has sought workers in the same states, as well as in Maine and Vermont. Chrysler has been hiring in southern Illinois for its new Blevedere plant in northern Illinois.

New plants and additional work turns at old ones cause the scramble. Oldsmobile will add a second turn to its Toronado line at Lansing in March. Chrysler will add a second turn at Belvedere in May or June. Ford slates double-turning at one or two more plants for the '67 model year. A new Chevrolet plant will open this spring in Lordstown, Ohio. These factories alone will add more than 7,500 jobs; three big new stamping plants in Michigan will mean thousands more. Auto employment, now at 900,000, has gone up 125,000 in the past two years.

An auto executive complains half the prospective workers in Detroit flunk his company's I.Q. test, which is based on a fourth-grade education.

B. A.

This kind of broadside is one of his "forte's" — also presents some troublesome problems.

Representative Bob Kastenmeier
House of Representatives
Washington, D. C.

Dear Bob:

You may recall my name as one of your supporters at the University of Wisconsin. I am writing to you as one interested in scientific psychology and in the proper utilization of the science of psychology in relation to the welfare and civil rights of people.

In connection with your work on civil rights, you may remember that last year a House Committee under Representative Gallagher and a Senate Committee under Senator Sam Irwin conducted investigations of the use of psychological tests in government employment. Although both of these Committees produced findings that led to abolishment of use of personality tests in almost every sector of the Federal Government, they did not extend their studies, as it was suggested that they do, to the unethical misuse of other types of psychological tests—the so-called general aptitude or intelligence and scholastic aptitude tests--on both Federal employees and on students in schools, colleges, and universities which are partly supported by Federal funds.

It is my opinion that the time has come to face up to the issues of human rights, civil rights and discrimination in employment and Selective Service posed by the nationwide fraudulent misuse of general intelligence, personality, scholastic aptitude, and the Graduate Record tests, as used in both schools and industries. It is suggested that, as one phase of your Committee work on civil rights, you conduct an investigation of test publishing firms, employment agencies, management consulting firms, executive placement firms and university placement operations which are interacting unethically in feedback relationships with privileged schools, colleges, and universities to misuse various types of aptitude and scholastic achievement tests in order to undermine democratic processes in educational selection and placement and hence in Selective Service and employment opportunity.

I am enclosing for your examination copies of my reports of scientific studies of various types of psychological tests in schools, government institutions and industry. Besides the general findings that

all types of psychological testing are invalid and disreputable as scientifically controlled processes, these reports bring out an hitherto unrecognized fact about testing, namely, that testers and their followers in schools, universities, and industries fudge and distort course designs, placement, student and worker rating procedures, and actual programs of education in order to follow the test results and to make the tests look good. These findings have indicated that personality, intelligence and scholastic aptitude testing has the status and a record of aiding rich and privileged students and other individuals avoid the draft by means of test-oriented and test-guided educational practices of an unethical nature. We have come to believe that this is the main purpose of testing in the nation.

I can explain to you very directly hos this visious discriminative feedback process works in terms ofthe Scholastic Aptitude Test, which a great number of colleges use for selection at the college level. This test has absolutely no validity in predicting college performance. However, over a million of these disreputable tests were sold last year by the Educational Test Service. The reasons for this large sale are now known through my investigations. Scores of preparatory schools in this country, especially in the East, do little more than train their privileged students in passing this test by using old copies and keys of the test itself. Therefore, these students establish by test-defined feedback action a preferred educational status in relation to the draft. It goes without saying that this unethically achieved preferred status is maintained inasmuch as much college training consists of little more than advanced training in passing multiple choice tests of the order of the so-called Scholastic Aptitude Test.

This same type of feedback relationship exists between the Graduate Record Examination (which also is sold by the Educational Test Service) and certain patterns of test slanted college training. Thus, it is not uncommon for many departments in psychology, mathematics, and literature in this country to slant their courses toward the verbal minutiae of the Graduate Record Examination, and to structure their beginning graduate courses in the same way, and thus make both undergraduate and graduate training conform to the testing format, which it is claimed can predict graduate status. These feedback relationships of the Graduate Record Examination are further refined by many specialized activities of the Educational Test Service in hiring paid academic consultants--i.e., deans and chairmen of university department--who can influence adoption of test programs. It is also a practice of this institution to give such consultants and other academic supporters lush week-long paid educational conferences in New York each year in order to discuss their educational activities in testing and feedback related educational functions.

Let me suggest also that equally vicious violations of Title VII of the Civil Rights Law occur in the fraudulent use of personality and so-called general intelligence tests by employment agencies, professional executive placement agencies and universities and industrial firms in the country. None of these tests have a scientific foundation or proven validity in predicting job performance. Nevertheless, they are used widely as discriminative devices in employment. The fact that they are used as such discriminative devices in areas of employment which determine

draft deferment in defense-related industries should come under close scrutiny by your Committee.

I suggest that your Committee take up the entire question of civil rights and the illegal use of scholastic, intelligence and personality testing at all levels of schooling and work. As suggested by my scientific articles, we now have good evidence that the claptrap methods of testing constitute little more than a process of imposing inferior educationupon children, who through past differential social and educational opportunity do poorly on the tests. The tests are used unconstitutionally in both public and private school systems in order to assign students to "inferior" classes and this "inferior" label sticks to the child throughout his career, because the classes in which he is placed represent education of inferior design. I suggest that your Committee could make a tremendous scientific and educational contribution by wholesale abolition of these psychological testing practices and feedback effects of testing in the public schools.

The smaller of the reports sent to you suggests other reasons why your Committee should look into the broad question of psychological testing and civil rights. Such testing has come to be organized as a nationwide commercial racket for the benefit of a few monopolistic publishing and testing machine manufacturing firms. Numerous interlocking relationships exist between scoring machine manufacturers, teaching machine manufacturers, general aptitude and scholastic aptitude test publishing firms, and achievement testing agencies. The whole business, rather than being scientifically controlled and ethically oriented, stinks worse than the content of the tests. Even the American Psychological Association--the one agency which should be aggressive in cleaning up the testing racket--is deeply involved in using Public Health Funds in order to promote and expand the worst of all testing activities--i.e., the charlatanism and quackery of personality testing. My opinion is that your Committee could clean up this mess in relation to civil rights and Selective Service once and for a long time into the future.

Let me send you my best personal regards.

Sincerely yours,

Karl U. Smith
Professor

Research Report 1966-7
March, 1966

ACKNOWLEDGMENTS

This report is the result of intensive research on a highly controversial and complex subject. A number of psychologists have provided us with data from their current studies. We are especially grateful to Commissioner Hernandez who permitted us to examine the testing materials from her files. Dr. Robert Krug, Director of Research for the Peace Corps, made available several of his studies on testing of minority persons. Dr. Philip Ash, Research Assistant to the Vice President of Industrial and Public Relations for Inland Steel; Dr. Joel Campbell of Educational Testing Service; Mr. Howard C. Lockwood of the Lockheed Aircraft Corporation; Dr. Richard Shore, Policy Planning Staff of the Department of Labor; and Dr. Arthur Brayfield, Executive Secretary of the American Psychological Association, have sent us a number of articles. While acknowledging our debt to various scholars, we of course assume full responsiblity for any errors of fact or interpretation.

TESTING OF MINORITY GROUP APPLICANTS FOR EMPLOYMENT

I. Introduction

The Motorola case* and the Tower amendment to Title VII of the Civil Rights Act of 1964 Section 703(h)** have dramatized the issue of whether the use of general intelligence tests by employers as selection devices for hiring and promotion deprives Negroes and members of other minority groups of equal employment opportunity. Individuals from culturally disadvantaged*** backgrounds perform less well on these tests on the average than do applicants from middle class environments and consequently may be screened out of training programs and/or excluded from jobs. Differences in culture, in opportunity, and in experience can have a devastating effect on test performance. Since many Negroes, Mexican-Americans, Indians, and lower-class whites have not shared the middle class culture, they may perform in an inferior manner on tests of general intelligence, particularly paper and pencil, but not necessarily on performance for which the tests are supposed to be predictive.

Consistent and significant differences on mean scores are also found between age, sex, educational, and urban-rural groups, but the focus of this report is the effect of testing on the culturally disadvantaged,

*See Appendix A for the chronology of the Motorola case.

** ". . . nor shall it be an unlawful employment practice for an employer to give and to act upon the results of any professionally developed ability test provided that such test, its administration or action upon the results is not designed, intended or used to discriminate because or race, color, religion, sex or national origin." Sec. 703(h)

***See Appendix B.

many of whom are Negroes. This report is not concerned with the willful misuse of tests to discriminate such as giving tests to Negroes but not to whites, or requiring Negroes to achieve higher scores than whites, or failing Negroes regardless of their actual performance. These practices are clearly unlawful. The question to be considered here is whether many "professionally developed ability tests" used by employers to select qualified applicants do in fact discriminate inadvertently.

Authorities in the field of psychological testing have suggested several proposals for mitigating the effects of unintentional types of discrimination against minority groups. We have examined the various proposals and have concluded that careful selection and administering of tests and validation of the testing instrument within an industrial setting, may be the most desirable means to achieve the goal of full utilization of the nation's human resources. The implications of this affirmative conclusion are discussed from the viewpoint of the Equal Employment Opportunity Commission, private employers, and the research psychologists who would have to assume the major responsibility for formulating suitable standards for selection of testing programs.

II. Types of Tests

The major types of tests most commonly used in employee selection are: (1) general intelligence tests, (2) tests of specific intellectual abilities, (3) knowledge and skill tests, (4) measures of dexterity and coordination, and (5) inventories of personality traits.

Intelligence tests such as the Wonderlic, Stanford-Binet, and Otis Quick-Scoring are designed primarily to measure the ability of the individual to understand and to reason with words and numbers. Such tests are most

useful in selection for jobs where learning from and understanding verbal academic material is important.

Specific intellectual abilities tests determine potential for learning certain kinds of work and for solving certain kinds of problems. The tests are not designed to test for a specific job, but to measure the skills for understanding and reasoning with words, numbers and symbols, visualizing of spatial relationships, word fluency, visual speed and accuracy, and creative abilities.

Knowledge and skill tests are usually specific to a job or job family. Knowledge tests are designed to measure the understanding of blueprint reading, electronics, accounting, etc., while skill tests measure one's ability to type, to take dictation, to drive, etc. These tests measure the degree or level of knowledge or skill already attained by candidates at the time of the test.

Dexterity and coordination tests measure speed and accuracy of physical movements. These tests must be very specific to the movements required in the job and are usually constructed by the employer. Examples of such tests are spatial and mechanical abilities, perceptual accuracy, motor abilities.

Personality and interest tests are intended to indicate how a person typically acts and feels, and to determine the type of activities he likes. Tests of this nature have been developed primarily for use in either vocational guidance or clinical use. <u>It is extremely important for a highly trained professional psychologist to evaluate and interpret the results of these tests</u>.

Tests may be further categorized as aptitude versus proficiency. Aptitude tests are designed to measure potential while achievement tests measure skill level at the time of testing.

III. How Tests Discriminate Against Minority Groups

An aptitude test that fails to predict job performance in the same way for both Negroes and whites, or fails to predict job performance at all is not a valid test. If such a test is weighted to differentiate between Negroes and whites, it is similarly invalid and similarly discriminatory. Tests may be held to discriminate in the social sense if they deny equal opportunity for consideration. A test may operate in this manner (a) when scores on it tend to differentiate between identifiable sub-groups, where the sub-grouping itself is not a relevant selection factor, and either (b) scores for the lower group underpredict performance on the job when the standards of the upper-group are applied, or (c) scores on the test do not predict job performance for either group.[1/]

It is known that Negroes on the average do less well on paper and pencil tests than whites. The mean scores for Negroes are lower than the mean scores* for whites on most paper and pencil tests of general ability, intelligence, aptitude, learning ability, or overall ability. The distribution of scores overlap, often considerably, but the average scores differ significantly in most studies.

*Raw scores are converted to norms in order to compare an individual performance with a specific group. See glossary in Appendix B.

More research has been done on the testing of minority group children than workers, but the information which has resulted from this research offers insight into why Negro adults achieve a lower mean score than job applicants from more middle class background. Newton S. Metfessel, Psychologist at the University of Southern California, in his research on children and youth who live in the culture of poverty, found that cultural factors such as home and family structure, personality and social characteristics, learning characteristics, and general school relationships handicap performance on tests.

These children usually come from a home environment where there is such a paucity of objects that the child's conceptual formation development is adversely affected. They also lack curiosity, and this affects both motivational patterns and the development of creative behavior. The culturally disadvantaged child is characterized by weak ego-development, a lack of self-confidence, and a negative self-concept. These conflicting feelings about himself frequently result in exaggerated positive and negative attitudes towards others.[2/]

Many aspects of learning characteristics are affected by the culturally poor background. The culturally disadvantaged typically have a cognitive style which responds more to visual and kinesthetic signals than to oral or written stimuli. Also, these children learn more readily by inductive than deductive approaches. Learning experiences which move from the part to the whole rather than from the whole to the part are

invariably more successful. Significant gaps in knowledge and uneven patterns of learning are typical of this type of background.

Children from the culture of poverty have had little experience in receiving approval for success in learning a task, an assumption on which the school culture is organized. "The cycle of skill mastery which demands that successful experiences generate more motivation to perform which in turn guarantees levels of skill sufficient to prevent discouragement, and so on, may be easily reversed in direction and end the achievement habit prior to its beginning." 3/

In general school relationships and school characteristics, these children from the background of cultural deprivation are placed at a marked disadvantage on standardized tests, which for the most part have been designed to test the white, middle class child. The shortcomings of the standardized tests when they are used with disadvantaged minority groups are discussed below.

A. Reliability of Differentation

Standardized tests may not provide reliable differentation in the range of the minority group's scores. The reliability coefficient for a particular test is strongly affected by the spread of test scores in the group for which the reliability is established. In general, the greater the spread of scores in the reliability samples, the higher the reliability coefficient. For many tests, there is evidence "that children from the lower socio-economic levels tend to have a smaller spread of scores than do children from middle-income families, and such restriction

in the distribution of scores tends to lower reliability so far as differentiation of measurement with such groups is concerned."[4]

B. Predictive Validity

Second, the predictive validity of tests for minority groups may be quite different from that for the standardization and validation groups. Factors which may impair a test's predictive validity are:

1. Test-related factors i.e. test taking skills, anxiety, motivation, speed, understanding of test instructions, degree of item or format novelty, examiner-examinee rapport which may affect test scores but have little relation to the criterion.

2. Complexity of criteria - It is important to recognize the influence of other factors, not measured by tests, which may contribute to criterion success. Since disadvantaged groups tend to do poorly on general intelligence and achievement tests of the paper and pencil type, one should explore background, personality, and motivation of members of such groups for compensatory factors, untapped by the test, which may be related to criterion performance.[5]

While certain aptitude and proficiency tests may have excellent criterion validity for some purposes, even the best of them are unlikely to reflect the true capacity of underprivileged children. They tap abilities that have been molded by the cultural setting. The test content, mode of communication involved in responding to test items, and the motivation needed for making responses are intrinsically dependent upon the cultural context.[6]

C. Validity of Test Interpretation

Third, the validity of the interpretation of tests is strongly dependent upon an adequate understanding of the social and cultural background of the group in question. Sources of error in test interpretation stemming from lack of recognition of the special features of culturally disadvantaged groups are: (1) deviation error - tendency to infer maladjustment from responses which are deviant from the viewpoint of a majority culture, but which may be typical of a minority group. (2) simple determinant error - thinking of the test content as reflecting some absolute or pure trait, process, factor, or construct, irrespective of conditions of measurement or the population being studied. (3) failure barriers - requiring minority group individuals to solve problems with unfamiliar tools.[7]

Job applicants from lower socio-economic levels may be characterized in contrast to their middle class counterparts as being less verbal, more fearful of strangers, less confident, less motivated toward scholastic and academic achievement, less conforming to middle class norms of behavior and conduct, less knowledgeable about the world outside their immediate neighborhood. To the extent that these subcultural differences affect test performance adversely, these persons may be denied the opportunity to employment and a more productive contribution to society. Selection instruments often call for responses that are influenced by the culture of the applicant's community or quality of his educational opportunity. Since such tests are "culturally loaded" against persons from a lower socio-economic status, they may

operate as instruments of racial discrimination. The crucial question is whether employers use techniques that unwittingly eliminate persons who might perform satisfactorily on the job. The relationship between test performance and cultural deprivation on the one hand, and job performance on the other, must be investigated for both white and nonwhite job applicants.

IV. Proposed Solutions to the Problem of Cultural Bias in Testing

Most employers defend tests as an efficient device for choosing the most qualified applicants. Where Negro job applicants consistently score significantly below white job applicants a question should be raised about test scores as predictors of job performance. In an employment situation we would like to know whether differences between group means are also associated with performance on the criterion. Do the factors that depress test performance also depress trainability or whatever criterion is to be predicted? Psychologists have suggested ways in which the effect of cultural bias inherent in many aptitude tests can be alleviated for minority group applicants. Few of these proposals have been universally accepted, but most have been discussed in the professional literature on testing of minority groups and the culturally disadvantaged.

A. Variants of "Culture-Free" and "Culture-Fair" Tests

1. Culture-Free Tests

One such proposal is the development of tests which are free of cultural bias in their content and instructions. Dr. Robert Krug, who has written extensively on testing of minority persons, indicates that one of two conditions must be met before a test can be classified as

"culture-free:" either the test items are those which all people of all cultures have had equal opportunity and equal motive to learn, or the test items must possess complete novelty for all people of all cultures.[8] For all practical purposes these two conditions are almost impossible to meet and the idea is often rejected as unfeasible. Howard Lockwood of Lockheed Corporation states that many industrial psychologists agree that even if such a test could be developed, it would be useless in personnel selection. It is impossible, he maintains, to avoid measuring cultural influences, and if they were completely eliminated from all tests, the tests would measure, in essence, nothing.[9]

2. Culture-Fair Tests

Dr. Krug, on the other hand, does not reject the idea entirely. He describes a "culture-fair" test, as a modification of the "culture-free" idea. The assumption underlying the "culture-fair" tests is that there exists a set of test stimuli which are equally appropriate, that is, equal opportunity and motive to learn, for at least two cultural groups.[10] Dr. Paul Schwartz, who headed an AID-sponsored aptitude test development project in West Africa, has done most of the research in this area. A "culture-fair" test or "culture-common test" developed by Schwartz for Nigerian and American children utilized a set of fruits and vegetables which were approximately equal in familiarity to both cultures.

3. Culture-Equivalent Tests

Dr. Schwartz also developed another variant of this concept called "cultural-equivalent" tests, denoting that two tests which are not

identical may, in fact, be equivalent. In this case investigations were undertaken to discover cultural counterparts of tools and machines, cultural manifestations of mechanical principles, and cultural opportunities to acquire information of potential relevance to mechanical training.[11/] The argument of cultural equivalence rests on the demonstration that tests constructed in this way have been valid predictors of performance in Westernized training programs in shop mechanics, electrical repair, and the like. Developement of similar tests in this country is impeded by lack of knowledge concerning the culture of southern Negroes, northern slum-dwellers of all races, or any other identifiable sub-groups. Dr. Ash asserts that so-called culture-fair tests do not measure aptitudes or characteristics significantly related to most ordinary measures of job success such as turnover, production or foreman ratings.[12/]

B. Creativity Tests

Another approach, adopted by Dr. Newton Metfessel and Professor J. J. Risser, of the University of Southern California involves the use of tests to measure creativity rather than traditional intelligence tests. The latter sample only a relatively small portion of the factors which are involved in intellectual potential and have placed a premium on verbal comprehension and speed of response and emphasize convergent thinking, or the ability to select the one correct answer.[13/]

Creativity tests, on the other hand, stress divergent thinking or the ability to create new or original answers. They are, according to Metfessel, more suitable for the testing of the culturally disadvantaged and certain ethnic groups whose command of language is not highly developed.

These tests utilize the most common and familiar of objects in order to sample the testee's ability to recognize problems, and his originality, flexibility, and fluency of thinking. Tasks include suggesting improvements in a familiar device such as a telephone, or thinking of problems that might occur in the use of an object such as a candle. One test requires the subject to list as many uses as he can for a broom handle.[14/]

The tests are scored simply on the number of acceptable answers given by the subject. They seem to be as effective in predicting academic success as traditional intelligence tests and, probably, would be as effective as the latter in predicting job performance.

C. Differential Selection Among Applicants From Different Socio-Economic Ethnic Backgrounds

It has been proposed that, since prediction equations for job performance for most tests currently in use have been based on the performance of whites, different standards (separate test norms, conversion tables, prediction weights, etc.) be employed for Negores and other culturally disadvantaged groups. This approach involves a technique known as the moderator variable. Applicants for a given job

are divided into sub-groups, and selection procedures are applied differentially to members of the two groups. Applicants could be classified, for example, on the basis of a measure of socio-economic status, demographic data (such as percentage of Negroes living in the census tract from which the applicant is applying), and race.

Studies could then be undertaken to determine whether there is, in fact, a differences in the predictive efficiency of job tests as between high and low status groups. Differences in selection procedures for different ethnic groups do not mean a lowering of standards because the standards which count are standards of performance on the job, not the selection standards. Equally qualified persons may be selected from various ethnic groups by applying the standards which are appropriate to each group.[15/]

Lockwood has proposed the use of "cultural exposure" as a moderator variable. Examinees should be grouped homogeneously as to cultural exposure and these groups treated separately in validity studies. Cultural exposure is defined as the material things to which a person has been exposed and the attitudes to which he has been exposed and which he has acquired. Research would lead to a better identification of the culturally disadvantaged and to the utilization of their abilities through a refinement in prediction of training and occupational success.[16/]

A major investigation is under way by Dr. Richard Barrett to determine if the division of applicants into sub-groups improves the accuracy of prediction for members of both groups. If selection is

improved by applying different procedures to the high and low socio-economic groups, then, the more talented would benefit, regardless of race. "It may also happen that dividing the group of applicants on the basis of race may lead to improved accuracy of predictions for members of both races. Such a result has far reaching implications for fair employment practices because failure to treat the two races separately would, if current policies were followed, lead to discrimination against the more talented Negroes." 17/

The overwhelming evidence is that the cultural background of the Negro in America today is so different from that of the white that his performance during the selection process can reasonably be expected to be different. It may be difficult to find an adequate sample of Negroes in most occupations in order to develop separate and suitable prediction equations for them. Lockwood also cautions against the use of a lower minimum score or separate standards of test performance for Negroes since it might tend to perpetuate the idea of race differences or race inferiority.

D. Dual Test Standards and Compensatory Training

The concept of a "dual standard" has some support among psychologists. Ash cites the work of Dr. Kenneth B. Clark of the City University of New York. Clark's work suggests that culturally deprived people who score low on tests may tend to overachieve on the job. In studying the college performance of students who scored low on college entrance tests, Clark found that for students from non-deprived environments, the tests were good predictors, and low college

entrance test scores were accurate indicators of poor grades. On the other hand, students coming from deprived environments did significantly better in college than would have been predicted from the tests.[18]

An experimental training program run by the Federal Department Stores in Detroit, Michigan, indicates that a lowering of required test scores will not necessarily result in a lower quality of job performance. The Federal Department Stores took 16 young people from culturally and economically deprived areas, all of whom had failed standard employment tests and were classified as "unemployable", and put them through a 10-week special training program. All 16 subsequently were employed, 14 at Federal and two elsewhere. The record of performance of all 14 employees at Federal exceeded what was predicted by standard sales aptitude tests. Some exceeded the company's minimum performance standards for new employees by "unbelievable margins."[19]*

Although the Federal Department Stores experiment is considered one of the first of its kind in offering compensatory training for individuals with low test scores, the concept of "double-standard" has had wide acceptance for years in the fairly common practice of maintaining different norms for the sexes. Several popular tests which offer different sex norms are the Bennet, The Wonderlic, the Minnesota Paper Form Board, and the Thurstone Temperament Schedule.

It is generally agreed that some of these sex differences on tests are undoubtedly of environmental origin. Girls, are expected to score lower than boys on tests of mechanical information. It is also

*Re-test results one year later for the ten trainees still employed by Federal showed no significant changes in the scores as a group.

expected that girls will perform less effectively on tasks for which the Mechanical Information test is a predictor. This, however, does not prevent many companies from employing women in manufacturing tasks which require mechanical ability where they perform satisfactorily.[20/]

On the basis of these examples, it appears that a "double-standard" can be justified in some circumstances, though a double standard in job performance and hiring of less qualified applicants is usually rejected as not being effective. If it can be demonstrated that score X for Group A and Score K-k for Group B are associated with identical levels of performance on the job, then an employer might reasonably consider adopting a more flexible attitude toward test scores.[21/]

E. Intensification of Recruitment - While there are significant differences in average performance, there is a considerable overlap in the distribution of test scores of whites and Negroes. It has been proposed, on the basis of this observation, that employers who wish to maintain their present standard of performance on their pre-employment tests, can increase their number of Negro employees by intensifying recruitment among Negroes in order to identify those whose test performance is equal to that of acceptable white applicants. Although this approach has merit in that it could provide employment for Negroes who are qualified but who do not apply for jobs in companies where they assume discrimination is practiced, it is not a solution to the testing problem. It ducks the question of the fairness of tests to those who fail because of

cultural disadvantage, and it will not provide enough additional workers to satisfy present and future labor needs.[22/]

F. Use of Test Scores as Only One Indicator - One other practical solution similar in many respects to the "double-standard" is to use test scores as only one indicator among others in the hiring decision, with a clear awareness that, where the applicant has not shared in the predominant middle-class verbal culture, the test score significantly underestimates his potential. A difference of one point more or less cannot be expected to determine if an applicant will fail or succeed on the job. Other personal characteristics such as achievement, motivation, and dependability may be just as significant indicators of successful job performance,and they usually can be identified in each cultural group.

G. Proper Testing Practices - Along with adoption of a more flexible attitude toward test scores, the most immediate improvement can be accomplished by an emphasis by the employer on proper testing practices.

(1) The employer could reconsider the relevance of the qualifications for employment to the specific job tasks required by his company. Many of these requirements are stated in terms of some generalized stereotypes, such as high school graduate, high IQ, or potential to advance to higher level jobs, and are quite extraneous to the requirements of that job. Tests should be professionally chosen to fit the distinctive features of both the industry and the background, education and other characteristics of the successful work force. It is unreasonable to insist

that all lower level workers have potential for supervisory positions. An employer may eventually find that by adopting a more reasonable set of qualifications for each job, he will have access to a considerably larger source of workers who can perform capably and who will present him with fewer problems of employee frustration or labor turnover.

(2) Selection tests should be developed by reputable professional psychologists who are competent in conducting testing programs in an industrial setting.

(3) Pre-employment tests should be administered by personnel who are properly trained not only in the technical details of giving tests, but also in the orientation and handling of people in the testing situation. Members of disadvantaged groups tend to be particularly sensitive to any mannerisms that might be considered antagonistic, sarcastic, or condescending, and test administrators should be aware of this and be able by their behavior to alleviate a certain amount of test anxiety. A personnel manager at a recent testing conference complained that the number of Negro applicants for jobs in his company had fallen off by 80 percent after the company recently instituted a pre-employment testing program.*

(4) A policy of re-testing "failure" candidates may gain for an employer many good employees who otherwise would have been eliminated by the first test. Many candidates, particularly members of minority groups, regard testing as a threatening situation and do not perform as well as they could. A second test would provide a more accurate

*University of Michigan Testing of Minority Group Applicants, January 26, 1966.

indication of the true capability of a person who is less experienced with testing situations and who may have been intimidated by his first experience.

(5) Finally, the most important principle is validation of tests in order to confirm the relationship between test scores and on-the-job performance. There is general agreement that tests should not be used for a group which differs from the validation group. Validity is relative both to the criterion to be predicted and to the group for which the prediction is to be made. Very few employers have validated their testing instruments. In a recent survey by the University of Wisconsin Industrial Relations Research Center, 152 companies which apply testing techniques were canvassed and only 7 percent reported that all their tests had been validated locally against on-the-job performance measures. Nearly 60 percent had validated none of their tests. The remainder reported that some but not all of their tests were validated.[23/]

Dr. Warren Ketcham, University of Michigan psychologist and Vice President of Psychodynamics Research and Associates, has suggested that within company norms should be used exclusively. This only requires that an applicant perform on tests as well as or better than persons who have done or are presently doing the job satisfactorily. The norm tables should then be used to rank applicants as sub-standard, low-average, average, high-average, or superior.[24/]

From recent discussions with research psychologists attached to large industrial concerns, it appears that many companies are developing ability

tests which will measure the essentials required for training or employment, while keeping at a minimum the relevant aspects of culture. For a number of reasons, these findings may never be released for general consumption. One of the responsibilities of the Commission will be to encourage this type of research by the psychological profession. If the purpose of tests is to uncover talent and potential, irrespective of label, surely the Commission could not advocate a more commendable policy.

V. United States As A Model Employer

If the Equal Employment Opportunity Commission establishes basic guidelines on testing of minority group applicants, including a provision on validation of tests, it will require private employers to satisfy certain standards which the United States government, as a civilian employer, for the most part does not meet.*

The U. S. government has set a fine example in its standardized testing program for the military where these tests have been completely validated. Testing in the Armed Forces serves a number of major programs, two of which are (1) to identify the number of personnel required in each skill and professional category, and (2) to identify each individual for training, upgrading, and utilization to his highest potential.

In order to maintain validity, test development activities are mainly serviced by professional job analysts, subject matter specialists, and test psychologists and validated in the working area. This systematic approach is essential to assure that the tests sample specific job functions in

*Of some interest is the fact that the United States Employment Service has recently undertaken a program to develop aptitude measures that can be used to evaluate potential for literacy training, vocational training and occupational potential of the educationally deficient. Much of the research is designed to improve the General Aptitude Test Battery (GATB). 25/

direct proportion to the importance of those functions to the job. As a result, job analysis provides not only a basis for test construction, selection and training, but also a means for increasing productivity and facilitating work.

VI. Recommendations for Testing Guidelines

The following recommendations are designed as a guide to help employers establish objective standards for selection, screening, and promotion of workers. These procedures should ensure that all qualified applicants are given equal opportunity for employment.

1. Job descriptions should be examined and their critical requirements established before tests are selected for screening applicants.

2. Tests used should be those developed by reputable psychologists. Such tests should be administered by professionally qualified personnel who have had training in occupational testing in an industrial setting.

3. Rigidly inflexible minimum scores should be re-examined in light of the considerable research under way on differential selection.

4. Test scores must be considered as only one source of information, and must be combined with other available data on performance such as motivation, leadership and organizational experience, self-sufficiency, and dependability.

5. Tests should be validated within the setting where they will be used. Validation should be for as many separate groups as possible in preference to one large heterogeneous group.

6. It may be advisable for employers who deal with applicants from culturally disadvantaged backgrounds to offer re-tests to candidates who are unsuccessful on their first try, since these people are less familiar with testing situations and may not perform as well as they are able.

APPENDIX A

CHRONOLOGY OF THE MOTOROLA CASE

I. July 15, 1963 - Leon Myart, a Negro, applied for a job as a television phaser and analyzer at the Franklin Park plant of Motorola, Inc. Myart took a five minute intelligence test (General Ability Test No. 10), was interviewed, and was sent home without being told whether he qualified for employment.

II. July 29, 1963 - Failing to receive a job offer, Myart filed a complaint with the Illinois Fair Employment Practices Commission and the President's Committee on Equal Employment Opportunity alleging that his not being hired was due to racial discrimination.

III. January 27-28, 1964 - Hearing of the Motorola case before hearing examiner Robert Bryant of the Illinois Fair Employment Practices Commission.

IV. February 26, 1964 - The hearing examiner directed that Myart be offered a job, that test No. 10 should no longer be used, and that any new test developed in its place should "reflect and equate inequalities and environmental factors among the disadvantaged and culturally deprived groups." He argued that the test had been normed on "advantaged groups" and did not "lend itself to equal employment opportunity to qualify for the hitherto culturally deprived and disadvantaged groups."

V. April 18, May 25, July 14-15, 1964 - Review of the Motorola case before the full Commission.

VI. November 18, 1964 - The Commission issued its unanimous decision, finding that Myart had been denied employment because of his race and while not supporting the order to hire Myart directed that he be compensated one thousand dollars.

VII. April 27, 1965 - Illinois Circuit Court decision on appeal of Motorola. The ruling requiring Motorola to pay Myart one thousand dollars was reversed, but the Commission's findings on discrimination were upheld.

VIII. November 11, 1965 - Case argued before the Illinois Supreme Court.

IX. March 24, 1966 - Illinois Supreme Court reversed the judgment of the circuit court on grounds that the alleged unfair employment practice was not established by a preponderance of the evidence.

APPENDIX B

GLOSSARY OF SPECIAL TERMS

Criterion - A standard that provides a basis for evaluating the validity of a test.

Cultural bias - Propensity of a test to reflect favorable or unfavorable effects of certain types of cultural backgrounds.

Culture-fair test - A test yielding results that are not culturally biased.

Culture-free test - A test yielding results that are not influenced in any way by cultural background factors.

Norms - Statistics that depict the test performance of specific groups. Grade, age, and percentile are the most common types of norms.

Reliability - The degree of consistency, stability, or dependability of measurement afforded by a test.

Validity - The extent to which a test measures the trait for which it is designed, or for which it is being used, rather than some other trait.

Psychological test - An observation of a sample of human behavior made under standard, controlled conditions which results in a linear evaluation called a score.

Culturally disadvantaged - Groups which do not have full participation in American society because of low incomes, substandard housing, poor education, and other "atypical" environmental experiences.

Madison, Wisconsin

Dear Karl:

I am happy to see that your piece on testing will be coming out in the Spring issue of New South. It will be quite useful.

Bob Anderson, our managing editor, referred your query regarding Congressional interest in this matter to me. We, of course, do not engage in direct legislative activity, but I would think that it would be useful for members of the appropriate Congressional committees to know of your piece. Please see the attached sheet.

I believe that some of this material could also be brought before the coming White House Conference to Fulfill These Rights. I am serving on a task force for that conference concerned with economic security, including employment, and will see that your article is at least put before the planning staff.

Sincerely,

Emory F. Via
Director
Labor Program

Are Intelligence Tests Unfair?

THE RECENT DECISION of the schools of New York City to discontinue the use of group tests of intelligence was based largely on charges that these tests are unfair to "disadvantaged" children. Such tests are under fire in many other cities. This is but the most recent chapter in a debate that has raged intermittently since the day in 1908 when Henry H. Goddard brought the Binet test from France, translated it into English, and restandardized it for use with American children.

Goddard, who was then research director in the Vineland School, used the test for classifying feeble-minded children, but in 1916 Lewis Terman of Stanford University published an extended form of the Binet which could be used for all adults and children including the very bright. A more recent revision of the "Stanford Binet" is still the most widely used individual test of general intelligence.

From Professor Wilhelm Stern of Germany, Terman borrowed the concept of the I.Q.—a ratio between mental age as measured by the test and chronological age. Neither Binet nor Goddard used the I.Q. in their versions and many psychologists today prefer to report test results as percentiles or standard scores. Consequently an intelligence test is not necessarily an I.Q. test and the terms should not be used interchangeably.

In the 1920s, paper-pencil tests of intelligence that could be administered to large groups of children were introduced into the schools and in some cases the results of these were also reported as I.Q.'s. Unfortunately, a great many parents and some teachers got the notion that intelligence, as measured by these tests, was a fixed, unchanging capacity that the tests measured directly. Neither Binet nor the psychologists who revised his test ever said or believed any such thing. In devising their tests they tried to select items that would give some clue to native endowment—those requiring acuteness of perception, discrimination, and problem-solving ability rather than memory or formal schooling—but they were well aware that scores were influenced by the child's previous opportunities for learning.

"Intelligence" at best is a hypothetical construct—the meaning of the word has never been clear. There is more agreement on the kinds of behavior referred to by the term than there is on how to interpret or categorize them. But it is generally agreed that a person of high intelligence is one who can grasp ideas readily, make distinctions, reason logically, and make use of verbal and mathematical symbols in solving problems. An intelligence test is a rough measure of a child's capacity for learning, particularly for learning the kinds of things required in school. It does not measure character, social adjustment, physical stamina, manual skills, or artistic abilities. It is not supposed to—it was not designed for such purposes. To criticize it for such failure is roughly comparable to criticizing a thermometer for not measuring humidity or wind velocity.

Though psychologists disagree about the nature of intelligence, and about the extent to which it is altered by the environment, most of them believe that test scores reflect inherited capacity to some degree. A minority, who are eager to prove that there is no inherited basis for differences in intelligence, base their claims largely on the exceptional cases of dramatic

OVER →

improvement in I.Q. when children from a restricted environment are transferred to one more stimulating. But whether differences in inherited intellectual endowment are great, small, or non-existent is not the vital question for educators. Whatever the answer to that question may be, nothing can be done about the inherited capacity once the child is conceived. A great deal can be done to improve the educational opportunities that result from differences in the environment, in school and out. The educator's job is to make the most of whatever talent is available.

Since the I.Q. is a ratio between mental and chronological age (multiplied by 100 for convenience) the quotient should remain the same as the child grows older. But psychologists and educators have engaged in endless debate over the stability or constancy of the I.Q. Some of the facts are clear enough but these can best be interpreted in terms of statistical probability. About the best that can be said in words is that if a child tested at the age of six is found to have an I.Q. of 100 there is a high probability (not to be confused with certainty) that if he is tested several years later, with the same test, his I.Q. will not be very far above or below 100, *if* his environment has remained relatively constant during the intervening years. A shift up or down five or ten points is not unusual but the chance that this child will later score an I.Q. as high as 170 or as low as 50 is about as great as your chance of getting a royal flush in your next poker game.

If, at the younger age, the child's I.Q. is 140 there is very high probability that he will continue to give evidence of intelligence far above the average *unless* his opportunities for learning are seriously impaired. This is not to say that he will make straight A's in college or that, as an adult, he will earn a high income or find his name in *Who's Who*. Achievement of any kind requires high motivation and fortuitous circumstances as well as good intelligence. It is most unfortunate that the term "genius" has sometimes been applied to those with I.Q.'s at this level. There are probably a million people in America—one-half of one per cent of the population—with I.Q.'s of over 140, but very few of these are appropriately called "geniuses."

A very low score on a group test must be interpreted with even greater care because of the potential damage done by labeling a child "feebleminded" or "subnormal." There is always a possibility that the low score resulted from the child's inability to read the test questions, negativistic refusal to answer, or illness on the day of the test. A competent psychologist knows this, of course, and will follow up with individual tests, which give him an opportunity to study the child carefully. But when group tests are administered by teachers or principals with no follow-up of individual cases it is dangerous to make a permanent school record of low scores lest such scores be taken at face value by those who will teach the child later.

Though the possibility of occasional error in individual cases is real enough in all group testing, the debate over the question of "fairness" to children from disadvantaged homes suggests a misunderstanding of the purpose of testing. If it is understood that it measures not innate but developed capacity, an intelligence test is unfair to the child from a poor home only in the sense that a scale which measures weight is "unfair" to the undernourished child. The brutal fact is that just as the underfed child is likely to be underweight the child from an intellectually impoverished home *is* handicapped—the test merely tells how much. It is obviously true that any test requiring the use of language is "culture bound" but this is less true of intelligence tests than of tests of academic subject matter. A good intelligence test will occasionally identify a brilliant child who, because of his cultural handicap, cannot do well on achievement tests.

It seems obvious that a modern school system cannot operate effectively without some sort of large-scale testing. But, since many parents and teachers persistently misinterpret I.Q.'s (parents boast of a high score as though it were evidence of moral superiority or a sure promise of later achievement, while some teachers seem to assume that a child of low I.Q. is unteachable) it may be necessary to give up group testing of general intelligence and to substitute tests of special abilities and of achievement. This seems to be what is planned by the school systems which are abandoning group I.Q. testing. The Army, during World War II, saved itself a great deal of controversy by calling its intelligence test the "Army General Classification Test" and by substituting standard scores for I.Q.'s.

The *individual* test of general intelligence, such as the Stanford Binet, which is given to one child at a time remains a useful instrument. The psychologist who administers the test is able to observe any evidence of emotional disturbance, lack of motivation, or language handicap that might render the test score invalid. To deny the use of this instrument to properly trained clinicians would be a large step backward. —P.W.

Mr. Emory Via
Southern Regional Council
5 Forsyth Street
Atlanta, Georgia 30303

Dear Mr. Via:

Professor Karl Smith, of the University of Wisconsin, has suggested that I send you the accompanying reprint from The Congressional Record that contains the full text of an article of mine that appeared last October in The New York Times Magazine. Its title is "The College Board Fails the Test."

If you are interested in further details of some of the problems in the testing situation, may I refer you to my book THE TYRANNY OF TESTING, which is now available as a Collier paperback, and also to my letter in last Sunday's New York Times Magazine, on page 36, which had to do with the sample questions for the draft deferment test.

Sincerely yours,

Banesh Hoffmann

PROCEEDINGS AND DEBATES OF THE 89th CONGRESS, FIRST SESSION

Vol. 111 WASHINGTON, WEDNESDAY, OCTOBER 27, 1965 No. 199

College Boards and Our Nation's Scholastic Profile

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, October 22, 1965

Mr. METCALF. Mr. President, within a few weeks, many of our high school seniors will take a crucial test. On December 4, the College Entrance Examination Board will be administered to next year's prospective college freshmen. Other seniors will take the test later in the school year. For some of them, the CEEB may determine whether or not they receive a college education. The scores they receive are a major determinant of scholarship aid as well as of admission to the college of their choice.

The parents whose children are taking this test, and the students themselves must have been dismayed and concerned to read the article which appeared in the Sunday magazine of the New York Times late last week. The article, written by Banesh Hoffmann, is entitled "The College Boards Fail the Test." I commend it to the attention of the Senate and ask unanimous consent that it be entered in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times magazine]

THE COLLEGE BOARDS FAIL THE TEST

(By Banesh Hoffmann)

(NOTE.—Banesh Hoffmann, a theoretical physicist who teaches mathematics at Queens College of the City University of New York, wrote "The Strange Story of the Quantum" and "The Tyranny of Testing," both available in paperback.)

Millions of American students each year take nationwide tests of scholastic aptitude and achievement that can have decisive effects on their educational futures. Altogether, students fill out well over 100 million standardized test forms a year, and these tests are almost exclusively of the multiple-choice, machine-gradable type.

For many students, testing reaches a climax in the scramble for college admission. In the 1964–65 academic year, for example, an estimated 1,390,000 candidates took the scholastic aptitude tests of the College Entrance Examination Board, and these and their companion achievement tests are by no means the only ones used for college admission purposes, though they are probably the best of their sort.

But how good is this best? How well do the college board tests fulfill their intended function? Even more important, how serious are the side effects of such mechanized tests? These are questions that we dare not treat lightly. Too much is at stake, not only for ourselves and our children as individuals, but for all of us as a nation. The answers are not necessarily reassuring.

With its approximately 600 member colleges and its strategic role in college admissions, the College Entrance Examination Board now occupies a position of enormous prestige and power in education. Its tests and its actions are inevitably reflected in educational practice throughout the country, and whether it wishes to or not, it affects intellectual standards by its own example, which should be one of excellence.

Naturally, in its exposed position, the college board has not escaped criticism. Critics have said, among other things, that its mechanized tests penalize subtlety and originality while favoring quick-witted superficiality and conformity; that they foster intellectual dishonesty; that they are made artificially difficult by means of ambiguity because genuinely searching questions do not readily fit into the multiple-choice format; that they neglect skill in disciplined expression; that they corrupt education.

The aim of the tests is to help in the selection of students for entrance to college, but, as Benjamin D. Wright gently put it a decade ago, when he was president of Smith College: "[They seem] to give the advantage to certain kinds of minds, although not always to those which will take the greatest advantage of college opportunities."

The College Entrance Examination Board was founded at the turn of the century to bring an element of order and uniformity to a chaotic situation in college admissions. It began with a grant from the Carnegie Corp., but is now supported by the fees it charges those who take its tests. It maintains its own full-time administrative staff.

Twelve colleges were the board's charter members and its first examinations were taken by 973 candidates. They were essay examinations.

During World War I, mass testing began to assume national importance, with inductees being sorted by means of what the Army called Alpha and Beta tests. After the war, the college board began to show cautious interest in such methods of mass testing, and in 1926, not without opposition from member colleges, it gave its first "psychological tests," calling them scholastic aptitude tests. In 1929 these SAT's underwent major improvement, being divided into two parts—one to test scholastic aptitude of a verbal sort and the other, scholastic aptitude of a mathematical sort, a separation that is maintained to this day.

Grading essays is expensive and time consuming, and essay graders are distressingly subjective: They do not even agree with their own ratings when given essays to regrade a few months later. During World War II, the board, over bitter opposition from member colleges, gave up essay tests—as a war measure—and substituted achievement tests of the mechanized sort now used. The English composition examination was an exception, but of that story and its strange convolutions, more later.

Meanwhile, in Princeton, N.J., the board had set up modest research facilities which, like the board itself, quickly became involved in extensive wartime activities. Because the research arm continued to expand into various testing activities after the war, it was set up as an autonomous nonprofit organization, Educational Testing Service, so that the board could concentrate on college admissions. Over the years ETS has become enormous: Its psychologists alone are now numbered in the hundreds. It makes up all the board's tests, as well as many others used by schools, graduate schools and governmental agencies, and it has earned a high place in the realm of testing, ranking among the very best in its field.

The SAT's and the achievement tests have different aims. The former seek to measure general academic potential, while the latter, offered in more than a dozen different subjects, are intended to measure specific academic achievement.

They are constructed by ETS with elaborate professional care. Special committees of professors, teachers, and psychologists select and prepare questions that are tried out by being inserted in actual tests (though not used in the scoring of those tests). The responses of the candidates are subject to statistical analysis designed to reveal, for example, which questions perform their intended function well, which are ambiguous and which favor those who actually scored poorly on the nonexperimental part of the test. Only after passing this rigorous statistical screening may a question be used in the nonexperimental part of a test.

But this is only the beginning. The SAT's are validated by comparing students' scores with their subsequent performance in college, statistics once again being brought into play, and it is primarily statistics that have molded the evolution of the SAT's to their present form. If scientific routine were all there is to science it would be hard to refute the claim that the tests are products of science, a claim that has repeatedly intimidated humanists critical of the test.

How well do the SAT's perform their intended function of predicting college grades? It depends on the college, but on the whole, in the purely statistical sense, they do so no better than a man's weight indicates his height. Many colleges, from Harvard down, find the board's tests valuable, and when the scores are used skeptically, which unfortunately is not always the case, they can give admissions officers useful supplementary data.

However, the University of California, which had been admitting students on the basis of their high school grades, made a 2-year study of the effect of combining these grades with SAT scores. The statistical improvement in prediction turned out to be so slight that the idea of requiring all candidates to take the SAT's was forthwith dropped.

Statistics are not everything, of course. Other things are also important. For the benefit of prospective candidates, the college board, aided by ETS, puts out booklets describing its tests and giving sample questions. We shall consider here the 1964 booklets describing the SAT's and the achievement tests.

Since, in the eyes of candidates and their teachers, these booklets represent, among other things, the quality of ETS and the college board, and since, if only by implication, they set intellectual standards, we would expect them to be prepared with meticulous care. Indeed, they often read as though they had been prepared by committees. It comes as a surprise, then, to find signs of carelessness, such as a "y" instead of an "x" in a sample mathematics question, and even faulty wording, such as: "The SAT can provide only a sample of your verbal and mathematical aptitudes," when what the SAT does is test such a sample, not provide it.

Were such slips the only reason for concern, we could forgive them. At worst we might mention them for the innocent pleasure of causing brief reddening of faces in high places. But, as we shall see, they are not the only reasons for concern, and they may well be symptoms of a wider carelessness with deeper implications.

The SAT is a 3-hour test containing both verbal and mathematical questions. It currently measures verbal scholastic aptitude by means of multiple-choice questions of just four types: questions dealing with antonyms, sentence completions, analogies, and reading comprehension. Samples are given in the booklet describing the SAT's. Let us examine one of each type—not, of course, selecting the four questions for purposes of flattery.

The first sample question in the booklet asks which is most nearly opposite in meaning to the word "exaggeration," the choices being: "(A) slight misunderstanding; (B) silence; (C) accurate representation; (D) truth; (E) understatement.

A competent student would probably pick the wanted answer without hesitation. As the board explains: "Since exaggeration means to overstate the truth about some matter, the appropriate answer is (E)." A deeper student might worry, though, feeling perhaps that precision is an absolute, and that there is an element of exaggeration in understatement. Indeed, when I tried this question out on a few professors and students, three professors in the humanities chose (E), but three in mathematics rejected it, as did a number of my mathematics students. However, since the question is intended as a test of verbal and not mathematical aptitude, let us not press this particular point but look instead at the board's own discussion. It goes as follows:

"If you know the meaning of the word, answers (A), (B), and (D) are obviously inappropriate. Answer (C) is, in a sense, partially correct, but represents what may be called a midpoint between the extremes of 'exaggeration' and 'understatement.' But it can be regarded as the midpoint of a U. It can also be eliminated as a possible correct answer if you consider that (C) and (D) are almost identical in meaning. If you reason that (D) is incorrect, then (C), too, must be wrong."

The word "consider" casts a pall of ambiguity over the whole passage. Suppose it is meant in the sense "take into account." Then the board is apparently saying that (C) and (D) are indeed almost identical in meaning. But in that case, why did it previously treat (C) and (D) differently, lumping (D) with (A) and (B) as "obviously inappropriate," and then giving special consideration to the "partially correct" (C)?

Since the above leaves the board in a predicament, let us explore the possibility that "consider" was meant in the sense "believe." This allows an escape, since it gives us a chance to interpret the passage as saying that the board does not itself believe that (C) and (D) are almost identical in meaning. What the passage is now saying, in effect, is that if the student erroneously be-

lieves (C) and (D) are almost identical in meaning, and if he has already eliminated (D), then he can also eliminate (C), for an incorrect reason.

It is hard to believe, though, that the college board would thus deliberately point up one of the basic defects of multiple-choice tests: that they ignore quality, being concerned only with choices of answers and not with reasons for choices. Picking a wanted answer for no matter how stupid a reason scores 100 percent on a question, while picking an unwanted answer, even for reasons of Einsteinian majesty, automatically scores zero.

This ignoring of quality, this all-or-nothing system of scoring, this insistence on conformity, this refusal to let the student express himself in words, this rigorous exclusion of evaluative judgment lest it contaminate the sterile precision of the grading—it bears a proud name. It is called "objectivity." And machine-gradable tests are called "objective tests."

Look next at this question. It is of the sentence-completion type, in which the candidate is required to pick the one set of words which, when inserted in the blank spaces in the sentence, best fits in with the meaning of the sentence as a whole:

"Despite the popular feeling against—in college football, the major teams have found it difficult to ——— without encouraging outstanding athletes with scholarships.

"(A) competition—survive, (B) favoritism—be impartial, (C) professionalism—win, (D) academic standards—discriminate, (E) rivalry—qualify."

Most of us would probably quickly pick (C). Indeed, the question may be too easy: If almost every student picks the wanted answer to a question, the question is virtually useless for test purposes and is usually discarded. How can we make this one more difficult?

There is an easy way. In answer (C), "professionalism" fits excellently into the first part of the sentence, as "win" does into the second. In (A), however, "competition" (if not excessive) makes no worthwhile sense in the first part, and "survive" makes none in the second. Let us, then, simply interchange "survive" and "win" so that (A) and (C) now read: "(A*) competition—win" and "(C*) professionalism—survive." At once we have a harder question.

Do you object that this is utterly improper? That instead of worthwhile difficulty we have introduced a spurious substitute? That no reputable test-maker would offer the above question with "survive" and "win" thus interchanged? Educational Testing Service and the college board do so in the SAT booklet.

It would take too long to go into all aspects of this question. The wanted answer is what we have labeled (C*), but once "survive" is counted as acceptable, "competition" cannot properly be rejected, and a close analysis shows that even the presence of the word "despite" does not save the question from ambiguity at the least.

We may not console ourselves with the belief that defective questions are so infrequently met as to have negligible significance. They are all too frequent, even on tests made by organizations as good as ETS. Dean Harry N. Rivlin, of the City University of New York, unwittingly gave the game away when he praised a test made by ETS with the words: "There are remarkably few items in which the key is challengeable." This is a little like praising the editors of the New York Times by saying that there are remarkably few who are illiterate. Again, the graduate record examinations are made by ETS, yet when Prof. E. M. Hafner of the University of Rochester scrutinized a GRE in his own subject, physics, he expressed the opinion that about 25 percent of the questions were defective in that if one thought deeply one would pick an unwanted answer.

Here is a sample analogy question taken from the SAT booklet:

"Island: Water:

"(A) sand: desert; (B) mountain: ocean; (C) city: meadows; (D) lake: land; (E) river: banks."

The official instructions call on one to select the paid "which best expresses a relationship similar to that expressed in the original pair." Sometimes in these analogy questions the particular aspect of the original relationship that the testers have in mind is fairly easy to guess, as perhaps it is here. At other times it can be quite obscure.

The wanted answer here is (D). But suppose we think of the original pair as expressing the relationship of terrestrial solid to terrestrial liquid. Then the "best" answer is (B), and (D) is quite unacceptable.

There are further points that can be made in favor of (B). For example, in general an island is a protuberance, as is a mountain, and each rests upon and is directly joined to the solid earth; but a lake is not a protuberance, and in general it does not rest on water, nor is it directly joined by water to the oceans. Those who wish to defend (D) would do well not to argue here that a lake can be linked directly to the oceans by a river. If they did, they would negate the implication of insularity, the very aspect of the relationship on which they principally rely.

Again, under appropriate circumstances, a mountain in an ocean can actually be an island in water. Identity being a close similitude, we could hardly deny that (B) can express none too badly "a relationship similar to that expressed in the original pair."

At first glance this question seemed relatively straightforward. Only after we stopped to think did its complexities begin to show—a not uncommon occurrance. A national merit scholar put the matter aptly in these words: "One of the best pieces of advice to give on 'how to take multiple-choice tests' is this: Play your hunches. If you stop to think, you'll only get confused."

The basic fallacy in analogy questions is clear: The given relationship inevitably has many facets, and the particular combination that the tester has in mind is neither specified nor unique, a point that Prof. L. La Fave of Indiana State University has particularly stressed.

In the SAT's the board measures reading comprehension by means of groups of multiple-choice questions pertaining to passages of some 400 words on various topics. The danger here is that imprecision, ambiguity, and worse may enter when the tester paraphrases the passage. For example, the wanted answer to one of the reading-comprehension questions in the SAT booklet is to the effect that the Kennelly-Heaviside layers in the atmosphere "do not affect [radio] waves of certain lengths." But what the passage says is that the layers "are transparent" to the longer waves.

That they are transparent to these waves does not mean at all that they do not affect them. How, for example, does the tester imagine that eyeglasses could perform their function if they did not affect the light waves to which they are transparent? The passage is about a scientific topic, yet the question penalizes the student who knows even a little science while favoring the one whose lack of scientific understanding allows him to equate "are transparent" and "do not affect" without a qualm.

These are samples, culled from the college board booklet, of the four types of multiple-choice questions with which the board currently assesses the verbal scholastic aptitude of candidates for college admission. The board assures us that they are solidly based on scientific research. A closer look at the procedure, though, shows that it is more scientism than science. It is based on statistics, and to use statistics we must first reduce what we seek to measure to numbers. But not everything lends itself readily to arithmetical treatment. Indeed, the most valuable human qualities are often those that are the most resistant to reduction to numerical form.

What does the "scientific" scholastic-aptitude tester do about such recalcitrant qualities? He ignores them—as he ignores all the damaging side effects of his tests. He concentrates solely on those superficial aspects of evaluation that he can conveniently reduce to numerical terms, and these alone he feeds into his computers. If what comes out goes against the sensibilities of scholars, so much the worse for the scholars and their subjective views.

Moreover, the statistical tester is like a man who appraises his milk by its bulk, unaware that part of the cream may have been skimmed off. When our concern is for one student out of a hundred, the tester's mass statistics will not reveal our loss. Yet even one in a thousand comes to a thousand in a million, and thought the penalizing and thwarting of this exceptional thousand may seem statistically trifling to the objective tester, it is certainly no trifling matter, and ignoring it does not make his method of testing scientific.

In the arts, subjectivity is rampant. But imagine the sterility that would ensue were the task of separating masterpieces from trash handed over to "scientific" evaluators who relied on statistical techniques for the sake of objectivity. Excellence, in the deepest sense, is not likely to be discoved by such methods.

If the present college boards leave much to be desired, why are they used? A major reason is that they are cheap and convenient and can handle large numbers of students expeditiously. The pressure of numbers is a powerful argument. With so many candidates to be rated for college admission, mechanized tests have obvious economic and practical advantages, as the testers are quick to point out. But not all bargains turn out to be bargains in the long run. If it is bargains we seek, why do we not use lie detectors as a substitute for the whole system of trial by jury—starting in this anniversary year of Magna Carta? The monetary saving could be enormous.

The college board and ETS would have us believe that theirs are searching tests worthy of the best students. But their own actions belie this. On the verbal part of the SAT they give 40 questions to be answered in 30 minutes and a further 50 questions to be answered in 45 minutes. This leaves so little time for contemplation that even if deep questions were present they could hardly elicit deep responses. At such a pace can the SAT's be other than superficial?

Perhaps, though, depth is out of place when we are testing merely for aptitude. Perhaps the deep questions are reserved for the achievement tests, even though those tests too are objective. Alas, it is not so. Here, for example, is what the college board says about the achievement test in history and social science:

"Each test consists of about 100 questions and has a time limit of 1 hour. Some of the easier questions should take you only a few seconds; others, more complex and requiring more thought, will take longer."

One would be hard put to match the delicate, if unconscious, irony of this statement.

On the basis of elaborate experiments, ETS and the board decided that the best way to measure ability in English composition was by means of an achievement test that involved no English composition. To the layman and the scholar this is manifestly ridiculous, and the teacher sees it as threatening to corrupt the teaching of English composition. But to the testers it was apparently an indisputable scientific fact.

Their test contained multiple-choice questions testing the student's ability to perceive such things as grammatical errors, inappropriate wording, tautology and misuse of metaphors; to recast sentences; to match styles; to restore the original order of shuffled sentences, and so on. In addition as a departure from strict multiple-choice objectivity, it asked him to correct a passage written in atrocious English.

But when they included it among their achievement tests it caused much dispute. To counter the criticisms, ETS and the board made a further experiment. They studied statistically the success with which three different tests measured ability in English composition: an essay test, the verbal part of the SAT, and their nonessay objective test (which they had had the audacity to call the "English composition test"). The statistics gave a scientific verdict: The essay test was the worst, the so-called English composition test was in the middle, and the SAT verbat was the best.

Armed with scientific evidence of such seeming cogency, the testers easily overawed the humanists, at least for a time, and this left them free to give their so-called English composition test instead of a test involving essays. So unnerved were the scholars that they failed to note the staggering fact that the board demonstrably did not believe in its own scientific statistical argument—the very one with which it had overawed them. Yet the evidence was clear. Had the board believed in its own argument it would have given up not only the essay test but also its miscalled English composition test and used the SAT verbal instead, for the SAT. Verbal was the test that had statistically, and therefore "scientifically," come out best—despite the fact that it had never been intended as a test of ability in English composition.

After a while, the scholars began to find renewed courage. Their commonsense told them that abandoning essays were wrong, and they forced the board to yield to the extent of giving a subsidiary 1-hour essay test. But the board was clearly reluctant. It gave the essay test the unattractive title "Writing Sample" and refused to grade it. Colleges that insisted on having candidates for admission take the essay test had to make arrangements as best they could to grade it themselves.

But the pressure continued, and to meet it the board incorporated a 20-minute essay into some of its 60-minute English composition tests—though into only a small proportion of them.

The latest twist in this curious tale introduces a note of irony. The board has just completed a new experiment, somewhat different from previous ones, and this experiment shows statistically that essays are, after all, worthwhile tests of ability in English composition. It is easy to be cynical about all this and to wonder whether perhaps science is here following the election returns. But the new experiment, like the previous ones, was performed in good faith, and carefully performed, and we must applaud the courage of the ETS investigators in pursuing an experiment that went against previous ETS findings. And if all that has been presented in this article leaves us with a feeling of misgiving, we have to remind ourselves in all fairness that ETS and the college board are among the very best of the testing organizations. Indeed, their high standing points up the need for establishing a distinguished committee of inquiry to look into the whole testing situation in the public interest.

Because of the new experiment, the board is about to propose to its members that the 1-hour "Writing Sample" be replaced by a 2-hour test, 1 hour of which will be objective and the other devoted to two essays to be graded by the board. It is not yet ready

to suggest giving up the present 1-hour English composition test, but if the proposed new test is ultimately accepted it may well end up as the sole English achievement test.

There is a ray of hope in this. Perhaps one of these days ETS will have the courage to pursue an experiment proving "scientifically" what is already clear: that the college boards penalize deep students. The ensuing reforms could be momentous.

Meanwhile, here is a way to make a start on the road toward reform if the 2-hour English test comes into being. As an essay topic give, say, an analogy question, such as the "island: water" one. But do not ask the student to select the wanted answer here. Instead, have him use the question as a springboard for flights of fancy. Have him analyze the question, giving as many reasons for and against each choice as he can think of, both serious and flippant. And above all assure him that critical remarks will be welcomed and not held against him.

Many students would be dumbfounded by such an assignment, and among them could well be uncreative ones with the happy knack of picking wanted answers. But a few gifted students, oppressed by the restraints of the multiple-choice format, would revel in their new-found freedom. Now at last they would have a chance to break through the multiple-choice barrier and, against a background created out of its remnants, show something of their true quality. Imagine the inspired essays that would be forthcoming, the wit, the frolics, the deliberate sophistry, the cogent reasoning, and the gentle, and ungentle digs at the objective testers. Imagine, too, the fun of grading such essays, and their salutary effect on the college board. It is certainly worth a trial. We already have far two many mechanized tests in the United States, and it could start a revolution.

But the revolution lies ahead. For the present, candidates for college admission will have to pay such heed as their intellectual integrity permits to that old prescription for success:

Pick "best," young man—and let who will be clever.

Mr. METCALF. Mr. President, Mr. Hoffmann's book "The Tyranny of Testing," published in 1964, in greater detail, expresses his concern about multiple-choice testing of all sorts. He analyzes demonstratably vague and ambiguous questions which are contained in college examinations, board tests, in the national merit scholarship tests, and other widely used scholastic aptitude tests.

All of us enjoy nit-picking at specific test items and I am sure that every Senator in this body can recall ridiculous questions from tests he took in college and in the armed services. But the questions themselves are not really the central issue. We must continually consider and assess the impact of aptitude tests on our educational system. We must stop to think of how they influence a high school English teacher who is attempting to prepare students for college. We must consider their part in setting intellectual standards for the young people of our Nation.

Commissioner of Education Keppel is concerned with testing also. However, he is not looking for individual levels of "scholastic aptitude" but for a group "profile" of our Nation's scholastic strengths and weaknesses. Those of us who have worked for the passage of the Elementary and Secondary Education Act were gratified to read Commissioner Keppel's speech of September 22, 1965, in which he discussed the need for a better reporting system on the quality and progress of our schools.

I ask unanimous consent that Mr. Keppel's speech be printed at this point in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

TOWARD A NATIONAL ASSESSMENT OF EDUCATION [1]

You were good enough to suggest that I might talk a little bit on what is called national assessment. I wonder if I could start personally with opinion and then shift to fact.

First, with regard to opinion. Personal opinion No. 1: I am personally opposed—and vigorously opposed—to a mammoth national testing of all children. I do not think that the instruments that we have achieved have the sensitivity necessary to justify any such procedure.

Second, I do not believe that any of us are, or probably ever will be, able to resist as teachers the tendency to teach for a test which you know darn well that kid is going to get. This is a personal view, and I don't care whether we are talking about a required national testing or voluntary (testing).

Next, personal feeling. With the immense complexity of the American educational system, particularly since the end of the Second World War, with the extraordinary migration that this Nation is engaged in, almost unlike any other nation in the world—20 percent of our people move every year—I think we are coming to the point where the role of the National Government as demonstrated in legislation this past year will be increasing. I happen to believe that it (the Federal Government) should always be the junior partner, financially and in every other way. It is sounder public policy to keep the majority of the stock locally, a larger portion of the stock at the State level, and a minority of the stock at the Federal level.

We are in an age in which we are going to need a better reporting system than we have had on the quality and the progress of the schools. This is partly documentable, I think, and I do refer to this as a fact because of the language that was written into title I of the Elementary and Secondary (Education) Act. Title I sends money into local school district plans that are approved by the State. You will find Congress inserted language saying that reports had to be submitted by the States to Washington, through the Office of Education and then to the Congress, on what effect these funds were having. That is just one of a good many such requirements of the Congress that amount to saying, if we are going to put up a million dollars we would like to know what happened to it. So then, this is a mixed personal (opinion) and fact here.

Another personal opinion to which I will add some facts, and I hope I can persuade you, is that we are really in a very different position in 1965 with regard to the problem of reporting the educational enterprise than we were in 1935 or certainly 1925.

The major differences are, I think, in two categories: No. 1, the development of the science, may I call it, of statistical handling has been substantial since roughly 1925 or 1935. It is in the last quarter century, anyway, that one can get within 5 percent accuracy or even less by dealing with very small samples.

I don't see that we need 100 percent accuracy. You're going to be putting funds into areas in which society concludes improvements should be made. What you want is a general reporting system. The development in the last 25 or 30 years of statistical sampling is one of the phenomena which we are more accustomed to in opinion polls, but we haven't used it very much in the educational area.

So, my opinion here is that statistical sampling theory and technology have developde to the point where we ought to be able to use them without running the risk—now please note, I am stating personal opinion—without running the risk which I figured at the beginning. If I thought that sampling would lead inevitably to national testing, like the first drink to alcoholism, I would oppose the whole works. But I think we've got to have a better reporting system.

The Office of Education can tell you all sorts of things: How many teachers we have, how tall they are, how many buildings we have, and whether they are painted or not. It doesn't tell you how much the kids know, and sooner or later we are going to be asked.

Very well, then, it was on the ground of these personal opinions and some facts that I encouraged Carnegie Corp. of New York to explore, with private funds and in the private realm, the question of whether it would be possible to get a better reporting system by taking a sampling of the knowledge of children—5 percent samples, 4 percent samples, but much less than 10 percent—to learn whether two things have developed: If the theory, the applications, the methods of statistical handling, could be successfully adapted to our need; and second, whether the testing art had developed to the point where we could do considerably better than guesswork if we used testing in connection with statistical handling.

Carnegie Corp. made a grant—a series of them, I guess—and set up a committee. There is a note on this in the current issue of the Phi Delta Kappan. The committee was headed by Ralph Tyler, of Stanfard. He used to be professor of education at Chicago, then became dean, and then went to hell in a hack at the Ford Foundation. That happens to deans. Anyhow, this group consulted with a lot of people.

I think a basic confusion was allowed to develop at the start: The word "testing" got into it. The minute I hear the word "testing" I think of kids in a classroom being tested on the same subject at the same time all over the place. It's inevitable. The idea of 5 percent or less statistical sampling got lost in the discussion the way these things do. The committee had a lot of meetings and then came down to the following statements which I quote:

"A well-conceived and well-executed assessment would, it is hoped, serve several important purposes." (Not necessarily the ones I started with, incidentally. I was just simple minded and thought we ought to have a way of reporting to the Congress so we wouldn't hurt so much every year I go up there.)

"First, it would give the Nation as a whole a better understanding of the strengths and weaknesses of the American educational system. Thus, it might contribute a more accurate guide than we currently possess for allocation of public and private funds, where they are needed, what they achieve, and decisions affecting education.

"Second, assessment results, especially if coupled with auxiliary information on characteristics of the various regions, would provide data necessary for research on educational problems and processes which cannot now be undertaken." If you have a bank of data of this sort you could probably do some research that would otherwise not be possible.

"Third, when sampling and testing procedures are adequately developed, international comparisons might be possible."

As a result of this committee report, Carnegie said, let's try it; make up some tests for four groups. The committee decided that the sensible way to begin sampling was by age level: Children approximately 9 years old, children approximately 13 years old, youth approximately 17 years old, and this charming group known as "adults." That, I presume, is anything over 17. In any case the committee wanted to cut at a certain level.

The committee has made contracts with the American Institute of Research, Educational Testing Service, Psychological Corp., and Science Research Associates to construct initial instruments in reading, language arts, mathematics, social studies, citizenship, fine arts, and vocational education. At least two contractors are working in most areas to develop more than one approach.

These will be quite different from the usual test, which is an effort to diagnose an individual student and predict whether he'd do better at Harvard or Yale or some equally incomprehensible result. The purpose here is not to test the individual; in fact, no one kid would take the whole of any one test. But the purpose is to guess how much they know. Therefore, it is a different kind of instrument. They propose to pretest these things after the first of November and then get a little more serious tryout in spring of this year.

I presume that they will see problems here, try to work them out, see what the results are—whether you get any kind of assessment of groups. The purpose, of course, is not reporting to schools on particular schools—certainly not on particular teachers, because that wouldn't make any sense. You've got such a tiny sample. This test would report, rather, on general levels, regionally or something similar, over a period of time—and I think it would be a great mistake to move too fast on this—so that the United States might have a method of being able to say that our schools have advanced so much, just as you do with children. * * * Haven't you backed yours up against the bathroom wall and put a thing on their head, and drawn a line and said all right, in the time since we drew the last line, at least he has grown up that much? It is about as simple as that, I suppose. Maybe too simple.

At any rate, that's the development of the Carnegie program. I had thought, and continue to think, that explorations in this area are much better done under private auspices and without Government money. I remain interested, very much interested, in the results of this in 6 months from now or so. If the conclusion is that assessment can be done by sampling without the risk of national testing, I shall myself be of a mind to say that we had better go ahead with Government or private or any other kind of money so that we do have this method of reporting.

Not on individual children. Please let me underscore this. We are dealing with a small percent. Actually, most children would never be tested in the course of their lifetime. And no child would be tested in all subjects anyway, because you take this sample from here, there, and somewhere else.

I would argue that this project deserves the full attention of the professional educational world. We are not now reporting satisfactorily to ourselves, and I must report to you as your representative in the executive branch of the Government that we are not providing satisfactory information to the public and to those who are responsible for making public policy. We've done remarkably well in getting a lot of legislation through, and I suspect it might be useful now to have some numerals.

That's the background.

[1] Highlights of remarks by Francis Keppel, U.S. Commissioner of Education, addressing an executive luncheon at the National Education Association, Washington, D.C., Sept. 22, 1965.

Mr. METCALF. Mr. President, unfortunately, when one sees the vast amount of paperwork for every school with which Mr. Kepple's staff has burdened this new program, one recognizes the inconsistency of his protest that the Department is only sampling.

I am sure there are some schools in every State that would find it convenient and suitable to participate in the sampling. But to require that every school—in addition to all the usual paperwork routine of initiating a new program—now test to measure the profile of our Nation's education is stifling and defeating to the objectives of the legislation.

I also share the concern of numerous State education officials and local school administrators who are disturbed about the multiplicity of reports required by the regulations and proposed regulations of the officials in the Office of Education who are in charge of the administration of the Elementary and Secondary Act. There is evidence that a good many of these requirements are based upon the eagerness of these officials to use the reporting requirements of the act as a basis for gathering information for future research projects. Of course, such requirements were never contemplated by the authors of the act or by the Congress. These unduly burdensome reports required of already overworked local school administrators threatens to alienate public support of this legislation before it has had an opportunity to demonstrate its value.

When the Elementary and Secondary Education Act of 1965 passed, it was the belief of many that this bill was the most significant improvement in 100 years toward full development of our most precious natural resource, our youngsters. In his recent speech to the final Democratic caucus of the session, Majority Leader MIKE MANSFIELD called on every committee of the Senate next year to assume the task of the many new Federal approaches to the Nation's problems. I urge that educational testing, as well as the many new reporting requirements, be one of the first areas in which Congress functions as an overseer. The Education Subcommittee of the Senate Labor and Public Welfare Committee or a specially appointed subcommittee should delve thoroughly into the whole question of educational testing, including widely used privately sponsored tests such as the College Entrance Examination Board, as well as the national survey. The reporting procedures which have been adopted by the Office of Education should be carefully considered in the light of the guidelines laid down by Congress in the Elementary and Secondary Education Act.

Mr. Banesh Hoffmann
Department of Mathematics
Queens College
The City College of New York
Flushing, New York 11367

Dear Mr. Banesh:

Thanks for sending the reprint from the Congressional Record regarding testing and for the references to your book and recent letter to the New York Times. Although we are not likely to publish anything further in this area soon it is very valuable for us to have this further information.

Our quarterly publication containing an article by Karl Smith will soon be off the press. I will see to it that one comes your way. Thanks for the interest and cooperation you have shown.

Sincerely,

Emory F. Via
Director
Labor Program

GUIDELINES ON EMPLOYMENT TESTING PROCEDURES

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

August 24, 1966

EEOC

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

GUIDELINES ON EMPLOYMENT TESTING PROCEDURES

August 24, 1966

GUIDELINES ON EMPLOYMENT TESTING PROCEDURES
ADOPTED BY
THE EQUAL EMPLOYMENT OPPORTUNITY COMMISSION
August 24, 1966

Title VII of The Civil Rights Act of 1964 provides that an employer may give and act upon the results of "any professionally developed ability test provided that such test. . . is not designed, intended or used to discriminate because of race. . ." (Sec. 703 (h)). The language of the statute and its legislative history make it clear that tests may not be used as a device to exclude prospective employees on the basis of race. The Commission accordingly interprets "professionally developed ability test" to mean a test which fairly measures the knowledge or skills required by the particular job or class of jobs which the applicant seeks, or which fairly affords the employer a chance to measure the applicant's ability to perform a particular job or class of jobs. The fact that a test was prepared by an individual or organization claiming expertise in test preparation does not, without more, justify its use within the meaning of Title VII.

Evaluation of test results is but one of several methods available to an employer in screening applicants and selecting new employees. If the facts indicate that an employer has discriminated in the past on the basis of race, sex or other prohibited grounds, the use of tests in such circumstances will be scrutinized carefully by the Commission.

An employer committed to equal employment opportunity will take affirmative action to ensure that all of his personnel policies are valid and consistent with his commitment.

Employers have discovered that they may be inadvertently excluding qualified minority applicants through inappropriate testing procedures. Indeed such testing may discriminate in employment and promotion just as effectively as the once common "white only" sign. On the other hand, employers who use tests, but treat them as only one of several factors in the hire or promotion process, have found valuable employees in minority groups who would have been excluded if the tests were the sole and controlling factor.

Employers have appealed to the Commission for guidance in the search for sound testing procedures. The Commission, on its part, has consulted with a panel of outstanding psychologists, all of whom have broad practical experience in the testing field. The guidelines are based on their recommendations.

Following are the general guidelines of the Commission and the report of the psychologists. In developing the guidelines the Commission sought to provide employers with a scientifically sound, industrially proven, and equitable basis for matching manpower requirements with human aptitudes and abilities. The employer who conscientiously follows these guidelines will have taken a long step to ensure equal opportunity to all applicants and employees regardless of race, color, religion, sex or national origin.

THE COMMISSION ADVOCATES:

I. Use of a total personnel assessment system that is non-discriminatory within the spirit of the law and places special emphasis on:

a) Careful job analysis to define skill requirements. Job descriptions should be examined and the essential requirements of the job determined before tests are selected. Job requirements often are stated in generalized terms such as "high school graduate," or "potential to advance to higher level". Such requirements may not necessarily be related to performance of a specific job in a given work setting.

b) Special efforts in recruiting minorities. The Commission encourages employers to seek out minority group applicants, to objectively assess their potentialities as employees, and to hire "qualifiable" applicants.

c) Screening and interviewing related to job requirements. Screening of applicants should be based on the qualifications required for a specific job. Interviewing and testing of minority applicants should be conducted by personnel thoroughly committed to equal employment opportunity policy as well as knowledgeable and skilled in intergroup relations. An inferior education and lack of opportunities for development of skills may cause minority group applicants to appear less confident or less knowledgeable to the uninitiated, but such persons may be fully productive workers in many jobs.

d) Tests selected on the basis of specific job-related criteria.

The Commission views tests as only one component of the personnel system -- no better or worse than the selection system of which they are a part. "It is quite possible to take a test that has been professionally developed in one situation and misuse it in another situation." The characteristics of a test, apart from the situation in which it is used, are not sufficient evidence on which to judge its quality. The Commission will not recommend any particular test, but adopts the Standards for Educational and Psychological Tests and Manuals, prepared by a joint committee of the American Psychological Association, American Educational Research Association and National Council on Measurement in Education (Published by The American Psychological Association). This publication, endorsed by the panel of psychologists consulted by the Commission, was prepared by recognized spokesmen for the profession and establishes standards and technical merits of evaluation procedures.

e) Comparison of test performance versus job performance.

The Commission encourages the use of job-related ability tests. Employers must be aware that when an applicant has not enjoyed equal educational and developmental opportunities, his score on a test may underestimate his job potential. The ultimate standard, however, is not the test score but performance on the job. Since cultural factors can so readily affect performance on so many tests, it is recommended that tests be judged against job performance rather than by what they claim to measure.

f) Retesting.
Mindful of the special problems of minorities, employers are encouraged to provide an opportunity for retesting to those "failure candidates" who have availed themselves of more training or experience. A recent conciliation agreement signed by the Equal Employment Opportunity Commission and a State Employment Security Commission requests the ESC personnel assigned to local offices "to exercise a more liberal construction" of the agency's manual concerning testing. In particular, if an applicant during the course of an interview claims he has had more education or experience, then that person will be retested. It further provides that the State Bureau of Employment Security be requested to examine the feasibility of issuing less subjective regulations pertaining to retesting, so as to ensure every applicant maximum opportunity to qualify for job openings.

g) Tests should be validated for minorities.
The sample population (norms) used in validating the tests should include representative members of the minority groups to which the tests will be applied. Only a test which has been validated for minorities can be assumed to be free of inadvertent bias. The Commission encourages employers to check these tests to make sure that hidden discrimination against minorities is not present.

II. Objective Administration of Tests

Since tests are assessment tools and their value depends upon the skill of their user, it is essential that tests be administered by personnel who are skilled not only in technical details, but also in establishing proper conditions for test taking. Members of disadvantaged groups tend to be particularly sensitive in test situations, and those giving tests should be aware of this and be able to alleviate a certain amount of anxiety.

STATEMENT OF AD HOC PANEL ON TESTING

The Equal Employment Opportunity Commission has asked us to advise it with respect to several issues concerning the development, introduction and administration of tests of aptitude and/or ability in industrial settings as related to problems of race relations. More particularly, the Commission has inquired concerning the processes by which tests should be developed and administered in an employment setting.

OBJECTIVE PERSONNEL ASSESSMENT SYSTEM

We recommend that the Commission advocate the use of a total personnel assessment system toward the attainment of equal employment opportunities for all Americans. The many components of an objective personnel assessment system, e.g., job analysis, development of criterion-related validity, psychological testing, recruitment, screening of applicants, interviewing, and the integration of pertinent personnel data, provide the employer with the basis for matching manpower requirements with human aptitudes and abilities that is most likely to be non-discriminatory within the spirit of the law.

The mutual interdependence of the respective components is definitive relative to the fairness and effectiveness of all aspects of the system. A sound testing program, for example, would be degraded by failure to admit appropriate applicants or by failure to use qualified personnel for the interpretation of test scores and additional relevant data obtained from other components of the assessment system. The final measure of the quality of fairness of a testing program must, therefore, hinge on the functional adequacy of the total personnel assessment system rather than any narrow evaluation of the quality of an individual system component.

PROFESSIONALLY DEVELOPED TESTS

We further recommend that the Commission adopt policies encouraging the development and application of various personnel selection and assessment procedures, and that guidelines, standards, and technical attributes of these evaluation procedures be stated in terms of principles and of sound objective assessment practices. To this end, the Commission may wish to consider the adoption of the published Standards for Educational and Psychological Tests and Manuals, issued jointly by the American Psychological Association, the American Educational Research Association, and The National Council on Measurement in Education (1966). It is of utmost importance that the guidelines and operational policies encourage and facilitate use of objective and equitable personnel assessment systems.

PROFESSIONAL APPLICATION OF TESTS

Section 703(h) of Title VII of the Civil Rights Act of 1964 provides for the use of "professionally developed ability test(s)." It is also important to provide for the professional application of tests. It is quite possible to take a test that has been professionally developed in one situation and misuse it in another situation. Thus, the characteristics of a test, apart from the situation in which it is used, are not sufficient evidence on which to judge its "professional nature".

What then is the heart of this "professional nature"? It involves a process from the determination of behavioral requirements of the job through careful job analysis, the selection and/or development of instruments to measure these critically important abilities, the administration of these instruments to applicants for the job or employees on the job, the identification or development of measures of effective job performance (the criteria), to the comparison of individual employee scores with their criterion performance.

JOB ANALYSIS

Job analysis provides the systematic, precise identification of the skill requirements of the different categories of jobs. It is the matrix within which employee capabilities may be specified. The assessment system in industry is the procedure which matches skill requirements, determined through job analysis, with employee capabilities.

CRITERION-RELATED VALIDITY

While the earlier steps described above for a professional approach to testing are important, the crucial step is the final process of comparing test performance with job performance. Tests should be selected on the basis of validation against the performance requirements of the job, that is, criterion-related validity. In this sense a single test has a different degree of validity for each job-situation for which it may be used. In fact, a test may have varying validities for different aspects of the same job. For example, it may accurately predict certain phases of job performance (e.g. number of accidents), but may fail to predict quality of output. If the scores from a given test, however, correlate (more than chance would indicate) with any important aspect of the job, it may be said to have validity for that job. In this same sense several tests or a test battery may be required to predict the several required aspects of job performance.

For many jobs, schools or training courses have been established to prepare the employee to perform the work. Test scores are often related to performance in the school (e.g. grades). It has frequently been found, however, that these course grades are not highly related to measures of job performance. Hence, it is recommended that wherever possible reliable measures of job performance should be used as criteria rather than the measures obtained during training. It should also be recognized that through time, jobs and job conditions frequently change. In these cases it will be necessary to revalidate

the test. Maintaining current evidence of validity thus becomes a phase of the professional process.

In such validation the norm population must be relevant. It should be described in terms of those variables known to be relevant to the ability tested. The occupation and experience of workers in the norm population should be described. The decision to use the test should be based on data from a clearly adequate sample.

NORMS

When a person takes a test, many things may influence his score, quite apart from the aptitude or ability being measured. For example, language deficit can affect a score on an arithmetic reasoning test; as can other early learning experiences such as putting odd shaped blocks together. The extent to which any cultural factor operates independently of the trait being measured can affect test reliability and validity for that segment of the population whose culture differs appreciably from the normative groups. For such a person who is so affected, the test may underestimate his true potential and deprive the employer of a capable and willing worker.

Because of the possible adverse effects of culture on test scores, it is important that the population used in establishing norms be clearly described. Since, in practice, it is difficult to develop norms for each of the many homogeneous subdivisions (e.g. minority groups, etc.), the resulting problems of test interpretation demand a thorough appreciation of the factors involved on the part of the interpreter. The test user should, therefore, select instruments, when possible, which minimize cultural differences.

Provisions also should be made for retesting when there is evidence that the applicant has availed himself of experience, e.g., formal training, etc., which would further reduce cultural handicaps. Any dynamic view of assessment must take into account not only the current

status of the individual but also the rate at which he is progressing in the further development of those traits being measured. Within this context, and where there is a strong indication that a cultural deficit is seriously affecting test reliability and validity, other methods of assessment such as job performance should be used. It would seem desirable, however, that the Commission encourage, that as rapidly as possible, validation studies be conducted with minority groups using measures of cultural background as moderator variables.

TRAINING OF PROFESSIONALS FOR SELECTION, ADMINISTRATION AND INTERPRETATIONS OF TESTS

Recognizing the benefits inherent in objective evaluation when properly developed, selected, administered, and interpreted, it then becomes necessary to consider the appropriate professional level required to perform each of those various functions. The matter of "professional development" of assessment instruments has been treated above, leaving open the questions of administration and interpretation of tests.

It would be impractical to outline a specific course of training which would qualify one to administer, score and interpret tests. Different tests demand different levels of competence for administration, scoring and interpretation. It is, therefore, the responsibility of the professional to recognize the limits of his competence and to perform only those functions which fall within his preparation and competence.

In the final analysis, tests are merely tools, and their value depends upon the skill of their user. Of central importance is the commitment of the employer to institute within his organization a total objective personnel assessment system fairly administered and professionally implemented so as to provide equal employment opportunities for all Americans.

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

information

from the Equal Employment Opportunity Commission

1800 G St., N.W., Washington, D.C. 20506

FOR RELEASE AMs WEDNESDAY, September 7, 1966 Phone: 343-5621

Testing procedures in employment and promotion policies may discriminate just as effectively as the once common "white only" signs, the Equal Employment Opportunity Commission stated today. The Commission published guidelines for employers on sound testing procedures.

Dr. Luther Holcomb, the Commission's vice chairman, said: "We hope these guidelines will help industry develop a total personnel program that will be sound, productive, and in the spirit of equal employment opportunity for all."

The language of Title VII and its legislative history "make it clear that tests may not be used as a device to exclude prospective employees on the basis of race," the Commission stated.

"The standards which count are performance on the job, not test scores," the Commission emphasized.

Pointing out that the evaluation of test results is but one of several methods available to an employer in screening applicants and selecting new employees, the Commission said: "If the facts indicate that an employer has discriminated in the past on the basis of race, sex, or other prohibited grounds, the use of tests in such circumstances will be scrutinized carefully by the Commission."

The Commission views tests as only one component of the personnel system -- no better or worse than the total selection system of which they are a part. Its guidelines advocate the use of a total personnel assessment system, with special emphasis on job analysis, recruitment, screening and interviewing related to job requirements, and test selection on the basis of specific job-related criteria. The guidelines call for retesting when those who have failed have gained more experience or training.

66-81

EEOC

Employers must be aware that when an applicant has not enjoyed equal educational and developmental opportunities his score on a test may underestimate his potential, the Commission pointed out.

In the validation of tests, the Commission encourages inclusion of representative members of minority groups to which the tests will be applied.

Section 703(h) of Title VII provides that an employer may use "any professionally developed ability test provided that such test ... is not designed, intended or used to discriminate because of race ..." The Commission interprets this to mean a test which fairly measures the knowledge or skills required, or gives the employer a fair chance to measure the applicant's ability, to perform a particular job or class of jobs. "The fact that a test was prepared by an individual or organization claiming expertise in test preparation does not, without more, justify its use within the meaning of Title VII," the Commission ruled.

The Commission's guidelines were based on a report of a panel of outstanding psychologists, consulted by the Commission, all of whom have broad practical experience in the testing field. The Commission noted that employers have appealed to the Commission for guidance in the search for sound testing procedures, after discovering that they may be inadvertently excluding qualified minority applicants through inappropriate testing procedures.

Psychologists' Report

Testing

Why unions are wary of personnel testing

Aptitude and psychological tests, designed to match men to jobs, are widely used in industry today. More and more, these tests are misused, says Bertram Gottlieb, industrial engineer in the AFL-CIO Research Department, and a member of IAM Lodge 1406.

In an interview on *Labor News Conference* over Mutual radio last week, Gottlieb explained why union negotiators seek to write safeguards against testing abuses into collective bargaining agreements.

Gottlieb was interviewed by Neil Gilbride, labor correspondent for the Associated Press, and James Millstone, a Washington correspondent for the St. Louis *Post-Dispatch*. Harry W. Flannery was program moderator. Here are excerpts from the radio interview:

MACHINIST PHOTO

Associated Press' Gilbride, AFL-CIO's Gottlieb, Post-Dispatch's Millstone.

Gilbride: Mr. Gottlieb, most of us probably think of organized labor as negotiating for wages and working conditions. How did you get interested in this subject of psychological and aptitude testing?

Gottlieb: Mr. Gilbride, I suspect we became interested primarily because the use of these devices has been rapidly increasing in recent years.

Employers, more and more, are using a wide variety of tests to determine, number one; who their employees will be, and therefore, in most cases, determine who our union members will be, and secondly; to determine which employees and which of our union members will receive promotions after years of service—promotions to better and higher-paying jobs.

Millstone: Mr. Gottlieb, do you challenge the right—the authority—of management to use extensively this kind of testing?

Gottlieb: I certainly would challenge the authority of a company to use a test when it has never done so in the past, and where the collective bargaining agreement is silent, and the company introduces such a test during the period of that collective bargaining agreement. In my mind, this constitutes a change in the working conditions in that factory—or in that office—or wherever the test is used. Therefore, it should be subject to negotiation with the union.

Gilbride: Are you saying, Mr Gottlieb, that your primary objection to these tests is they are used to weed out union members or prospective union members?

Gottlieb: Well, in terms of the test as used in the employment situation, Mr. Gilbride—where a man walks up to a factory gate and seeks employment—if a test is designed, as it can be according to testing proponents, to determine say, the liberalism or conservatism of an individual, to determine whether he is pro-union, or anti-union or neutral—if these tests can do what their proponents say they can do, then obviously, a management—without directly attacking a union, without doing anything to the union that is in existence—can, in the long run, seriously weaken the union and weaken its ability to protect the workers by using the test to weed out those people they feel would be good union members.

Millstone: Do you feel that a company should not use aptitude tests to determine whom they want to hire and whom they want to promote?

Gottlieb: Where we have a group of workers who have been employed in a factory for many years, our general feeling is that the most important thing that should be taken into consideration in promoting these workers to higher paying jobs and higher skilled jobs is their seniority. A person who has worked for a long time in a particular industry, it seems to me, has a right to be considered for a better paying job.

Now, we would expect, therefore, that a test of questionable validity would not be used in these situations, that a person would be given a chance. After all, the most important way, the best way, to find out whether a person can do a job or not is to give him a crack at it—give him a chance to do a job, give him a chance to learn.

Let me give you what I think is an excellent illustration of this, Mr. Millstone. In 1965, the Chrysler Corporation in Detroit needed a substantial number of additional arc welders. Local 212 of the UAW was successful in getting 365 low-classification workers an opportunity to qualify for these higher-skilled and higher-paying jobs.

Before entering the training programs, the 365 men were given an aptitude test by the Michigan Employment Security Commission. Over 90 percent of these men failed. Many of them had been long-term employees of the Chrysler Corporation and yet they failed this test.

After negotiation with the union, the company agreed to give the workers an opportunity to train for these jobs. All those who completed the training—and the largest majority of them did—all those who completed the training are now, over a year later, successfully performing the work for which the test claimed they had little or no aptitude.

In other words, even if the tests could do what their proponents say they can, we would still feel that workers who had contributed to the industry should have a right to be trained and given an opportunity to do jobs which will enable those workers to get the better-paying jobs and make a better contribution to the industry.

Gilbride: Mr. Gottlieb, would you prefer that the use of these tests be abolished altogether or is your aim to get them to some degree of accuracy on which both sides can agree—both labor and management?

Gottlieb: Well, I would think, in terms of the status of testing today, we might best abolish them at least temporarily. Here is what one of the most authoritative evaluators of tests in the United States said recently, I quote now:

"At present, no matter how poor a test may be, if it is nicely packaged and if it promises to do all sorts of things which no test can do, the test will find many gullible buyers. Counsellors, personnel directors, psychologists, and school administrators seem to have an unshakable will to believe the exaggerated claims of test authors and publishers."

In other words, testing today is, in most cases, in the hands of salesmen who make money by selling tests—tests of doubtful validity and doubtful reliability.

Millstone: Mr. Gottlieb, you haven't mentioned one objection that I have heard to testing—that's invasion of privacy. I wonder if you consider that to be a major factor in objections to the way tests are used?

Gottlieb: Well, Mr. Millstone, invasion of privacy enters into what we normally call the psychological testing area rather than the aptitude testing area. Generally speaking, aptitude tests do not go into the area that we would consider an invasion of privacy. The tests which are supposed to determine numerical ability, abstract reasoning, space relations and mechanical reasoning abilities, normally don't get into the problems that we are concerned with when we talk about invasion of privacy.

The psychological testing area does. Many young people—people of all ages, in fact—when applying for jobs, are asked questions which, in our mind, have no right to be asked by people administering tests—questions which, if they are ever asked at all, should be asked only by skilled psychiatrists who have training and know when these questions can be asked without damage.

But, young women applying for jobs of all kinds in companies are asked questions about their sexual habits, about their backgrounds and about their family life. In fact, many of us, if we knew some of the questions being asked of our children in school, would probably storm the gates of the school and ask them to stop using tests.

Millstone: What is the justification for these kinds of tests?

Gottlieb: Well, Mr. Millstone, unfortunately, there is very little justification, other than the fact that some people like to gather statistics. When they ask your child what income level you are in, I don't think the school administrator who okays the use of a test has any Machiavellian motives. But, I would say that is, basically, none of the school's business.

Yet, I would venture to say that most of us in this area—in fact I know that my children were asked this question to indicate which level my income was in. My children have also been asked to indicate how often we go to church, and whether my wife and I fight.

These are the kinds of tests—questions—that are asked our children. When we allow our children to be conditioned to accepting these kinds of test questions, Mr. Millstone, is it any wonder that they don't object when they go out to get their first job and are asked similar questions?

Millstone: Is this a matter of concern to organized labor? Is this a matter for negotiation also, do you think?

Gottlieb: I would say it's a matter of grave concern. And, where our people are active in communities on school boards and so on, they do attempt to prevent this kind of question being asked of our children. But, our concern basically, of course, in terms of tests is in terms of their industrial use.

Flannery: And there, your objection is to possible indiscriminate or uninformed use of such tests?

Gottlieb: That's right, Mr. Flannery. I think tests, by themselves, are impossible to take a position against. You just can't say, "we are against testing, period." What we can say is, testing can be dangerous. In most cases today it is dangerous. Therefore, we have to work to protect workers against the use of these tests where they are not properly used.

Testing

It's Measure for Measure

'Chitling Test' Is a Genuine Stickler

By PAMELA HOWARD

Cultural bias in job testing for unemployed Negroes in the District has brought forth a new kind of IQ test which "would put the shoe on the other foot," according to Frank Hollis, acting director for Manpower under the United Planning Organization.

"We call it the 'chitling test,' after one of the 30 questions included in the multiple choice quiz," he said. All the questions are admittedly exaggerated to point up the cultural differences, but Mr. Hollis feels strongly that something of the sort ought to be devised to aim at Negro culture instead of repeatedly toward the middle class white population.

"How many white people could answer these questions?" Mr. Hollis asked, listing some samples:

"Cheap chitlings (not the kind you purchase at a frozen food counter) taste rubbery unless they are cooked long enough. How soon can you quit cooking them to eat and enjoy them?"

(a) 15 minutes
(b) 2 hours
(c) 24 hours
(d) 1 week (on a low flame)
(e) 1 hour

(answer: c)

"If a man is called a 'Blood', then he is a ——

(a) Fighter
(b) Mexican-American
(c) Negro
(d) Hungry hemophile
(e) Redman or Indian

(answer: c)

"If you throw the dice and '7' is showing on the top, what is facing down?"

(a) "Seven"
(b) "Snake Eyes"
(c) "Boxcars"
(d) "Little Joes"
(e) "Eleven"

(answer: a)

"Down home" (the south) today, for the average 'Soul Brother' who is picking cotton (in season) from sunup until sundown, what is the average earning (take home) for one full day?

(a) 75 cents
(b) $1.65
(c) $3.50
(d) $5.00
(e) $12.00

(answer: d)

"The opposite of square is?

(a) Round
(b) Up
(c) Down
(d) Hip
(e) Lame

(answer: d)

"And Jesus said, 'Walk together children ——'

(a) Don't you get weary There's a great camp meeting.

(b) For we shall overcome.

(c) For the family that walks together talks together.

(d) By your patience you will win your souls (Luke 21-19)

(e) Find the things that are above, not the things that are on Earth (Col. 3:3)

(answer: a)

Some of the more sophisticated Negro professional workers in UPO were stumped by the test when it was passed among employes recently, but sub professional workers with roots in the ghetto passed with flying colors, Mr. Hollis said.

It isn't a test anybody uses, but groups are studying it to see how something similar can be incorporated into standard job tests.

The quiz was actually conceived and written by Watts worker, Adrien Dove, who used it to demonstrate how cultural bias in job testing was preventing the people in Watts from getting jobs. Hence its official title: The Dove Counterbalance General Intelligence Test — A measure of cultural involvement in the poor folks and soul culture.

On a trip to California, Ben Segal, liasion director for the Equal Employment Opportunity Commission discovered the test and brought it back to Washington.

He admits it was written with "tongue in cheek", but this way it shows effectively how tests can be made to discriminate against whites as easily as they can against Negroes.

He said that the Wonderlic test, a standard employment quiz used all over the country, is a typical example of exams that are aimed at the white middle class community.

It includes such questions as:

"A contest always has —

(a) an umpire (2) opponents (3) spectators (4) applause (5) victory.

(Answer: 2).

"Which one of the six statements below explains the following proverb?

'Any port in a storm.'

(1) A conscientious worker need no prodding.

(2) Geese that lay golden eggs are too tough to eat.

(3) In dire distress, any aid is acceptable.

(4) Don't destroy the things that do you good.

(5) A willing horse should be whipped lightly.

(6) Ships should not venture out to sea in stormy weather.

(Answer: (3).

"A man who is averse to change and progress is said to be—"

(1) democratic (2) radical (3) conservative (4) anarchistic (5) liberal.

(Answer: 3).

"Which of the following is a trait of character?"

(1) personality (2) esteem (3) love (4) generality (5) health.

(Answer: 1).

Tests like this, Mr. Segal says, "tend to discriminate against the Negro and others from the disadvantaged and poverty areas. They often bear little relationship to the requirements of the job. These tests do a better job of determining how much of the white middle class culture the Negro absorbed than of measuring the ability to perform the job."

This problem of testing is only one of several obstacles in the way of the presently unemployed Negroes in our metropolitan area, Mr. Segal related here this week in a speech to a local group fo Community Advisors on Equal Employment. He often cites the Dove test in his speeches because he feels it helps to dramatize the inadequacies of the testing method.

Here in Washington (where Negroes number almost 63 per cent of the population) many companies and Federal government agencies have begun delving into the problem.

Many companies are either modifying the tests that already exist or are not using them exclusively as criteria for hiring or advancement.

EEV

The Wall Street Journal
Tues. Feb. 21, 67
P. 1

Testing

EMPLOYMENT TESTS face tougher standards emerging from Federal bias cases.

The Equal Employment Opportunity Commission develops a harder line against testing methods rated discriminatory against minorities. Recent EEOC decisions indicate the agency will demand firmer proof that higher-scoring job candidates actually perform better on the job; most employers can't show that now, officials figure. Automatic rejection of candidates scoring under some set minimum is rated unacceptable.

EEOC officials zero in on testing for promotions or transfers; they want employers to reply on the employe's work record instead. One official hails as a "major victory" a Southern paper company's decision to eliminate all testing for promotions; the EEOC found the exams screened out nearly all Negroes.

The Labor Department and Urban League launch an experiment to find if tests truly reflect Negroes' job abilities.

* * *

Oil, Atomic + Chemical Workers Thus

Changes Coming in Job Tests

3/67

IF YOU are a typical employe, the odds are that before you got your job, you had to take one or more tests to measure your general intelligence, personality and/or skills. The odds are also that the tests made you nervous, you considered them unfair and you tried to "beat" them in one way or another.

Take heart, particularly if you are a member of a minority, "disadvantaged" group.

The long arm of Title VII of the 1964 Civil Rights Act is now reaching out to force a major overhaul of job testing practices in the U. S. to make sure they are "not designed, intended or used to discriminate because of race, color, religion, sex or national origin."

SOME of the current practices of the great majority of employers seem to be in conflict with guidelines released by the Equal Employment Opportunity Commission (EEOC) on testing," says Prentice-Hall on the basis of a national survey a few months ago.

At least indirectly, "the EEOC guidelines seem to be attacking the very popular general intelligence tests which are given to all applicants by three out of five offices and by a majority of Southern plants."

"There is an urgent immediate need for companies to improve their test procedures because EEOC has a mandate to see that bias is eliminated from testing," emphasizes Dr. Jack W. Dunlap, board chairman of the research firm which bears his name and is headquartered in Darien, Conn.

Dunlap, who has 43 years of experience in test construction, considers this "favorable over the long-term because it will force the construction of more reliable and valid tests and this

By SYLVIA PORTER

will result in selection of a better personnel."

THE ramifications of Title VII become ever more wondrous to behold. The EEOC does not plan to bar testing. This would be a ridiculous move.

But the EEOC must, under the law, try to eliminate bias from tests and testing procedures. The following suggests the extent of the problems of discrimination.

- The general intelligence test may be not only culturally biased but also misleading. It may test your ability to unscramble sentences, for instance — but not your memory for ideas, ability to evaluate and solve the kind of problem found in the job, your awareness of implications. These factors may be far more indicative of your fitness for the job than your general intelligence.

- The tests may claim to measure your ability to perform a job but the scores may not measure how you actually would perform on the job and the passing scores may be obsolete or unrealistic. The EEOC says employers must validate their tests, make sure they are authentic and up to date. According to the Prentice-Hall survey made in conjunction with the American Society for Personnel Administration, almost half of U. S. employers are not doing this and are thus violating the guidelines.

- The EEOC says employers should validate the tests especially for minorities to eliminate "hidden discrimination" or "inadvertent bias." This is an explosive area.

- Crucially significant is the attitude of those administering the tests. In Dunlap's words, "An examiner might deliberately create an atmosphere of apprehension or hostility, which will usually result in the degradation of a test score."

Clearly, there is a great gap between testing practices and the EEOC's guidelines for nondiscrimination.

Probing the Mind

Brain-Wave Monitor Seen as Improved Way To Gauge Intelligence

Cultural Factors Don't Affect Results; System Also Used In Medicine and Psychiatry

7/1/71

Another Way to Pigeonhole?

By RICHARD A. SHAFFER
Staff Reporter of THE WALL STREET JOURNAL

Canadian psychologist John Ertl says he can tell how smart a person really is by flashing a light in his eyes.

The light makes tiny changes in the brain-waves, and Mr. Ertl says that the speed of this response reflects intelligence: the quicker, the brighter; the slower, the duller.

Others agree the test works. Moreover, it's just one of the ways that scientists are beginning to probe the mind by studying how the brain reacts to changes in the world around it, from flashing lights and beeping sounds to shocks and even puffs of air. Some say this research one day may open the door to the first intelligence and personnel tests that are fair to minority cultures and races. It also could yield important clues to serious mental illness.

No one yet knows for sure whether brain-wave testing will fulfill this early promise. But that such tests are possible at all is a major breakthrough. A few commercial applications already are being made. For instance the intelligence test devised by Mr. Ertl, who is director of the Center of Cybernetic Studies at Ottawa University, goes on the market this month—and others are likely soon.

Traditional Tests Assailed

As it happens, this comes at a time when traditional pencil and paper tests of mental ability are more in disfavor than ever.

Public schools in many big cities have abandoned the traditional IQ tests because, they say, the scores for ghetto children are misleading, sometimes branding bright students as dull and spoiling their futures when the truth may be that the child has scored poorly simply because he has inadequate command of English. In addition, a Supreme Court ruling this spring has apparently made it all but impossible to use the standard intelligence tests in industry—long a common hiring practice—on the ground that they are racially biased and don't give minority group members an equal chance at the better jobs.

Mr. Ertl's test avoids these pitfalls, as does the brain-wave testing method in general. The subject isn't required to read, write or even speak, so ethnic bias can't distort the result. To

wave testing will fulfill this early promise. But that such tests are possible at all is a major breakthrough. A few commercial applications already are being made. For instance the intelligence test devised by Mr. Ertl, who is director of the Center of Cybernetic Studies at Ottawa University, goes on the market this month—and others are likely soon.

Traditional Tests Assailed

As it happens, this comes at a time when traditional pencil and paper tests of mental ability are more in disfavor than ever.

Public schools in many big cities have abandoned the traditional IQ tests because, they say, the scores for ghetto children are misleading, sometimes branding bright students as dull and spoiling their futures when the truth may be that the child has scored poorly simply because he has inadequate command of English. In addition, a Supreme Court ruling this spring has apparently made it all but impossible to use the standard intelligence tests in industry—long a common hiring practice—on the ground that they are racially biased and don't give minority group members an equal chance at the better jobs.

Mr. Ertl's test avoids these pitfalls, as does the brain-wave testing method in general. The subject isn't required to read, write or even speak, so ethnic bias can't distort the result. To take the Ertl test, for example, all the subject does it put on what looks like a football helmet and sit quietly in a dark room watching a light flash 200 times until his score appears on a computer about the size of a small typewriter. The brain-wave changes caused by the light are picked up by electrodes in the helmet and timed by the computer. The whole affair takes about five minutes, compared with about an hour for the usual IQ test. And it's more accurate in a significant number of cases, Mr. Ertl and others maintain.

The changes in the brain's natural rhythm generated by the light—or any other known outside stimulus—are called the evoked response. Lately, scientists have been able to correlate the frequency, amplitude and other parameters of these evoked waves with a wide variety of psychological states.

Work With Mental Ills

In the first application of this research to clinical psychiatry, Dr. Charles Shagass at Philadelphia's Temple University Medical Center found that the early evoked waves tend to be unusually deep in patients with schizophrenia, psychotic depression or character disorder. W. Grey Walter, director of the physiological department at Burden Neurological Institute in Bristol, England, has determined that an evoked response even occurs when one merely expects something to happen. He calls this the "contingent negative variation," or expectancy wave, and reports that it is reduced in anxiety and schizophrenia, increased in obsessive neuroses and totally absent in psychopaths.

True, scientists have long suspected that brain waves mirror the activity of both worlds beneath the scalp: not only of the brain that surgeons handle but also of the mind with which psychologists and psychiatrists deal. But that has been a difficult theory to prove or disprove, because the brain usually is doing so many things at once that its electricity is a jumble of signals not easily unscrambled for study. Brain waves do vary to some degree with the state of consciousness. But since it's so much easier to tell, for example, whether someone is awake or asleep just by looking at him, the actual clinical usefulness of brain waves was, until quite recently, limited to diagnosis of physical disorders: epilepsy, tumors, brain damage.

What changed all this was computer analysis of the evoked response. And now, scientists say, the electrical activity of the ordinary human brain is apparently at last turning out to be a helpful guide to its mental activity.

Leaving the Grass Standing

The evoked response is so weak and brief (usually less than one-thousandth of a volt, lasting less than a half-second) that it normally is drowned in the brain's ongoing electrical patterns, which, on the average, are from five to 20 times more powerful. But a computer can sort them out. "It's like having a lawnmower that cuts down weeds but leaves the grass standing," explains psychologist Ertl.

It works because the evoked response for any particular person always seems to follow its stimulus by the same amount of time. If the stimulus is repeated many, many times and all the brain waves that follow it for a certain period are added in a computer, the brain's random activity acts like noise and tends to cancel itself out, leaving the evoked response as a quite visible wave. This wave is known as the averaged evoked response, or AER.

At the University of Oregon Medical School in Portland, pediatrics professor Dr. Rudolf Engel has discovered that age differences of only a few days bring dramatic changes in the average evoked response of newborn infants. He believes that brain-wave testing could en-

Please Turn to Page 18, Column 3

Probing the Mind: Brain-Wave Monitor Helps Test Intelligence

Continued From First Page

able hospitals to quickly separate healthy but small full-term babies from large premature infants who are prone to respiratory infection if not properly treated. "Moreover," he says, "proof of the length of gestation at birth may be helpful in jurisprudence.'

Dr. Enoch Callaway, chief of research at the Langley Porter Neuropsychiatric Institute in San Francisco, has used the average evoked response to distinguish patients who have genuine sensory loss due to hysteria from those who are only malingering.

As electronic technology improves, other uses for brain-wave testing are rapidly coming of age, according to Dr. Callaway.

"Talking to children, severely psychotic patients, and people whose cultures are foreign or divergent may be difficult, yet language plays an important part in almost all current psychiatric and psychological procedures," he has written. "Quick, reliable, language-free measures of such things as intelligence, personality, attention deployment, and assignment of meaning would obviously have great value . . . (and such uses) will soon be ready for practical application."

That hasn't happened yet, however. For one thing, the whole field is so new that scientists don't yet agree on what part of the evoked wave to measure or how to measure it, so they often can't evaluate the results of each other's work and resolve or confirm apparent contradictions. For instance, although Mr. Ertl's finding that intelligence correlates with the speed of response to light has been confirmed in his own laboratory—and by two independent researchers—with a total of 1,028 subjects, two other experimenters using a total of 48 subjects haven't been able to duplicate Mr. Ertl's work. Nobody has yet been able to explain why.

In addition, in many cases, particularly medical applications, the brain-wave tests rarely give any information that isn't easier and cheaper to get some other way—such as simply asking a patient what's wrong with him.

Costs Become Secondary

However, "usefulness is a relative matter," as Dr. Shagass explains. And if an evoked response test "were shown to provide unique information of a nature decisive for clinical management, such as provided by radiological procedures, it would be used without much regard to cost."

This already has occurred with brain-wave testing for diagnosis of hearing defects. The procedure, for instance, has been used for some time as a matter of clinical routine with children at the Central Institute for the Deaf in St. Louis. Instead of asking a subject whether he can hear a particular tone, the institute's staff watches his brain waves for a response. If the tone alters the brain waves, doctors know the subject has heard it—even if he says he hasn't. If the brain waves aren't altered, doctors know the tone wasn't heard.

"Although the number of children for whom this particular method really makes a difference is not very large, nevertheless the method allows us to make an important early decision as to the handling of the young child," according to Dr. Hallowell Davis of the institute. "This justifies the expense of the method."

Princeton Applied Research Corp., a New Jersey concern that makes a $15,000 brain-wave audiometer, says it sold 15 to 20 such machines last year. And Associates International Inc. of Shreveport, La., which owns the marketing rights to Mr. Ertl's invention, expects to lease 500 to 800 of his intelligence testers at about $200 a month in the next fiscal year.

No Clues to Causes

The Ertl test, however, isn't likely to replace the standard IQ tests for many years, if ever, critics say.

The principal reason is that although its score may be more meaningful in some cases, it gives no clues to what's behind it. For example, although it might detect a learning problem, it would be of little help in the actual diagnosis and correction of that problem, practicing psychologists say, because its single score doesn't distinguish among the many factors that make up human intelligence—verbal, mathematic and spatial abilities, to name a few—which are commonly given as separate scores on IQ tests.

And even Mr. Ertl admits that the future of his test may not please everyone. "I expect that it will be misused to pigeonhole people, just as the IQ test was," he says unhappily.

In fact, it already would be possible to test the evoked response of an unborn child, he adds, "and that brings up frightening possibilities."

ers are likely to drop out of the national bargaining organization before 1973.

7-14-70 EEO-Testing

PSYCHOLOGICAL TESTS find fewer backers among personnel men. W-S-J

Smith Kline & French Laboratories and Western Electric no longer use psychological tests at all in their hiring programs. A Deutsch Corp. subsidiary making electrical equipment deemphasizes the tests as screening devices for prospective managers. The company complains the tests tend to "create the concept" of the average employe, and thus work against creative types who may not conform.

Many firms use the tests more sparingly. Philadelphia National Bank employs them only after applicants have been hired. "We don't use them as a (hiring) crutch on which to lean," explains an official. Scott Paper makes the tests optional, and gives employes the right to have scores removed from permanent files. Another problem: Adept test-takers sometimes flop on the job, some employers say.

Employment — Testing

Karl U. Smith

". . . nor shall it be an unlawful employment practice for an employer to give and to act upon the results of any professionally developed ability test provided such test, its administration or action upon the results is not designed, intended or used to discriminate because of race, color, religion, sex, or national orgin." - - -Title VII, Section 703, Civil Rights Act, 1964.

Undoubtedly many of the members of Congress who voted in favor of the Civil Rights Act of 1964 thought the above quotation entirely harmless. In fact, some of them likely considered the paragraph an important safeguard against discriminatory hiring practices. Employers, after all, do administer such tests. It's common practice just about everywhere. Everyone accepts their validity, and so let us be absolutely certain that the results aren't abused. What could be more in keeping with the spirit of the new law? How could anyone sympathetic to the rights of minority groups possibly object?

Yet one extremely vital objection has been raised. Are not pre-employment ability tests unfair, per se, to Negroes as a group because they are based on cultural and education levels unfamiliar to many Negro applicants and thus underestimate Negro learning ability? The question was discussed in a policy guide published by the Bureau of National Affairs in 1965. The attitudes of a representative panel of industrial and personnel relations executive were examined in the report. By a ration of eight to one the group rejected the idea that enviornment had any relation to test results.

Comments from the men are interesting for what they say about the average American's ideas about testing in general. One, for instance, replied that his company's tests were tailored to deal equally with all, regardless of race. Another recognized

that enviornment and educational backgrounds could be a factor in how Negroes scored on the tests, but then he begged the question entirely with the observation that there had to be some yardstick with which to measure individual ability. Regardless of color, said one executive, people have to rely on their innate abilities. Changing the test standards for one would be unfair to the majority, he said. Yet another businessman said his company realized that tests weren't perfect barometers and so it relaxed its standards for Negroes.

To all who were quoted, the basic validity of such tests and their predictive ability were seemingly beyond question. This attitude is also reflected again and again in the literature of racists seeking to prove Negro inferiority on the basis of comparative IQ scores. By the same token one even detects a certain defensiveness from liberal whites presented with the results of such tests.

This sort of attitude is hardly surprising in view of the fact that throughout this century the testing movement has been expanding in education, industry, business and government. This movement originated in the 1890s with attempts by Jastrow to measure scholastic aptitudes and by Cattell and Binet to measure intelligence in children. However, the main impetus for widespread testing came when Yerkes, Hunter, Woodworth and others created general intelligence and personality questionaires for military selection purposes in World War I.

Today, psychological testing has grown into a tremendous commercial, industrial, and educational activity. The sale of tests alone exceeds twenty-five million dollars yearly. But even more significantly, tests are used extensively by educational and industrial consulting firms, which sit astride the personnel organization and executive appointment programs of every major industry and many major school systems of the United States.

The implications of such a situation ~~is~~ are frightening. Without regard for human elements or for enviornmental factors, without regard for the effects that industry, school, institutional atmosphere has upon those subjected to tests, or the ways that one administering them can influence and control what he supposedly is measuring, the testing movement seemingly has convinced the American people of its total, complete authenticity.

Yet based on more than 30 years of professional experience in the field of psychological and personality testing, extensive research at the University of Wisconsin Behaviorial Cybernetics Laboratory, it is my firm conviction that all such tests which purport to predict individual ability, personality, or intelligence are simply elaborate hoaxes.

I do not make the statement capriciously. In the three decades in which I have been involved in the testing movement I have participated actively in planning construction, validating and statistically analyzing verbal, paper and pencil performance, and psychomotor tests for such diverse purposes as the testing of general intelligence, English aptitude, radar operator aptitude, radar night-fighter apitude, flexible-gunnery aptitude, supervisory ability, occupational aptitudes of convicts, adjustment of tubercular patients to the sanitorium enviornment, salesmen aptitude, and aptitudes of industrial workers. Tests from some of this work have been used in the military and industrial fields. Since World War II the writer's major interest in participating in test construction and validation activities has been in evaluation of the extent to which test procedures can be reduced to or related to experimental and scientific methods.

The material from which I base my evaluation of the testing movement consists of a report which embodies two special studies.

These are entitled "Cybernetic Analysis of Personality Assessment Procedures, "And "Cybernetic Analysis of Psychological Testing and Test Prediction."[1] The term "cybernetic" is used in this connection to mean system study, feedback study, study of the interactions of tests and people, of tests and institutions. As applied to the testing field, we study the way in which the tester himself controls situations in order to arrive at what he considers predictions, the way in which the institution affects the testee and causes him to display certain characteristic forms of behavior that might be probed by the tester and which may be set up as a standard or performance for development of the test.

Just after World War II, serious investigation in psychology began to examine for the first time many of the activities of psychological testing. Some psychologist recognized that the use of tests during the war had been a failure and that the predictive significance of most tests was very near or below chance level. Evidence indicated that none of the test had predictive efficiency beyond that of differentiating between extremes of intellectual and occupational competency. After the war, a number of psychological research programs on testing and training in the Air Force failed spectacularly. One of the most ambitious of such projects--possibly one of the most ambitious of all time--was established at Lackland Air Force Base in the 1950's to investigate related procedures of military test selection and training. Seven years and approximately fifty million dollars later, this project was summarily discontinued by the Air Force without warning. Although the project drew on the services of some 200 psychologists and educational psychologists, it produced not a single significant positive contribution to psychological testing and military selection. A comparable project in the medical branch of the Air Force had an almost identical outcome.

---

1 Published by the Behavioral Cybernetics Laboratory, University of Wisconsin, June, 1965.

A similar failure occured in an almost equally ambitious project conducted by a group of the country's most outstanding clinical psychologists. Using a large battery of the most advanced intelligence and personaility testing procedures known to them, they could not predict significantly the performance of their own students in graduate school courses, in research, or in hospital therapeutic activities. This study proved not only that professional psychologists are limited in their ability to use tests but also that their test and interview procedures provide no means of discerning why and where they fail.

Psychological testing has never had a meaningful scientific theory. Testing theory assumes the existence of certain general or specific traits of intelligence, personality, or aptitude which are held to be intrinsic to the makeup of an individual, and to persist relatively unaltered throughout most of his lifetime. These alleged traits are comparable to the mental faculties assumed in prescientific psychology, although they are referred to as behavioral features of aptitude or personality. These traits presumably can be measured by means of sample questions which are scaled statistically according to performance of some selected social group. This concept of measuring deviations of performance from a socially defined norm is basic to all testing activities, but the use of such statistical measurements for predictive purposes is not verifiable by experimental procedures.

At best, testing is a process of selecting test items that seem to resemble the assumed trait in which one is interested in order to measure that same trait. It is thus a process of proving that an unknown X equals another unknown X. Such processes and the assumptions that underlie them are not susceptible to checking and refinement by means of the experimental methods of science.

The giving of a test or the validation of a test is not an experiment, as is sometimes claimed. Experimental procedure requires concepts and hypotheses which have objective operational meaning, the controlled variation of known and objectively defined

variables, and the use of measurement scales whose units and references base can be shown to be equally applicable to all instances of their use. Testing and test validation have none of these characteristics of experimental procedure.

The testing movement has reflected none of the advances in experimental methodology which have marked the science of human behavior over the past several decades. The major advances in scientific analysis of human behavior since 1935 are those related to analyses of the feedback control mechanisms and the processes of sensorimotor interaction which determine learning, perception, and motor patterning in the activities of speech, visual behavior, auditory perception and sound perception, hand coordination and instrumental behavior. These advances have had no impact on the testing movement. Testing concepts and methods were devised largely before Hull (1928) wrote his book on aptitude testing and have not changed significantly since Hull's early days. Most of the tests in use today and the criterion measures on which they are based were set up before 1940.

Because tests have no real scientific or experimental basis related to individual behavior, their scaling procedures must be based on estimating deviations from socially defined norms. In establishing such group norms for validation studies, test specialists never have followed the minimal rules governing representative population sampling. Their population groups, on which the validity of the test depends, typically are preselected groups favored in one way or another. No test in use today is based on a representative population, and few if any tests have ever been checked for their degree of discrimination against people not represented in criterion groups. Further, testers have not investigated the social effects of such test discrimination in the different classes of people affected--that is, children with educational differences, children with histories of childhood diseases, injured children, children of the foreign born, Negroes, children from broken homes, the underprivileged and disadvantaged children from homes of the unemployed and disadvantaged, farm children, children from deteriorating industrial areas, in general, those children and adults who are not easily accessible to the tester in his limited validation studies.

As a result of the bias of their validation groups, psychological tests amount to socio-economic discriminative devices. They are a superficial prop for institutionalizing social, economic, job and educational discrimination processes in the guise of being "scientific instruments." They are used widely in schools to establish special classes, privileges, activities, opportunities and rewards for "bright" students and to depreciate the activities of students labelled "dull" by the tests. Test labels and the test-related class records are attached to students for their entire educational careers. The influence of the testing process on the student's grades often is very direct, for students in a "bright" class automatically receive A or B while those in a "dull" class can never make an A even with outstanding talent and effort.

The use of intelligence and so-called ability tests in schools discriminates particularly against children who have suffered illness, or injury, and those with reading, writing and speech disabilities. Testers in public hearings claim that their procedures help the children with educational difficulties, but these are the ones who are hurt the most, both in school and in their subsequent occupational activities. In dealing with individual problems, the testing approach is largely negativistic, except in the use of vocational interest inventories. Intelligence, ability, and personality test scores are used universally to justify negative actions--sometimes custodial actions--against workers, but they are used only rarely to provide positive help in making decisions or solving problems.

Test psychologists try to give the impression that the field of testing is continuously engaged in research activity to improve the design of tests and their accuracy, but available evidence indicates no really successful research on testing has occurred in the last quarter century. Students of the writer have obtained data from some of the country's most advanced industries indicating that no meaningful research has been or is being conducted by those companies in regard to the accuracy of their college-student recruitment and selection programs. Companies that claim test

studies are being conducted cannot describe the nature of the research or give any data whatever on the results.

The situation with respect to test validation in education is somewhat different. Research on psychological testing constitutes a major activity of graduate students in educational psychology. Using sample tests which can be obtained cheaply or without cost, such students can obtain a series of measurements, assemble the data and present them toward a degree. Researchers and students in this area conduct their studies on the assumption that the general procedures of testing are highly valid and scientifically founded. They add a few more data to the general body of testing knowledge, but do not probe the basic assumptions or validation procedures of the testing movement. Thus current testing research in the academic domain is no more scientific than its parent field.

One feature of the so-called validation research in education is disreputable by standards of scienfific honesty. Testing firms and test agencies claim to validate their tests by receiving performance data and test scores from selected educators and teachers located in different institutions around the country. However, these academic representatives of testing firms sometimes are paid consultants of the firms and thus have a vested interest in the activities they supposedly are subjecting to scientific verification. While this situation is not true of all test researchers, where it exists it raises questions concerning honesty of intent and practice.

Let us now describe what we believe to be the first systematic cybernetic (feedback) studies of the effects of institutional enviornments on emotional manifestations in behavior and on behavioral criteria used in test standardazation procedures. Such study amounts to investigation of the feedback effects of the institutional envioronment on individual and group behavior. Testing theory assumes that sampling behavior will reveal the intrinsic trait make-up of the individual. The purpose of this research was

to determine whether the so-called traits that testers sample actually are produced by the social and institutional conditions under which people live.

This research was conducted during a period of over two years when the writer directed a program set up by request in a state prison to develop vocational testing and guidance procedures for prisoners. The prison authorities agreed that graduate research could be carried out on all aspects of behavior related to the program, and the writer agreed to serve on the Assignment Committee of the prison, a committee of five or six major prison officials who decided the educational, vocational, and custodial assignments of the inmates.

From the vantage point of a research facility located inside a prison, an attempt was made to study the prison as a mechanism of behavior control, including control imposed by testing and allied psychological techniques. Observations were made on prison officials from the warden down, relative to their attitudes, modes of behavior, and avenues of influence in imparting certain standards of performance and pressures of response control on the inmates. One of the most important aspects of this research was that prisoners could be observed for months or even years in order to note any changes in behavior that occurred after their first entry into the prison. Tests and lengthy interviews were given the prisoners two or three days after they entered prison and again some three to six months later. In addition, the writer talked informally with nearly every prisoner without disclosing to him that the intent was to make systematic observations on his behavior.

The theoretical idea behind our prison research is that an institution is a feedback system characterized by certain features which influence behavior and emotional patterning of its inmates. This idea conforms with our general cybernetic notion of feedback control of behavior in closed-loop systems. Research strategy is to discover the variables in the system which define the pattern of control and to establish relationships between feedback variables and behavior variables.

From the first, our experiences in the prison led us to believe that features of prison life have direct repercussions on patterns of behavior and emotional expressions of the prisoners particularly but also of prison guards and officials. The dominant theme of prison management is custodial control through threat of punishment, social isolation, or restriction or change of activity. The dominant patterns of behavior can be described as withdrawn, surly, regressive, suspicious or paranoid, secretive, depressed, repressed, and so on. We observed that these patterns become more noticeable during the first year of prison life, especially in younger prisoners.

Inasmuch as these features of behavior are closely related to the so-called personality traits which are said to be measured by many tests, we attempted to obtain data showing progressive changes in test performances during prison life. Such changes would indicate that the measured characteristics of behavior or personality are not necessarily intrinsic traits of the individual but are generated in him by the control pattern of his environment.

The results of the studies show that the institutional environment (1) can affect behavioral criteria used to validate personality tests (2) can influence test scores, (3) exerts these influences in a negative or inverted direction relative to normal standards of social and emotional adjustment and (4) can institutionalize these effects so that all individuals in the system are affected. The traits generated in people by institutional enviornments thus <u>are not an expression of individual makeup as much as they are a reflection of environment design</u>. The criteria of abnormality which have been used to validate personality tests are not bona fide intrinsic behavioral standards but reflect the inverted human control standards that are characteristic of custodial institutions.

The question may be raised as to whether school and industry enviornments also are characterized by control features that influence thebehavior and emotional adjustment of students and workers. We believe that in many cases they are. It follows that test criteria performances and test scores made by individuals within these enviornments are contaminated by the characteristics of the enviornment. We have seen workers in industries and students in universities whose behavior patterns obviously were modulated and constrained to conform to the demands and pressures of their institutional environments. Sampling such behaviors by means of psychological tests is a poor way to predict individual performance outside the institutional pattern of control.

Our industrial studies reveal many direct and indirect ways in which psychological consultants and clinical psychologists mix personality test procedures causing an influence on job performance factors or the behavioral status of the testee. These include (1) suggesting to the testee that he has personality difficulties (2) influencing promotion and social status of the testee by recording test scores in relation to test potential (3) revealing the judgment that the testee has a personality problem; (4) relating test scores to potential development of the individual in special training programs; (5) defining special job specifications in terms of the personality test factors; (6) influencing and pressuring testees on the basis of test results while serving in the role of personnel counselor; (7) relating test results to need for special training, counseling, psychotherapy, or psychiatric treatment; (8) influencing the adjustment of wages and fringe benefits to correspond to test factors; (9) participating in actual rating or grading of testee performance on the job or in school; (10) setting up special classes which lead to grading or assignment of testees in relations to d test-dominated class standards; and (11) serving as a personnel officer who provides references and recommendations for promotion, transfer, or job seeking of the testee.

Test psychologists, clinical psychologists, and consulting psychologists attached to industries, schools, and institutions carry out these practices of mixing their test programs with personnel control processes in the course of doing their jobs. The inevitable result is to increase the apparent validity of the tests. When testing programs are challenged, psychological counselors and consultants have plenty of data to show correspondence between test results and subsequent performance. What is not made clear is that the correspondence is due for the most part to the control activities of the counselors. The industrialist or school official or director of an institution accepts the activities of the psychologist in the belief that they are scientifically substantiated, not realizing that the mixed bundle of psychological services serves to substantiate itself.

The main conclusion from our cybernetic analysis of testing as an institutional control operation is that tests become predictive devices only insofar as the tester is permitted to control or influence the status of the worker or of the work performance to be predicted. There is no evidence which shows that a pure, unmixed testing program provides significant predictions of human ability or performance.

But the apparent validity of tests is enhanced by the way they are used in selection or screening procedures. Tests as we have seen, are not scientific instruments for measuring individual behavior, but a means of estimating statistical deviations from group norms. Thus the claims that testing is directed toward understanding individuals and their behavior cannot be verified. The statistical socially defined measure of tests are in no way comparable to operationally or experimentally defined individual behavior variables.

Tests are used widely today in the belief, fostered by test specialists, that indications of superiority and deficiencies in specific behavior factors can be read from the test scores.

However, the individual items of tests do not disclose anything meaningful about the dimensions of individual response because the items do not represent objectively defined variables and dimensions in behavior. This fact lies behind the widely recognized dilemma of the testers: no two psychometricians can agree on the meaning or definition of personality and intelligence or of their supposed sub-traits, and no two scales of the same name in different tests mean the same thing. The reasoning of testers and their claims that tests can be used both to scale the social deviation of individuals and to probe their individual response systems are neither scientific nor logical. The failure of tests to measure individual factors must be recognized in order to assess their use in selection and screening.

The use of psychological testing to set up classes of students in our schools is not only unscientific and inaccurate, it is undemocratic and jeopardizes the opportunities of individuals both in education and future work. Further, the test classification procedures in our schools obstruct truly scientific advances in understanding behavior and its disturbances and deficiencies. Tests never have yielded any information about the individual behavior mechanisms underlying writing, reading, spelling, speech, and other skills or deficiencies in these skills. The nearly universal use of test selection programs in our schools has had the effect of obscuring the need for and of frustrating any attempt to do direct research on educationally significant skills and behavioral deficiencies of school children, including their emotional deficiencies. The main feedback effects of testing programs is to obscure the needs of the individual child by classifying him arbitrarily and inaccurately, and to distort the design of his educational enviornment by substituting test - oriented objectives for individually oriented schooling.

The effects of such "testing-caste" processes in industry are

equally dangerous. There is clear evidence that one of the feedback effects of the psychological testing movement in industry is to impair motivation of the lower uneducated and economic groups in seeking employment. By the artificial elevation of employment requirements as determined by test cutting scores, test selection methods have raised the stated qualifications for jobs beyond the level required in the job itself. Evidence shows that the general educational level of applicants tend to shift upwards in any industry which adopts testing procedures to cover all types of employees, even though the job requirements in the industry are not scaled upwards.

We believe that one of the main effects of test selection procedures has been to create an artificial management philosophy toward work demands in American industry and thereby to magnify the effects of the tests in creating a caste of unemployable persons. Management has been led to believe that work success and training can be predicted in terms of quickee tests and personality estimates, and that responsibility of industry and government for creating work is confined only to those who pass these tests. We are just beginning to learn the costs of an unemployed caste society and to the government. Our view is that mush of the underemployment in this country is due in part to the direct and indirect feedback effects of test selection programs in inflating employment requirements and in degrading the value of nonverbal skills in industry.

Psychological testing has mushroomed into a multimillion-dollar industry in which a few organizations and a relatively few individuals go far toward defining the primary machinery of educatinnal and job assignment of the American people. We have presented evidence to show that testing has no basis in objective science and that its presumed predictive effects are feedback effects of the testing activity itself. To use such dubious apparatus to control the status and behavior of students and workers is unethical and illegal even when the activity is carried on by well-meaning people. It becomes immoral when combined with certain'

other charlatan procedures sometimes indulged in by psychological consultants, including secret psychiatric analyses of unsuspecting applicants and employees and using data as props to justify workers at all levels. If an unscruplous management wants to cover up some devious program of depriving people of educational opportunity or their work rights or jobs, the testers and the clinicians are called in. This process apparently has come to full bloom in several government agencies which use clinical psychological testing and psychiatric intrusions in order to make periodic checks of employees and to fire them if their personality readings do not satisfy the tester. Rather than promoting educational and work opportunities which will expand basic liberties, agencies and industires which rely on tests and clinical practices are depriving people of their constitutional rights, constraining freedom of thinking, and thus are undermining the democratic process.

Mr. George Harris
Southern Regional Council
52 Fairley St.
Atlanta, Georgia

Dear Brother Harris:

It was good to rap with you about the substantive issues around reforming the assessment of minorities in America. I applaud SRC efforts to convene the February conference on intelligence testing and public policy. Please keep me informed about development as I am vitally concerned about the conference theme.

In this letter, I am mailing you some additional materials which will give added data for your efforts to help us secure funds to launch our five year research and development project at Hampton Institute April 1, 2, 3, and 4.

I will mail you the revised conference budget just as soon as it is completed.

Let's keep in touch!

Yours for reform of testing!

Norman R. Dixon

National Conference on Testing in Education and Employment
University of Pittsburgh
Pittsburgh, Pa. 15213

December 26, 1972

Mr. George Harris
Southern Regional Council
52 Fairley Street, N.W.
Atlanta, Georgia 30303

Dear Brother:

Our progress towards the National Project on Testing in Education and Employment has been commendable. Beyond a doubt, we are succeeding in mobilizing powerful forces for changing minority group assessment in this Country. The job must be done and we, as the agents of a great social purpose, must dedicate ourselves anew to the destruction of the barriers to opportunity and advancement represented by standardized testing in America. We welcome the Southern Regional Council as a co-sponsor for the National Conference on Testing in Education and Employment. From my several dialogues with you, I am convinced that the Southern Regional Council is taking care of business.

By telephone, we have extended a request to the Southern Regional Council to join the ranks of our sponsors. This letter comes as a formal communication of that invitation.

Second, the co-sponsor fee-check should be made out to the National Project on Testing. Third, as I have indicated to you by telephone since I received your letter, co-sponsors are meeting two or three times before April 1, 1973. Of course, you will be informed, as you already know, of every such meeting. These meetings will be designed to take a hard look at programming action to implement our plans for changing testing in America. Fourth, we have been in contact with the following foundations, which I cited to you over the telephone: The Pittsburgh Foundation, The Spencer Foundation, The Ford Foundation, the John Hay Whitney Foundation, The New York Foundation and The Johnson Foundation. The Ford Foundation, the John Hay Whitney Foundation and The Spencer Foundation all have stated that they will help fund the 5-year project on testing. The New York Foundation plans to help us with preliminary planning; the Pittsburgh Foundation contributed $5000 for continued planning. The Johnson Foundation contributed $2500 and meeting facilities for our 3-day work session - July 11-13, 1972 at Racine, Wisconsin.

Our big job now is raising the necessary funding for the Hampton Institute Workshop. I mailed you the budget for this earlier. I hope the above points address themselves to the questions of your earlier letter to me. If not, Brother, just call me for additional information.

I have tried several times to get in touch with Jean Fairfax of the Legal Defense Fund, but without success. I shall continue to try and I hope we can get her over here when you come January 10.

As a member of our steering committee, you, of course, should feel free to invite Jean's participation and you may urge her to contact me for further information. Also, please feel free to contact Dean Paul Yervirsaher of the Harvard Graduate School of Education and invite the School to become a sponsoring organization. I would be happy to talk to him and you in the conference hall. Of course, any other ideas you have for making our Project become an effective tool for social change in this Country are welcome, and knowing how devoted and capable you are in taking care of business, I am sure you will share them for test reforms for our people.

Sincerely,

Norman R. Dixon gr

BUDGET
FOR

National Workshops to Identify Critical Areas and Key Personnel for a Five Year Research and Development project to Improve Minority Assessment Techniques

Hampton Institute, Hampton, Va.. April 1, 2, 3, 4, 1973

BUDGET ITEMS	FUNDING REQUESTED	SPONSORS CONTRIBUTION	TOTAL
1. Workshop site facilities (auditoriums, office space, room for research presentations, etc.		$26,500	$26,500
2. Office machines for reproduction of research papers		300	300
3. Local telephone services (workshop site)		60	60
4. Salary for workshop director (before, during, after)	$ 7,000	18,000	25,000
5. Travel funds for director and staff	2,400		2,400
6. Staff per diem at workshops (4 @ $40 per day for four days)	640		640
7. Communication (printing of programs, name badges, stationery, telegrams, postage long distance telephone calls	2,500		2,500
8. Supplies (paper, stencils, pencils, envelopes, tapes)	850		850
9. Production and dissemination of workshop proceedings	6,000		6,000

BUDGET CONTINUED

BUDGET ITEMS	FUNDING REQUESTED ($19,930)	SPONSORS CONTRIBUTION ($44,860)	TOTAL
10. Three major speakers (national leaders as theme analyzers @ $500 each	500		$1,500
11. Per diem for 3 national leaders and theme analyzers @ $40 per day	120		120
12. Travel for 3 national leaders and theme analyzers @ $300 each	900		900
13. Twenty major researchers and presenters @ $150 each	3,000		3,000
14. Travel for 20 major researchers and presenters @ $200 each	4,000		4,000
15. Per diem for 20 major researchers for one day @ $40 per day	800		800
16. Contingency fund	4,000		4,000
	$33,710	$44,860	$78,570

University of Pittsburgh
Pittsburgh, Pennsylvania 15213

Dear Dr. Dixon:

I was very elated to hear from you and was more exhilarated to have been selected as one of the chosen few to participate in a work session to design the National Conference on Testing in Education, Industry and Government.

At the present time, it is impossible for me to attend this conference in that we are involved in the evaluation of the admissions and financial aid offices in 30 of our institutions. The evaluations, hopefully, will be completed by July 28, 1972.

Since I will be at Central State College on the 12th of July, I would like to attend your conference then because I am very interested in your task. However, if I don't get a chance to see you at that time, I would appreciate it if you could let me know what I could do to help. You also might be interested in an instrument that I have developed that will predict college success of Black disadvantaged youth. The norms are located and I will conclude my validy checks in about a month. If you are interested, please let me know.

Looking forward to a continuous working relationship.

Sincerely,

Jim

Dear Dr. Dixon:

I wish to thank you for extending to me the invitation to participate in the three day series of work sessions to design the National Conference on Testing In Education, Industry, and Government held on July 11-13, 1972 at the Wingspread Conference Center in Racine, Wisconsin.

I regret that pressing matters here in Washington prevented my coming to this meeting.

I will be interested in the future direction of this Conference and when and where it will be held. I hope that I will be able to arrange to be present.

If I can be of help to you in your deliberations, please let me know.

Sincerely,

Miles M. Fisher, IV

Black Colleges Produce Over 70 Percent of the Black College Graduates in America

SCHOOL OF EDUCATION
UNIVERSITY OF PITTSBURGH
PITTSBURGH, PENNSYLVANIA 15213

OFFICE OF THE DEAN

June 29, 1972

Dr. Norman R. Dixon
Associate Professor
Department of Higher Education

Dear Dr. Dixon:

I have followed with considerable interest the development of the idea of the National Conference on Testing in Education, Industry, and Government. The focus on test validity, socio-economic, racial, and ethnic bias, and procedures for inducing change in test producers and test users is indeed timely. The conference is of grave importance to the welfare of our nation because it aims to help education, industry, and government to identify and nourish human talent more effectively.

The School of Education heartily endorses the conference. Through support of your work in our Department of Higher Education and throughout the United States we have demonstrated institutional concern. Furthermore, the proposed national conference addresses significant testing problems in which I have long been vitally interested.

Because of our concerns the School of Education endorses your presentation of the conference idea to external sources for funding. I shall be glad to do whatever I can to increase the possibilities for success in your search for funding.

Sincerely,

Paul H. Masoner

HAMPTON INSTITUTE
HAMPTON, VIRGINIA 23368

OFFICE OF THE PRESIDENT

November 22, 1972

Dr. Norman R. Dixon
Associate Professor, Higher Education
Director, National Conference on Testing
University of Pittsburgh
Pittsburgh, Pennsylvania 15213

Dear Dr. Dixon:

In these days of rapidly changing trends in higher education, it is important to have a better understanding of the true usefulness of our various indicators (test) of performance, potential and information acquisition. This is especially true in higher education because of the broadened spectrum of students from all walks of life now attending or seeking entrance into college. Because of these facts and the present demonstrated weaknesses in our testing system, I welcome the idea of a National Conference on Testing in Education and Employment.

Hampton Institute heartily endorses this conference and stands ready to do whatever it can to assure the success of such a conference. More precise evaluative instruments are sorely needed in our daily attempts to evaluate the multitude of persons presenting various cultural and ethnic differences. It is important that we be able to speak intelligently and analytically to these differences.

As a traditionally Black institution, we have a special interest in the promotion of such a conference and therefore endorse your presentation of the conference idea to external sources for funding. We are hopeful that these initial steps will pave the way to a total elimination of the drastic national manpower losses due to inadequate and inappropriate evaluative instruments.

Your and your colleagues are to be commended for your initiative in developing and promoting this much needed national conference.

Sincerely yours,

Roy D. Hudson
President

Mr. George Harris
Southern Regional Council
52 Fairlie Street, N.W.
Atlanta, Georgia 30303

Dear Mr. Harris:

The Office of Minority Affairs of the Ohio State University is one of the sponsors of the National Conference on Testing in Education and Employment to be held at Hampton Institute on April 1-4, 1973. I have been on the Steering Committee since its organization. Dr. Norman R. Dixon, Conference Director, has told me about your interest in this event.

I am writing to encourage your active support in a movement that is bound to have a significant impact in areas crucial to the education and employment of Blacks. We need $30,000 to help defray conference expenses and launch a very significant five-year follow-up program. As you know, we are not planning a three-day conference to talk about problems but will develop a five-year action program designed to make the changes in testing that will adequately open doors of opportunities for Blacks in education and employment. To this task we are wed.

It has been a privilege for me to work on the Steering Committee with a distinguished corps of scholars, educators and administrators. Excellent planning has been done thus far. Your influence and assistance with our funding program will be a highly valuable contribution adding power to our thrust to make this event not only historic but highly valuable.

Sincerely,

William J. Holloway

WINTER, 1965

Staff Members, Ray Murphy and Ernest Green Tutor Sheetmetal Applicants

Training

The Meritocracy of Labor

by Murray Kempton

The most public life Ernest Green is ever likely to know is now not quite seven years back in his past. He is only 23 now. Ernest Green was the first Negro to be graduated from Central High School in Little Rock, Arkansas. He was for awhile a subject for all the news photos, a thin child with glasses walking through the crowds in the fall of 1957, and then still a thin child in a black robe with his classmates in the spring of 1958, a graduate, thanks to the protection of federal troops.

He was one of 601 seniors at Central High School. Just 14 of them wrote their good wishes in his class yearbook.

"I really admire you, Ernest," the secretary of Central High's student government wrote under her picture. "I doubt if I could have done half so much if our positions were reversed. May you achieve all your goals and they be the best."

The fifties focused on the special Negro, and his story was always inspiriting. Now the sixties are confronted with the ordinary Negro and he has almost no story at all.

Ernest Green departed the South to complete his education at Michigan State University; and few of the strangers who saw him in his singular high school year can have thought much about him since. The other day I went to Brooklyn, from some small curiosity about the ordinary Negro, and came upon Ernest Green.

He has found his goal in the Bedford-Stuyvesant area, which is Brooklyn's Harlem. He spends his days trying to find jobs for young Negroes as plumbers, electricians and carpenters.

It would be too much to say that it is as hard for an ordinary young Negro in New York to be taken on as an apprentice in a skilled trade as it is for an extra-

ordinary young Negro to be admitted to a Southern university. But it would not be a great deal too much to say.

In 1958, the year of Ernest Green's high school graduation, the New York State Commission Against Discrimination made an ethnic survey of the apprentices in the state's construction industry. Apprentice training is the only means of entry into those building crafts which have always been the best general opportunity for comfort and pride available to the young whose education ends with high school. In 1958, the State Commission Against Discrimination estimated that perhaps two percent of New York's 15,000 construction apprentices-in-training were Negroes.

That estimate may have been generous. We have lived since through seven years of numberless protest demonstrations by Negroes and hardly more computable responses in plea and intervention by government. The State Commission Against Discrimination has become the State Commission for Human Rights. For all that has been said, no responsible agency will assert yet that more than two percent of the construction apprentices now in training are Negroes.

The skilled-job market has, of course, always been controlled by a company of trade unions which have been the only medieval institutions in the city, being hierarchic, feudal and frequently consanguine. Apprentices, more often than not, have been connected by blood or friendship with full members of these guilds. The tradition of the job as property to be bequeathed or given away has done as much to bar the Negro as any lively prejudice against his color. There were 3,000 union plumbers in Brooklyn a year ago last August; nine of them were Negroes, none of whom held the "A" membership card and earned the $4.10-an-hour wage which are the rewards for survivors of the apprenticeship stage.

Last spring the State Commission for Human Rights found Local Union 28 of the Sheet Metal Workers Union guilty of discriminating against Negro applicants. Local 28 had and has 3,300 members, none of whom was or is a Negro. Some 26 of the 30 applicants accepted for the local's apprenticeship program in July, 1963, were related to union members. A journeyman fitting the standards of this guild earns up to $6.15 an hour. Under pressure of court orders, Local 28 has agreed to give up selecting its apprentices by family bond and to subject all applicants to an aptitude test supervised by New York University next month.

A chance in the construction crafts is coming then to depend less on favor and more on objective standards. Last year, the Taconic Foundation made a grant to the Workers Defense League to seek out young Negroes to take these tests. The League set up its apprenticeship program headquarters in the most impressive building on its shabby block on Fulton Street. Ray Murphy, holder of the master's degree in clinical psychology, which is so much easier for a Negro than a plumbers union work permit, is its director and Ernest Green is his assistant.

What Poor Schooling Can Do

They have perhaps 150 young Negroes on their rolls as prospective applicants to any apprenticeship class a union opens up. None of them went to schools remotely as good as Central High in Little Rock. They had no chance against the barriers of custom; and now they do not have a greatly improved chance under the test of merit.

Their common problem can be embodied in the case of Arthur Harris, 19, a graduate of Thomas Edison Vocational High School in Queens, where he was selected above all his fellow seniors as laureate in the plumbing award of the ladies auxiliary of the Master Plumbers Association. In April, 1964, Arthur Harris tried to follow the bent indicated for the best plumber in his class by enrolling in the apprenticeship class sponsored by Brooklyn Plumbers Local Number One. Local One did not answer his letter; Ray Murphy intervened and in October the education committee of Local One agreed to let Arthur Harris take its aptitude examination.

The new merit system for neophyte plumbers administered by New York University is not one of rigid intellectual standards. An applicant, to be eligible for apprentice training, need only show himself above the level of the bottom quarter of the average American high school senior class. Arthur Harris could, then, have passed with a score of 100 out of a possible 400. He scored a 63; and, at that, may have done no worse than a majority of the other applicants, all of them white graduates of New York City schools. No more than 20 of the 60 testees seem to have achieved what in essence is a 25 percent passing grade.

Arthur Harris scored *five* out of a possible 100 in the category of "mental alertness"; *seven* out of a possible 100 in mechanical reasoning and *five* out of a possible 100 in numerical ability.

Ray Murphy guesses that a young man who had mastered the elements of the ninth grade would achieve the passing mark on this test. There can be no sensible quarrel with the honesty of the academicians who conducted it. We can only conclude then that the best prospective plumber in a New York City vocational school had been equipped by his teachers to rank less than a point above the *lowest five percent of American high school graduates* in alertness, mechanical capacity and skill with numbers.

Arthur Harris has dropped from sight since this

disaster; Ernest Green is afraid that he has given up. Most of the young Negroes who sit in Bedford Stuyvesant are like Arthur Harris and other graduates of vocational high schools, which means that they belong to a category of persons trained for no vocation at all.

We can assume, however, that if the Taconic Foundation and Ray Murphy and Ernest Green are patient enough, the building trades unions will have to yield their privileges and accept their apprentices on objective merit. But even that surrender is by no means imminent; most of Ray Murphy's day is spent in the continual interventions necessary to persuade or press union officials to give his charges a chance just to take their tests.

There is the case of Emmett Washington, a member of the maintenance division of Local Three of the International Brotherhood of Electrical Workers. In June of 1964, Local Three sent out letters to its members asking if they had any sons who might like to be apprentices to its construction division. Emmett Washington wrote back that he had no son but that he himself was a member of the union still young enough to be an apprentice. He got no answer; Murphy inquired for him and was told that the local had decided not to hold a class this year.

"I took one kid down to Local Two of the plumbers union to see a man named Kearns who is secretary of their joint apprenticeship committee," Murphy said. "When we got there Kearns came out and said that Kearns wasn't in. We had to go back again before he'd give him an application. I'm still not sure when he will take a test.

"I took two kids to Local 40 of the iron workers last October and they told us they weren't interviewing applicants unless they were accompanied by two sponsors who were union members. They had promised two years ago that they would no longer require sponsors. I got in touch with the secretary-treasurer and reminded him of some of these things and he called back to say that it had all been a mistake and we should apply again.

"We went back down and while we were waiting, one of the white applicants said we could go in first because his *sponsors* hadn't gotten there yet. Anyway, we were finally able to make an application 10 days ago."

Same as in the South

Still, the tests are coming; the problems that cannot be righted by any pressure at Murphy's command is the condition of the tested. When we think of the ordinary Negro, we recognize that the New York school system has settled into a mold as segregated in class as anything we have deplored in European education. The South, of course, traditionally drew the distinction of race; the academic public high school was for white children; the industrial or vocational school was for Negroes. New York has come unconsciously to a system which, in essentials, ends with the same result.

A child's pattern is set when he is 13 and ready to enter the complex of city high schools. He may, if he can pass its tests, enter an academic high school and hope to go on to a municipal college, where the tuition is still free and open to any high school graduate with an average of 85 in his academic subjects. Short of that, he can try for a technical high school, where the academic standards are also exclusive and where he can learn a trade. Failing all tests, there is no place for him except the vocational school where he learns almost nothing and serves no purpose beyond the requirements of the compulsory school education.

On the bulletin board in Ernest Green's office, there is a clipping from *The New York Times* telling the story of Michael Stewart, the first Negro apprentice to be accepted by Local 40 of the iron workers union. " 'His father, Malcolm Stewart, writes technical manuals for Sperry Rand'," Ernest Green read from the *Times*. "Now there's a working class background."

Cont. last page

From the Desk of RACHELLE HOROWITZ, Executive Secretary

Progress in Apprenticeship Training

The WDL Apprenticeship Program is still very much a pilot project. After nine months in Bedford-Stuyvesant, we have discovered that discrimination by trade unions is only the last (and sometimes unnecessary) step in a long process of exclusion that begins with public apathy and that includes an outdated vocational school system and a morass of government red-tape and bureaucracy.

Despite all the new rules and regulations and the occasional public proclamation, we are far from the day when an individual Negro or Puerto Rican applicant will be able to enter the trade of his choice without the assistance of a determined staff and the weight of a national organization behind him. Unions are turning more and more to objective criteria for admittance to training programs; therefore, the focus of the WDL program will turn toward the vocational school; Murray Kempton has not exaggerated the school's shortcomings.

The Apprenticeship staff has convinced the Board of Education to hold an annual career conference for students interested in vocational trades, and to invite trade unionists to speak before vocational school assemblies. Next we shall have to convince the Board that in an age of automation, intermediate mathematics is more important than woodworking.

Acknowledgements

The article by Murray Kempton is reprinted with the permission of *New Republic* magazine; the photographs of apprenticeship applicants being tutored at the Northside Center for Child Development were taken by Burt Shavitz.

Just a reminder: Have you paid your membership dues yet?

OF LABOR

Cont. from page 3

Sheet Metal Workers Local 28 sent out word last week that on February 13, it would conduct its objective test for apprentice applicants as prescribed by court order. Murphy and Green think they might have as many as 60 candidates; Dr. Kenneth Clark has agreed to hold classes for them at the Northside Center for Child Development and do, in the little time remaining, whatever private tutoring can to repair the damage which has been done by public education.

"You know, five of our kids did pass the electricians' apprenticeship tests on Long Island," Ernest Green said. "Of course, three of them were college students. They were over-qualified. Maybe I'll take the sheet metal test myself."

He is the graduate of a Southern high school and a Midwestern university. It does not seem that attainments significantly less impressive will soon give a Negro a chance to work at a skilled trade in New York.

Welfare Strike

WDL has always fought for the rights of labor and New York City's Welfare workers were no exception. While the office mobilized public support and additional pickets, WDL officers Norman Thomas, Rowland Watts, A. Philip Randolph and Board members Michael Harrington and Bayard Rustin sent the following wire to Mayor Wagner on behalf of WDL:

> WE HAVE LONG URGED THE REPEAL OF THE CONDON-WADLIN ACT AND FAIL TO UNDERSTAND HOW ITS USE TODAY TO DISMISS 5,398 WELFARE WORKERS HELPED THE POOR AND UNDERPRIVILEGED OF THIS CITY. BOTH LOCAL 371 AND THE SOCIAL SERVICE EMPLOYEES UNION HAVE AGREED TO THE APPOINTMENT OF A FIVE-MAN FACT FINDING BOARD. THE CITY HAS DONE A TERRIBLE DISSERVICE TO ITS POOR AND TO ITS SOCIAL WORKERS BY REFUSING THIS DEMAND. WE URGE THAT CONTINUOUS NEGOTIATIONS ON ALL GRIEVANCES PRESENTED BY THE STRIKING WORKERS BEGIN AT ONCE, AND THAT CITY OFFICIALS GET DOWN TO THE SERIOUS BUSINESS OF GUARANTEEING DIGNITY TO ALL WORKERS AND ALLEVIATING POVERTY.

Union Helps Train Youths In 'Man's Job'

AFL-CIO News 1/15/66

Syracuse, N.Y.—Operating Engineers Local 545 and the New York State Employment Service are looking for 60 unemployed young men willing to tackle a rigorous training program as the first step to a lifetime of work at good pay.

The opportunity is sponsored by the local in cooperation with the State Dept. of Public Works and the Neighborhood Youth Corps as part of the war on poverty and is open to youths not scared off by the union's offer of "real men's work in the outdoors —sometimes it's wet, sometimes it's cold, but it's always interesting and the pay is good."

The 60 accepted candidates will

(Continued on Page 3)

SIXTY YOUNG MEN from three New York State areas will receive training as rod and chainmen under a Neighborhood Youth Corps program sponsored by Operating Engineers Local 545, Syracuse, and supported by the State Dept. of Public Works. Going over some of the details are (left to right) Business Mgr. Jess Webb of Local 545; State Industrial Commissioner M. P. Catherwood; IUOE Reg. Dir. Howard Dalton; J. Burch McMorran, DPW superintendent, and Daniel McGraw, Jr., IUOE assistant regional director.

Union Program Trains Youth for 'Men's Work'

(Continued from Page 1)

be chosen from the Erie County (Buffalo), Onondaga County (Syracuse) and Essex County (Elizabethtown) areas and will be given 21 weeks' training as surveyors' aides to prepare them for work in the construction industry under union agreements with contractors.

During the training period they will work 32 hours a week and receive $1.25 an hour, and will be covered under all statutory insurance and the Operating Engineers Welfare Fund.

During training they receive will

way to beat poverty is to put people to work at good wages. Our three projects across New York State will give 60 young men the chance to get started on a lifetime career in a well-paying job.

"Our local union and its members are happy to be able to join with the state and federal governments in this effort to break the poverty cycle, while at the same time providing our contractors with qualified survey party members."

be chosen from the Erie County (Buffalo), Onondaga County (Syracuse) and Essex County (Elizabethtown) areas and will be given 21 weeks' training as surveyors' aides to prepare them for work in the construction industry under union agreements with contractors.

During the training period they will work 32 hours a week and receive $1.25 an hour, and will be covered under all statutory insurance and the Operating Engineers Welfare Fund.

"The training they receive will [illegible] instruction and on-the-job [illegible]ce as entry level surveyors," [illegible]iness Mgr. Jess Webb of [illegible]5. "Upon successful com[illegible] of their training they will be [illegible]alified rod and chainmen, [illegible] have had considerable ex[illegible]e as instrument men.

[illegible]e rates for rod and chain[illegible] under our collective bargaining [illegible]s vary from $2.175 to $2.65 [illegible]r. We expect that the con[illegible]n industry will be able to [illegible] all of these trainees shortly [illegible]ey complete their course."

[illegible] training will be given un[illegible] direction of highly-skilled [illegible]of-party who belong to [illegible] Local 545-D and are quali[illegible] instructors, Webb said. It will include use of the transit as well as instruction in the duties of a rod and chainman.

The project has a $100,000 Neighborhood Youth Corps grant of which the State Dept. of Public Works is providing 10 percent "in kind" by assigning equipment and tools to the trainees and giving them space in DPW garages out of which they can work as they move from one construction site to another.

Qualifications Listed

Potential trainees are being sought through the combined efforts of the union and the Employment Service with the cooperation of community and church groups. Applicants must be between the ages of 18 and 21, come from families whose 1965 income was no more than $3,100, be in good health and have an interest in mathematics.

The project has the hearty approval of the IUOE international office and Gov. Nelson Rockefeller (R). Commissioner of Labor & Industry Martin P. Catherwood and Deputy Commissioner Nicholas Valentine arranged to have employment counselors assigned to the program in all three areas. The Employment Service is screening the applicants for basic qualifications, with qualified surveyors making the final selections.

"We feel this is a meaningful and positive step in the war on poverty," said Webb. "The real way to beat poverty is to put people to work at good wages. Our three projects across New York State will give 60 young men the chance to get started on a lifetime career in a well-paying job.

"Our local union and its members are happy to be able to join with the state and federal governments in this effort to break the poverty cycle, while at the same time providing our contractors with qualified survey party members."

Training - Job Corps 1/29/66

Morgan Says:

Job Corps Woes Show Need Of New Ways to Fight Poverty

By Edward P. Morgan

(This column is excerpted from the nightly broadcasts of Edward P. Morgan, ABC commentator sponsored by the AFL-CIO. Listen to Morgan over the ABC network Monday through Friday at 7 p.m., EST.)

TROUBLE SEEMS to be breaking out all over in the Job Corps and if it isn't properly understood—and thus treated with understanding—there is a danger that the war on poverty may be lost.

Last Aug. 20 there was a serious riot in the Job Corps camp at Fort Breckenridge, Ky. There has been a running dispute for months at the Camp Kilmer Job Corps Center in Edison, N. J., between academicians and businessmen on how to run the camp.

Morgan

Last week it was revealed that the Office of Economic Opportunity, Sargent Shriver's GHQ in the war on poverty, was cancelling a $9 million contract with Southern Illinois University to run the Fort Breckenridge operation. The cancellation stemmed from the riot. Some industrial corporation will take over on July 1.

Another corporation, a subsidiary of Intl. Telephone & Telegraph called Federal Electric, has the Camp Kilmer contract to the tune of $11.5 million and nobody quite knows what the upshot will be to the argument between the company and Rutgers University professors, hired as consultants, over administrative policies. The Rutgers group and Job Corps teachers contend Federal Electric is trying to impress "business methods" on a sociological assignment—the preparation of poor youngsters, most of them school dropouts, for a productive role in society.

As if these difficulties weren't enough, the Job Corps share of the "poverty" pie has been cut from $310 million in the current budget to $228 million in the budget for the next fiscal year. The anti-poverty program will expand but more slowly than if Viet Nam were not draining dollars from domestic projects. This is too bad but not tragic—especially if everybody, including the politicians, the poverty experts and the public—will use the interval to take sharp but constructive looks into the methods used so far in waging this worthwhile but strange sociological revolution.

One fact sticks out. The desire to wage it is not enough. Take the camp at Fort Breckenridge. It added up to how not to train a Job Corps. There was good will here. But it slipped into a crevasse of misunderstanding widened by an almost utter failure of communication. The staff and the volunteers simply did not speak the same language. Some of the mistakes were so obvious that their commission seemed incredible. Most of the 750 volunteers came from big cities, like Chicago and Los Angeles. Many had never been beyond their city limits. Here were urban fish flung out of familiar waters, into a strange Kentucky countryside. The nearest town, Morganfield, was off limits; local custom was still segregated. So for infrequent leave the youths, black and white, had to take long bus rides to Evansville, Ind., where no proper preparations were made—no "hospitality center"—to receive them.

Inevitably there were incidents. Security patrols were put on the buses, the men were searched for knives and other weapons while their girl friends watched. They came quickly to regard Breckenridge as a prison, not a door to opportunity. Home leave was rigidly controlled, partly due to expense, but this was never adequately explained and even when parents sent money for fare, a pass might not be granted. Suspicions rose that the staff feared dropouts and a blot on their record.

FEW IN THE CAMP administration seemed to comprehend the low threshold of patience among their charges. When you live a life in which things are constantly denied you and then comes a glimmer of getting something, you want it now. Skeptical, suspicious in the first place, these recruits decided to see what the promises were. And what did they find? Chores of cutting grass for "discipline" because job training courses weren't ready when they arrived. Trips to Mammoth Cave to kill time—which were suspended when some, in the fury of frustration, misbehaved.

These reluctant, homesick migrants from city slums were sophisticated after their fashion and burned with resentment when the staff, from the director down, referred to them as "boy" or "son." "Treat me like a man," one youth said. "If you treat me like a man I'm gonna act like a man." With a self-image of virility their pride was outraged by clothing issues of ancient Navy bell-bottom trousers and khaki shirts.

Inextricable racial tension helped explode the riot but it undoubtedly was a mistake to bill it simply as a "racial incident." There were scores of other angry sparks—over inferior classrooms, lack of equipment, long waits in the chow line.

Nobody in his right mind would argue that these tough young charges be given a silver-spoon-and-Little-Lord-Fauntleroy treatment. But more adequate preparation, with some realization of their problem and how to communicate with them on their own terms, is vital. The old condescending social welfare approach is out. Nor can this experiment in social revolution be successful if the local community is uncooperative. One man who had a fat construction contract at Breckenridge ran a motel and bar in Morganfield that barred Negroes.

The nub of the problem—which the OEO seems belatedly beginning to realize—is this: if we're going to win the war on poverty we've got to train more cadres in new ways to fight it; the old ways simply aren't good enough.

Jobs vs. Training

Many Negroes Prefer Former, Government Stresses Latter

By MONROE W. KARMIN

"Antique."

The Negro was unsure of himself. "I don't know if that's the right word or not, but you know what I mean. Like back in Roosevelt's time, leaf-raking, cleaning up, fixing things. They say that's out of date now but, I don't know, it sure would seem like it would make jobs."

He stopped. He had said enough, perhaps too much. His words carried a quality of criticism, and the Negro felt it was not his place to criticize. After all, he was just a nobody from Oakland talking to a somebody from Washington.

Still, the man from Washington had come, unannounced, to the hangout in Oakland's ghetto to hear first-hand what the people were thinking. And the Negro had just returned from work: A hundred-mile journey, each way, to pick tomatoes from dawn to dusk to bring home a net pay of $2.75.

That was today. Tomorrow there would be no work, nor the next day, nor the day after. So he decided to take the risk. "What we need here," he blurted out, "is jobs, jobs, jobs, not training for *no* jobs."

The gamble paid off, but only for a time. The Washington somebody returned to the nation's capital convinced that Federal policy was missing its mark. Yet that conviction soon eroded under the weather of Washington reality. The Oakland Negro was right; his ideas are considered out of date by the Johnson Administration in today's fiscal, economic and political climate.

The President's Preference

The President's new budget makes clear his preference for aiding the unemployed via long-term routes that promise more lasting benefits than would a major revival of New Deal make-work programs. Expenditures for education, training and the like are slated next year to jump nearly 60% over what they were last year. Spending for job-creating public works is scheduled to slide back next year to about last year's level.

In part, the trend is the product of belief. Today's thinkers hold great faith in the power of education and training to generally uplift the unemployed so that, eventually, he will be better qualified to survive in the competition for jobs without artificial support.

But the choice also reflects hard fiscal and political realities. The Vietnam war's mounting cost leaves Mr. Johnson's budget little room to accommodate a massive new investment in job-creating public works, without reneging on his commitment to education and training. Even the President's most ambitious new public works-type venture — the $2.3 billion plan to rehabilitate neighborhoods in selected "demonstration" cities — starts modestly ($12 million the first year) and stretches out its cost over six years.

[illegible] a political risk, too. No matter how desperate the plight of the urban jobless, the fact remains that national unemployment has fallen to its lowest level in nine years. Hence, the danger that massive public works spending of the New Deal variety might offend the public consciousness as an unwise extravagance.

And extravagance is about the last thing the Administration wants to be accused of at a time when the economy is steaming along so briskly that inflation is now a major Washington worry.

Sensible as all this may seem to Federal planners, it fails to impress the Oakland Negro. To him, education and training may be fine, especially for the youngsters, but his most compelling need is for money to feed his family; not a handout but the dignity of a job—and fast.

There's no assurance, of course, that the Oakland Negro's solution for his problems is any more accurate than Washington's. But it does seem obvious that a communications gap exists between the ghetto dweller seeking help and the Federal official offering help, a gap that prevents either party from achieving satisfaction. It epitomizes the contradictions of contemporary society:

The country as a whole. Despite the ample dimension of Johnsonian Great Society spending, the frustration of the Los Angeles Negro erupted last summer in the worst race riot of the century. Now Washington lists 21 "high tension" cities that threaten to produce more violence in future summers.

Or a single community. Despite the investment of some $45 million of Federal funds in Oakland over the past several years to finance a variety of Neighborhood Youth Corps, anti-poverty, training and related projects, Negroes there insist "all we get from Washington is talk."

The talk flows both ways, and the Oakland Negro has his champions in Washington. Last fall, in the wake of the Los Angeles riot, Federal officialdom hummed with discussion of a "Depression style" make-work program to combat "Depression-style" ghetto conditions. (In Oakland, for example, unemployment among Negro males is five times the national average, or 20%).

From California, Governor Edmund Brown began beating the drums for a $2.5 billion Federal program to create 500,000 jobs. The call was heard by officials within the anti-poverty Office of Economic Opportunity who deliberated ways to put the plan into effect. Leaf-raking appeared to be coming back into vogue.

But Vietnam's expense continued to mount, national unemployment continued to fall and, perhaps most important of all, Federal policymakers began to worry, for real, about inflation. All of these influences had their effect on the President's budgetary decisions.

Not that public works spending is neglected entirely. Far from it. An estimated $7.6 billion will be spent for non-defense projects that are unabashedly make-work, such as the anti-poverty Green Thumb effort that will offer part-time employment to needy, retired farmers on roadside beautification projects.

But the public works expenditure line is flattening out, and new authority requested by the President for future-year spending suggests the trend will continue unless there is a major policy turnabout.

An illustration is the special, accelerated public works program that got started during the Kennedy years to promote quick employment. It will disappear before long. Just $8 million is budgeted for the coming year to wind up the program; last year this job-creating scheme doled out $322 million.

Boost Fails to Materialize

While the demise of accelerated public works is no surprise, it was expected that a new public works agency, the Economic Development Administration (EDA), would get a hefty financial boost in the new budget. This agency came into being after the current fiscal year had begun. But EDA isn't getting, for the new year, any more appropriations than it got during its abbreviated first year. Effect: A cutback.

In contrast, cutbacks are hard to find among the various Federal education and training activities. Aggregate spending will climb sharply to $6.4 billion in the coming fiscal year, from $5.7 billion this year and $5.2 billion the year before. Authority requested for future-year spending points to a continuing steep rise.

The multi-billion dollar program to create new jobs that was considered last fall is conspicuously absent from the new budget. Instead, the poverty-fighting Office of Economic Opportunity will spend $1 billion for education and training programs in fiscal 1967. As the President's message declares, "Education is vital to the achievement of a Great Society and is our major weapon in the war on poverty."

More training for the unemployed also is being planned by the Labor Department, which will direct its program toward the unskilled in an effort to, as the budget explains, "increase the availability of productive labor to meet the demands of our expanding economy."

Should Vietnam's cost ease, or national unemployment worsen, or the economy plunge into a tailspin, future Federal budgets may be telling a quite contrary story. Certainly, there are those who continue to argue the point; a special Presidential committee on automation this month recommended massive spending for job-creating public works.

But, as far as the fiscal 1967 budget is concerned, the die has been cast in favor of educating and training the unemployed. Mr. Johnson may well be right, but the Oakland Negro doesn't think so.

Harper Sponsors Second Parent Education Program

Atl Daily World

The second parent education program, co-sponsored by the Youth Incentive Committee of the Atlanta Urban League, and the Guidance Department of Harper High School, is scheduled at 7:30 p.m. Thursday, Feb. 24, in the school gymnasium.

The necessity for parents as well as youth to be informed of the present day demands for earning a living, what is expected, and the qualifying requirements for employment are to be discussed.

Workshops on job preparation and job opportunities will be the subjects for discussion.

Workshop Areas and Leaders are: Apprenticeship Training, Merlin Taylor, Bureau of Apprenticeship Training, Industrial Training Advisor, U. S. Dept. of Labor.

Employer Preparation — Nathaniel Arnold, executive director, Atlanta Urban League.

Student-Teacher Relations — Dr Huey Charleton, professor, Atlanta University, C. B. Feagan, administrative assistant, Charles L. Harper High School. 2/23/66

Civil Service — William Gaines, training specialist Post Office Department — Atlanta Regional Office, Reid A. Brookins, property management officer Federal Housing Bureau.

Manpower Development Training —Richard T. Lyles, director vocational services Atlanta Urban League.

Parent-Student — Mrs. Edith Ha rick, Director Social Service Department, E. O. A. Summer-Hill McCamicsville Service Center.

I. B. M. Machines — Don Hall, registrar Hoke Smith technical school, Schrader, representative I B. M.

Sales — Mrs. D. Fierst, director of training, Rich's Inc. Paul E. X. Brown, representative sales & marketing Atlanta Coca-Cola Bottling; Sub-Group Chairman, Youth Incentive Committee, Atlanta Urban League.

Supervision and Foremanship — Charles Prothro, industrial development specialist, Economic Development Program.

(Continued on Page 6, Col. 5)

Training

Harper Sponsors

(Continued from Page One)

All parents, especially senior parents and friends are urged to attend this program.

Kennon Thompson is Principal Mrs. Fredericka Hurley, guidance coordinator.

Miss Sara Elizabeth Wingfield, school counselor, chairman; and Rudolph Hinds, reporter.

New York—A demonstration program aimed at qualifying 17-to-22-year-olds for chronically unfilled jobs, with union halls as the

TRAINING CONTRACT was awarded recently by the Labor Dept.'s Office of Manpower & Training to the Coordinating Council on Education for the Disadvantaged for a demonstration program to help train young adults for sub-professional jobs in New York, using the halls of eight unions. Shown at the signing ceremony are, from left, seated, OMT Dir. Curtis C. Aller; Benjamin F. McLaurin, eastern zone official of the Sleeping Car Porters and CCED chairman; U.S. Senators Jacob Javits (R) and Robert F. Kennedy (D); Gus Tyler, assistant to the president of the Ladies' Garment Workers, and Herman Kressel, manpower development training director for the city Board of Education; standing, Mel Bartell, CCED secretary-treasurer and president of Radio Station WADA, New York's Spanish language station.

Unions Open Meeting Halls For Training

New York—A demonstration program aimed at qualifying 17-to-22-year-olds for chronically unfilled jobs, with union halls as the first classrooms, has been set up by the labor-backed Coordinating Council on Education for the Disadvantaged. The CCED will undertake the project under contract with the Office of Manpower & Training of the Labor Dept.

Known as Program SAVE (sub-professional and vocational education), it will prepare young men and women whose high school educations have proved inadequate, most of them Negroes or Puerto Ricans, for entry into community colleges where their training will be completed.

Job Follow-Up

A follow-up program that includes working with U.S. Employment Service offices will channel them into jobs.

Eight unions have offered their halls for use in the program—Sleeping Car Porters, Ladies' Garment Workers, Intl. Brotherhood of Electrical Workers Local 3, Teachers Local 2, Longshoremen's Local 1814, Seafarers, Auto Workers Reg. 9-9A and Millinery Workers Local 2.

SAVE is financed to serve 800 young men and women in its first year. Upon registration at a union center, the student will be given an appointment with a counsellor who will assign him to qualified and sympathetic tutors in the subjects in which he needs help. When he is fully prepared he will be assisted in entering the community college for his sub-professional training, during which SAVE will keep an eye on his progress, and thence into a job.

The program is intended to deal with the problem of those whose education has left them unprepared to enter the world of work so that they go jobless while many jobs are unfilled.

CCED membership includes AFL-CIO Pres. George Meany, several AFL-CIO vice presidents, Pres. Harry Van Arsdale, Jr., of the New York City AFL-CIO and officials of many New York unions. The chairman is Benjamin F. McLaurin, eastern zone official of the Sleeping Car Porters and a member of the Board of Higher Education of New York City.

Job Training Pact Signed By BSEIU

A school for the unemployed offering training in custodial work will be set up in Washington within the next two weeks by the Building Service Employes under a contract with the U.S. Office of Education.

The school, co-sponsored by Washington Locals 82 and 536 as well as the international union, has rented its own facilities and will operate on a classroom basis with full-time instructors. Each of the four training periods planned for 1966 will enroll 40 students and last for 12 weeks.

Prospects will be supplied through local and federal agencies, screened by the U.S. Employment Service and indoctrinated so they will be aware of the type of training they will receive and the type of job for which they are heading. BSEIU Rep. Richard E. Murphy will be administrator of the school.

"Our main purpose in sponsoring this school," said BSEIU Pres. David Sullivan, "is to secure jobs for unemployed workers after they have completed the course. The school represents a concrete effort to support Pres. Johnson's War on Poverty. If it is successful we hope to establish similar schools in other cities."

Second Class Postage Paid at Washington, D. C.

Job Training Program Set with Urban League

Bal Harbour, Fla.—The AFL-CIO and the National Urban League will join in a cooperative movement to enhance job and promotion opportunities for Negroes, Federation Pres. George Meany announced here.

The program was approved by the AFL-CIO Executive Council, which voted $10,000 a year for three years to help launch it after an appearance before the council by Whitney M. Young, Jr., executive director of the league.

Meany at a press conference termed the Urban League approach "very positive" and a "good program" in terms of pre-apprenticeship training for Negro youths and job promotions for Negro workers.

He said the AFL-CIO is "not satisfied" that discrimination is being eradicated at all levels of the trade union movement as quickly as desired, but stressed that "constant improvement" and progress are being made. Complete elimination will take time, he noted, and the AFL-CIO will continue to press for results.

Voicing support for the AFL-CIO's civil rights program, Young told the council that "we both recognize" that unfortunately there still remain "many gaps between the stated policies of the AFL-CIO and the practices of some local unions."

The great increase in the number of Negro union members, Young said, "is due to their growing awareness of the advantages to be gained from such membership." Working with the unions, the league "will encourage more active participation of non-white workers in unions and community activities." It is "imperative," he added, "that minority youth be assisted in making early vocational choices" based upon first-hand knowledge of the requirements necessary to enter into

(Continued on Page 3)

TrainingPlan Set by Labor, UrbanLeague

(Continued from Page 1)

apprenticeships and into technical and other occupations."

The League program, in cooperation with the AFL-CIO, will:

- Set up programs to improve the position of Negro workers "in those occupations, industries and business enterprises" which have union contracts.
- Disseminate within the Negro community information on job prospects in the blue-collar labor market, the nature of unions and the rights and responsibilities of union membership.
- Establish a national trade union advisory committee within the urban league to further the cooperative relationship for job opportunities in organized skilled trades and assist in the placement of qualified individuals in job categories where their skills can be fully utilized.

Young told reporters at a press conference he hopes the program will open a "new era of cooperation" between the labor movement and the Negro community, because the condition of the Negro worker today is little different than it was five or 10 years ago.

With unions opening doors to Negroes in greater numbers, he said, the challenge to Negro groups is to provide men who can take advantage of the opportunity.

Training

SOON-TO-BE SKILLED CRAFTSMEN meet with Assistant Dir. William E. Pollard (left) of the AFL-CIO Dept. of Civil Rights after attending a Conference on Apprenticeship Opportunities held for New York City high school students. Already taking part in union training programs are, left to right, Robert Auld, Intl. Brotherhood of Electrical Workers Local 3; Scott Green, Sheet Metal Workers Local 28; Herbert Hall, Machinists Local 15; Richard Treolia, Sheet Metal Workers Local 28, all apprentices, and David Peterson, classed as a helper in Operating Engineers Local 94.

Apprenticeship Appeal Given New York Youths

New York—New York City youths were told "you are wanted, you are welcome" as apprentices in the city's building trades unions.

Pres. Peter J. Brennan of the New York Building & Construction Trades Council, principal speaker at a conference on Apprenticeship Opportunities for high school students told the youths, "If you have a skill you are needed, and while some crafts may be disappearing from our industry, others will be around for many hundreds of years and will need skilled workers."

Construction unions, Brennan declared, have an obligation to admit apprentices, including those from minority groups, and give them the same opportunities enjoyed many years ago by today's labor leaders. The industry can absorb them in a dozen and a half different crafts, he said, but he added a warning about job opportunities.

"Public works is the key to the whole problem of construction today," he declared. "Private industry can build only so much, and this is why the government must come in and pick up its proper responsibility.

We want the government in Washington, D.C., in Albany and here in New York City to know that we need more job opportunity. We want government officials to know that more public works building can not only fill the need for residential and commercial structures but also help keep employment in this industry at a high level."

He asserted that the present New York City administration has more than $3 billion worth of construction plans pending that should be put into operation.

Hope that the city's Board of Education would cooperate in making high school students aware of existing job opportunities was expressed by Bayard Rustin, director of the A. Philip Randolph Institute and conference chairman.

"We trust that the Board of Education will let us go into the schools and see that information about the apprenticeship program is brought to the attention of the thousands of young people who stand to gain," Rustin said.

He held that the Johnson Administration's war against poverty is linked directly with training young people in specific skills and with eliminating illiteracy.

Other speakers included Vice Pres. David Crockett of Local 6, Typographical Union; Thomas Van Arsdale, business agent of Local 3, Intl. Brotherhood of Electrical Workers; and Myron Horwitz, a representative of the Bureau of Apprenticeship Training, New York State Labor Dept., who urged the students to "stay in school and get as much training as you can."

Apprentice Trainees Are Wanted At AFB

Macon Weekly 3/5/66

Warner Robins Air Materiel Area is actively seeking young men and women who are interested in learning a trade and being paid while in training. WRAMA is actively looking for this type of person. They have recently developed a special Apprentice Program and are taking action to fill these jobs.

Eligible applicants will be hired at a starting pay of $1.91 an hour with step increases each six months until they complete the eighteen month training program. The skills for which training will be given include:

a. General Aircraft Mechanic, b. Aircraft Sheetmetal Worker c. Free Gyro Repairer, d. Radar Repairer f. Radar Airborne Electronic Computer Repairer, g. Electrical Equipment Repairer, h. Electro-Mechanical Instrument and Controls Repairer, i. Powered Ground Equipment Mechanic.

These programs have been designated to bring employees into the Federal Service who have aptitudes in one of the mechanical trades. Employees hired under this program will progress through the various levels of the trade until they are fully qualified as junior level mechanics. The program will provide for eight hours in the classroom each week and thirty-two hours on the job training. The class room portion of the training will be conducted by the Macon area vocational school. Employees in these programs will attend the school for [illegible] each week and will spend the rest of the time working at Robins AFB, Ga. Employees will be paid for the time they are attending school.

Trainees will be encouraged to participate in all Self Development activities sponsored by the Robins AFB including the College Program offered by the University of Georgia Center in Macon and Warner Robins. A trainee may secure a two year certificate in Business Administration by attending one of the centers two nights a week on his own time.

If you know anyone who would be interested in this employment, he sould apply in Civil Service Examination No. AT28-12 (25) by submitting Form 5000AB to the Board of Civil Service Examiners, WRAMA, Robins Air Force Base, Georgia. The forms may be obtained from the Board located in Building 1678, or from most first or second class postoffices. Any applicant passing this test will be offered immediate employment if he meets all physical and security requirements.

Industry & Finance

Wirtz Denies Labor Crisis

WASHINGTON (AP)—Secretary of Labor W. Willard Wirtz said Monday it is "cockeyed" for any one to say the current 3.7 per cent unemployment rate is too low and would cause labor shortages.

Wirtz, at a news conference, said the government will continue to try to push the nation's jobless rate down to what it considers the rock bottom level of 2.5 per cent of the civilian labor force.

"There is not a manpower shortage in this country today," Wirtz said.

However, he added, there are budding labor shortages in some areas of the country and in some trades.

He said the problem now is to train the unemployed, totaling 3.1 million, for the jobs that do exist.

A partial answer to the problem, he said, is for people to move from surplus labor areas to areas where manpower shortages may be developing.

Wirtz said in trying to match unemployed workers with available jobs, the problem has become both economic and sociological. Wirtz made the comments after signing two contracts to train the unemployed.

One, for $521,287, was signed with the National Tool, Die and Precision Machining Association to train 1,800 persons to become apprentices in that industry.

The other contract was for $56,680 with the National Urban League to train the poor and disadvantaged for jobs.

'IT'S A GOOD THING'

Job Corps Seeking 1,000 Atlanta Boys During April

By FRANK WELLS

Dexter Hammonds, 17, dressed himself neatly in a dark blue T-shirt, a corduroy jacket and his best pants.

David Brodsky

He wanted to make a good impression on the interviewer, because Dexter wanted to get a job. The job he was looking for was one in the Job Corps where he could learn a trade at the same time he earned some money.

Dexter was just one of 400 Atlanta boys who have joined the Job Corps, and Economic Opportunity Atlanta is looking for 1,000 more during the month of April.

Dexter talked with David Brodsky, an interviewer and recruiter for the Job Corps. The interview took place at the Economic Atlanta NASH-Washington Neighborhood Service Center at 247 Ashby St. NW.

The recruiters had been around for a couple of days, riding around the neighborhood in a sound truck telling about the Job Corps and handing out leaflets.

But Dexter said he had heard about the Job Corps from a friend who told him "it's a good thing to get into."

Dexter has finished the ninth grade at Archer High School and before his application was processed fully he took some tests to find where his level of education stood.

"I don't know what trade I'll study for," Dexter said. "I want to get in some basic education first. You got to have that first."

Dexter said he didn't care where they sent him as long as he could get some training.

Washington's Job Corps office has said that Atlanta boys have the highest Job Corps success rate of boys from any city in the country, and the lowest dropout rate. That's the reason they asked Atlanta to send them 1,000 boys in April.

There are 115 rural and urban Job Corps Centers located throughout the country. It usually takes a boy from one to two years to graduate.

The Centers are no vacation spots. The boys spend up to 14 hours a day in job training, basic education and plain hard work. Each earns a dollar a day and each month $50 is put into a savings account for them so they will have some money when they graduate.

If he chooses to do so, the Job Corp boy can send $25 of this savings home each month and the Job Corps will match this amount.

The Corps is still a new opportunity. To date 13 Atlanta boys have graduated from the Job Corps. Of these seven are working, two have joined the Air Force and one joined the Army (all three had previously failed the Armed Services enlistment tests), two boys are looking for jobs and one has moved and EOA doesn't know what happened to him.

EOA is responsible for recruiting and screening Job Corps applicants for Atlanta and Fulton, Cobb, Clayton, Fayette, Douglas, DeKalb, Rockdale and Gwinnett Counties. Recruiting offices are on the fourth floor of 101 Marietta Street.

An example of how the Job Corps is paying off in human values is found in the story of Robert J., a 19-year-old 9th grade dropout who had been out of a job for 23 weeks when he came to the Job Corps recruiting office.

He said he had done construction work, but was laid off. The Job Corps sent Robert to the Cispus Job Corps Center in Randle, Wash. While there he studied basic education and cooking. He graduated in nine months with a General (High School) Equivalency diploma and came back to Atlanta just last month where he has found a job as a cook's helper making $1.75 an hour — with every chance for further advancement.

Helps You Overcome
FALSE TEETH
Looseness and Worry
No longer be annoyed or feel ill-at-ease because of loose, wobbly false teeth. FASTEETH, an improved alkaline (non-acid) powder, sprinkled on your plates holds them firmer so they feel more comfortable. Avoid embarrassment caused by loose plates. Get FASTEETH at any drug counter.

Youth Corps a Year Old--and Still Has Far to Go

TASK FORCE report

Page 8 Monday, April 11, 1966

The Neighborhood Youth Corps has been in action to help the teen-agers of Georgia and the rest of the country for just a little more than a year.

Georgia has 27 projects now under way—but has had a total of 39 projects approved.

During calendar year 1965, 14,820 young people between the ages of 16 and 21 were approved for enrollment in Georgia, according to William S. Harris, regional director of the NYC. (The NYC is operated under the direction of and financed by the U.S. Department of Labor.)

Of this total, 12,496 were in the in-school program and 2,324 in the out-of-school category.

Federal funds totaling $7,402,634 were spent on these programs during 1965, Harris said. And the program is growing. For instance, the Atlanta program for out-of-school youngsters is authorized 873 enrollees. At present it has only 677.

The programs range all the way from 1,000 youngsters authorized (and taking part) in the in-school program in Atlanta to only 12 taking part in the program sponsored by the Chattahoochee-Flint Area Planning and Development Commission. This commission is authorized 54 out-of-school trainees, but has not as yet filled its quota.

The in-school programs seem to be better able to fill the allowance of students authorized to participate than the out-of-school programs. This is probably because the schools have counselors who are already in full knowledge of the problems of some of their students and who have been looking for some such program to help out.

Out-of-school programs have more difficulty in reaching the youngsters who should be helped, although Neighborhood Youth Corps officials are doing all they can to find the ones who need help the most.

Here are the organizations now using NYC help (some of them in more than one project:

Atlanta Economic Opportunity, Inc.; Atlanta-Fulton County Boards of Education; Gainesville City Schools; Georgia Mountains Planning and Development Commission; Northeast Georgia Planning and Development Commission; Chattahoochee-Flint Area Planning and Development Commission; Economic Opportunity for Savannah - Chatham County; Bibb County Board of Education; Rome Board of Education; Walker County Board of Education; Oconee Area Planning and Development Commission.

West Georgia Planning and Development Commission; DeKalb County Board of Education; Heart of Georgia Planning and Development Commission; Cartersville City Schools; West Central Georgia Planning and Development Commission; Coastal Area Planning and Development Commission; Murray County Board of Educatin; Altamaha Community Action Authority, Inc.

Polk County Board of Education, and Chatham County Board of Education.

For the Desperate, There's New Hope In Youth Corps Jobs

By FRANK WELLS

Desperation is a feeling that can come early in life . . .

It can come as a youth searches vainly for work and is turned down each time because he has no training, no experience and no way to get any.

It can come to a high school student who feels completely left out of school activities because he has no money and no way to get any — and his family would need it all anyway.

The Neighborhood Youth Corps, sponsored nationally by the U.S. Department of Labor, is furnishing an answer to a small percentage of the frustrated youths in this country. In Georgia, nearly 7,000 boys and girls between the ages of 16 and 21 are enrolled — some in school, others who are dropouts.

The idea behind the whole thing is to break the vicious circle of poverty — to teach these boys and girls that it is not necessary for them to remain poor, untrained, fit only for menial jobs, if they can find even those.

The idea is working, and the program probably will be enlarged.

Here's a typical reaction as told by an official supervising the work of some of the Neighborhood Youth Corps enrollees:

"This lad had been working for the Neighborhood Youth Corps for just a week. He got his paycheck — with the usual deductions for taxes, Social Security and the like.

"He seemed to be more interested in the deductions than he was in the remainder of the check. He asked what each deduction was for and then exclaimed, 'Well, look at that! I'm a taxpayer! Me, a taxpayer!'

"He couldn't get over it. He showed his check to everyone around, pointing out that he was PAYING TAXES. These kids want to be contributors to society. They don't want to be on relief or the welfare rolls, and they can see the importance of learning."

The official emphasized that it is important to the individuals enrolled to feel they are needed and of value to the job at hand.

"It is sometimes the first time they have ever felt as if they were needed — not just another mouth to feed, not just a drain on meager resources. It stops the 'born to lose' attitude of many poor youngsters.'

PROJECT GROWING

Right now Georgia has 27 projects using the Neighborhood Youth Corps enrollees, according to figures of the Department of Labor.

Largest number of enrollees are in the Atlanta area, with 1,000 in-school participants and 677 dropouts. The programs, of course, differ.

The in-school enrollees work after their regular school hours and are employed in other schools, mainly elementary schools. They do all sorts of work, ranging from ground maintenance to clerical and library work.

THEY'RE LEARNING

They are learning in school, and they are learning after school.

'LIKE I'M ON MY OWN'

$10 Check Brings Confidence Into Their Lives Each Week

Staff Photos—Charles Bennett

Cora Sue Porter Polishes Flasks as Part of Her NYC Job in Habersham County Hospital

'LIKE I'M ON MY OWN'

$10 Check Brings Confidence Into Their Lives Each Week

By MARGARET HURST

A $10 check each week can mean self respect, confidence, and a sense of responsibility to a young girl who may be the first in several generations of her family to have a steady job.

Several young high school girls participating in the Neighborhood Youth Corps' In-School Work Training Program in Atlanta put the meaning of the $10 in their own words:

"I can help my sister with her six children and help my brother some. They help me when they have money. It makes me feel good. . . ."

"My mother doesn't have to give me lunch money. . . ."

"I gave my father $7 to pay the light bill. . . ."

"Like, I'm on my own. . . ."

"It makes you feel a kind of security. . . ."

These girls represent only a small sampling of the 1,000 Atlanta high school students who are participating in the NYC program.

Students interested in the program are interviewed by one of five project counselors to determine their eligibility and enrollees are placed on job assignments within the school system at schools where help had previously been unobtainable because of a lack of funds.

IN 25 SCHOOLS

One of the project counselors, Miss Marian Baker, points out that this is not a "make work" situation. Enrollees help out in over 25 elementary schools with such jobs as library-aide, clerical aide, secretarial aide, lunchroom aide, grounds keeper and custodial aide.

The fact that the jobs are not just created for the students helps them to realize they are not taking "welfare" but are actually making an "honest living."

The students are paid $1.25 an hour and may work a maximum of eight hours a week. Students receive reimbursement for whatever transportation is involved.

EIGHT TO 10 IN FAMILY

Miss Baker said that the students usually come from families which have an average of eight to 10 persons. And in some cases the student is the only member of the family working at present.

Criteria used to help determine the eligibility of enrollees includes the following:

Pupils from families receiving financial aid through the Fulton County Department of Family and Children Services.

Pupils from families receiving welfare assistance from any other welfare organization.

Pupils from families whose members received benefit from a free lunch program.

Pupils from families whose income classified them in the poverty bracket.

Dr. Hugh F. Moss, project director, said that while close to 1,000 students are being assisted in finding jobs through the NYC that there are "easily" 2,000 more in the Atlanta area who are eligible and who would like to take part in the program.

The NYC has a workload limit of 1,000, or 200 enrollees to every project counselor, and at present no additional federal funds are available to provide more counselors. He said in one Atlanta school alone there are 3,300 students who are eligible to come under the NYC program.

The project counselors have three major areas of responsibility: selection and placement including pre-work counseling, general supervision of enrollees, and personal and vocational counseling of enrollees.

The students are supervised on their jobs by a school staff member and by providing this supervision the city-county pays its one-tenth share of the program. The major portion of money for the NYC comes from federal funds.

According to Miss Baker, once the students have gotten "the feel of working" on the jobs provided by the NYC they can find other jobs. She said the program has fewer boys than girls because once the boys get accustomed to working they want more money and, therefore, they find other jobs.

Miss Baker said money means a lot to these students because in most cases "it's the first money they've had." She said the counselors, who meet with the enrollees two hours each week, try to teach the students neatness, punctuality, how to apply for a job and to show them how their work will help them in the future.

The Atlanta program is sponsored by the Atlanta and Fulton County boards of education through the Metropolitan School Developments Council.

In other areas of the state, NYC programs for persons in-school and out of school have produced the same rewarding results.

In Gainesville, Beverly Wilson, 16, who dropped out of school in the 10th grade, is empolyed in the office of the Georgia Mountains Planning and Development Commission.

She is learning to be a cartographer — how to draw maps.

30 HOURS

She works 30 hours each week and is given six hours of training by a cartographer. Beverly traces maps — taking pertinent information off a master map and creating a new one with these details shown.

"I thought at first it would be too hard for me, but it's not. It's real interesting work and you can put your mind to it," Beverly said.

One of her supervisors said that after Beverly's training period is up, she can easily get work as a cartographer's aide in many different government offices and can start at something like $2.25 an hour.

Cora Sue Porter, 19, who passed the ninth grade before she quit school, works in the laboratory of the Habersham County Hospital.

"I really like what I'm doing, I really do," she said.

Cora Sue does mostly clerical work for the laboratory — learning how to keep patient's charts up to date and keeping the monthly reports and inventory in order. She also helps out in keeping the many, many pieces of glassware in the laboratory clean.

Cora Sue wants to be a laboratory technician, but she doesn't have enough education. However, she is learning how to be a laboratory technician's helper and is getting a good basic training in clerical work.

Beverly Wilson Learns to Trace Map

Herman Burrell (R) Learns Workings of Diesel Generator from Alfred Stroud

Youth Project No Orphan--- Its Lineage Goes Back to FDR

Back in the days of the Great American Depression a man named Franklin D. Roosevelt was elected president and almost immediately started a program to help the impoverished and uneducated youth of this country (among many other things).

He started the Civilian Conservation Corps, which took youths off the street corners of America and put them to work building and conserving America's natural beauty spots. Many a youth swung an ax who had never seen one until the program started.

And he also started the National Youth Administration, which gave young people jobs while they were completing their education. Many youths earned their spending and living money in college working on the campus itself.

Then came World War II — and after that the GI Bill of Rights which gave every veteran the opportunity of furthering his education.

Wells

Hurst

Bennett

Then there was a lag.

Now federal and state governments are interested again in seeing that every youth in the country who wants one can get an education. And those who have "interrupted" their educations by dropping out of school are also included in most programs. More government-financed educational programs than ever before are now in effect.

One of these programs is the Neighborhood Youth Corps, sponsored and financed by the U.S. Department of Labor with the help and cooperation of local, non-profit groups.

On this Task Force Page, Atlanta Constitution reporters Margaret Hurst and Frank Wells and photographer Charles Bennett examine the NYC and the work it is doing in Georgia.

21 are enrolled — some in school, others who are dropouts.

The idea behind the whole thing is to break the vicious circle of poverty — to teach these a taxpayer! Me, a taxpayer!'

"He couldn't get over it. He showed his check to everyone around, pointing out that he was PAYING TAXES. These kids

Largest number of enrollees are in the Atlanta area, with 1,000 in-school participants and 677 dropouts. The programs, of course, differ.

The in-school enrollees work after their regular school hours and are employed in other schools, mainly elementary schools. They do all sorts of work, ranging from ground maintenance to clerical and library work.

THEY'RE LEARNING

They are learning in school, and they are learning after school.

Emphasis is placed on developing desirable work habits like thoroughness, dependability, punctuality, independence, self-reliance and honesty. They are also taught the value of a good appearance.

The youngsters in the in-school program are paid for their work. The pay is not much — but it is often the first money these teenagers have ever earned — and it helps them keep up with their classmates. It also is valuable assistance to their families in many instances.

BASIC PAY

The out - of - school enrollees work longer and are paid more. They put in 30 hours a week at their jobs and six more hours in training — for some such basic education as reading and writing and arthmetic. For their 30 hours they are paid $1.25 an hour, the basic minimum wage.

The Atlanta in-school program is run by the Atlanta and Fulton County Boards of Education. The out-of-school program is run by Economic Opportunity Atlanta, Inc.

Typical of the out-of-Atlanta programs are the ones headquartered in Gainesville. There the in-school program is administered by the Gainesville city schools and the out-of-school program by the Georgia Mountains Planning and Development Commission. The out - of - school setup takes in 17 mountain counties.

HOSPITAL EMPLOYE

One of the out-of-school enrollees is Herman Burrell, 17, who completed the eighth grade. He is working in the Habersham County Hospital at Demorest, helping in maintenance of the modern hospital.

"Well, I like it," Herman said. "I've always liked mechanical work, and I'm learning how to go about it."

Maintenance in such a building requires knowledge as an electrician, a carpenter, a plumber, a mechanic and most anything else that comes along.

DOING WELL

Alfred Stroud, who supervises Herman's work, said that he is sure the boy is learning and will make a good employe for "anybody" when his training is complete.

"Herman is a bright boy and, more important, he is willing and wants to learn. He is interested in everything we give him to do," Stroud said.

Herman didn't hear this comment — he was down in the sub - basement "blowing the tubes" on the furnace.

WSJ 4/26/66

ON-JOB TRAINING draws increasing attention as a key to Negro advancement.

Stepped-up employer training of Negroes will get top emphasis at the White House civil rights conference in June. Federal officials, rights group leaders will urge private companies to launch expanded training for the disadvantaged even if they have no specific job vacancies; the trainees could compete better in the labor market generally.

Private employers will be pressed to do more to hire Negroes. Ideas talked of: More "positive recruitment"; breaking up skilled jobs to let unskilled helpers do part of the work; lowered testing standards; even locating new establishments so Negroes can travel to them more easily. Federal men concede any big expansion of industry's training efforts might require tax incentives, however.

Government officials find many companies shy from expanding training programs on their own; they don't want to risk training workers that someone else might hire away.

* * *

UNCLE SAM STRIVES to link job training and job creation projects.

Three-man teams, one each from the Labor Department, Health, Education and Welfare and the Office of Economic Opportunity, travel to Boston, New York, Chicago, San Francisco and six other major cities. They'll seek reasons for lack of coordination, report back with remedies for White House consideration; they may hit 29 cities before they're finished. Object is to increase efficiency of the multitudinous programs, which together cost more than $1 billion a year.

By July 1 the President's Committee on Manpower hopes to have preliminary conclusions based on the teams' reports. Its recommendations could range from simply improving communications to a major reshuffling of responsibilities among the Washington agencies. One possibility is an effort to pool their money for joint support of job programs, hopefully getting better results than separate efforts. One Federal official estimates 250,000 job trainees could be added by reducing inefficiency and duplication.

* * *

CITIES HIRE more outside experts to handle an expanding array of services.

A National League of Cities survey finds outside consultants handling 112 different kinds of jobs in 105 scattered cities for a total outlay of $17.3 million. Nearly half of some 1,500 urban renewal tasks are being planned by private experts; the bill approaches $80 million. The consultants also help out on cities' race relations, zoning, public works, mass transportation, computer operations and other tasks.

Economy is one reason given; New York City finds it spends 63% more having its own bureau of design plan school buildings than if outside architects were hired. Lack of municipal staff to handle expanding demand for services is another.

Baltimore's comptroller declares "increasingly large expenditures on consultants have aroused (taxpayer) concern, suspicion, and demand for curtailment."

PLASTERERS STRUGGLE to stem a job drain from use of substitutes. WSJ 4/24/66

The union, along with contractors, backs a "Keep New York Plastered" campaign that will pump $100,000 into radio, television, billboard ads in the city this year, up from $65,000 in 1965. Union locals and contractors in Minnesota are winding up a $75,000 drive to extol plaster's superiority over cheaper wallboard substitutes.

The job loss runs high; a Chicago plasterers' local says its membership has fallen to 1,400 from 2,500 five years ago, blames the increased use of wall board. But the gain in drywall use elates the carpenters' union; its members install the board.

Use of cheaper methods and materials worries other unions. The AFL-CIO Building Trades Department runs a survey to find out how extensively prefabricated housing is eroding craft union jobs.

IUE Recruits Job Trainees In 12 Cities

Members of the Electrical, Radio & Machine Workers will conduct a house-to-house drive in 12 key cities to recruit 1,500 disadvantaged persons for on-the-job training programs in the electrical manufacturing industry.

Under a $156,000 Labor Dept. contract, the IUE will seek out unemployed and underemployed persons for training and assist them during the training period, Labor Sec. W. Willard Wirtz announced.

The cities selected for the first recruiting drive are Pittsburgh, Philadelphia, New York, Cleveland, Cincinnati, Chicago, Milwaukee, St. Louis, Indianapolis, Boston, Newark, N.J., and Springfield, Mass.

IUE Pres. Paul Jennings signed the Manpower Development & Training Act contract with Manpower Administrator Stanley H. Ruttenberg and assigned IUE Civil Rights Dir. William S. Gary to the drive.

Ruttenberg said the IUE is the first union to launch an on-the-job training program on a wide scale with a "buddy" system to aid the disadvantaged.

Manpower — Training

60 Pay Base Lost Wages

Rep. John H. Dent (D-Pa.), made it clear that he wasn't accepting any such amendment and the issue went to two votes.

The first test was a non-record vote while the House was meeting as a Committee of the Whole. With a number of members absent, the teller count was 160 for the Ayres amendment, 121 opposed.

As observers noted and newspaper stories reported, Powell did not vote either way on that test.

Unemployment Program

U.S. Helps Jobless to Move Into Labor-Short Regions

By SYLVIA PORTER
Financial Analyst

So far this year, in an experimental project, 104 men and women, principally aerospace workers laid off by a Sacramento, Calif., firm, have received financial help from the U.S. Government so they could move to new jobs in California and as far away as Salt Lake City and Detroit. Instead of being unemployed, these workers now are earning sums ranging up to $4.90 an hour.

In the past few months, more than 50 unemployed welders and metal machine workers in Virginia have moved, again with federal financial assistance, to new jobs with a major shipbuilding company in another part of the state. These workers, some of whom had been unemployed for a full year, are now earning starting wages up to $2.13 an hour.

Also this year, more than 300 West Virginians, mainly ex-coal miners and their children, have been helped to move to new jobs on the East coast and in the Midwest. Many of these workers were formerly on welfare rolls or were youngsters who had never held full-time jobs. All are now drawing regular paychecks in skilled, unskilled or trainee positions.

This fiscal year an estimated 6,000 U.S. workers may be eligible for federal financial help under an experimental Labor Department "labor mobility demonstration program" to move unemployed workers to jobs in labor-short areas of the nation. Through the program, financed under the Manpower

also may receive a cash allowance to tide them over until the breadwinner is settled in the new job. In some cases, transportation costs for the worker to go for a job interview in advance are paid, too.

This concept of federal assistance to workers to move away from home to new jobs has been successfully pioneered by other countries, notably Sweden, Great Britain, France, Canada, to ease labor shortages or to alleviate pockets of unemployemt. But until now, the U.S. has provided no general worker relocation assistance.

Today, though, the U.S. is facing the twin problems of unemployment pockets and local labor shortages. While many areas of the U.S. are now suffering from severe labor shortages, there still are eight major metropolitan areas with unemployment rates of six per cent or more, plus nearly 500 smaller areas with "substantial unemployment."

At last count, the unemployment rate in Columbus, O., was a low 2.3 per cent. But in Portsmouth, O., the unemployment rate was above the national average of about four per cent. The unemployment rate in Louisville, Ky., was 3.2 per cent, but in other areas of Kentucky it was as high as 30 per cent.

a rapidly-shifting job market, a more mobile labor force is crucial to our sustained economic growth. Encouraging job mobility will be a key challenge wherever either labor surpluses or labor shortages are problems.

Steady Purchases Called Best

Many Invest in Stocks Monthly

By WILLIAM A. DOYLE
Financial Consultant

Q. I am interested in buying stocks on a monthly basis. I have been told that it is possible to do this with many blue-chip stocks. But I really don't know anything about it. Do you?

A. There are a number of methods for buying stocks on a steady basis. What you have probably been told about is the "Monthly Investment Plan" — MIP, for short.

Through MIP it is possible to invest as little as $40 or as much as $1,000 every month or every three months in almost any of the stocks listed on the New York Stock Exchange. They're not all investment-grade blue chips. But they're about the best-known stocks around.

Most people who use MIP invest "quarterly" — — every three months — because the commission charge on one larger investment is not as big as the commissions on three smaller investments.

But anyway you do it, it's a handy method. All of the money (less commissions) you invest each time is used to buy the stock you select. You buy full shares and fractions of shares — to the third decimal place.

Methods such as MIP make it easy to invest. And steady investors are the ones who come out ahead in the long run.

star dash

Q. In 1940 I purchased $5,000 worth of bonds in a company because of the high interest. In 1964 a new group took over the company and liquidated it. The bonds were paid off at only 66 cents on the dollar. I received $3,300 and suffered a loss of $1,700.

Can I claim this loss on the income tax return I file for 1966?

A. You should report it as a capital loss for the year in which it happened. That was two years ago. So, you should file an amended tax return for 1964 and claim a refund on the taxes you paid for that year.

star dash

Q. The day the papers carried the stories that General Motors profits dropped 62 per cent in the three months ended Sept. 30 (to 34 cents a share), one paper carried the following statement.

"Earlier this month Detroit brokers had heard that GM earnings for the quarter were about 35 cents a share." Where does information such as this come from? Where does it leave the average investor — who must wait for company announcements?

A. "Information" such as that comes from many sources. It would be better to call it an "educated guess." Face it, a drastic change in the earnings of a major company never comes as a complete surprise.

Security analysts and other observers watch a company's operations all the time — checking on its sales volume and anything else that affects the company's profits.

Brokerage firms hire people to do just that — watch how companies are doing. These analysts are far from perfect. Sometimes they're dead wrong. But they can usually call a big change in a company's profit-and-loss statement before it is announced.

It leaves the "average investor" at somewhat of a disadvantage — unless he keeps in touch with brokers who have the information.

Editors to Hear Talk by Reagan

CORONADO, Calif. — (AP) — Ronald Reagan, California's Republican governor-elect, is scheduled to address the 33rd annual convention of the Associated Press Managing Editors here Wednesday.

Reagan plans to speak informally and answer editors' questions at the first general session Wednesday morning.

Upwards of 1,000 persons are expected to attend the conference which opens Tuesday and continues through Saturday.

were formerly on welfare rolls or were youngsters who had never held full-time jobs. All are now drawing regular paychecks in skilled, unskilled or trainee positions.

This fiscal year an estimated 6,000 U.S. workers may be eligible for federal financial help under an experimental Labor Department "labor mobility demonstration program" to move unemployed workers to jobs in labor-short areas of the nation. Through the program, financed under the Manpower Development and Training Act, an unemployed worker who has no expectation of finding a job near his home is offered either a grant or a loan to help him and his family to move to a new job elsewhere. Worker and family

are eight major metropolitan areas with unemployment rates of six per cent or more, plus nearly 500 smaller areas with "substantial unemployment."

At last count, the unemployment rate in Columbus, O., was a low 2.3 per cent. But in Portsmouth, O., the unemployment rate was above the national average of about four per cent. The unemployment rate in Louisville, Ky., was 3.2 per cent, but in other areas of Kentucky it was as high as 30 per cent.

Of course, unemployed workers, and particularly older workers, are not always willing to move away from home. About one in four of the workers relocated under the Labor Department project returns home for one reason or another. As the project continues, a host of other problems will surely emerge as well.

Nevertheless, in an era of

Bus Taken On Joyride

NEW YORK — (AP) — Police arrested five teenagers on charges of stealing a 14-ton, $36,000 city bus from a Harlem garage and taking a criss-cross six-mile joy ride to lower Manhattan.

The boys' one-hour adventure ended when the bus ground to a halt after sideswiping a car. They were arrested by two patrolmen who had given chase in a citizen's car for five blocks.

Before that, the boys had followed the bus' scheduled route from uptown Harlem to midtown Manhattan where a bus driver spotted them and reported to his dispatcher.

Detectives said the youths claimed they had gone to the bus garage "looking for work" when they noticed the vehicle.

What makes First Federal's 5¼% savings certificates the most popular in Florida?

A.

Peace of mind— The extra dividend

While oldtimers will tell you that FIRST FEDERAL is known for consistently paying high dividends, we don't believe that even the generous 5¼% we are now offering is the biggest reason why FIRST FEDERAL Savings Certificates are the most popular in Florida. We believe it is the *extra dividend* we offer: the peace of mind you enjoy when you know your funds are protected by the strength of the South's largest and the nation's most experienced Federal — holder of U.S. Charter #1.

Why not invest your savings where you know they'll earn generous dividends, without worry or time-consuming effort on your part, and where they'll enjoy the security that pays you the priceless extra dividend of peace of mind. Certificates are available in amounts of $1,000 or more, paying 5¼% per annum.

FIRST FEDERAL's Regular Passbook Accounts earn 4½% dividends, paid and compounded quarterly. You have the added convenience of saving and withdrawing in any amount. No minimum required.

Savings for Regular Passbook Accounts received by the 21st of this month earn from the 1st.

Home loans are always available at First Federal—so come in and see us.

Unemployment Project

Steel men thrive on sabbaticals

Pessimists said they would go to seed. But the facts prove otherwise

Sixteen tons are handled differently these days. Kaiser steelworker Mike Popick operates a "Larry" car—a bin on wheels that charges the furnaces with coal.

Their wives will get sick of them and vice versa. Their children will become unruly. They will not only drink too much, they will soon wear the glazed look of perpetual TV watchers. In short, unless they moonlight, they will be miserable and feel guilty about not working.

Pessimistic observers predicted all this and worse in 1963 when 475,000 steel industry workers won 13 weeks of paid vacation every five years under unique United Steelworkers of America contracts designed to cushion the impact of automation on jobs. Now a Southern California sociologist, who has studied the experiences of 390 Kaiser Steel Corp. employees taking the three-month vacations, concludes that the pessimists were apparently wrong.

The men who answered Dr. William J. Klausner's questionnaire represented roughly a third of the 1,255 workers on extended vacations from Kaiser's Fontana plant during the plan's second year. They reported that:

- They were happier on vacation than at work.
- They felt closer to their families.
- They saw so little need to fill their days with work that only 1.8% took full-time jobs.

Klausner concluded that blue collar workers could indeed handle their leisure.

Among the report's revelations:

Some 81% of the vacationing steelworkers traveled—three-quarters of them outside California, although only a few abroad.

Some 44% attended more sports events than they had previously, but only 27% increased their TV viewing. Some 16% started new hobbies or developed new interests.

Despite the wide opportunities for spending generated by a long vacation, 60% continued their old

savings and investment habits. Nine per cent even managed to save more money.

Most vacationers spent more on travel and entertainment (80% and 57% respectively). Some 18% spent more on alcohol.

Almost half increased their spending on home improvements, and many did some of the work themselves. Painting the house was a common project.

About 75% felt they occupied most of their vacation time usefully.

"Usefully" did not mean "gainfully." In addition to the 1.8% who held full-time jobs, only 8% did part-time work.

More than half reported that their families enjoyed being with them more during their long vacations than before. Only 1.3% said their families enjoyed them less. Few said they felt any need to get out of the house more at night.

Some 77% said they enjoyed the vacation very much and 11% said they enjoyed it quite a bit. Almost all reported no change in their attitudes toward community, company, or union.

The return to work went off just as smoothly. The great majority were not anxious to get back, but when they did, more than a quarter felt their work efficiency had increased. Only 3% found their jobs less interesting than before.

Most of the workers believed that the extended vacation had helped them as individuals, and that it improved their outlook on life and on themselves. About 60% felt it improved their physical health.

Significantly, many changed their ideas about retirement. More than 38% thought of it more favorably after their sabbatical. Only 3% thought of it less favorably.

Profile. The typical worker in the study was 45 years old, a high school graduate, a blue-collar worker, a married man, and the father of two school-age children. He earned $8,000 a year and owned his own home.

The sociologist who studied him is a University of Redlands professor with a long-standing interest in the social implications of automation, particularly the additional leisure time it is likely to create. The Kaiser vacationers gave him the opportunity to analyze leisure's impact on the family in a culture "where it is assumed the Protestant ethic is salient, and that work is good and leisure is —if not bad—at best not as good as work." Thus Klausner wrote in a paper due to be published shortly in a scholarly publication.

The absence of restlessness and

Steelworkers' vacations have changed, too. The Popicks load up for a trip to the mountains during part of Mike's 13-week vacation, due every fifth year.

The day you pick up your ticket is the day to get BANK OF TOKYO YEN TRAVELLERS CHEQUES

Why should you change your money into yen when you leave for Japan? And why Bank of Tokyo Yen Travellers Cheques? The answer to the first question is simple. And we'll answer it with a question: why waste time standing in line at exchange counters when you can accomplish the same at home? The second question is easy, too. Bank of Tokyo Yen Travellers Cheques are better than yen cash. Should you lose them, you get your money back. What's more, they're freely convertible when you're ready to leave. **BANK OF TOKYO**

disorientation seemed to show that—despite this assumption—the Kaiser workers consider work as a means, not as an end, Klausner concluded.

"It may at least be hypothesized that the family of the blue-collar worker in America is strongly capable of handling extended leisure, and will grow and flourish with the increase of leisure time," he wrote.

He warned, however, against drawing too sweeping conclusions regarding the need for work. The Kaiser vacationers still work most of the year, they all expect to return to jobs, they feel they deserve the vacation, and "they do not need to redefine roles or adjust self-concepts to that of a nonworker, a violator of the Protestant ethic," Klausner added.

USW officials expressed pleasure at the tenor of the report. They feel it enables them to answer the "vocal minority" of workers who complain that they would prefer more money to more vacations, says James Vezie, president of Local 2869, bargaining agent at the Fontana plant. "This report indicates we've satisfied two needs here," Vezie says, "recreation as well as jobs."

The California study is the only one undertaken so far, but union spokesmen in Pittsburgh speculated that a similar study in their area would probably produce similar results. One observer noted that many steelworkers were critical of the plan before they used it, but "without exception, they praised it afterwards."

Scheduling. Some early criticism also stemmed from awkward scheduling, which required many workers to take their vacations in the fall and winter. Union officials said this was corrected during 1965 negotiations.

The extended vacation plan became a bone of contention during the McDonald-Abel fight for the USW presidency, when supporters of then President David J. McDonald defended the innovation and supporters of current President I. W. Abel attacked it. It is regarded as less controversial now.

On the management side, Kaiser officials noted that the plan exacted a considerable price in reduced efficiency and higher operating costs. A spokesman cites the inexperience of personnel moving up to replace vacationers, the need to train replacements, rescheduling problems, and the temporary loss of skill in workers returning from their vacations. He also says industrial accidents increased as men shifted from one job to another. **End.**

Manpower — Relocation

U.S. Looks for Snags In a Negro-Relocation Plan—and Finds Plenty

* * *

Whites Don't Want Negroes in Suburb, Negroes Won't Move There for Jobs, Officials Say

By JAMES P. GANNON
Staff Reporter of THE WALL STREET JOURNAL

CHICAGO — An obscure Government experiment aimed at moving unemployed young Negroes out of city slums to jobs and homes in the suburbs is bogging down in a morass of problems here.

For that reason, it's considered quite a success.

This project, tiny by Federal standards but potentially important in helping shape Governmental efforts to aid jobless slum-dwellers, wasn't designed for "success" but to discover the problems of moving ghetto Negroes out of the city. While so far failing to relocate even one-tenth of its quota, the test is providing a gold mine of difficulties for Federal problem-seekers.

Though the project's files bulge with job offers from suburban employers, a double-edged resistance to transplanting the Negroes has largely stymied attempts at relocation. The reactions from white-dominated suburbs, where housing for Negroes is difficult or impossible to find, range from cool to hostile. But the feeling is often mutual. Most candidates for relocation either refuse or are reluctant to trade their dreary but familiar ghetto homes for a less depressed but foreign suburban environment.

So far, only eight individual relocation attempts have been made; five persons have moved to their new work areas, two are working but continuing to commute from their Chicago homes, and another quit work after a clash with his foreman.

Abandoning the Suburbs

Moreover, attempts to relocate Negroes into the nearby "bedroom" suburbs have been dropped. Instead, the project concentrates on towns and small cities way out on the fringe of the metropolitan area. "Relocation to the suburbs has been a failure," says Charles Helfer, the man who runs the show.

All relocations so far have been to working-class towns with well-established minority groups of their own. Four relocated workers live in Elgin, Ill., a city of some 50,000 about 40 miles west of Chicago, where they work in a foundry. Another two found jobs in a Caterpillar Tractor Co. factory in Joliet, Ill., about 50 miles southwest, but they commute daily from Chicago's South Side by auto. One relocated worker lives in Gary, Ind., the big steel center, where he works for a steel fabricating concern.

The few accomplished relocations hold some promise, however, that at least some Negroes from the ghettos can adjust to life and jobs in unfamiliar surroundings. John Paul Jones, personnel manager at Woodruff & Edwards, Inc., the Elgin foundry, says he has had "good results" with the four Chicago men. "I'll take more if I can get them," he promises.

The transplanted workers seem pleased, too. Conwell Carrington, a 26-year-old native of the British West Indies, likes his foundry job, although so far he hasn't been able to find housing in Elgin for his big family. He is living in a rooming house now while his wife and five children stay with relatives in Chicago. But Mr. Carrington hopes to borrow enough money from the project's special loan funds to make a down-payment on his own house in Elgin.

Permanent Program Studied

The Chicago experiment is one of about two dozen "labor mobility demonstration projects" run by the Labor Department. These pilot efforts, involving about 6,000 jobless persons and their families, are meant to test the feasibility of establishing a permanent program to move the unemployed to areas offering jobs.

While nearly all the other projects seek to move workers out of job-poor areas—West Virginia coal-mining regions, poor Ozark Mountain farm counties, towns crippled by massive layoffs and the like—to urban areas of high employment, the Chicago project seeks to move the unemployed out of the big city to surrounding areas with high demand for workers.

This operation was designed to move no more than 75 workers—primarily but not exclusively Negro—and their families at a cost of no more than $115,000. But the project's significance lies in the broad social and economic questions it confronts.

Federal officials are becoming increasingly concerned about unfavorable employment prospects for big-city slum residents. Jobless rates among inner-city Negroes average about 10% nationally, compared with an unemployment rate of less than 4% for the entire labor force. And job growth is concentrating in areas away from the ghettos. A recent Labor Department study shows that from 1960 to 1965, fully 62% of the new industrial buildings (by value) erected in U.S. metropolitan areas

went up in suburbs; in Chicago the suburban share was 77% and in Los Angeles, 85%.

If moving some unemployed slum-dwellers to the job-rich outlying areas seems a fairly logical response, the Chicago test shows the practice isn't as simple as the logic. Labor Department officials in Washington say they haven't decided whether to continue testing such relocation, though it's considered likely they'll try a follow-up project.

Indeed, officials insist they aren't even testing the idea on its merits, but merely seeking the mechanical or operational problems involved in the moves. Whether such a program should be in the Federal arsenal of weapons against urban unemployment is a policy question that won't be asked until research shows whether the mechanics can be made to work, says one Labor Department planner.

On surface appearances, the Chicago project seems a most improbable exhibit of big Government in action. It is run out of a small, three-desk office without a name on its door, housed in a ghetto-area YMCA with a gym-sweat aroma inside and white-paint scrawls of "black power" on its red brick exterior.

A nonprofit group dubbed Job Opportunities Through Better Skills (JOBS) runs the relocation experiment under a 16-month contract with the Labor Department. The man in charge is Mr. Helfer, a 38-year-old bachelor, a former school teacher, welfare worker and Fred Astaire dance instructor who exhibits a hearty disdain for the forms and formalities of bureaucracy but an obvious interest in the hard-up people he serves.

Mr. Helfer's Problems

A few statistics illustrate the difficulties he has had. Working from a list of former job trainees in another Federal manpower program, Mr. Helfer has sounded out by letter and phone more than 2,000 men, mostly aged 18 to 23. Of these, only 109 have been processed through a lengthy series of interviews and questionnaires to determine eligibility for relocation assistance; most others never responded to the inquiry or quickly lost interest.

Nearly two-thirds of the 109 processed candidates were ruled eligible for relocation (some by Mr. Helfer's readily admitted tactic of stretching Washington-set standards "like rubber bands"). But of this number, only the eight have reached the point of trying relocation.

What explains the scant success? One reason is that most candidates aren't anxious to leave their neighborhoods, slums or not. Over one-third flatly reject any relocation, while many more who initially express willingness to move change their minds after exploring the idea.

Those who are willing to move have plenty of job opportunities to explore. When the project was getting under way last March, Mr. Helfer called on about 75 outlying employers and "80% to 90% gave us an immediate job order." One manufacturer listed 187 jobs in a dozen categories. "Virtually everybody needs help out in the suburbs, especially at the entry level and at the semiskilled level," says Mr. Helfer. That is because most people who can afford to live in the suburbs are employed in skilled blue-collar, white-collar or professional jobs.

Though jobs are abundant in the suburbs, housing for minorities isn't. Mr. Helfer sounded out suburban real estate agents, community officials, employers and others on the housing question. The predictable answer: Trying to move Negroes from the inner city into white suburbs would create a crisis. The white suburbs hereabouts are "dead set against" integration, Mr. Helfer finds; when he casually mentioned the Negro relocation project to some young suburban homeowners "they hit the ceiling."

By chance, the project was just getting into full swing last summer when Martin Luther King's open housing marches into white neighborhoods in Chicago and nearby suburbs exploded into violence. These clashes hit the relocation effort at its most vulnerable point. Mr. Helfer admits: "The civil rights activity and the riots have made this job more difficult by antagonizing people."

Jobs and Prices

Analysts Doubt Inflation Will Slow Without Rise In Unemployment Rate

Nixon Policy Aims at Averting Big Layoffs, but Aides See Joblessness Approaching 4%

The Threat of Urban Unrest

3/26/69

By RICHARD F. JANSSEN
Staff Reporter of THE WALL STREET JOURNAL

WASHINGTON—A statistical time bomb—the threat of higher unemployment—is ticking away in the White House.

Despite three straight months of joblessness at the exceptionally low level of 3.3% of the work force, Nixon Administration men recognize that the politically sensitive indicator has not been defused. The question isn't whether the rate will rise, one says, but only "when and how much."

The reason for this sober outlook is the fight against inflation. Officials figure they'll have to slow the economy through tight credit and a black-ink budget so that new jobs probably won't be created fast enough to accommodate quite all of the rapidly expanding work force. While Chairman Paul McCracken of the President's Council of Economic Advisers calls any unemployment "a personal tragedy," it's clear that officials are willing to risk at least a little more of it in the near future to avoid a much bigger jolt of joblessness later if unchecked inflation should bring on a severe recession. (Consumer prices rose sharply again last month. See story on page 2.)

Administration aides carefully avoid precise public forecasts, but they are privately poring over projections that range from some slight upticks in the jobless rate to more than a full-percentage-point increase by late 1969. If the worst fears are realized, one strategist says with a shudder, it would mean "almost a million more people out of work"—and a socially explosive situation that could force the Administration to let up in the inflation fight.

An Ominous Curve

The President's planners are acutely aware that a chart economists call the "Phillips Curve" (after its developer, British economist A. W. Phillips) shows that there usually is a close relationship between inflation and employment. While this relationship can vary from time to time, the chart shows that so far in the 1960s U.S. price rises have been small only when unemployment was rather high.

Thus, the Administration is pinning its hopes on "gradualism," a strategy intended to skim off excess demand for goods and services so carefully as to prevent large layoffs. "Some people won't be able to find their first jobs so fast, but that's easier to take than having to tell somebody he's out of a job he already has," one economist says. But he concedes it "takes a lot of faith" to think that such a delicate balance can be struck.

It's "exciting," Federal Reserve Chairman William McChesney Martin says, to try to reduce inflation without a recession. But other authorities caution that gradualism could also

Jobs and Prices: Inflation Battle Is Seen Raising Unemployment Rate

Administration aides carefully avoid precise public forecasts, but they are privately poring over projections that range from some slight upticks in the jobless rate to more than a full-percentage-point increase by late 1969. If the worst fears are realized, one strategist says with a shudder, it would mean "almost a million more people out of work"—and a socially explosive situation that could force the Administration to let up in the inflation fight.

An Ominous Curve

The President's planners are acutely aware that a chart economists call the "Phillips Curve" (after its developer, British economist A. W. Phillips) shows that there usually is a close relationship between inflation and employment. While this relationship can vary from time to time, the chart shows that so far in the 1960s U.S. price rises have been small only when unemployment was rather high.

Thus, the Administration is pinning its hopes on "gradualism," a strategy intended to skim off excess demand for goods and services so carefully as to prevent large layoffs. "Some people won't be able to find their first jobs so fast, but that's easier to take than having to tell somebody he's out of a job he already has," one economist says. But he concedes it "takes a lot of faith" to think that such a delicate balance can be struck.

It's "exciting," Federal Reserve Chairman William McChesney Martin says, to try to reduce inflation without a recession. But other authorities caution that gradualism could also yield quite unexciting strides against inflation. Insiders talk of a "4-3-2-1" countdown against inflation—by which this year's price rise would be limited to roughly 3% after more than 4% in 1968, and so on. But even hopes for such modest progress in 1969 are being weakened by the apparent determination of corporations to splurge on plant and equipment outlays.

Memories of 1960

The policy of gradualism has been determined at the very top, officials say. President Nixon emphasizes to them that a rising jobless rate in the fall of 1960 cost him the election then. "We must find ways to curb inflation," Mr. Nixon recently promised AFL-CIO President George Meany, "without asking the wage earners to pay for the cost of stability with their jobs."

But the rub, insiders admit, is that these ways aren't readily at hand. Mr. McCracken concedes that "no one can be certain" whether the inflation from three years of overheating "can be cooled with no adverse unemployment effects."

Consequently, other key officials say, no one can be sure how far and how effectively the White House and the Federal Reserve Board will press their battle against inflation.

The "critical issue," says board member Andrew F. Brimmer, is how long the public will tolerate a jobless rate drifting back toward the 5% plus levels of the early 1960s, when prices were rising only about 1% annually. "There is little likelihood" of ending or even appreciably reducing the inflation rate "without some increase in unemployment," he warns.

A Senator's Sympathy

The President faces "a very, very painful choice," sympathizes Democratic Sen. William Proxmire of Wisconsin, vice-chairman of Congress' Joint Economic Committee. "Whenever we get to a level of unemployment below 4%," he says, in either that year or the next "prices rise at a rate of 3.5% to 4% or more." Significantly, the 4% jobless rate was a "floor" for the liberal Democratic economists of the Johnson Administration.

But with the jobless rate now at its 15-year low of 3.3%, a Nixon adviser concedes, the Democrats' floor of a 4% unemployment rate has suddenly become a "political ceiling" for the Republicans. "Anything that exceeded 4% would be highly unsatisfactory," Commerce Secretary Maurice Stans says, a view that associates attribute also to Mr. Nixon himself.

With a wary eye on possible fresh unrest in urban slums, Government economists fret that the first sizable increases in the rate are likely to come in early summer, when the high schools will likely pour out more job-seeking youngsters than business can absorb. Of those arrested in riots of recent years, the Joint Economic Committee reports, some 20% to 30% usually were jobless, and most of the rest voiced frustration about low-paying and erratic employment.

Moreover, Mr. Brimmer warns, in an economic slowdown the jobless rate among nonwhites (usually about double the average for the whole labor force) climbs more than twice as fast as that of whites. Even now, some of the "hard-core" unemployed laboriously re-

Please Turn to Page 14, Column 2

Continued From Page One

cruited by auto makers are being affected by layoffs in the industry because their seniority is the lowest.

The specter of widespread layoffs of Negroes only recently trained—at substantial Federal and corporate cost—clearly haunts White House aides, who are studying more generous welfare payments as a possible palliative. The billions of dollars put into antipoverty efforts in recent years, some stress, would be "wiped out" if there's a sizable rise in Negro unemployment. The nonwhite jobless rate, which was 8.1% in 1965, is now down to 5.7%.

In this context, a seemingly innocent shred of economic intelligence contained in a recent Federal Reserve staff forecast is causing some consternation in the capital. Assuming that the board's credit policy remains restrictive, the staff projected this year's average jobless rate as edging up to a 3.8% to 4.0% range from 3.6% last year. For the staff forecast to prove accurate, one analyst calculates, the jobless rate would either have to start promptly edging up by about one-tenth of a point monthly from the December-January-February level of 3.3%, or surge sharply upward late in the year.

An Ominous Implication

The implication, he adds, is that by December the monthly jobless rate would have surpassed the 4% mark, maybe to about 4.3%, maybe to as high as 4.7%. "That would really bring some screams," he predicts. It would mean an increase of roughly one-third in the number of unemployed—to about 3.6 million from 2.6 million last month.

But the Federal Reserve forecast looks too pessimistic to some senior Executive branch aides. They think that even by December the monthly rate may be bobbing along comfortably below 4%. "Employers are going to hoard workers because it's too expensive to let them go and recruit again if you expect to need them in another six months," says one Administration man.

Perhaps the greatest reassurance, stresses Presidential Counselor Arthur Burns, is that the U.S. is increasingly a "service economy." There are more teachers, repairmen, and the like who are far less likely to be thrown out of work by a mild growth slowdown than, say, a worker on an auto assembly line.

With the growth in service jobs helping to prevent unemployment from getting out of hand, key strategists figure it's safe to let the jobless rate drift somewhere close to 4% and remain there long enough—perhaps a couple of years—to permit leveling-off of the price increase trend. "I don't think there's any way out of the box we're in unless we do let the rate drift up," a well-placed aide says.

Even among the Nixon Administration's optimists, no one is willing to guarantee that unemployment can be held precisely at desired levels. If businessmen become convinced that the Government is detrmined to squelch inflation at the cost of more than a year of restrictive policies, officials reason, any current "hoarding" of labor would end and large layoffs might occur.

Generating an Antidote

Inflation itself, some more pessimistic planners say, may already be on the verge of generating its own recessionary antidote. Although retail sales still show year-to-year gains, adjustments for price increases reveal that Americans are buying little if any more "real" goods than a year ago. "A businessman doesn't need any more workers to produce the same number of items to sell for $1.50 each than he does when he's selling them for $1.25 each," one official reasons, so that even while consumers are spending more money joblessness could rise rapidly.

For the longer run, though, Government economists appear increasingly optimistic that they can "shift the Phillips Curve." That's their way of saying that the efficiency of the U.S. economy can be increased enough to keep prices reasonably steady even at a jobless rate consistently below 4%.

The main reason the Phillips Curve is plaguing the U.S. now, the economists say, is a Vietnam-related bulge in Federal spending and borrowing. The extra demand has forced employers to increase pay sharply to retain skilled employes and to scramble for many marginal workers, whose ability to produce doesn't match the pay they can command.

Peace in Vietnam and then an avoidance of sudden Government-caused surges in demand would be a big help in combating the Phillips Curve, officials figure.

Unemployment 3/10/70

Week of March 9, 1970

TWO MAJOR LABOR AREAS ADDED TO SUBSTANTIAL UNEMPLOYMENT CLASSIFICATION

WASHINGTON -- Two major labor areas with rising unemployment, Seattle and New Bedford, Mass., have been reclassified as "substantial" (over 6 percent) unemployment areas, the Department of Labor has reported.

Seattle, including King and Snohomish Counties, and New Bedford, including parts of Bristol and Plymouth Counties, both had been in the "moderate" (under 6 percent) unemployment category last month.

This brings to seven, among the 150 major labor areas, in the "substantial" group. The other five are: Fresno and Stockton, Calif.; Muskegon-Muskegon Heights, Mich.; and Ponce and Mayaguez, Puerto Rico.

Muskegon was the previous major labor area to be classified in this group in June, 1968.

Cutbacks in the aircraft industry were considered the major factor in causing the increased unemployment rate in Seattle. In New Bedford, the drop in employment came in large part from layoffs in textiles and in other manufacturing industries.

These two changes, along with those of 12 very small labor areas, became effective March 1.

An area is considered one of "persistent" unemployment and joblessness has averaged 6 percent or more and (1) has been at least 50 percent above the national average for three of the preceding four calendar years, or (2) has been at least 75 percent above the national rate for two of the preceding three years, or (3) has been at least 100 percent above the national average for one of the preceding two years.

(MORE)

An area is considered one of "substantial" unemployment when joblessness has averaged 6 percent or more of the workforce and is expected to remain so for the next two months or more.

Procurement Preferences

Firms doing substantial business in areas classified as "substantial" or "persistent" unemployment are eligible for preference in award of Federal procurement contracts under provisions of Defense Manpower Policy No. 4 (Revised).

First preference goes to firms in or near areas having concentrated unemployment or underemployment which have agreed to hire a proportionate number of disadvantaged persons living in the areas.

Firms in areas of persistent or substantial unemployment are eligible for second and third preference respectively.

Ross

BLS draws 'TILT' charge

Arthur M. Ross, the U.S. Commissioner of Labor Statistics, made two announcements last week that brought cries of "tilt" from trade union economists.

In one decision, Commissioner Ross altered the basis for counting the nation's unemployed. He excluded from the unemployed anyone who has not applied for a job within the past 30 days.

In the other, Ross disclosed that the Government's Consumer Price Index had been jiggered to write off last month's jump in automobile prices as improvements in quality. In this way the substantially higher auto prices are not reflected by the price index.

Wage rates for more than 2,000,000 American workers go up when the price index rises.

Predicted

The action offsetting the auto price increase with quality and warranty improvements had been predicted weeks earlier by Gardner Ackley, chairman of the President's Council of Economic Advisers.

Both decisions had been vigorously opposed in advance by the BLS Labor Research Advisory Council. They were also protested by letters to Secretary of Labor Wirtz and to Ross by IAM Research Director Vernon Jirikowic, by Nat Weinberg, director of economic analysis for the UAW, by Nat Goldfinger, director of research for the AFL-CIO, and others.

Jirikowic warned Ross that in his opinion the action to eliminate the "discouraged job seeker" from the unemployment count "is a serious error."

Less sensitive

"To do so," he continued, "means that in the downward phase of the business cycle, the overall jobless rate and level will become an even less sensitive economic indicator. Consequently, public policy actions to combat unemployment may be seriously delayed."

Speaking for the AFL-CIO, Goldfinger wrote to Secretary of Labor Wirtz, "I think the Bureau and the Department are on the verge of a serious mistake."

Labor's protests were overridden, however, as they were on the decision to write off increased auto prices as quality improvements and not count them in making up the October price index.

Speaking for the Auto Workers, Nat Weinberg wrote Commissioner Ross on Oct. 19 warning:

"The auto corporations have made use repeatedly of BLS quality adjustments, based upon the incomplete and selective information which they have chosen to provide, to claim that there has been no increase in the prices of their products. In our judgment it is highly improper for BLS to lend its official certification to such claims unless it is supplied with all the data necessary to verify them."

At the press conference at which the October Price Index was announced, Commissioner Ross reported that the suggested retail price of automobiles had increased an average of $55, that on the weighted average this amounted to a 2.1 per cent increase over last year.

However, Ross said that the safety steering column, padded dash, dual brakes, larger tires and extended warranties made up for all but 0.2 per cent of that increase.

Under questioning, the Commissioner conceded that there had been some deterioration in the quality of the new models. However, he refused to reveal what they are.

Price index up .4%

Higher prices for housing, medical care and clothing sent the cost of living up another four-tenths of one per cent in October. The Labor Department announced that the Consumer Price Index hit a record high of 114.5. This means that it now takes $11.45 to buy what $10 bought in 1959.

John Percoul — Unemployment Project

New System For Measuring Employment & Unemployment Announced By A. M. Ross

WASHINGTON—An improved system for measuring employment and unemployment will go into effect in January next year, Commissioner of Labor Statistics Dr. Arthur M. Ross announced.

The changes are designed to make the concepts of employment and unemployment "understandable to the public," to make statistics more "useful," and "ought to provide new insights into manpower problems," Dr. Ross said.

The major changes—expected to affect figures on the unemployment rate by no more than one-tenth or two-tenths of a percentage point—are:

—Children 14 and 15 years old will no longer be counted. About one million youngsters of these ages are employed now, nearly all of them part time. Their elimination will substantially reduce the total employment figure but will have little effect on the unemployment rate.

—Persons will not be counted as unemployed unless they are currently available for work. Under the old definition, a student who was looking for summer work in April was counted as unemployed that month, if he had no promise of a job, even though he would not be available to start work until June.

—To be counted as unemployed, a person must have engaged in some job-seeking activity, such as answering want ads, during the preceding four weeks. The question used at present in the monthly unemployment survey merely asks whether the person interviewed has actively been looking for work without specifying a time period.

—Persons with a job but not currently working will not be counted as unemployed even if they are looking for another job.

Commissioner Ross also said the Department of Labor is considering another change in the unemployment statistics.

This involves adding new questions to the Department's monthly questionaire aimed at identifying those who fail to look for work because they feel certain they could not find it.

Such "discouraged unemployed," as Dr. Ross called them, are at present counted neither as employed nor unemployed, but are considered to be "not in the labor force."

If it proves possible to identify these persons with any degree of accuracy, their numbers may be added to the total of the unemployed at some future date, he said.

Revisions to employment and unemployment figures will be made back to 1948 to take account of the elimination of youngsters 14 and 15 years old from the statistics and to make the statistical series that will begin in January comparable with figures for earlier years.

Boom Is Riding South Along Interstate 85

Industry Gain Spurs a Labor Shortage and Integration

Special to The New York Times

SPARTANBURG, S. C.—An industrial boom is advancing along the fringes of Interstate Highway 85 from Danville, Va., to Atlanta. It is bringing new prosperity to the region, but it also has caused a severe labor shortage.

The labor scarcity, in turn, is spurring a variety of social changes along the four-state route. Employers report marked improvements in working conditions and wages and new strides in integration, with expanded opportunities for Negro workers.

The shortage is probably most acute in Spartanburg County, which last year was invaded, at the invitation of the Chamber of Commerce, by 31 major investments in new plant or additions, with a combined value of about $100-million.

This was one-sixth of the $603-million in new industrial investment made in South Carolina in 1965. Most of the money has come from the North, put up by manufacturers seeking, among other things, to lower their operating costs. Until a year or so ago, low-cost, nonunion labor was in ample supply in most of the state and still is—except along I-85.

'Closed for Lack of Help'

The situation along this new highway has changed drastically. Personnel managers in the busy strip of territory are searching for miles around, advertising for help continuously in dozens of newspapers and on radio and television stations. But in Spartanburg County in particular they are recruiting practically no new workers. The supply has been exhausted.

Nearby villages and towns have been stripped of almost every potential worker, able-bodied or not.

R. C. Burnette in Tryon, N. C., 20 miles from Spartanburg, recently hung out a sign on his Gulf Oil station reading: "Closed For Lack of Help." Another gas station in Hendersonville, N. C., is closing for the same reason. Cooks, maids, yardmen, farmers and other workers are disappearing from their jobs to work in the new mills.

Allen D. Slater, manager of a large cattle farm with more than 500 Black Angus near Landrum, S. C., recently said, "The situation is lousy. We have the capital to build new barns, fences, and do a lot of things, but we can't get men. I hired five men this spring but two quit to work in the mills. We just don't have

...ing Severe Labor Shortag...

Continued From Page 30

enough human hands to do the work."

So acute is the situation that prisoners are being recruited as fast as they are released from jail. William Maroney, president of Taylor-Piedmont, a wood processing concern with branches in Spartanburg, Wilmington, N. C., and Augusta, Ga., said:

"We're recruiting at the prison gates. We took a salesman off the job just to look for new workers. He's tried all the nearby prison camps, looking for men becoming eligible for parole. But the supply of prisoners is about dried up. We also tried to get Cuban refugees from Miami. No luck. We've gone to Army-Navy recruiters asking for 4-F's.

"We're so desperate we hired 39 women to do men's jobs. At the end of a month only four remained."

Mr. Maroney believes the shortage of prisoners is attributable to the payment by employers of workers' fines, an opinion supported by the Spartanburg County Supervisor, W. D. Finch, who has complained that he does not have enough prisoners to keep up the county roads.

There are about 135 prisoners in the county's five work gangs at present. Mr. Finch said recently that this left him 45 men short of the amount needed to do the work required by law. While employers are paying some fines, he added, many prisoners now have enough money because of the region's new prosperity to pay their own fines or hire lawyers.

Steps Toward a Union

Housemaids had been in surplus supply in Charlotte, N. C., but now that a shortage is appearing, they have taken the first steps toward forming a union. There are reported to be 700 job openings in Gastonia, N. C., alone.

There has been some pirating of workers. One new concern offered a wage increase of $1 an hour to another company's nine-man maintenance crew, and the crew walked out in a body. One employment manager said frankly, "Anyone who comes into this area has to steal from somebody else."

If many employers think they have problems, they could learn about real trouble from Edward Cronin, personnel manager for Hercules, Inc.'s new $30-million synthetic fiber plant six miles from here. Mr. Cronin, needing 50 semiskilled workers, began beating the bushes in an already depleted labor market last August.

"We set up recruiting offices in every village for 60 miles around. We advertised every way we knew how. By this month we have managed to get 43 workers, still seven short, and we've lowered our standards 'way down.

"Now the company has announced it is adding a $70-million plant to convert our basic product into fabric. The local newspaper has calculated the new addition will require 2,000 workers. I myself haven't been ad[illegible] how many it'll need. B[illegible] it is 200, 600, or 1,[illegible] the o[illegible]

afraid a Negro will get his job. This has meant Negroes can now be advanced where they were held back. We have at least a hundred Negroes in supervisory jobs where a few years ago they never would have had a chance."

Rapid integration was reported by all the employers interviewed. In Columbia, Walter W. Harper, director of the State Development Board, said:

"Economics has brought changes in racial attitudes that the law couldn't. Economics has solved a lot of age-old social problems."

Touching on another key aspect of the labor shortage here, what is bad for employers has not been bad for the workers, and many employers appreciate this. Mr. Burnette, the gas-station owner put out of business by the new mills, said, "Though it's hard on us small-business men, I'm not opposed to the new mills coming into this area. They're good for the people, good for the community."

This view was echoed by Cary Page, principal owner of Jackson Mills, which operates two textiles plants, one at Iva, S.C. and the other at Wellford, S.C.

"Oh, brother! Are we having problems," he exclaimed. "New workers come in, work four or five hours, and walk out. We can't get office help. But still, looking at the general welfare, it's a good thing for the people around here who have been poor, very poor, for a long time, too long a time."

Gains for Workers

Regular hours, shorter hours, higher pay and fringe benefits have been luring men and women out of village and farm jobs into the factories.

A helper in a gas station, for example, until recently received about $1 an hour and worked perhaps 50 hours a week. A farmhand also was paid about $1 an hour and might have had to work 60 hours a week. The same scale applied to domestics. But the mills start unskilled workers at around $1.85 an hour, and a skilled man can get $3 an hour.

Perhaps just as alluring is the spread of the 40-hour week and regular work. Formerly, very few workers in the area received hospital and other fringe benefits. "I don't blame them for going into the mills," is a frequently heard comment, even from employers who have lost their help.

See attached sheet

"You can't bring in [illegible] labor for two reasons," he added. "One, there isn't any migrant labor available and, two, there isn't any housing here for them if you could get them. There's talk around town of $15-million to be invested in new housing developments, but so far it's just talk, not houses, and we need men now.

"The houses are supposed to be in the $10,000-$15,000 bracket. It'll take a long time to build them because the builders are already booked far ahead, and anyhow the price is out of reach for the typical migrant worker.

"Maybe industry around here will have to go back to the old company-owned mill towns that fell into disrepute years ago. Build houses for the workers. It may become a must."

Like Hercules, the United States Rubber Company, announced in February that it would build a big new plant. U.S. Rubber's plant was to be at Moore, S.C., and the company has bought 800 acres of land there. But although details of the new plant were expected to be announced last spring, no word has been given yet, leading to speculation here that the labor shortage may have given the company second thoughts.

A spokesman for U.S. Rubber said last week that he was not authorized to discuss why the awaited announcement had not yet been made, but he added:

"We're aware of the situation and it has affected our plans. As to the proposed new plant, it has been designed to manufacture synthetics and employ 500 people." When and if the plant will be built is still unknown.

Glum Personnel Men

Robert Bridges, assistant personnel manager of Alamo Industries, which has an investment of $25-million in a new man-made fibers plant designed to employ 700 workers, said the other day, "We're looking for 300 men. I don't know where we'll find them. Employment managers in this area are all pretty blue."

The personnel manager of a large machinery manufacturing plant with more than a thousand employes reported, "If school hadn't closed last month, I don't know what we'd have done. We managed to find enough schoolboys to keep going this summer, but next fall? It'll be another story.

"One thing that's happened is the color line has been broken down, perhaps forever, or at least as long as the boom lasts. The pressure has brought integration in the mills and brought it fast. And there have been no problems.

"The white man is no longer

Employment effect of a new industry in a rural area

Undereducated, underskilled workers benefited little when a major aluminum producer built a new factory in Ravenswood, West Virginia

IRWIN GRAY

When a new plant opens in a depressed area, the question is not only how many people get jobs, but who gets the job.

Establishing a new industry in an underdeveloped area can open up opportunities for its inhabitants. But if the local unemployed workers are largely undereducated and lacking in work skills—as is true in most underdeveloped areas—some means must be found to provide them with remedial education and specialized training in order to make them attractive to the new employer. Otherwise, migrants already possessing the desired skills may flow into the area to take most of the available jobs, and the new prosperity engendered in the town will offer scant help for the unwanted workers.

Analysis of the employment growth following construction of a new plant in a rural area provides some indication of the effect of a new industry on the local labor force. Most studies of the effects of new industry on regional employment patterns deal with dollar flows and the extrapolation of quantitative employment patterns. The investigation reported here focused on the qualitative changes in the labor market over the decade following construction of the plant and on the barriers to employment faced by unemployed workers already in the area. In particular, an attempt was made to delineate employment opportunities created within the plant (direct effects), created by suppliers to the plant (indirect effects), and resulting from the growth of population and supporting businesses (induced effects).

In 1956 an aluminum reduction and rolling mill was built by Kaiser Aluminum and Chemical Corp. at Ravenswood, W. Va., about 50 miles north of the State capital, Charleston. The study of employment effects was limited to the town of Ravenswood, the aluminum plant, and the immediate environs with full awareness that economic benefits of the new plant could probably be traced well beyond those bounds. However, the area studied was geographically isolated by a wide green belt that surrounds the town on three sides and the Ohio River that bounds it on the fourth. Before construction of the Kaiser aluminum plant the main industry of Ravenswood (and the environs of Jackson County) was agriculture.[1] The agricultural activities were rapidly declining due to the competition of other States' "larger, automated farms operating with mass-production techniques."[2] The rugged land made such automation economically unfeasible in Ravenswood. This decline in farming and dairy activities spurred outmigration, especially among younger people: Between 1940 and 1956, Jackson County lost 16 percent of its population.[3] The population of Ravenswood remained static at about 1,100.

Kaiser provides the only manufacturing employment within Jackson County. All other manufacturing jobs for county residents involve commuting by automobile over 20 miles. Almost all the commercial establishments of Ravenswood (including the aluminum plant) fall within a 6-mile radius of the town.

Direct employment

Kaiser officials recognized that the arrival of a large plant in a rural area would create a number of problems. "It was only right," therefore, that the company maximize the hiring of personnel from the local area, and it did set out to do this.[4] (The local person also had definite advantages from the standpoint of direct communication with the plant and ability to be first on the scene when

Irwin Gray is associate professor of industrial management, Polytechnic Institute of Brooklyn.

Monthly Labor Review 6 69

job openings were announced.) However, this standard was relaxed when it became evident that directly applicable skills were lacking in the local manpower pool and even some basic academic preparation was missing.

As parts of the plant went into operation and a particular skill was needed on the production floor, an hourly worker from another of the firm's plants which performed the same production operations was promoted to foreman and transferred to train men and then supervise the operation. The method of training the initial cadre of workers called for "good" men who could learn quickly on the production floor. At the start of operations, the company did not have the time to provide elaborate classrooms or training facilities; the standard of selection of workers was then, by necessity, kept quite high. Once the company had a trained cadre, it was able to advertise job openings, select from a "flood of applicants," test their training and potential, and build up a work force meeting the company's established standards of age, education, and physical fitness (18 years minimum, eighth grade—high school diploma preferred, no serious physical handicaps).[5]

At the start of operations in 1957, the qualifications of most of the unemployed and underemployed in the Ravenswood area fell far short of the company's specifications.[6] As the plant was built, it began to attract applicants from great distances and standards did not have to be lowered to meet the plant needs. Indeed, the standards may have become even more rigorous.[7]

Men from all over the country learned about the Ravenswood plant through different news media, friends, and relatives. The difficulty and complexity of the work within the aluminum plant was compensated for by long term well-paying career possibilities. Qualified inmigrants shouldered aside local applicants who could not match their educational and experience levels. In most cases, the local applicant did not even meet the basic standards of the company. The competition provided by the inmigrant relieved all pressure on the firm to relax its standards, in spite of its preference for the local applicant.

The high standards, responsible duties, and good pay attracted a large number of applicants to the aluminum plant when job openings were announced. The type of man Kaiser needed was likely either to be employed, to have migrated from the area and wished to return, or to be on temporary layoff from some other industrial plant along the Ohio River. The growth of the work force at the plant also brought an extremely wide range of experience to the company. "We have ex-teachers, ex-teamsters, ex-everything in this plant!"[8]

As the chart shows, the number of professional, technical, and managerial employees and foremen was disproportionately large in relation to a "normal" operating work force.

Change in occupational mix

[1] Includes watchmen, janitors, storeroom attendants, etc.
[2] Management trainees.

Source: 1957 data, *Labor Supply and Mobility in a Newly Industrialized Area* (BLS Bulletin 1261, 1960), p. 4. 1965 and 1967 data, interviews with Karl Dunlap, Employment Supervisor, Ravenswood Works, April 27, 1965, and September 11, 1967. These are rough estimates taken from company manpower-situation reports.

Employment at the Ravenswood plant has grown steadily, except for two small dips due to a falloff of business. In September 1967, the plant was operating at capacity with some 3,400 employees. Plantwide seniority which assured promotional opportunities, possibilities of "making foreman," and the highest wages in the area (under a United Steelworkers' contract) combined to produce long term, career-minded employees, and no massive recruitment campaign designed to induce distant persons to move to the plant has been necessary for the last several years.

As plant operations grew in scope from startup to capacity, several changes took place in the skill spectrum of the work force. In the summer of 1957, plant activity was directed mainly toward future production needs rather than toward those of current production.

The decline from 1957 to 1967 in the percentages of service workers and laborers shows that at full capacity operation the uneducated—vying for jobs which require only rudimentary pushing, hauling, stacking, and miscellaneous hand tasks—could not expect to garner even as much as 15 percent of all available jobs, regardless of other considerations such as promotion potential.

Between 1965 and 1967, the highest capacity operating levels, the company's major needs were for skilled craftsmen and operatives. Unskilled men who left the plant payroll were replaced by people with the ability or potential to handle skilled work. Again, such men did not come from the ranks of the unemployed; they were either "coming home" to Ravenswood or were attracted to Kaiser from distant points by the promise of a better career.

In sum, the direct effects of Kaiser's entry into the Ravenswood labor market were disappointing from the standpoint of the lesser qualified persons seeking jobs. The firm, because of the career opportunities it offered and the competition generated for the jobs, found itself with workers who were far superior to the general applicant from the local area. And too many of the local applicants who needed jobs were dropouts from high school with no trade and with little to offer in the way of work experience. Far fewer Ravenswood people benefited from Kaiser jobs than was at first expected.

To the disappointment of the townspeople of Ravenswood, Kaiser was the only plant to move into the area. An aluminum plant has several unique characteristics which lessen its ability to attract satellite industries, but the experience of Kaiser's facility in Ravenswood is still instructive.

The inputs to an aluminum company plant consist in the main of direct labor, materials (alumina, carbon, cryolite), and electricity. The inputs of these materials and of most incidental supplies to operate the plant are controlled by the corporation on a national scale.[9] While the increase in indirect employment caused by the plant's operation could be traced from Ohio (power generating plant) to Louisiana (production of alumina from bauxite), this has not helped Ravenswood. Only three firms have located in Ravenswood to furnish services to the Kaiser plant, and subsequently to the surrounding area, creating approximately 50 jobs. No precise tally of such jobs can be made, but informal estimates were obtained from the staffs of the firms involved.[10]

Other industry

Three factors have hindered the town in its attempt to attract additional industry: (1) Aluminum is sold F.O.B. purchaser's plant. The price to the purchaser next door is the same as to the purchaser in Detroit. There would be no advantage to an aluminum fabricator in relocating near a plant. (2) Kaiser's contracts with the United Steelworkers set guidelines on wage policy for its plants across the entire United States. A low cost or profit-maximizing industry moving to Ravenswood would be confronted by a relatively high wage pattern. Under these circumstances, the new industry would undoubtedly choose to locate in another area rather than next to Kaiser. The arrival of Kaiser and its high wage standard has probably done a great deal to discourage further industrial growth. (3) The school situation is another handicap. The arrival of Kaiser brought new teachers (wives of Kaiser officials) and awakened the school system to new responsibilities. But spending is still low compared with that of surrounding regions. A new industry developer would rather locate where schools are of a caliber to attract necessary engineering and other talent, as well as to provide the basic skills required for high-grade production workers.

The population of Ravenswood grew from 1,175 in 1950 to approximately 5,000 in 1967,[11] with a measurable increase in local employment, adding some 950 men and 500 women and teenagers to the local labor force. The general consensus of the employees of local stores and service units was that in nearly every case the "local boy or girl had first crack at the job." Some of the jobs, of course, were not attractive to outsiders under any circumstances. Of some 300 jobs (this figure is an estimate based on discussions with local businessmen and on personal observation) created by the expansion of business due to the town's population growth, the majority resulted from the opening or growth of service stations and other retail stores. These opened up low skill jobs for farmers, housewives, and others who could not qualify for positions with Kaiser.

Unfortunately, the need for a large amount of capital and business experience has prevented many local people from becoming entrepreneurs. Most of the new stores were started either by persons who brought capital into the town or as branches of firms such as Sears, Roebuck.[12]

About 100 of the new jobs were in the professional category—teachers, physicians, ministers—almost all filled by outsiders.

Expansion of government services at a local level was mainly in street paving, construction, etc.—work done by crews assigned, on a transient basis, by the county commissioners at the county seat some distance from Ravenswood. Exact numbers could not be obtained; the county government does not break down its personnel assignments by location and could only make an informal guess. A reasonable estimate is about 90 additional jobs.

The total picture

The increase in the number of persons employed in the town of Ravenswood due to Kaiser's location there totals about 4,000. Of this number, about 300 to 500 "local boys" are in the aluminum plant, and about 300 local persons are in establishments existing because of Kaiser's growth and economic support of the town.[13]

More local people could be at work, at the expense of inmigrants, if they had had the necessary minimum education or training. As noted earlier, the "local boy" has the advantages of knowing people, having contacts, access to information through his presence at the scene, and a decided employer preference to give the local resident a first chance at a job. That more were not hired brings up some pointed questions about education and skills in general.

The level of education required for the adequate performance of a job's tasks is different, of course, for each type of job. It is the general feeling of people in Ravenswood who are in the position of hiring, or passing on the qualifications of would-be employees, that education is as good an indication of future job proficiency as any other single characteristic, and probably better than most, regardless of the training the person will receive on the job. The feeling about education is especially marked from a negative viewpoint: An employee without education "probably won't succeed and, therefore, an employer should not waste time with him."

No employer in Ravenswood would hire, for a permanent job, a person with less than an eighth grade education; most want at least completion of high school. Proof of completion of high school is used as a character reference. Completion of eighth grade is considered the bare minimum that will allow an employee to fill out reports, calculate time-and-material charges on a job, and be "really useful." The effect is to severely reduce opportunities for workers with lesser educational attainments.

Labor mobility also works to the disadvantage of the uneducated or undereducated. The more education a head of family has, the more likely he is to have the resources to move among labor markets.[14] At first, those with more education leave an area like Ravenswood to look for better job opportunities; this leaves some jobs open to those who stay behind. But with the arrival of a high-paying, long term career opportunity, such as a job with Kaiser, these emigrants return home. News of the plant draws hundreds of others, even from distant cities. As the plant builds up to capacity over the first few years of its operations, it may influence men who might otherwise leave Ravenswood to stay, even in jobs subordinate to those in the plant or entailing a distant drive every day. If there is a possibility of a job in the plant, they want to keep their applications current.

Employers' expectations as to education and job

skills rise with this "improvement" in the quality of the labor supply, and the uneducated find themselves at an even greater disadvantage in the labor market.

With the relative stabilization of plant requirements between 1965 and 1967, and the applicants' realization that job openings call for a specialized background, outmigration has been building up again. This does not operate to the advantage of the "stay-behinds," however, because of the increased employer expectations and, in Ravenswood, the relative stagnation in business job opportunities.

Locating a large production facility in a rural area, or any area that has a large underemployed or unemployed labor pool, can open up opportunities for less well educated workers. However, in an area with largely uneducated or over-age people, migrants take most of the jobs available.

Some of the migrant flow may be former inhabitants—the younger, more educated workers who left their hometown but will return now that better opportunities exist. This return migration and the long-distance commuting of other skilled workers tends to improve the quality of the labor force in the area.

Thus, in order to benefit the unemployed workers with lesser qualifications, the plant would have to lower its requirements to allow the entrance of some of these lesser skilled applicants. The plant would then be hiring workers of less than the best quality available—an unlikely prospect in the absence of financial incentive or moral suasion.

In a small community, competition for jobs still tends to hold down the growth of opportunities for any but the better educated job applicants. As jobs open up in service type businesses, women will be attracted into the labor force.

It appears, then, that if an area is to gain any immediate improvement in the unemployment rate, the main impact of an inmigrating facility on the unemployed must come through the generation of direct employment opportunities suitable to the characteristics of the unemployed. □

[10] The telephone company repair office consolidated several outlying offices into one plant in Ravenswood. Before the arrival of Kaiser, outside crews were sent into the area for any needed telephone work. The transfer of offices has resulted in a change of commuting patterns more than it has affected the number of new opportunities for local personnel. However, being "in town" has a strong psychological effect.

The second firm supplying services to Kaiser is the Canteen Co., set up to service the construction workers with beverages and packaged foods. About 10 men are needed to service the Kaiser plant alone, and 8 more handle accounts in surrounding towns. If the Kaiser operation was needed to make Canteen an economic feasibility, 18 men owe their jobs to the aluminum plant's existence.

The third example of new jobs arose on the output side. Aluminum sheet, plate, and foil are shipped out by train and truck to markets covering almost the entire eastern half of the United States. The expansion of business for one trucking outfit (which used to haul milk) resulted in the addition of 7 new jobs. The level of education demanded at this firm is at least high school, since dispatchers are wary of trusting a $20,000 tractor-trailer and a $20,000 cargo of aluminum to anyone who did not have the qualities necessary to graduate from high school.

A GUIDEBOOK FOR UNION ORGANIZERS

Published by:

INDUSTRIAL UNION DEPARTMENT, AFL-CIO

Publication #42
O.E.I.U. LOCAL 2

September 1961

INTRODUCTION

This guide for union organizers is not designed as a blueprint. It has been prepared, not to present magical new ideas or techniques, but to stimulate the thinking of the union organizer; to get the organizer to re-examine the methods he is using.

As all of us know, organizing the unorganized is a major subject on the agenda of every national and international union. It is the most important union activity in the labor movement.

Scores of resolutions have been adopted at conventions and special organizing conferences calling for greater efforts and new organizing momentum. Labor leaders, well groomed on the subject, have delivered numerous speeches and received loud applause in their call for stepped-up drives and the launching of new efforts to bring unionism to the millions of America's unorganized.

These speeches, conferences, and resolutions have received wide publicity. Newspapers have quoted union officials, and labor has translated resolutions and other action into special leaflets and pamphlets.

We have learned from experience, however, that our call for "organizing the unorganized" has had little or no effect upon the workers we seek to bring into the labor movement. Why? What are we doing that is wrong?

I have discussed this problem with the officers of the Industrial Union Department, the officers of numerous international unions, and many of my other associates in the labor movement. I have had similar discussions with the IUD's public relations, research, and education staff who have assisted me in getting under way the Department's pilot programs in the Greater Philadelphia Area and in South Carolina.

I have found that, with some rare exceptions, the consensus is that the problem of organizing the unorganized has undergone little change since the 1930's.

The fundamental principles of the labor movement remain the same. We still believe that working men and women must organize to: secure higher wage standards, provide job security and dignity, eliminate discrimination, establish industrial democracy, and promote social legislation aimed at bettering the American way of life.

Our history clearly demonstrates that these objectives are sound and constructive. These objectives have brought about an expansion of the labor movement while, at the same time, proving that our movement is an essential instrument in a free society.

If our objectives remain the same, we must ask ourselves if we are failing to convey the message of unionism to the unorganized. Again, the vast majority of those with whom I have discussed the organizing problem are convinced that there is no real substitute for the "old fashioned" organizing campaign and all the work such a campaign entails. Experience in our Philadelphia and South Carolina projects has proved this point.

These discussions with union officials and staff members also have strengthened my conviction that a high powered publicity campaign can never be an alternative to the personal contact work of an organizer.

The organizer has read about the "Madison Avenue" approach and its commercial advantages. He may not like the idea of high-pressure selling, but he can be convinced that if publicity sells soap, it also can sell unionism. My own experience has taught me that publicity -- alone -- does not work in an organizing drive because unionism is a concept, not a tangible product.

To convince unorganized workers that they need unionism requires know-how, a thorough knowledge of the individual worker's job and his role in producing the company's product, and a sincere interest in the worker's specific problems.

The impersonal approach cannot get the organizer's message over to unorganized workers; it can never take the place of person-to-person contact, nor can it cope with the tactics developed by anti-union employers. Management, as we know, has recognized the importance of building up individual relationships with its employees -- through

supervisors and foreman. Organizers cannot hope to be successful until their own relationship with the workforce is strong enough to overcome management's campaign to develop union hostility.

Personal contact, of course, will not guarantee an organizing success. There are many other tools, detailed in this guide, that can be used effectively.

More than anything else, perhaps, we need a revival of the spirit that characterized our early organizing efforts. A spirit that made the campaign more of a crusade than a job.

One way to revitalize this spirit is to redevelop the cooperative campaigns that worked so well in the past. The feeling of fraternalism that can be developed when the organizers of various unions work together in a common effort can go a long way toward bringing back the real meaning of unionism.

The Industrial Union Department's current organizing projects are based upon this belief. We have learned that the cooperation of a number of unions in a campaign that will not directly benefit them has not only renewed the spirit of the organizers, but has helped to resolve numerous jurisdictional disputes.

The IUD's two present projects have eliminated conflict at the plant gate. They have replaced suspicion and mistrust with cooperation and unity. We of the IUD are proud of our efforts to stimulate organizing among our affiliates, but we know that much remains to be done.

This handbook, prepared at the request of a number of affiliates, is not intended as substitute for any union's established procedure. It is not a rule book. It is merely the compilation of ideas and techniques that have worked in the past and which -- we believe -- will still work.

If this handbook is of assistance, it will serve the IUD's purpose of helping to stimulate the staff representative's thinking and aiding his union in getting on with the task of organizing the unorganized.

Nicholas Zonarich

Organizational Director
Industrial Union Department
AFL-CIO

WHY ORGANIZE?

Organizing the unorganized is of key importance to the American labor movement. Organizing builds union strength and aids all labor in its efforts to improve the wages and working conditions of the membership. It extends the benefits of trade unionism to more workers and extends industrial democracy in our complex society.

Lacking self-organization, today's worker has no voice in the nation's political life, its quest for higher living standards, or its efforts to create a better life for all. The unorganized stand alone and are usually ignored and forgotten.

Even ardent conservatives publicly admit that America is best served by a strong labor movement. They may define strength far differently than would a union man but few publicly call for the destruction of unions or their elimination from American life. Most seem to understand that without a labor movement, a dangerous void will be created in the economic, social, and political life of the nation.

Union staff representatives know that a growing union is one that is alive and strong. They know that organizing successes lead to new victories -- victories that benefit both the union and the workers involved. An organizing victory at a new plant may indeed have an important bearing upon a union's ability to make new gains for all its members.

Wages and working conditions at an open shop may vitally affect negotiations in any given industry. Low wages and poor working conditions anywhere in an industry are always a threat to all who work within it and a hurdle in the path of new improvements. The unorganized shop can be permitted to undercut wages and conditions only by imperiling conditions in the organized shop.

The protection of union-won conditions is a major reason for continued organizing drives, since even the presence of the union helps to bolster wage levels and prevent deterioration of working conditions. The organization of a non-union shop may permit an industry to yield new contract gains in collective bargaining since it tends to prevent cutthroat competition based upon sweated wage levels. Because of factors such as this, a successful organizing campaign may have as great an effect upon an industry's wage levels as an immediate set of collective bargaining negotiations.

BUILDING THE UNION

Often, the great need is to complete the organization of plants within a given corporation to prevent the employer from playing off the unorganized workers against the organized. Just as the union's ability to bargain with an industry is determined largely by the extent to which it holds bargaining rights, so is its effectiveness within a corporation often measured by the number of plants for which it bargains.

Pressures within a union to complete the organization of a given company can be very strong. Members employed at one plant soon learn that unorganized plants within the corporate chain weaken their bargaining position. As companies increase the measure of their diversification and seek new markets, the union's need to gain full representation rights becomes more intense.

Organizing an isolated shop may have less strategic impact than a key victory within an industry or company, but the results are of major importance to the workers involved. All workers seeking self-organization deserve the assistance of the labor movement.

Although the staff representative may know that all unorganized plants within his union's jurisdiction are potential objectives, he is usually given a specific target to investigate. Depending on his union, he may have the authority to launch a campaign or he may be instructed to "survey the situation" and make a report to his director.

Either way, however, the staff representative should not jump, feet first, into a wide-open organizing campaign. First, he should learn all about the target -- its management, its labor relations, and the attitudes of its employees.

THE SURVEY

Background information is vital to any successful organizing campaign. Unless the organizer understands the company's operations, the make-up of its workforce, and has a thorough knowledge of in-plant conditions, he cannot make an intelligent appraisal of his "target."

Every survey is based on the assumption that a campaign will be waged. Since an organizing campaign in many ways is like a battle, the staff representative must assemble his facts before determining his tactics.

The organizer's presence in a small community may immediately become known, but this does not mean that he cannot collect important information without getting a page one newspaper story announcing his presence at a plant gate.

Many organizers have learned -- some by sad experience -- that organizing does not start with a handbill. They generally conduct their own survey of the company and its operations before they introduce themselves to the first employee.

The first -- and perhaps easiest -- part of this survey deals with the physical location of the plant. A few hours spent observing the plant and talking with gasoline attendants, waitresses, and bartenders will usually reveal:

- Number and location of plant gates used by employees.
- Starting time, quitting time, and number of shifts.
- Approximate number of employees per shift and their breakdown by sex, age groupings, and race.
- Eating and drinking establishments near the plant.
- Transporation facilities for employees.

A visit to the community library will often provide information about the company's operations. A check of Dun and Bradstreet Credit Reports, Standard and Poor's Corporation Records, and Moody's Investors Service should disclose whether the plant is part of a chain or is locally-owned and the firm's general financial position.

By comparing net sales for the year with net income, for example, the representative can estimate the company's rate of return on sales, while dividing total net worth into net income will indicate the company's profit picture.

If none of the major reference books include the company, or single out the specific plant, the library may have special information printed by the plant's public relations department. Back issues of the community newspaper may provide other data, including annual financial statements.

The next step in the usual survey involves contacting the labor movement within the community. Not only is it important to meet with the various representatives, business agents, and council officials in the area, but they can often be of real assistance.

Active union leaders can provide important background information on the community. Among other things, the representative can learn:

- -Community reaction to organized labor.
- -The names of sympathetic public, civic, fraternal, veteran, and church leaders.
- -The position of community newspapers, radio, and television stations.
- -The degree of company participation in community activities and the names of company officials who are considered community leaders.
- -The labor history of the company.
- -A general idea of wage rates and working conditions at the plant.
- -The names of company employees who are active in the community -- through through their church, civic leadership, sports, programs for children, fraternal organizations, and politics.
- - The names of company employees who formerly belonged to unions in the area or who are known to desire union representation.
- - The meeting dates of local unions and councils in the area.

The initial survey has now been completed. The representative has gathered information that will be of vital importance to any organizing campaign, while remaining relatively quiet. In many cases, not one company employee has been approached. The representative has made promises to no one, and--certainly--no open drive has been started.

It is at this point that the representative will be ready to make his first contacts with workers employed in the potential bargaining unit.

SELECTING LEADERSHIP

The organizer has two immediate objectives when he makes his first contacts with workers at the plant. He is looking for leadership for his campaign and information about the specific problems and complaints of the employees.

There is no blueprint for meeting individual workers and gaining their confidence--conversations can be started in restaurants and bars, through "leads" passed on by other union members, and by acquaintances made through social affairs. If there is any rule at all, it is that contacts are not made by suddenly appearing at a plant gate with a leaflet urging employees to sign a union authorization card and mail it to a post office box.

Most organizers are interested primarily in meeting the type of employee who is respected by his fellow-workers and who has influence inside the plant. Getting to know a few of these employees is more important--at this stage--than meeting the maximum number of workers.

Once a potential plant leader has been contacted, it is important to win his confidence and trust. Time spent in developing this leader, answering his questions about the union, and explaining the benefits of collective bargaining will be well worth while after the organizing campaign gets under way and this leader becomes a union spokesman inside the plant.

Articulate and respected leaders inside the plant are vital to any campaign, but the representative must use his own judgment in selecting the right people. He must be sure that they are not known as chronic "gripers" or "soreheads" and that they are not motivated simply by a desire for revenge or a driving personal ambition.

In the "perfect" campaign, the organizer

will find a leader for every group in the plant--a woman for the female workers, leaders within minority racial and national groupings, and spokesmen for the various departments and shifts. Since the "perfect" situation rarely exists, the staffman must develop a leadership group as representative as possible.

If no potential leaders can be found, the representative had better acknowledge the probability that he will not be able to wage a successful campaign. There is no sense wasting time and funds when all the influential employees are either disinterested in unionism or opposed to it.

Employees must have the desire to organize themselves and--in fact--must do the real job of building their own local union. The organizer can utilize his experience and knowledge to help workers win their rights, but he cannot forcibly organize them.

Once the key leaders have been found, the organizer--who has gotten to know each of them as an individual--should call his people together for their first meeting. By pooling the knowledge of his leaders, the organizer should, at this meeting, get his first comprehensive breakdown of employees in the potential bargaining unit and a picture of the major company policies and practices that are responsible for worker discontent.

The organizer will need a breakdown of employees that includes:

- Departmental structure of the company (including which departments work the various shifts);
- Number of workers in each department, grouped by sex, race, and general age level;
- Departmental morale (including basic complaints, names and functions of unpopular foremen and supervisors);
- Names of employees considered leaders in their departments (including those the key leaders think the organizer should contact);
- Names of employees known by the leaders to work in the various departments.

The organizer will then, if time permits, attempt to learn the complaints of the employees--classifying them as departmental or plant-wide. Justified grievances should be separated from petty matters that will have little or no effect during a campaign.

As the complaints are discussed, the organizer gains a good opportunity to describe how similar problems have been settled through established grievance or bargaining procedures of unions. The meeting may end with an agreed-upon time for another discussion, but the organizer will still not have announced the start of a campaign nor have distributed authorization cards.

Subsequent meetings of the same group can be utilized to add new leaders selected by the organizer, to gain a more complete breakdown of the company's operations, and to secure the names of additional employees.

LEARNING ABOUT UNIONS

The organizer can use this period to describe the various procedures that can be followed to obtain recognition of the union, and the problems that may arise under each of these procedures. There is no sense fooling the leaders; they should know all the facts--including the possibility of long NLRB delays and adverse decisions based on technicalities.

The more the leaders understand about unions and the struggle they may face to secure collective bargaining rights, the better they will be able to withstand future company pressure. Even more important, a well-informed leadership is the organizing committee's best weapon against the anti-union attacks that will probably be conducted by foremen and supervisors.

As the leadership meetings progress, the representative should learn more details about specific company working conditions. By this time, he should know:

- Job classifications and wage rates, and how they compare with similar organized companies;
- Company method of communicating with employees for the handling of grievances;
- Premium pay rates, pension benefits, and insurance coverage;
- All other fringe benefits granted by the company;
- Company violations of any state or federal laws such as minimum wage, health and safety provisions;
- Specific actions by the company--including its supervisors -- that create hardships for individual workers or are clearly unfair.

By holding leadership meetings throughout this stage, the organizer builds an organizing committee able to function as a team. The period--being one of preparation--is used to add leadership to the committee so that it will parallel management's structure as far as possible.

The leaders--representing the maximum number of departments and groupings of workers--learn to articulate the benefits that can be gained by forming a union. They also learn to understand the risks they will be required to take. They gain an understanding of how labor movement ideas and ideals can be translated into practical action for the solution of plant problems. When this stage is reached, the organizer and his organizing committee are ready to begin a full-scale campaign.

COMMITTEES AND PARTICIPATION

Once the organizer has held a few meetings with his leaders, he can expect management and the workforce to know that "there is an organizer around." Even if the company has remained completely silent, the organizer can assume that it knows of his activities and is planning to counteract his campaign.

There is no set rule for the organizer's next move. He may attempt to start a "quiet" card-signing campaign or he may couple card-signing with his first leaflet distribution at the plant gate.

Whichever method he uses, and the method depends on circumstances and judgment, he should make sure that the leaders do the job of signing up the employees--after instructing them on the secrecy of signatures and other questions that will be raised by the workers. Assuming that the leaders are taking cards into the plant, the representative has nothing to gain by attaching other cards to his first leaflet.

The purpose of the first leaflet distribution should be little more than to "show the face of the union" in practical support of the cards that are being taken into the plant. Unlike other distributions, the leaflet can be general in nature and may well be a publication prepared by the union's international office.

As long as the leaflet names the union and includes something about the philosophy of the labor movement or the type of union that is conducting the organizing campaign, it will serve its purpose. The very act of distributing the leaflets gives the organizer the opportunity to stop workers, show them who he is, and--if possible--introduce himself.

Once the organizing committeemen give the organizer signed authorization cards, his activities are stepped up. Cards should be checked against the departmental breakdown and then classified by sex, age group, and race. Using this system, the organizer will soon be able to determine his strong spots as well as his "trouble" areas. He also will be able to check on the relative ability of his leaders, discovering where he must build additional support and where he can shift certain of his key people toward other groups within the company.

The organizer should also attempt to make a house call at the home of every card-

signer. While such a tactic may be impossible, depending upon the size of the plant, these calls are much more effective than letters of appreciation to those who have indicated a willingness to support the union.

In a campaign involving 100 workers, for example, if the organizer secures 70 authorization cards, his job is to convince these 70 workers to vote for the union, not to work on the remaining 30 employees. If these workers can be convinced to vote for the union, the election will be won regardless of the votes of the non card-signers.

PARTICIPATION PAYS OFF

Assuming house-calls can be made, the organizer should attempt to obtain the card-signer's active support in the campaign. Many organizers have discovered that once a worker participates in the union's drive, his sincerity and support become definite.

There always is room for more help in a campaign. Participation demonstrates to the individual worker that he is helping to build "his" union. He also helps to generate enthusiasm for the union within the plant.

As the organizer talks with the card-signer, he should evaluate the worker's potential value to the campaign. If the employee is interested in helping, he may be of assistance in signing up others. He may be willing to serve on a general organizing committee, pass out handbills, work on publicity, or do detail work at the campaign headquarters.

Before the organizer leaves the card-signer's home, he should attempt to secure the names of additional employees, the card-signer's opinion about their union sentiment, and a description of the card-signer's departmental conditions as well as major complaints against the company.

Once enough card-signers have been contacted to establish committees, special meetings should be called and assignments made. Committees may include:

- Membership--to accumulate the name and address of all employees, breaking these names down by department, sex, age group, and race;
- Publicity--to discuss information that should be included in material distributed during the campaign;
- Distribution--to mimeograph, help hand out (or mail) literature, and to maintain an accurate mailing list;
- Strategy--to work with the organizer in planning campaign tactics and timing;
- Community--to explain the need for the union to community leaders and demonstrate that the employees are actively participating in their own organizing campaign.

Obviously, the organizer will not always get enough workers to support the union openly, but when the employees are willing to act, he should take advantage of the situation. Some successful campaigns have found 75 percent of the bargaining unit serving on committees. In such a situation, the company has a difficult time claiming "outside agitation" and attacking "a minority of disgruntled employees."

While any or all of these committees are functioning, the leadership group--often expanded--maintains its key role as the in-plant organizing committee. Without this committee, the campaign has little chance of success. The other committees play supporting roles--and help the organizer to meet and talk with a wider group of employees--but they are not essential to victory.

In large plants or other large bargaining units, area, floor, departmental, or other in-plant organizing subcommittees may be advisable. In these instances, subcommittees should be headed by the proper representative from the leadership organizing committee. The organizer in charge, or another union representative, should be present at all subcommittee meetings to help give direction to planning and to seek to avert actions which may imperil the campaign's progress.

If the organizer is fortunate enough to have several smoothly operating committees, he will be in a better position to spend his time on house calls, the preparation of leaflets, and the coordination of the campaign.

By listening to these committees discuss their problems, he will obtain a better "picture" of the drive and be able to rely more on facts than on "playing it by ear."

After discussing the question with his committees, the organizer may decide to call a general meeting.

MEETINGS

The major purposes of a meeting are to achieve a large turnout, thereby demonstrating solidarity, enthusiasm, and strength, and to get a message across to a number of workers at one time.

Meetings that have been announced publicly--through handbill, word of mouth, or the press--always run the risk of being poorly attended. They should not be attempted until the organizer is certain of good attendance. Once a meeting of all employees has been called, no effort should be spared to fill the hall.

Any big meeting should be carefully planned in advance--with speakers instructed to keep their remarks brief and with time permitted for a question and answer period. If possible, an employee known and respected throughout the plant should chair the meeting. This employee can state the purpose of the meeting and describe why he believes organization is necessary.

Upon being introduced, the organizer should set the tone of the meeting. He should remember that he is not on a soap box and should seek to identify himself with the employees. Big words and generalities should be avoided; the workers have come to hear about the union, not to be impressed with the organizer's oratorical skill.

Most organizers have found that it is important to refer to "our" problems instead of "your" problems and that their knowledge of specific complaints inside the plant will be of great assistance.

Lofty promises of what the union "will do" can come back to haunt any union representative. It is best to be honest with the workers, explaining what "we" can do if "we" stick together and are prepared to fight for working condition improvements.

Unless the major issue in the campaign is the company's heavy-handed approach to labor relations and its refusal to treat employees as human beings, the organizer should not launch a vindictive attack against management. If a firm follows an "enlightened" paternalistic policy, the chances are that calling the boss names will only alienate many of the employees who have no personal resentment against top management.

Even in the case of the paternalistic company, however, the workers should be warned against the possibilities of an anti-union campaign. The organizer who praises management and says that the union has no fight with the company will look ridiculous if the company starts attacking the union.

The organizer should also remember to keep his remarks brief and to the point.

Discussion from the floor should be encouraged, not made impossible by a long-winded speech that drags on late into the night.

Questions asked from the floor should be answered honestly and specifically. When the union representative doesn't have the answer, he will gain respect by admitting he doesn't know and promising to get the information--as long as he follows through on his promise.

Before the meeting adjourns, an attempt should be made to secure additional authorization cards. Workers who are willing to take cards to their friends in the plant should be encouraged to do so. When the meeting ends, the organizer should try to meet as many of the employees as possible--noting potential house calls as he gets acquainted.

NLRB PLEDGE CARDS

Under NLRB rules, a 30 percent showing on union pledge cards is all that is required to petition for an election. These days, however, few elections are won with such a showing. NLRB pledge cards are at best a signifying of intention at a given moment. Sometimes they are signed to "get the union off my back." In other cases, the employer urges workers to sign the cards to get a premature election. In still others, workers sign to scare the boss into a raise. Whatever the reason, there is no guarantee of anything in a signed NLRB pledge card except that it will count toward an NLRB election.

For these reasons and out of long experience, most organizers will not move forward by filing for an election unless they have at least a majority of the workers signed and that majority looks reasonably solid.

There may be times when, because interest shows signs of waning, the organizer will petition for an election with fewer than 50 percent of the workers signed up. This will depend upon whether it is felt necessary to move ahead regardless of results.

If an election is lost or if an organizer determines that further progress is not possible in a campaign at a given time, thought must be given to withdrawal. The worst thing possible is to "pull out" without warning, leaving workers high and dry.

Aside from other considerations, the union may want to return another day. It may be advisable to counsel with the plant leaders to this effect and to try to keep a nucleus alive. In any case, good-byes in this kind of situation should involve full consideration for those who supported the union and who must continue to work in the plant.

THE HOUSE CALL

Visiting a worker--and his family--at home is one of the most important parts of an organizing campaign. It is a central part of the organizer's efforts.

It is during the house call, and only during the house call, that the union representative speaks to the employee as an individual instead of as a nameless part of a collective group.

Every organizer knows that while workers at a given plant may fall into various categories and share common complaints, each individual has his own characteristics, his special wants, and his separate ambitions. No two workers are identical; each will have his own specific reason--no matter how far fetched--for accepting or rejecting unionism.

The house call eliminates the generalities of all organizing campaigns, because it does not deal with the average employee or average family; it deals with a single worker and his own family.

There are very few rules that apply to house calls. Since each worker reacts differently, the representative must judge the people he is visiting. But most union organizers follow a few guidelines:

- They time their calls after the dinner hour--when a person is usually most relaxed and receptive to ideas--and make no new calls after 9 P.M.
- They either speak to a worker before visiting his home, follow up a signed authorization card, or use the referral of a fellow-worker to avoid knocking on a completely strange door.
- They avoid bitter arguments, regardless of how wrong the worker may be, since such arguments only lead to increased hostility.
- They attempt to reduce the time spent with workers who have obviously determined how they will vote and cannot be swayed in their opinions.
- They attempt to involve other members of the worker's family in the discussion since the entire family will be affected by the outcome of the election and may well have an influence on the employee's vote.

The organizer who is a good salesman may not do a good job at making house calls. Person-to-person organizing can be a lot different than selling insurance. A glib union representative often creates the reaction that he is simply "selling his product on a commission basis."

Many representatives recognize that organizing a worker means much more than "closing a sale" by getting his "signature on the dotted line." They have learned that it is often much wiser simply to discuss the benefits of unionism and answer individual questions without resorting to any "hard sell." If the organizer gains the confidence and respect of the employee, the chances are good that he has instilled a pro-union sentiment.

Before visiting any home, the organizer should have a thorough knowledge of his union--its history, its governing rules, and its collective bargaining history. He also should know as much as possible about the company, the department where the employee works, and his friends in the plant.

Upon arriving at a home, the union representative should attempt to create a good impression within the first few minutes of his call. There is no sense trying to push past a reluctant employee who is obviously annoyed at what he considers an invasion of his privacy or the interruption of some family activity. The effective organizer is polite and positive without being overly aggressive. Above all, he is friendly--simply asking if he may enter the house and discuss the union with the employee.

Once in the house, the organizer will probably find that no two house calls are exactly the same. The TV may be on--and may stay on, children may be running in and out, the employee may start talking about sports or world affairs, or his wife may ask about the family life of a union organizer.

An organizer wants to discuss unionism, but this does not mean that all other subjects can be ignored. Often, the relaxed organizer who permits the worker to do most of the talking is doing a good job.

If a personal relationship develops--even though the worker remains unconvinced of the need for a union--progress has been made and a second call should be planned.

If, on the other hand, the worker is receptive to the need for a union, he should be encouraged to become active in the campaign by joining a committee, talking to other plant employees, or distributing authorization cards.

Regardless of how the home call turns out, the organizer should write down his impressions of the employee shortly after leaving. Besides noting whether the worker is "pro-union," "anti-union," or "undecided," it will be helpful later if the representative includes probable ways of gaining the employee's support.

THE TELEPHONE CAMPAIGN

In very large bargaining units, house calls must be selective and involve contacts with key workers.

In such situations, large-scale telephone calling may help to bring awareness of the union message.

Such a campaign will involve the use of volunteers and these will have to be furnished with a short message or with an "approach." Calls are made directly into the homes of workers from lists assigned to each battery of callers.

The Communications Workers of America effectively used this device in the City of New York in a successful campaign resulting in a victory in a bargaining unit of 18,000 telephone maintenance workers scattered through the city's five boroughs and suburbs.

In this case, the CWA installed a battery of phones in the union headquarters and developed teams of volunteer callers, each of whom gave a few hours each week to the campaign. It was found that this activity developed enthusiasm that paid off on the job, and that the workers involved liked the attention devoted to them. It was also discovered that wives were interested in the message where husbands were not home at the time of the call.

The telephone campaign, of course, is not new and it need not be utilized everywhere in the same manner. It has been used by both political parties as an effective device.

PUBLICITY

Just as the house call and telephone call are means of communicating with the employees of an unorganized plant, publicity is another communications tool. It is a weapon to be used in a campaign, but it is only a weapon. Publicity, alone, probably never won any election and the best handbill ever drafted--by itself--probably never guaranteed a single vote.

But, as a campaign tool, publicity can be helpful as the easiest way of communicating with the employees.

The representative who is not afraid to write and recognizes that publicity is nothing more than written organizing knows that the more clearly he communicates with the workers, the better are his chances of success.

Written organizing may take the form of:

- Handbills at the plant gate.
- Letters to the workers' homes.
- Advertising in the press, radio, and TV.

- News releases that are pro-union and helpful to the campaign, but have the advantage of not being paid advertisements.
- Billboards and union movies.

Every organizer knows that there are some things that can be easier said than written. In effect, he recognizes that certain words and phrases have more appeal to the ear than they do the eye and that while certain combinations of words are easily understandable when spoken, they are confusing when translated to writing.

In using publicity, the representative should remember that while his campaign may be based upon facts, he must create an emotional appeal. Words such as "security," "freedom," "dignity," "fear," "equality," "justice," and "self-respect" have this appeal. They are understood and they are uncomplicated. While they may be concepts, each worker can define them in his own terms.

The representative who uses emotional phrases--without resorting to "corn"--and sticks to the facts without attempting to mislead the workers can organize on paper as well as in front of a meeting.

There are, however, a few general rules to follow when using the various publicity forms.

HANDBILLS

The first handbill distributed at the plant gate is the easiest. In most cases, it can be a leaflet describing the union attempting to do the organizing, or discussing unionism itself. This handbill--or leaflet--can probably be obtained from the international union.

Future handbills, and the frequency of their distribution, are a different matter. After gaining an over-all knowledge of the specific union, the workers will no longer be interested in generalities; they will want to know "what's it mean to me." As the campaign develops, handbills should deal with specific situations within the plant and the union's program. Frequency of distribution will depend on the type of campaign, the number of employees, the use of other forms of communication, and the representative's impression of their need.

Basically, each handbill consists of three main points. It has eye appeal to encourage the worker to read it; it presents one--or at most two--issues in understandable and short language; and it suggests a means of dealing with the issue.

To obtain "eye appeal," the representative should use the maximum possible amount of white space. Eyes are lazy--the crowded, single-spaced page "looks" like too much work. Cartoons clipped from magazine advertisements or traced from standard AFL-CIO, other union, or sales company sketches will also help to dress up the handbill. A humorous cartoon may get the worker to read the text.

A "headline" also is helpful. A few words, traced with the help of a mimeograph lettering guide will serve the same purpose as the headline in the daily newspaper. In the same fashion as the newspaper editor, the headline writer should attempt to summarize the handbill's "message" and create interest in reading further.

The organizer can learn something about leaflet writing from the text of newspaper stories. He will notice that sentences are always short and use simple words and that paragraphs can be started at the end of any

sentence when it appears that there is just too much black space (writing) lumped together.

A good handbill will be contained on one side of a piece of paper and will save its best paragraphs for the beginning and end. The first paragraph must be interesting and get the worker to continue reading, the last paragraph must make him say to himself: "That's right!"

Finally, every handbill should be signed--not necessarily with the name of the representative, but with the name of the union organizing committee (individuals when they are willing), or the name of the union.

LETTERS

Letters are often used when longer messages need to be addressed to the workers and when representatives want to involve the families. While they can be several pages in length--although it's best to keep them short--and do not need cartoons or eye-catching headlines, their sentences and paragraphs should still be short and to the point.

The organizer should also remember that the wife may very well read the letter. He will often want to aim some of his remarks directly to her. While the worker may keep in-plant working conditions to himself, the family knows about food costs, stretching the paycheck, and is interested in security. It also has heard about strikes! If the company is paternalistic, the organizer should also consider the family's reaction to sudden, harsh words against the boss. The employer has had years to "work on" the family--no union representative is going to accomplish anything by blasting away in his first communication with the home.

Like handbills, letters also should be signed--either by the representative, the name of a committee, the names of workers in the plant, or the union.

ADVERTISING

A representative's use of advertising will, of course, be determined by the funds he is permitted to spend. It should also be determined, however, by the impact it is likely to have upon the employees and the community.

Newspapers, radio, and TV advertisements in large cities are not only expensive, but often are relatively useless. In a city where organized labor is strong and the general population is large, only the directly affected workers will be at all interested and they can be reached by other means.

In the small community, the situation may be different. Advertisements will be relatively cheap and the organizer may feel that public support is essential to the success of the campaign.

Newspaper ads are priced by the amount of space used. The larger the ad, the better chance of it being seen, but this does not mean that all of the space must be filled. Like the handbill, white space is important. Once the representative knows what he wants to say, he can usually get assistance from the newspaper in securing the best wording and type sizes. He will not be charged for this help.

Radio and TV ads are handled in the same way, but instead of buying space the representative will be purchasing time and the best period for a large audience. Most representatives using radio and TV, purchase "spots"--short announcements between programs--that are bought as a "package." The stations will help prepare the announcements, but the representative should be sure that he gets as many "spots" as possible played when the employees are driving to and from work (radio) or during the evening (TV).

Generally speaking, the organizer should think twice before going into paid advertising campaigns, whether through radio, TV or newspapers. Aside from the need for expert handling, campaigns of this kind may kick back or have no visible influence upon

either the community or the workers directly concerned because of other community or world issues, or because they are "lost" in the shuffle. Use of these media on a sustained basis can be expensive. This is not to say, of course, that ads, TV or radio should never be used.

NEWS RELEASES

The major objective of the news release is to get it used--as news--as closely as possible to the way it has been written. The release that is picked up by the newspaper as prepared by the organizer has the effect of a free advertisement, but more important--since it is not labelled as an ad, it carries the newspaper's reputation for accuracy.

Once again, a release dealing with an organizing campaign must depend upon the community in which the campaign is being undertaken. In a large city, the papers may announce that an election will be held as well as the results, but the average organizing drive simply isn't "news" and won't be given much space, if any.

In the small community, however, the case is often entirely different. A union campaign at a company which provides a large share of the community payroll is very definitely "news" and will be treated accordingly.

The preparation of a news release by a union representative should not be undertaken until the local newspapers have been examined. By reading how the paper "plays" local news, the representative will get an idea of how best to word his release.

Generally, in writing a release, the most important information must come first. The "lead" paragraph must be dramatic enough to guarantee readership. The first few paragraphs must also answer the questions: who?, what?, why?, where?, when?, and how?

Since newspapers, radio, and TV all will attempt to shy away from outright propaganda, the representative should be sure that all of his emotional statements are written as quotations--either of himself or of members of the in-plant organizing committee.

No newspaper story will say: "The management of Company X is violently anti-union and has fired workers seeking to join Union Y," but the paper will print the statement if it reads: "John Smith, Union Y representative, today charged that 'Company X is violently anti-union and has fired workers seeking to join the union.'"

One further point: the newspaper, radio, and TV stations consider news to be especially worth using when it is happening at the time of the release or will happen in the near future. Stories that talk about events happening a few days prior to the paper's publication are not news, they are "history." For this reason, releases should be written in the present and future tenses, stressing that action <u>will</u> take place or is happening <u>today</u>, rather than stating that something <u>has</u> happened.

Radio stations can be given the same releases presented to the newspapers, but an attempt should be made to time the releases so that in some cases the newspaper will be on the streets before the radio announcement, and vice versa. TV stations also can be given the same release, but an effort should be made--whenever possible--to include a picture. Since TV is mostly visual, inclusion of a picture (8" x 10") will help to get the release broadcast.

A few simple rules about preparing a release:

- Type the copy, using only one side of a piece of paper and double-spacing.
- Leave wide margins so that the editor has room to write his own corrections.
- In the top right hand corner, place the name of the union, the name of the representative and a phone number where the editor can contact the representative.
- Above the start of the story--on the left--state the time when the story can first be used. Most stories can be marked: "For Immediate Release."
- Start the story almost half way down the first page, giving the editor sufficient room to write a headline and instructions on type size.

BILLBOARDS AND UNION MOVIES

Billboards, union movies, picture slides, etc., are all visual aids that can be of assistance in a campaign. Their use, of course, depends on the availability of funds and films.

If billboards are to be used, their space can usually be rented by contacting the agency listed on the bottom of the sign that the union desires to rent. The agency also will probably be able to give the union the name of several artists who can prepare the desired message.

Some unions have excellent movies that representatives use to stimulate discussion during organizing meetings. The representative should be sure that he has had a "sneak preview" of the film, so that he can lead an intelligent discussion and give a brief introduction before it is played. Additional films are available from the AFL-CIO Education Department and many representatives carry an AFL-CIO film catalogue with them.

THE ISSUE, THE COMPANY, AND THE COMMUNITY

Every organizing campaign develops its own key issues -- problems that are of major importance to the employees and that are generally viewed as the major reasons for joining a union.

As the campaign gets under way, the organizer should soon recognize what these issues are and how he wants to develop them. While he may want to discuss other problems, he knows that if he can convince enough of the workforce that the union -- and only the union -- has the remedy for these key issues, his campaign will be a success.

Once these key issues have been selected -- whether they are wages, job security, pensions, or working conditions -- the organizer should use all of his organizing weapons to stress the union's solution.

If the organizer does a good job of constantly hammering on these issues, he will hold the offensive and force the company to answer his charges. The theory that a good offense is the best defense holds especially true in organizing.

Handbills, publicity, letters to the home, meetings, house calls, and all other forms of communication should emphasize the issues. The representative should be sure that he sticks to the facts. As long as he does, and as long as he varies his charges enough to maintain interest, the company will end up answering the union throughout the campaign.

The anti-union company that is determined to defeat the union will, of course, also seek to take the offensive. It will tell its employers about union thugs, racketeering, strikes, and violence. It may devise all sorts of false statements in an effort to scare and confuse its employees.

As the company campaign becomes especially vicious, pro-union members of the workforce are almost certain to urge the representative to answer certain management charges. While some statements may have to be counteracted, the organizer must remember that he will be playing into management's hands when the union takes the defensive. Whenever possible, company statements should be ignored, or treated lightly, while the union's communications continue to stress the key issues.

WARNING THE MEMBERS

Once the company has indicated that it is launching a full scale anti-union campaign, however, the union representative should warn the union's supporters of possible management actions. The leadership committee, as well as all other committees, should know -- and understand -- just what the company can do under the law and what the union can do to overcome these tactics.

In describing company tactics, the representative should not attempt to fool the union supporters. It is dishonest and unfair to promise committee members that they "cannot be fired for union activity." Every representative knows that despite the language of the law, active union supporters are fired on other pretenses and either are forced to wait long months before being rehired or never regain their jobs.

Committee members also should be warned of "captive audience" meetings and the National Labor Relations Board's present interpretation of "free speech." Other legally permissive company tactics also should be described. The union's supporters may be surprised and even dismayed by this information, but advance warning is still better than the last-minute shock and disintegration of a campaign caused by a hostile employer.

While the company's personal attack against the union may be the greatest obstacle for the representative to overcome, he should also consider the attitude of the community. In the larger cities, of course, this attitude may be one of complete indifference and have little bearing on the campaign's outcome, but in the smaller cities and towns, public sentiment can be extremely important.

Management has learned the value of community sympathy and open support. Anti-union firms, especially in the South, have devised programs that place the full weight of community pressure against the union supporter. Since the actions of community committees cannot be blamed on the company--under the NLRB's "agency" definition--these committees often go "all out" in their efforts to defeat the union.

There is no reason why representatives should not try to win community support for the union. In areas where there has been little experience with the labor movement or where the company is the dominant industry, such efforts may prove worthless--but they should be tried. In some communities, union representatives have found strong support and help when they least expected it.

Once the campaign is in the open, the small community knows that "the union is trying to come in." The representative has nothing to lose by approaching various leaders and finding out where their sympathies lie and what they plan to do. House calls on community leaders can be as effective as house calls on unorganized workers.

Other unions in the community can tell the representative what people to visit. If there are no other unions, the representative can start by visiting municipal officials and churchmen. A pro-labor clergyman or a sympathetic elected official--even if they wish to remain anonymous--can often be the source of other contacts.

If there are other unions in the community, the representative will, of course, want to involve them as much as possible in the campaign. Local union leaders, business agents, and council officials should be urged to speak with their friends at the target plant, their employers, and community leaders with whom they have a personal acquaintance. Union officials and members living in the area also can be of assistance by speaking at campaign meetings or supplying the representative with needed manpower for leaflet distributions.

In speaking to community leaders, it is important for the representative to be as objective as possible and to avoid personal attacks on the company. The major point to stress is the right of working men and women to seek self-organization and to vote in a free election. If community leaders are impressed with this fact relatively early in the campaign and the company then launches a vicious anti-union drive, the representative may find that he has won valuable allies.

Should community leaders be willing to support the union openly, the representative will want to take advantage of this situation. A community committee can be formed -- just as management does -- with letters mailed to the workers, ads in the press, and news releases. The more prominent the leaders, the more help they can provide.

The representative who finds interested community leaders who are "on the fence" should attempt to secure literature quoting men in the leader's occupation or profession who support trade unionism. Many internationals have such material, as does the AFL-CIO and the IUD.

Although most representatives will find it difficult to form a community committee that speaks out openly for the union, some personal contacts may succeed in neutralizing the company's planned use of these same leaders. If the community takes the position that a decision to be represented by a union should be left up to the involved employees, the representative has gone a long way toward securing a fair election -- one of his major goals.

In this connection, the union organizer's personal behavior is important because his actions are watched by the workers in the plant. Just because of his work, the union representative must be courteous and avoid situations which can reflect upon him and the union during an organizing campaign.

TIMING

An organizing campaign -- like a battle -- depends on strategy, tactics, and timing. If both the strategy and tactics are properly developed, the campaign can still fail if the representative fails to time his drive so that it reaches its high point on Election Day.

As with every other part of an organizing effort, the timing of each campaign may be different, but the final objective is identical. The representative wants pro-union sentiment to reach its maximum strength when the workers go to the polls.

During the 1960 national elections, many political commentators claimed that the closeness of the final results was caused by the Kennedy campaign "peaking too soon." These commentators charged that the President reached his high point -- maximum votes -- 10 days to two weeks before Election Day and that if the election had come a week later, Nixon would have won.

If the political commentators are correct, what happened during the Presidential election often happens in union organizing campaigns. The representative uses up all of his ammunition, has his drive running at full speed, and then finds that he cannot maintain active interest through Election Day.

Even worse are the campaigns that reach their peak before the NLRB sets an election date, only to dwindle in interest as the Board permits company-requested delays aimed at killing the spirit of the drive.

Many organizers have learned to "hold back" until the election date is set and then plan their publicity and other activities to reach a climax on the eve of the vote. These representatives have learned that when the final union action contains nothing more than balloting instructions, a "last minute" company appeal can have a devastating effect.

As mentioned in the section dealing with meetings, the representative may decide to hold a mass meeting on the night prior to the election. Such a meeting runs the risk of a poor attendance, but a large turnout can do much to boost morale and help to insure victory. A test vote, held at such a meeting, not only gives the workers practice in casting their ballots but will indicate the union "trend."

AIMING FOR ELECTION DAY

In other campaigns, the organizer may find that--like it or not--he has reached his peak membership well before the election. If his personal vote count shows a union

victory--regardless of how narrow--he will concentrate all his efforts on maintaining his support, even to the point of ignoring the non-union and on-the-fence employees. Such action may force the union to take a defensive position in the last days of the campaign, but if the votes can be held, the representative may be successful.

Usually, in such a situation, the organizer finds that he is in a losing battle. The company is left free to concentrate on the hard-core union supporters and will, almost always, be able to switch a few key votes.

In some campaigns, the organizer may find that as the union reaches its peak strength, the company reacts by taking clearly illegal action. Members of the leadership committee may be discharged, supervisors may make open threats, and working conditions -- and even wages -- may be drastically changed.

While the representative may recognize that he has solid unfair labor practice charges, he should carefully consider whether the filing of such charges -- and the delay of the election -- is in the union's best interest. The organizer may decide, if the union's strength is sufficient, to push hard for an election or strike the company for immediate recognition and the correction of injustices. The decision to strike, of course, must be carefully considered in the light of specific circumstances.

ELECTION DAY PLANNING

Election Day marks the conclusion of every campaign. The importance of the union showing its strength and thereby helping to develop a bandwagon psychology cannot be underestimated.

Unfortunately, many representatives work hard up to Election Day and then, assuming that everything possible has been done, sit back and await the vote count. These representatives follow the theory that "if the workers don't know about the union, they never will."

Politicians have long known that while this theory may make sense, it does not take into account the sometimes strange behavior of human beings. For this reason, both major political parties work hard and long on Election Day -- and surveys show the work produces extra votes.

Most organizers will have selected their observers well before Election Day. The observers--chosen for their leadership and respect in the plant--have been told about their job and will receive additional instruction from the Board agent.

Although the NLRB has rules governing activities at the polling place, the representatives can still build a bandwagon atmosphere by getting pro-union supporters to wear buttons, to voice their voting intentions, and to "talk up" the election away from the polls.

The representative should also follow the political precinct practice of turning out the vote. A committee of union supporters can be used to check off those workers who have voted and to contact those employees who have indicated union sentiment, but have not cast their ballots. Vacations, time off, and shift schedules should be analyzed by departments to make sure that transportation can

be provided when necessary. In addition, workers not reporting to the plant on Election Day should be contacted during the voting hours to be sure they plan to cast their ballots.

Generally, the union representative uses his organizing headquarters as an Election Day center. Employees working on late shifts can be utilized to make phone calls while other workers can provide cars. If any workers are sick or hospitalized, every effort should be made to transport them to the polls.

While the representative should not waste his time turning out the non-union vote, he should consider the possibility of having the friends of on-the-fence voters drive the undecided employees to the voting place. It is up to the friends to determine, ahead of time, whether these workers are potential union votes.

Assuming that the representative, or his leadership committee, have a listing of all eligible pro-union voters, ever effort should be made to make sure that each of these voters goes to the polling place. All too often, union supporters have failed to vote because they were convinced that the election was "in the bag," only to find out that the results of the count postpone union representation for at least a year.

If the representative and his committees work hard to obtain the maximum union vote, they will know that they have done everything possible to win a victory. The vote count will determine whether their efforts have succeeded.

CONCLUSION

There are no "absolute" formulas for success in organizing. Each campaign must be planned and carried out according to the circumstances that present themselves.

Tactics will vary and those proved successful in one campaign may fail in another. The experienced organizer recognizes the need for planning, but he also knows that plans must be flexible and tactics can be shifted or changed as need dictates.

There is no substitute for the in-plant leadership organizing committee. Generally, the more successfully these committees are built and spread through the plants, the more probable will be the chances of success.

There's nothing like face-to-face contact with the workers. This means going where workers go, especially to their homes. In large plants, house calls may have to be selective but they can be ignored only by inviting failure. In smaller plants and communities, there is much to be gained by visiting every worker at least once.

Commonsense and experience are probably the best guides for the union organizer. But it is possible to learn from the experiences of others and this guide has sought only to draw from such experiences. The use of these suggestions does not guarantee victory. They are intended only to help in planning and in the work that must follow.

These suggestions have been tested -- and are now being tested -- in action by industrial union organizers. It is hoped that they will help to inspire thoroughly planned campaigns in which problems are anticipated in advance. Planning and hard leg work are the not so secret ingredients of good organizing.

The material in this section

of the

GUIDEBOOK FOR UNION ORGANIZERS

deals with

ORGANIZING AND THE FEDERAL LAW

and was

originally prepared

as

course material for staff training

Important Note: The following guide is presented as background for an understanding of the law and its interpretations, as they relate to organizing. It is not intended as a substitute for legal advice in specific situations. Organizers should seek advice and direction through normal union channels, as to both the application of the law and union policy.

BARGAINING RIGHTS AND ORGANIZING

This section deals with getting bargaining rights, through voluntary recognition or Labor Board certification. It treats the federal labor law on organizing, employer and union unfair labor practices as they relate to organizing, and briefly the most important municipal and state laws that touch organizing.

GETTING BARGAINING RIGHTS. Bargaining rights may be obtained by recognition or by NLRB certification. The simplest and quickest way to get bargaining rights is by voluntary recognition by the employer. He may recognize a union for one or more plants of his company, and he may even include in the bargaining unit employees (such as guards and supervisors) who could not be included in a Labor Board certification.

REQUIREMENTS FOR VALID RECOGNITION. In order for voluntary recognition by the employer to stand up, if attacked before the NLRB by a rival union, it must meet these requirements:

There must be a valid contract in existence. It must contain terms and conditions of employment and not merely "recognize" a union.

Such a contract must not be "premature." In an expanding unit (usually a new plant) the Board may hold that the contract does not bar an election if substantially less than a full complement of workers is currently employed. The Board used to require that a "representative" group of workers be currently employed before it would order an election or honor a voluntary recognition. In recent rules, it has stated that 30% of the anticipated number of workers must be employed in 50% of the job classifications before it will order an election. Presumably, it would not regard voluntary recognition of a union as a bar to an election if it took place before this volume of employment had been reached in an expanding unit.

The employer must have "convincing evidence" of a majority. Such evidence could be provided in several ways -- such as by a card-check or an independently-conducted election -- but the evidence must be clear-cut that the employer actually thought the union represented a majority of his employees.

It is not enough for a rival union merely to be on the scene in order to forestall a valid recognition, unless it has made a claim for recognition on the employer. The Board has held a contract following voluntary recognition to be a bar to an election, even when a rival union was around, under these circumstances:

- no claim had been made on the employer by the rival union;
- the employer had good evidence that the union he recognized actually represented a majority of his employees.

Obviously, however, the Board will look closely at these situations, in order to prevent "back-door" agreements which might effectively deny workers a free choice of bargaining representative.

Effect on AFL-CIO No-Raiding Pact. When a union gets bargaining rights by voluntary recognition instead of by Board certification, the AFL-CIO No-Raiding Pact does not apply for a period of one year. After the first year, the no-raid pact applies equally to voluntary recognition and Board certifications.

However, the normal Labor Board rules on contract bar and on unit questions apply in the event another union seeks to represent all or a part of an established bargaining unit.

NLRB CERTIFICATION. The other method of getting bargaining rights is by Labor Board certification. This is by far the most common today. Though it takes longer to achieve, because of the election procedure, it has some advantages. The most important are these:

1. The Board will normally dismiss an election petition filed within a year of certification.

2. Where a contract is signed within a year of the issuance of certification, the Board will normally not hold an election until its expiration date (subject to contract bar rules discussed later).

3. A strike by another union against a certification is illegal.

4. A union can strike (and get other unions to strike in sympathy) against an employer refusal to honor a certification and bargain.

5. A certified bargaining agent for employees doing a certain type of work can strike if the employer assigns this work to employees belonging to another union. Without certification, such a strike might be illegal.

FEDERAL LAW ON ORGANIZING. This section sketches the basic federal law on organizing, giving its historical development and coming down through the changes in the Taft-Hartley Act of 1947 and the amendments to Taft-Hartley that relate to organizing in the Reporting and Disclosure Act of 1959 (Landrum-Griffin).

HISTORY TO WAGNER ACT. The whole history of organizing in this country prior to 1932 (with minor and temporary exceptions) has been one of government intervention on the side of employers. For several decades in the 19th century, unions labored under the "criminal conspiracy" doctrine imported from English common law.

When this doctrine was no longer tenable, the courts produced others. One was the "illegal purposes" doctrine which held that although unions as such were not illegal, their purposes might be illegal. Under this doctrine, the purpose of setting wage rates was held to be illegal.

A companion was the "illegal means" doctrine, to the effect that although union purposes might be legal, the means for achieving them might be illegal. By this test, strikes, picketing, and boycotts were all held to be illegal.

The major employer weapon was the injunction which was used against labor organizations with devastating effect. It found its first statutory basis in the Sherman Antitrust Act of 1890, under which employers sought injunctions against union organizations as "combinations in restraint of trade."

A second employer weapon was the "yellow-dog contract" which some employers forced their workers to sign as a condition of employment. Such a contract stipulated that the worker would not join a union as long as he worked for that employer. The first attempt to strike off this shackle was the Erdman Act, passed in 1898, applicable to the railroads only. This act made it illegal for employers to fire workers for union membership, which in effect made yellow-dog contracts unenforceable. The Supreme Court set aside the Erdman Act in 1908 on the grounds that it interfered with "freedom of contract" guaranteed by the Fifth Amendment.

A second statute which gave hope to unions -- a false hope, as it turned out -- was the Clayton Act of 1914 which stated that "the labor of a human being is not a commodity or article of commerce." It was mistakenly thought that this language would exempt unions from the Sherman Act, and it was widely hailed as "labor's magna charta." These hopes were dashed when the courts continued to issue injunctions against "restraint of trade" by unions.

Railway Labor Act (1926). The beginning of modern labor law was the Railway Labor Act of 1926. For the first time it was laid down as public policy that railroad workers had the right to organize and bargain through representatives of their own choosing, free from employer interference. This law was validated in 1930 by the Supreme Court in the Texas & New Orleans Railway case.

Norris-LaGuardia Act (1932). The principle of collective bargaining was first recognized for all workers in interstate commerce in the Norris-LaGuardia Act of 1932. This Act stated: "Whereas . . . the individual unorganized worker is commonly help-

less to exercise actual liberty of contract and to protect his freedom of labor . . . it is necessary that he have full freedom of association, self-organization, and designation of representatives of his own choosing, to negotiate the terms and conditions of his employment, and that he shall be free from the interference, restraint, or coercion of employers of labor, or their agents, in the designation of such representatives or in self-organization . . . ."

In addition to this first clear statement of public policy favoring the right to organize, the Norris-LaGuardia Act severely limited the use of federal injunctions to cases involving fraud or violence. (In fact, it is commonly known as the "Anti-Injunction Act.") It also rendered yellow-dog contracts unenforceable by labelling them as contrary to public policy.

This law erected barriers to legal action on behalf of employers that even the ingenuity of the courts could not evade. But it left out a vital protection for the right to organize. Unionists had always had the theoretical right to organize under the constitutional guarantees of free speech and assembly. But the employer also had the right to fire a worker for joining a union. As long as he held that right unchecked, labor organizations showed themselves unable to sustain organization on a large scale.

Section 7 (a), NRA. This famous section picked up much of the language of Section 2 of the Norris-LaGuardia Act on the right to organize and incorporated it into the "codes of fair competition." But it also contained the fatal flaw of providing no sanctions against employers who interfered with the rights enunciated for workers. The codes were declared unconstitutional in the Schechter Case in 1935.

THE NATIONAL LABOR RELATIONS (WAGNER) ACT, 1935. The growth of the labor movement as it is known today dates from the Wagner Act passed in 1935 and declared constitutional by the Supreme Court in the Jones and Laughlin Case in 1937. For the first time in American history, the employer was prohibited in specific terms from interfering with the worker's right to organize.

Right to Organize. Section 7 of the Wagner Act stated: "Employees shall have the right to self-organization, to form, join, or assist labor organizations, to bargain collectively through representatives of their own choosing, and to engage in concerted activities for the purpose of collective bargaining or other mutual aid or protection." This much was about the same as the Norris-LaGuardia Act.

Employer Unfair Labor Practices. Section 7 was called the "heart" of the Wagner Act, but it was the "muscles" provided by Section 8 which kept employers off workers' backs when they formed unions. This section established categories of "employer unfair labor practices" in organizing and bargaining, and Section 10 provided sanctions against employer violations, initially through the NLRB but ultimately enforceable in the federal courts. For the first time, the right to organize was not only enunciated but was protected by some legal teeth.

In the late thirties these restraints on employers, combined with economic distress and a genuine desire on the part of workers to organize, were effective in launching wide-scale unionization. Today they mean much less, because of watering-down of the law and particularly because of weak-kneed and employer-oriented administration of the law by the NLRB.

Representation elections. The second great innovation of the Wagner Act was its provision for representation election procedures through the NLRB. This procedure is spelled out in Section 9 of the law, supplemented by the Board's own rules and regulations and statements of procedure. No longer was it necessary for a union to strike for recognition if the employer refused to deal with it. A union claiming a majority could petition the NLRB for an election; and if it won, the employer was required to recognize and bargain with the union.

LABOR-MANAGEMENT RELATIONS (TAFT-HARTLEY) ACT OF 1947. The philosophy of the Wagner Act was to ease the way to organization and collective bargaining and to restrict employer interference with that right. The Taft-Hartley Act specifically sought to throw roadblocks in the way of organizing and bargaining.

Its philosophy is made clear in the addition it made to Section 7, the heart of the Wagner Act. The underlined part of the following paragraph represents the Taft-Hartley addition to Wagner Act language:

> Sec. 7. Employees shall have the right to self-organization, to form, join, or assist labor organizations, to bargain collectively through representatives of their own choosing, and to engage in other concerted activities for the purpose of collective bargaining or other mutual aid or protection, and shall also have the right to refrain from any or all of such activities except to the extent that such right may be affected by an agreement requiring membership in a labor organization as a condition of employment as authorized in Section 8 (a) (3).

Its other sections then spelled out in detail various restrictions on organizing and bargaining. These restrictions will be taken up as they arise under subsequent subject headings. The most important of these was a whole new section of "union unfair labor practices."

LABOR-MANAGEMENT REPORTING AND DISCLOSURE ACT OF 1959. Though commonly known as the Landrum-Griffin Act, this law was changed slightly in House-Senate conference committee from the original Landrum-Griffin Act passed in the House. It directly affects organizing in five provisions:

1. "Hot-cargo" clauses are made illegal. Title VII makes illegal any agreement with an employer requiring that he refrain from handling unfair or struck work. An exception is made for the garment industry.
2. Picketing for both organizational and recognition purposes is sharply restricted.
3. Secondary boycotts are further restricted.
4. Economic strikers are given the right to vote for a period up to one year from the commencement of a strike, at the discretion of the NLRB, if a representation election is held.
5. Conduct of representation elections may be delegated by the NLRB to regional directors.

EMPLOYER VIOLATIONS. The Taft-Hartley Act took the old Section 8 of the Wagner Act covering employer unfair labor practices and made it into Section 8 (a). It added a new Section 8 (b) on union unfair labor practices.

CATEGORIES OF EMPLOYER VIOLATIONS. The following actions of the employer were unlawful under the Wagner Act, and the same language was carried over in the T-H Law:

1. "Restraining, interfering, or coercing" workers in their right to organize and bargain.
2. Forming company unions or dominating unions.
3. Discriminating against workers for union membership or activity.
4. Discriminating against workers for testifying under the law.
5. Refusing to bargain collectively with a majority union.

"FREE SPEECH" PROVISION. All of these were important in organizing in the late thirties. Their importance had been greatly reduced under Taft-Hartley, however, by the inclusion in that law of a new Section 8 (c) -- the so-called "employer free speech" section -- which states:

> "The expressing of any views, argument or opinion or the dissemination thereof, whether in written, printed, graphic, or visual form, shall not constitute or be evidence of an unfair labor practice under any provision of this act, if such expression contains no threat of reprisal or force or promise of benefit."

Even before the "free speech" section was written into the law in 1947, some courts were holding that employers could make statements bearing on union organizing campaigns.

Interrogation. The Labor Board is still in the process of refining its views on employer free speech, but it is clear that the Eisenhower Boards gave the employer great latitude in expressing himself during organizing campaigns. For example, individual interrogation of employees during a campaign -- regarded under the Wagner Act as coercive in itself -- is permitted under certain circumstances.

In one case (Blue Flash Express, 1954) the employer questioned all the employees in a unit, ostensibly to see if the union had a majority. The Board said this was all right. Its test would be whether, in view of all the circumstances, the interrogation reasonably tends to restrain or coerce employees in the exercise of rights guaranteed in the law. In a later case (Mall Tool, 1955) the Board said "an employer's technique of talking individually to his employees doesn't per se justify the voiding of an election." In this case the interviews took place at the work benches, not in the employer's office, and about half the employees were interviewed.

The old Wagner Act philosophy was that it was none of the employer's business how his employees felt about a union, and in any case that the NLRB election would tell him all he needed to know. Decisions since Taft-Hartley have drastically changed this view.

Polling of Employees. A recent case illustrates how silly the Board can get about employer polling. The Board held (Offner Electronics, 1960) that an employer cannot take a poll of the union sentiments of his employees after the Board directs an election or a consent agreement is signed. (Presumably, it would be all right beforehand!)

Employer favoritism. The free speech provision opened the door to the employer to express open preferences for one union as against another during an election campaign. He cannot extend special privileges to one union during an organizing campaign (Wagner Iron Works, 1955) but the incumbent union, by virtue of holding the contract, may enjoy certain privileges denied an outside union -- such as access to the plant.

The employer cannot recognize one union without proof of majority, but he can do several things short of recognition to express his preference. For example, he can "predict" that the benefits will be lower if the incumbent union is displaced, or on the other hand he can say that he cannot pay the higher wage rates that will be demanded by one of the unions. Though the "threat" of reprisal in the form of a plant closing seems clear in the latter statement, it has been held by the Board to be "protected free speech."

Expressions of Opinion. It has been held in a recent case that the employer can say that negotiations will "start from scratch" if a union gets in. The Board held this to be protected as a mere statement of fact and not a threat to withdraw benefits.

In balancing off the employer prohibitions in Sec. 8 (a) (1) against the "free speech" provision of Sec. 8 (c), the Labor Board has been giving the edge to employers.

Captive Audience. This is the practice by an employer of calling his employees together on company time (and usually, though not always, on company premises) and giving them an anti-union speech before an election. The Board's rulings on this have been shifting in favor of the employer. They have gone through the following cycle:

1. At one time any anti-union speech by an employer to a captive audience before an election was an unfair labor practice. This was the doctrine under the Wagner Act but was changed immediately after the "free speech" provision of Taft-Hartley was enacted in 1947.

2. The next stage was the Board's view that the employer could make a captive audience speech, but the union must be given "equal time" if it did not have other opportunities to make its case "under circumstances which reasonably approach equality." This was laid down in the Bonwit Teller case in 1951 for department stores only and later extended to other industries.

3. The Board's position now is that the employer may make a captive audience speech without giving the union such an opportunity. (Livingston Shirt, 1953) This is true as long as the union can solicit employees during non-working time. The Board said: "An employer's premises are the natural forum for him just as the union hall is . . . for the union."

A further extension of the doctrine was made in a Board ruling on an employer speech after working hours, for which attendance was "voluntary." This was held to be non-coercive, even though the pressure on union supporters not to expose themselves before an election is obvious to any organizer.

24-hour Rule. All captive audience speeches are banned during the 24-hour period before an election, regardless of whether or not they are coercive. The Board feels that they have "an unwholesome and unsettling effect and tend to interfere with that sober and thoughtful choice which a free election is designed to reflect."

Other electioneering is permissible during the 24-hour period, but it must not take place within sight or hearing of Board agents conducting the election. Many unions voluntarily suspend organizing activities of an overt sort during this period to take no chances of upsetting the election, but this choice is not dictated by Board decisions.

SOLICITATION. Board rules under this heading relate to Sec. 7 guaranteeing the right to organize and Section 8 (a) prohibiting the employer from interfering with that right. For the union, a fundamental necessity in organizing is to get access to workers to get the union's message across. When the employer arbitrarily and unreasonably restricts the rights of employees to self-organization, or the right of a union to organize employees, the Board has held that Sec. 8 (a) has been violated.

Although the Board makes a point of deciding each case on the basis of its own particular circumstances, it has spun out certain guidelines which can be used in assessing the new situation. It makes distinctions between the rights of employees and the rights of non-employees (usually union organizers), and between working and non-working time.

Employees and non-employees. Employees have greater latitude than non-employees. They can solicit and distribute literature on company property, subject to certain rules described below. ("Employee" has been interpreted to mean an employee on leave and an employee of the company though from another plant or shop.) Non-employees may be denied access to parking lots and other company property when the rule is generally applied and where there is reasonable opportunity to reach employees by other means (such as house calls).

Working and non-working time. The employer may prohibit union solicitation of all kinds during working hours, on the theory that "working time is for work." However, he may not prohibit union discussion during non-working time and in non-public areas. This is so even though the non-working time is paid time, such as a rest period. The test seems to be whether or not the discussion or solicitation interferes in any way with production.

NO-DISTRIBUTION RULE. The Board has moved clear over to the employer's side on this matter. At one time, the employer could enforce a no-distribution rule, provided

that it applied to all comers and provided the union has other "reasonable means" for reaching employees. Later the Board upheld an employer who violated his own rule but enforced it against the union. The Supreme Court upheld the Board on the grounds that the union had not asked the employer to waive the rule for it, too.

Now the Board has upheld an employer who adopted a no-distribution rule during a union organizing campaign. (Star-Brite Industries, 1960) The Board says this is OK if it does not have a "discriminatory purpose" or "unfair application" and it finds neither in this case!

DISCHARGES AND DISCRIMINATION. Employers still ignore the law and discharge or otherwide discriminate (by transfers, rate-cutting and other means) against union supporters during organizing campaigns. It has become increasingly difficult to prove to the NLRB that such discharges and discrimination have been motivated by anti-unionism.

As is necessary in all cases involving charges of employer unfair labor practices, the union seeking to substantiate the charge must accumulate and present evidence of the charge to the NLRB. Affidavits concerning the charge must be gathered immediately, for some people get cold feet when weeks and sometimes months pass after a man has been discharged. The affidavit should be a brief but accurate statement of what the person knows about the company action.

SANCTIONS AGAINST EMPLOYERS. Section 10 of the law provides for the procedures to be followed if the employer (or the union) engages in unfair labor practices. Charges are filed with the NLRB and if upheld result in a cease-and-desist order ultimately enforceable in the federal courts.

OBJECTIONS TO ELECTIONS. Much more useful from the organizing standpoint is an objection to an election because of employer interference, provided the employer's conduct took place after the election was ordered. Objections to elections are processed much more quickly by the Board and, if sustained, result in a new election.

Technically, the Board rules for setting aside elections are not as stringent as those for finding an employer guilty of an 8 (a) charge. Even though an employer's conduct might not be unlawful under section 8 (a), the Board may find that the same conduct interfered with the free choice of a bargaining representative and order a new election.

In the General Shoe case of 1948 the Board said: "Conduct that creates an atmosphere which renders improbable a free choice will sometimes warrant invalidating an election, even though the conduct may not constitute an unfair labor practice." In the same case, the Board pointed out that the "free speech" provision, 8 (c), only applied to unfair labor practices.

Actually, this theoretical difference in the Board's mind has not meant much in practice. Its chief manifestation has been the "24-hour rule" under which captive audience speeches in the 24 hours just prior to an election constitute grounds for setting aside an election, though not unfair labor practices.

UNION UNFAIR LABOR PRACTICES. The restrictive philosophy of the Taft-Hartley Act is well illustrated in the Section 8 (b) which it added on union unfair labor practices. (Other union conduct may result in the Board's setting aside an election, though the action itself does not constitute an unfair labor practice.)

CATEGORIES OF UNION UNFAIR LABOR PRACTICES. Briefly, this section provides that it shall be an unfair labor practice for a union or its agents (a steward has been held to be an agent) to do any of the following things:

1. To restrain or coerce --

   A. Employees in the exercise of rights guaranteed in Sec. 7 (in this case, the right not to organize or engage in collective bargaining)
   B. Employers in the selection of bargaining representatives.

2. To cause or attempt to cause an employer to discriminate against an employee or to have him discharged for anything other than a "failure to tender the periodic dues and the initiation fees uniformly required as a condition of acquiring or retaining membership."

3. To refuse to bargain collectively.

4. To engage in or encourage employees to engage in a strike or boycott under certain circumstances and for certain purposes.

5. To charge excessive initiation fees.

6. To exact pay for work not performed or not to be performed (so-called "featherbedding" prohibition aimed at Petrillo and the Musicians' Union).

7. To picket under certain circumstances.

The practices most commonly involved in organizing are those relating to "restraint and coercion" and to secondary boycotts and picketing.

UNION RESTRAINT OR COERCION. Section 8 (b)(1) makes it an unfair labor practice for a union to restrain or coerce employees in their right to join or not to join a union and engage in concerted activities.

This has been held by the NLRB to prohibit:

1. Preventing persons from entering or leaving struck premises.

2. Mass picketing where it has a "coercive" effect (mass picketing as such is not mentioned in the T-H Law).

3. Extreme threats off the picket line.

4. Threatening workers with loss of job if they do not join the union. (Seamprufe, 1949)

The NLRB has not been squeamish about name-calling on the picket line in most cases. But in one case persistent use of profanity and insults resulted in pickets being denied reinstatement. The furthest the Board has yet gone in this regard was in the BVD case in 1954 when it denied reinstatement to employees on the picket line who did not engage in violence but merely failed to restrain other pickets from violence. The effect of an unfair labor practice, then, can be a denial of the protection of the law for reinstatement.

LIMITS ON UNION PROPAGANDA. For a long time, even after Taft-Hartley, the Labor Board made no effort to police or censor union propaganda in organizing campaigns. In 1953, however, in the RCA and United Aircraft cases, the Board indicated when it would step in.

". . . as a general rule, and in the absence of coercion, it (the Board) will not under-

take to censor or police union campaigns or to consider the truth or falsity of electioneering propaganda, unless the ability of the employees to evaluate such material has been so impaired by the campaign material or by campaign trickery that the uncoerced desires of the employees cannot be determined." (RCA)

The statutory basis for the Board's intervention was the provision of 8 (b)(1) prohibiting unions from "coercing or restraining" employees in their rights guaranteed in Section 7. However, the Board has generally used its power to set aside elections.

In the United Aircraft case, Union A put out a fake telegram allegedly signed by the international president of Union B, making certain statements favorable to Union A. The Board set aside the election, stating:

> "Exaggerations, inaccuracies, partial truths, name-calling, and falsehoods, while not condoned, may be excused as legitimate propaganda, providing they are not so misleading as to prevent the exercise of a free choice by employees." The Board thought the free choice was impaired in this instance.

In another case, Gummed Paper Products, the Board set aside an election when a union published false wage comparisons and then, in the face of a company denial and on the eve of the election, repeated the wage comparisons and said they were based on a non-existent new contract.

The way the statute is written, unions appear to be under the same limitations as employers in the "free speech" Section 9 (c), not to "threaten" employees or promise benefits. The Board has so far applied this mainly to employers, however.

The lesson from this is that union organizers must be extremely careful about statements made so close to the election that the employer has no chance to reply. If he does have a chance to reply and does not take it, the Board is unlikely to intercede even in the case of enthusiastic claims.

Sample ballots. It used to be a common practice for organizers to distribute sample ballots marked with an "X" by the name of their union. Such a practice might make it appear that the Labor Board itself wanted employees to vote as indicated.

It is permissible, however, to distribute a completely blank facsimile ballot, provided it is marked "sample" and contains no other marks.

Penalties. If union propaganda went further than the Board thinks permissible, or if a marked sample ballot is put out, the Board might set aside the election and order another.

SECONDARY BOYCOTTS. Sec. 8 (b)(4) of T-H prohibited unions or their agents from A) striking or refusing to use or transport goods, or B) "inducing or encouraging" employees to strike or concertedly refuse to use or transport goods, when the purpose of such action was to require an employer to do any of the following:

1. Join a union
2. Cease using or handling any goods
3. Recognize an uncertified union
4. Recognize a union if another had been certified
5. Assign work to certain employees or union members where another union has been certified for such work.

These were sweeping restrictions designed to curtail union activity aimed at employees of a secondary employer. There were still certain areas of activity, however, which the union could pursue. It could:

1. Tell employers not to handle struck goods (since they were not "employees")
2. Get individuals to refuse to handle goods, if this was not concerted action.
3. Get employers to sign hot-cargo clauses to the effect that they would not deal

with "unfair" or struck employers.

4. Tell customers at a secondary employer's place of business by means of picket signs that certain items sold or used there were non-union. (As long as the union did not picket employee or delivery entrances and the wording of the sign was clearly aimed at customers or consumers.)

1959 Amendments. The restrictions in the new law make the T-H provisions seem pale. Under the new law --

Unions cannot "threaten, coerce, or restrain any person engaged in commerce," if the object is to get him to cease using a product. Even such mild boycott activity as O'Sullivan's and Kohler, aimed at employers who use these products, might run afoul of this provision.

Unions cannot appeal even to an individual employee not to work on a product.

Unions cannot have a legal hot-cargo clause with an employer, to the effect that he will not handle struck or "unfair" work. Section 8 is amended by adding the following new subsection:

> "(e) It shall be an unfair labor practice for any labor organization and any employer to enter into any contract or agreement, express or implied, whereby such employer ceases or refrains or agrees to cease or refrain from handling, using, selling, transporting or otherwise dealing in the products of any other employer, or to cease doing business with any other person, and any contract or agreement entered into heretofore or hereafter containing such an agreement shall be to such extent unenforceable and void. . . ."

An exception is made for the garment industry which has many such clauses in its agreements for major garment centers, to protect itself against runaway shops and non-union competition.

Apparently no picketing at all can take place at a secondary employer's place of business, not even informational picketing whose sole purpose is to inform customers that non-union goods are being handled inside. This prohibition seems to be contained in an addition to section 8 (b)(4) which states:

> ". . . for the purpose of this paragraph (4) only, nothing contained in such paragraph shall be construed to prohibit publicity, other than picketing, (underscoring added) for the purpose of truthfully advising the public, including consumers and members of a labor organization, that a product or products are produced by an employer with whom the labor organization has a primary dispute and are distributed by another employer, as long as such publicity does not have an effect of inducing any individual employed by any person other than the primary employer in the course of his employment to refuse to pick up, deliver, or transport any goods or not to perform any services, at the establishment of the employer engaged in such distribution . . . ."

It would seem obvious from the above that informational picketing of a secondary employer where no primary dispute is involved might be prohibited. This could include picket-sign advertising that certain products were non-union. It remains to be seen if it is constitutional to restrict peaceful, truthful picketing, as the above-quoted section tries to do.

Penalties, Injunctions and unfair labor practice charges. Union representatives are familiar with "the law's delay" in dealing with employer unfair labor practices. Violations of the secondary boycott provisions, however, are handled with the greatest of dispatch. The General Counsel of the NLRB must give such cases top priority, and if he has "reasonable cause" to believe that a complaint should issue, he must apply for an injunction against the alleged violation. The union is then restrained while the charge is heard and an award made. There is no counterpart to these injunction pro-

visions for any employer unfair labor practices.

Damage Suits. Concurrently with these injunction proceedings, the employer may sue the union for damages, under Sec. 303 of the law. Such action is independent of an unfair labor practice charge.

PICKETING FOR RECOGNITION OR ORGANIZATIONAL PURPOSES. The 1959 amendments to the National Labor Relations Act add a new section which for practical purposes makes it an unfair labor practice to picket for organizational purposes or for recognition. Such picketing is an unfair labor practice (1) where another union is recognized and a question concerning representation cannot appropriately be raised at the time of the picketing; (2) where an election has been held within the preceding 12 months even though no union may have been certified; and (3) where the picketing is conducted without a petition having been filed within a reasonable period of time following the commencement of the picketing, not to exceed 30 days.

Even though it is not an unfair labor practice to engage in such picketing where such a petition has been filed, the effect of such picketing is to cause the Board to proceed to an election forthwith without regard to the usual requirements of the Act relating to the investigation of representation petitions, hearings, and the requirement that a showing of interest be provided by the petitioning union. An exception to this part of the Act permits informational picketing aimed solely at the public so long as employees of other persons do not refuse, in the course of their employment, to perform services for their employer.

While this portion of the Act does not specifically exempt unfair labor practice picketing or strikes in protest of unfair labor practices committed by an employer during an organizational campaign, it is unlikely that the Act would be held to prohibit such picketing. In the event that such unfair labor practices occur and an unfair labor practice strike is otherwise deemed advisable, advice should be obtained from the union's legal department as to the legality of such proposed action before it is commenced.

STATE AND MUNICIPAL LAWS. Interference with organizing on the part of state government takes the form of right-to-work laws and other state laws regulating organizing. In addition, there are municipal anti-leaflet ordinances and requirements for the registration of organizers.

STATE RIGHT-TO-WORK LAWS. The role of the states in labor relations took on importance with section 14 (b) of Taft-Hartley which gives the states the right to pass union security restrictions more stringent than the federal law. Eighteen states have these so-called right-to-work laws, some of them also prohibiting or circumscribing the use of the checkoff.

One effect on organizing has been to bring injunctions against strikes and picketing, on the alleged grounds that such actions have had the effect of coercing employees to join a union.

STATE JURISDICTION - 1959 AMENDMENTS. The 1959 amendments to Taft-Hartley contained a section (Title VII, Sec. 701) giving jurisdiction over labor disputes to states where the National board declines to assert jurisdiction. Although it was not specified, it is generally agreed that the state will apply its own laws and public policy.

Since only 12 states have anything like comprehensive administrative machinery for conducting union elections, it is obvious that this provision can lead to chaotic and widely-varying practices from state to state. Most "public policy" of the states lies in the direction of restraining unions and not in protecting the rights of workers to organize, strike, and picket. The prospect is not a happy one.

Effect of Norris-LaGuardia. It remains to be seen what latitude the states will have in issuing injunctions in labor disputes "affecting interstate commerce" when the NLRB declines to act. The Norris-LaGuardia prohibits injunctions in disputes involving interstate commerce, except in cases of fraud and violence.

MUNICIPAL ORDINANCES. Even municipalities have tried to regulate union organizing. The chief forms of attempted regulation have been invoking anti-leaflet ordinances and requiring registration of union organizers.

Anti-leaflet ordinances. These are occasionally invoked to try to stop distribution of union literature. Such ordinances are almost certain to be held unconstitutional in view of several Supreme Court decisions, the oldest in 1929. Such ordinances in Milwaukee, Los Angeles, Worcester (Mass.) and Irvington (N.J.) have been held to violate free speech and freedom of the press in the First Amendment. While a case is being litigated, however, they can be effective in blocking or harassing a union organizing campaign.

Registration of union organizers. These laws are cropping up principally in Southern states as harassment against organizing. Two of these have been held to be unconstitutional (Steelworkers V. Fuqua, Kentucky, 1957; and a case involving the Ladies Garment Workers in Baxley, Ga.). Though unlikely to stand up in court, they have helped to slow up organizing and take time and money to litigate.

Labor's IUD seeks ways to move ahead

AFL-CIO's Industrial Union Dept. is going to be a more conservative, less centrally directed, and, perhaps, a considerably less effective agency now that Walter Reuther and the United Auto Workers are gone.

Many unions are concerned about this. Even major ones seriously at odds with Reuther generally concede that IUD, as a personal project of the former CIO president, was for a dozen years a dynamic force in a federation that badly needed such a prod.

Because they felt that way, the alliance of 59 industrial unions last weekend drafted United Steelworkers President I. W. Abel as a successor to Reuther; they thus picked the head of AFL-CIO's biggest union and the union originally most closely associated to CIO.

But it may take more than Abel's interest to get IUD rolling again.

Cutting back on generosity

Abel accepted the IUD presidency with a warning that it might be necessary "to restrain some of our past generosity" for a time. He said a "reappraisal of priorities" must be undertaken, and that for the present IUD must follow a new, much more narrowly limited course.

The department's treasury is down from $3.5-million to $600,000. Loss of UAW, through suspension from AFL-CIO, has cut IUD revenue by 20%, to $100,000 a month.

Staff people have been laid off. Research programs—including a computer operation—have been cut back.

But, at least for now, 70 organizers are being kept in the field and coalition bargaining staffs are being retained.

Old wounds need healing

UAW money and manpower went a long way toward making IUD a strong and viable arm of AFL-CIO. Almost every international union that mounted a Southern organizing campaign in the years since 1955 counted on IUD help—and got it. Coalition bargaining received its strong impetus in labor from IUD.

But many unions objected to highly personalized control by Reuther and his UAW-oriented aides in IUD, notably Jack Conway, who just resigned as executive director. Their wariness kept them from putting all the money and effort they could into IUD.

IUD also alienated AFL-CIO—and particularly George Meany—by undertaking conflicting organizing, bargaining, and legislative programs.

Abel's first big problem is to win enough confidence among IUD's stand-offish affiliates to get them to raise contributions voluntarily. If they don't, IUD is in trouble.

Battling to stay strong

Nevertheless, Abel is pledged to keep IUD as a strong force in AFL-CIO.

Almost certainly, IUD will be more closely tied to AFL-CIO. Organizing may be taken over by AFL-CIO and coalition bargaining entirely by IUD.

Meanwhile, industrial unions that counted on IUD help in the past may turn to Reuther and his independent UAW for continuing aid—and the result could be a reshuffling of alliances.

In bowing to pressures to take on the IUD job, Abel became even more than before the man at the top of most lists of AFL-CIO presidential potentials when a successor to George Meany, 73, must be chosen.

Labor's new breed of middle managers

Next generation of union leaders will spring from today's middle-level officials—who show a different style

While labor itself has slowed its pace, many of the younger men bring enthusiasm and professional polish to their jobs

The new approach is typified by three examples: a Southern organizer, a political activist, and a labor educator

Most businessmen think of the labor movement as a top and a bottom, with nothing in between. On top, union leaders call or settle national strikes, support or balk presidents. Below, union members ratify or overturn settlements, follow their leaders' advice—or sometimes don't. In between, a blank.

In reality, this blank is peopled by middle-level leaders who mean more to labor's future than either George Meany or Walter Reuther—not just for the obvious reason that some of them will become tomorrow's top leaders, but because the best of them possess a verve and intensity missing from most of the labor movement. They are the yeast in the dough, the spark in the tinder. And labor badly needs this quality if it is to continue to be an important force in U.S. life.

Changing role. Union membership as a percentage of work force appears to have stopped growing. About 22% in 1945 and 25% in 1953, it is only 23% today. At the same time, labor's role has changed in great part from militant movement to conservative institution. Few look to it for anything more than the routine stewardship of its members' wages and working conditions, with peripheral sallies into politics.

Some of this change is inevitable and probably a mark of success; the aim of most movements is to produce institutions that will serve their ends.

But in becoming an institution, labor appears to have become elderly in more than the average age of AFL-CIO executive council members—which is 64. Reuther's attacks on AFL-CIO "apathy" seem scarcely less ritualized than Meany's defense, and most union members care little about either.

Counter trends. Two factors run counter to this trend. One is the upsurge in public employee unionism, which recreates in an important segment of labor the buoyant spirit, willingness to take risks, and social involvement of the 1930s and 1940s.

The other is the existence of a pool of outstanding middle-level leaders typified by the three men profiled here: a white Alabaman who successfully organizes Negro and white workers; a lobbyist who gives unions a political voice in the labor no-man's-land of Texas; and a veteran of the brawling 1940s who now builds bridges between labor and the university and who theorizes about the need to serve the union member as a whole man.

Younger and perhaps more flexible than the present top leadership, men like these view labor as both movement and institution and function effectively on both levels. Employers tend to respect them (indeed, the union leader whom management loved to hate is almost as outdated as the industrial relations manager who antagonized the union). As a group, they do their jobs extremely well—and as if they were extremely well worth doing.

Men such as these generate much of the energy that moves labor today. In the process, they inevitably determine the direction in which it will move tomorrow. And perhaps whether it will move at all.

Organizer in the South

Frank Parker of the Retail, Wholesale & Department Store Union is a Southern white man with a knack for organizing Southern Negroes—something that few unions attempt and fewer achieve. More than 6,000 of Parker's 15,000 members are Negroes. All but 1,000 of them, white and black, have joined since Parker took over RWDSU's Southern operations in 1942.

Parker's success among Negroes didn't just happen. It grew naturally from the solid reputation for nondiscriminatory behavior established by the old CIO, with which RWDSU was affiliated; from the 180,000-member international union, which participates militantly in civil rights activities; and—quite obviously—from Parker himself.

"We may not get all we want from an employer—who does?—but we treat all our members alike," Parker says firmly. "I believe we have a healthy number of Negro members because they recognize we are democratic. The Negroes know who will give them a fair shake and who won't."

Realistic approach. This doesn't mean that Parker expects cheers the first time he visits a predominantly Negro plant. He expects suspicion—and gets it, even when flanked by his

Frank Parker, 50, pulls together an interracial union in the tough but improving labor climate of the South.

top Negro assistant, Henry Jenkins.

But he talks to the workers, sometimes earnestly, sometimes jovially, and usually "after a while, you can feel the warmth . . . And I am extra, extra careful not to violate that confidence."

The fact seems to be that—in addition to his ideological assets—Parker is a born organizer. It's a quality as inexplicable and unmistakable as the one that distinguishes an actor or a painter.

In Parker's case, the quality showed itself early. As a 19-year-old shipping clerk in a Birmingham bakery, Parker reacted to his $10-a-week wage by gathering a shop committee, establishing contact with the local CIO office, and signing up 200 bakery workers. That was 31 years ago. He has been a union activist ever since: financial officer of his local union, business manager, international union representative (the union's only one in the South when he got the job in 1942), regional director, and assistant Southern director since 1954.

Tight schedule. A small, lean man, with the look of a retired middleweight contender, Parker habitually works a 15-hour day and sometimes a seven-day week. Despite his title of assistant, he is effectively in charge of all RWDSU operations south of Washington and east of Austin; the Southern director is a semiretired union veteran who takes little part in daily activities at regional headquarters in Birmingham.

Parker spends most of his time explaining—explaining the benefits of organization to prospective members, explaining union programs to current members, explaining to employers that they must raise wages, explaining to rival unions why they had better keep their distance.

The start of a typical day finds Parker conferring with an employer who is fighting RWDSU efforts to unionize his plant; Parker warns the man that he is watching like a hawk for possible violations of the Taft-Hartley Act. After breakfast, a session of the Alabama Unemployment Compensation Commission's appeals board, of which Parker is a member. After lunch, a quick talk with the president of a local union who wants Parker's advice on how to handle a grievance.

Then paperwork at the office, including some international union business; Parker is a vice-president. Instructions to his secretary about plane reservations for Florida, where he is expected the next day to help negotiate a contract. Then a trip to a nearby small town, together with the local union president, to chat with the new manager of a unionized plant; they want "to get the new man off on the right foot."

Back to Birmingham for a hasty dinner and a membership meeting dealing with pensions; Parker attends in his capacity as trustee of RWDSU's pension and welfare boards. And so to bed, after midnight.

"I don't think I could do it in a shop, on an assembly line," Parker says with a grin. "But in this work I can, because it's important and it's different every day."

Persuasion, not defiance. Despite his full-time devotion to the union, Parker is not at all what other unionists call a red hot—a man who leaps to the barricades at every opportunity. Parker prefers persuasion to defiance. He believes in discussing problems with management "because if they know as much as we do about the situation, we feel that 90% of the time they will make the same decision as we would."

At contract time, he remembers that "a union has many weapons, and the strike is just one of them. My attitude is, use the other weapons first.

"I don't like to set deadlines and say, 'If we don't get what we want by midnight, out we come.' Settlements are hardly ever black or white. They're usually in the gray area in between.

"Of course, if the employer is never going to do the right thing, you have to strike," he adds.

Among the results of this policy have been 20 years of strike-free relations with Moore-Handley, Inc., a large hardware wholesaler in Pelham, Ala. Parker says Moore-Handley wages and fringe benefits are good—and paid equally to white and Negro workers. Recently, when the company moved a warehouse out of downtown Birmingham, company and union renegotiated their contract eight months early so that the warehouse workers wouldn't lose the increased commutation cost.

Tactics. Mark Taliaferro, a management attorney who has often faced Parker across the bargaining table, says: "He's my favorite union man. He doesn't make any sweetheart deals, he stays with his members—but he's honest, he's fair, he's willing to bargain."

Another business leader says, "Parker is a community asset."

But these are Birmingham people. Out in the hinterlands, hostility toward union men—especially Negro or "nigger-loving" union men—hasn't changed much since the 1930s. And this is where the unorganized plants are.

Parker's organizers work under the constant threat of violence or arrest. One popular anti-union tactic, for instance, involves planting moonshine or other contraband in an organizer's car, to be "discovered" by cooperating law officers.

Organizer Henry Jenkins realized he was in for this treatment recently when he emerged from a house call in the boondocks to glimpse strangers tinkering with his car trunk. Slipping into a nearby church, Jenkins phoned Parker in Birmingham, who phoned the AFL-CIO civil rights office in Washington, which phoned the Justice Dept., which phoned one of its Alabama representatives. The Alabama man sped to the scene to get the moonshine out of the car and Jenkins out of the church.

Jenkins' behavior in the incident faithfully carried out Parker's instructions to organizers: Outflank trouble, don't meet it head on. "If it comes to the fighting stage, remember, it takes two to make a fight, and we try not to be the second half," Parker says.

NLRB attitude. How the National Labor Relations Board responds to such employer or community tactics can determine the union's success or failure, Parker says. He is matter-of-fact about the political factors affecting the board's response.

"Under Eisenhower, an employer could beat your brains out, and the

Exclusively Tinnerman... T-MARKED TO PROVE IT

Heel-and-toe molding clip

Dart-type fastener

Front-mounting tubular clip

Floating-type shaft clip

Clip for Bowden cables

PRODUCTS: Self-latching screwless spring steel fasteners.

BENEFITS: Simple to apply. Easy to lock. Vibration-proof. Economical.

No screws are needed to fasten many types of SPEED NUT® Brand fasteners firmly in place. These SPEED CLIP® fasteners have integral spring steel latching features that lock the fasteners tightly to hold panels together, cables in place, or accessories in position.

Attaching a SPEED CLIP to the assembly usually requires a mere thumb-push to seat and lock the fastener into punched holes. The attachment is vibration-proof, yet can be designed for removal and re-use. All SPEED CLIPS are available corrosion-proofed.

The latching types shown here are only a few of the 12,000 variations of SPEED NUT fasteners available. For fasteners that best meet your specific design need or service requirement, call the local Tinnerman sales office, listed under "Fasteners" in the Yellow Pages. Or write: **Tinnerman Products, Inc., Dept. 12, P. O. Box 6688, Cleveland, Ohio 44101.**

Most Southern workers would join a union if they weren't afraid of reprisals . . .

Story on page 74

board said, 'Case dismissed.' Oh, me! It was murder," Parker says.

NLRB attitudes shifted toward a more pro-labor position under Kennedy and Johnson, Parker says. Now he expects another, milder shift toward employer viewpoints as a result of labor's recent electoral setbacks. He has changed his organizing plans to match.

"We'll have to take a more cautious tack and get strong organizational support before we come out in the open in plants where management is strongly anti-union," he says. "We cannot risk the jobs of a few without the support of many now. We cannot do what we might have done two years ago."

Parker believes that most Southern workers would join a union if they weren't afraid of the consequences to themselves if the union failed to win a majority, or, more important, failed to win bargaining rights and a contract.

"Our biggest problem is overcoming those fears," Parker says. "That applies to both whites and Negroes."

Future prospects. As a union official who has succeeded where many others fail—in organizing Negroes, in increasing membership, in building a strong union while gaining community respect in the South—Parker seems to be a natural prospect for higher office. It is conceivable that he may head RWDSU some day.

Predictably (since professions of personal ambitions are no more acceptable in labor circles than in political ones), Parker talks about the future in terms of his present post. He's "ambitious to build the union," he says; he would like to double the Southern membership.

"I am not an eager beaver in the sense that I'm looking for any more of a national position with the union than I have, and that's an honest statement," he says. "We in the South now have a great deal to do with the shaping of the policies of the international union. As a v-p on the board, I give voice to the feelings of the RWDSU's Southern membership.

"If it came to pass that I could better serve the union in the future in a different capacity, I would evaluate the situation then."

Winning labor a bigger voice in Texas

Hank Brown, 47, president of Texas State AFL-CIO Council, swings weight around the Capitol in Austin; helps push the labor effort to better conditions for the state's low-paid Mexican-American farm workers.

Texas labor unions resemble Texas cactus; they survive by learning to grow in arid soil. Texas labor leaders survive by imitating another feature of the landscape; they develop into classic Texas politicians, tough yet wily.

One of the best examples of this breed is Henry S. (Hank) Brown, 47-year-old president of the Texas State AFL-CIO Council. Brown heads a federation whose affiliates count some 200,000 industrial, craft, and white-collar workers as members. Informally, he also speaks for—and to—some 150,000 Texas unionists whose organizations are not affiliated with the state group.

Brown regards his constituents realistically. He says that Texas unions have improved in their treatment of minorities; the Negro and Mexican memberships of affiliated unions (10% and 15% of the total respectively) have increased a third in the seven years since he took office. But he adds that some unions continue to bar Negroes by indirect methods.

"When we find out about it, we ask them to leave," he says, ". . . if they don't get mad and quit first."

At present, the council is providing moral and financial support to striking Mexican-American farm workers, whose average hourly wage —when they're working—is 85¢. It has contributed $100,000 in direct aid to strikers' families; it supports the Mexican-American Affairs Committee (formed "to educate the Mexican-American in his basic rights"); and it lobbies in Washington for legislation to put farm workers under the Wagner Act. Wagner Act coverage would compel farm employers to bargain with a union if a majority of employees voted for it.

On the jump. Advancing labor aims through political means is Brown's basic function, both as state AFL-CIO head and in his second capacity as chairman of the council's Committee on Political Education (COPE).

During a typical week shortly before the May 4 primary, Brown met with his staff to map a get-out-the-vote campaign for Democratic gubernatorial candidate Don Yarborough (who topped the May 4 primary but lost in the runoff); delivered get-out-the-vote speeches in Beaumont, Houston, and Orange; and gave advice on their get-out-the-vote drives to union leaders in Beaumont, Orange, and Port Arthur.

On the nonpolitical side, Brown

What's so special

about the EXECUTIVE SPECIAL?

Simply this. Executive Special is specially designed to be the basis on which you can plan your business *or* personal security.

For your Business: Executive Special is so exceptionally comprehensive that you can use it in planning your Key Man, Split-Dollar, Deferred Compensation, or Stock Purchasing Program.

For your Personal Security: Executive Special creates an immediate estate for you (in amounts of $25,000 or more) . . . or conserves the estate you may already have created.

So whether you're building security for your business, for your key people, or yourself, Executive Special is basic to your planning.

We'll be glad to show you how Executive Special can do the job for you!

met with lawyers to consider purchase of land adjacent to the council's Austin headquarters; attended a business meeting of the council's trustees in Houston; and—by phone—advised a Dallas union official how to set up a pension fund, suggested the name of a labor representative for the board of a new center for economic education at Texas Christian University in Fort Worth, and assured Houston school officials that he would be happy to speak to high school students on careers in the building trades.

If the state legislature had been in session, the week's schedule also would have included some purposeful hobnobbing with state legislators and perhaps testimony before a legislative committee.

Political support. COPE spends only $200,000 in a hot political year—peanuts compared to some other Texas groups—but it works hard on door-to-door canvassing and it blankets the state with some 2-million leaflets, research bulletins, and other pieces of printed matter annually.

Texas COPE normally supports whatever liberal Democrats the state produces, and it backs Senator Ralph W. Yarborough in his quarrels with conservative Governor John B. Connally, Jr. It helped elect Texas' first Negro state senator since Reconstruction, Barbara Jordan of Houston.

But where the liberal-conservative division is less clear-cut, Brown tries to wean his members from automatic allegiance to the Democratic ticket. In 1966, the Texas AFL-CIO refused to support Democrat Waggoner Carr against Republican Senator John G. Tower on the ground that both were equally conservative. It also looked with benevolent neutrality on the successful candidacy of liberal Republican Representative George Bush.

Brown himself regards a few Republicans as good guys—Nelson Rockefeller, for one. But he doesn't expect to have to face the problem of whether to vote for him.

"The Republicans don't have enough sense to nominate Rockefeller, who could make some inroads into the labor vote," he says. "Most of the delegates to the Republican convention will be country club people who will nominate somebody like Nixon or Reagan."

Campaign technique. As the representative of a labor, liberal group in a predominantly agricultural, conservative state, Brown knows he can't expect 100% support even from relatively friendly legislators.

"We take into account what kind of a district a man represents," he says. "If it's rockbound conservative, we know we can't always win him over. But we try. We show him just how a bill will help his district."

Brown employs a three-stage technique on legislators who consistently fight labor-backed bills.

"First, you appeal for the legislator's vote every way you can," he says. "If that doesn't work, the next election you rough him up a little with a strong opposing candidate. As a last recourse, you go for broke and try to retire him."

In practice, few politicians get the drastic treatment—just as, in practice, Brown tempers his opposition to some bills that offend labor sensibilities if they appear to be necessary, or at least sure to pass. A case in point was the recent measure authorizing municipal sales taxes, traditionally anathema to labor as "taxes on the poor."

"I've seen him put up harder fights," says Stephen J. Matthews, executive director of the Texas Municipal League and a long-time fellow lobbyist. "Maybe Hank realized that cities have to collect more money to pay their employees more, and this was the only way they were going to get to do it."

Another appraisal of Brown's performance comes from State Senator Chet Brooks, who rates him "very effective" although "he may be a little blunt at times."

Much of Brown's lobbying involves issues that don't affect unions directly—for instance, his current attempt to roll back a 16% increase in state auto insurance rates.

Brown lost a round in this fight last year when a judge declined to cancel the increase on the ground that the matter was legislative, not judicial. But Brown recalls with pride the judge's additional comment: "Isn't it strange that the AFL-CIO rather than the attorney-general of Texas is defending the people's interests?"

"We are going to the legislature to get the law changed and the rates reduced even if it takes us 10 years," Brown says.

Winning his spurs. Brown wasn't always such a hard-driving type. The son of a Pennsylvania coal miner, he dropped out of high school to drift around the country in freight cars during the Depression. Eventually he lighted in San Antonio, signed up as a plumber's apprentice, and apparently developed the characteristics he displays today. Three years after he became a plumber, he was manager of the local plumbers' union.

Brown moved up to become research and education director of the

Texas AFL in 1953, held the job after merger with the CIO in 1955, quit in a policy disagreement in 1957, and—after a stint back with the San Antonio plumbers' local—returned to Austin as secretary of the Texas Building & Construction Trades Council in 1960.

The next year, Texas State AFL-CIO Council President Jerry Holleman resigned to become Assistant Secretary of Labor, and Brown won the post in a bloody election campaign whose scars still throb.

Gains. Since then, Brown has struck scarcely less painful blows by pushing through six dues increases, raising the monthly per capita tax on each member from 8¢ to 25¢. The council lost its auto workers, its steelworkers, and most of its carpenters partly as a result of the 1966 increase.

"Labor leaders are like politicians—we hate to raise taxes," Brown says. "But we have to build the programs we need."

Of the present budget of $500,000, perhaps a third goes to equal opportunity activities—mainly educational projects such as a recent meeting in San Marcos, Tex., where Brown and others sought to open lines of communication with 200 Negro leaders.

A growing share of the budget goes to community service—for instance, mobilizing union members to pitch in after floods and other natural disasters. And the council backs up its affiliates' organizing efforts with legal advice, economic research, and union literature.

Only 12% of the state's 4-million workers are organized, and trying to increase the percentage is expensive. Brown calculates that it costs the council $125 to sign up a new member.

"But we're getting there," Brown says; Texas unions win a rising percentage of the collective bargaining elections they enter.

Aspirations. Brown commutes fairly regularly to Washington, on labor errands and as a member of such blue-ribbon groups as the President's Labor-Management Advisory Committee and the national labor-management panel of the Federal Mediation & Conciliation Service. He disclaims any desire to stay there permanently, either in an AFL-CIO or government job. He has turned down several offers, he says, because "there's too much to do here."

Many of his associates remain unconvinced. "He'll make it to Washington all right," says a colleague familiar with Brown's 60-hour week, "provided he doesn't kill himself first."

POUNDS NOT TONS

Latrobe is not a steel company of the common variety. Latrobe is a highly specialized one. Basic steel manufactures commodity items in huge volume which it sells by the ton. Latrobe, on the other hand, makes limited quantities of super pure, specialty alloys to individual requirements. Such steels are universally sold by the pound . . . at prices ten times those of basic steel.

The Specialty Steel Company

What! You still don't own any mutual funds?

Investment Company Institute, 61 Broadway, N.Y.

Cass Alvin, 52, idea man for the Steelworkers' Western district, preaches labor aims on the campus at UCLA.

An evangelist for 'modern' unionism

The United Steelworkers lists Casimir (Cass) Alvin as education and publicity director of its Western district, with headquarters in Los Angeles. A more complete title might be teacher-preacher-at-large, bringer of the union message to the district's 72,000 members and to anyone else who will listen.

The message he delivers is different from the one he received back in Indiana in the 1930s, because the preacher knows that times are different.

The son of Polish immigrants, Alvin grew up among steelworkers who worked long hours at back-breaking tasks in unorganized mills. At 18, he quit a newspaper reporter's job to attend the University of California at Los Angeles and to work summers as an organizer in auto plants. He has been a USW staff man since 1946. Today's worker shares neither his kind of past nor its built-in motives for loyalty to the labor movement—and Alvin knows it.

"That's the new job of unions," he says. "To take this product, not of a family born in Europe, not of the Depression, but of the U. S. public school system and prosperity, and to make him feel that the union is the best way of life on the industrial scene: the best way to handle threats of automation, the best way to handle vocational training, the best approach to politics."

In the old days, workers thought that anything the union did was great because no one had ever done anything for them before, Alvin says.

Now workers' expectations are higher, they share in the general irreverence toward established institutions, and they have more outside interests, he says.

A broader union. "The union must broaden itself to concern for the total person. We must worry about the air he breathes, the recreation available, the wages being garnisheed because of too-easy credit . . . The union must be close to the men, it must help them satisfy personal needs outside the plant gates as well as inside," Alvin says.

Alvin will deliver the union message anywhere. He'll talk to grade school pupils, move on to lecture to college students, and round off his day by arguing with the students' professors.

His favorite audiences are UCLA extension classes—bright but unrealistic, he says.

"They don't understand labor-management relations in a free society," Alvin says. "They take the results for granted and think that collective bargaining is unnecessary, all that is needed is an enlightened, paternalistic management. They think they can survive on their own in this highly organized society. They feel that way not only about unions but about their own professors."

Spreading the Gospel. Alvin tells the students that society is a balance of many collectives—that "institutions like churches and unions survive because they really help people."

"And, of course, I remind them that an unorganized worker simply makes less money," Alvin says briskly.

Alvin doubts whether he has changed any basic attitudes despite the warmth of the students' response. But he thinks that talking to them is important just the same.

"It's another reference point as they make their decisions about life," he says. "It's important that their ideas on trade unions do not come only from the front page of newspapers."

If Alvin brings unionism to the campus, he also brings academia to the Steelworkers. His educational institutes—short training courses for local union leaders—feature sociologists and political figures rather than the drills in parliamentary procedure traditional to such union classes.

Stretching members' minds is the most crucial part of his job, he believes. "I think ignorance radiates problems. Labor must learn to make decisions based on reason. You can't

do it on emotions alone anymore."

Communication is a problem much on his mind.

"Unfortunately, because of mass media, no one talks to anyone any more," he says. "They just assume everyone knows everything because it appears on Channel 4. The intimacy that characterized organized labor in the 1930s has to be revitalized.

"Some of the great labor leaders have the quality I'm talking about, and can project it. It's not emotionalism and it's not just something they do for the dues dollar. It's concern that they have for others and their problems for no other reason than that they are people, too."

In the past, Alvin has helped transmit this feeling in speeches prepared for the Steelworkers' founding father and first president, Philip Murray, and for former USW President David McDonald. He will probably do some speechwriting for the current president, I. W. Abel, too.

Action-backed talk. Alvin's accomplishments, however, include more than talk, his own or others'. Over the years, he has had a hand in framing the unique Kaiser Steel Corp.-USW long-range sharing plan and in working out jurisdictional agreements between USW and various craft unions.

At present, he maintains close contact with the Western wing of the International Brotherhood of Teamsters; he and IBT Vice-President Einar Mohn are among the moving spirits on the California Council for Health Plan Alternatives, a union-based group seeking radical reform of health plans. Alvin is also active in programs to aid the Watts area of Los Angeles, and he serves on the California State Hospital Advisory Board as an appointee of former Governor Pat E. Brown.

In his day-to-day work, Alvin has gained the reputation of a Jimmy Higgins—union slang for someone who's ready to do whatever needs to be done, whether it's licking stamps or manning a picketline.

Alvin doesn't just write organizing leaflets. If necessary, he helps the organizers hand them out at the plant gate, sweeps the hall for the meeting to follow, and photographs the meeting for Steel Labor, the USW publication.

Political handicap. Despite all this, Alvin is unlikely to rise any further in the union hierarchy. He has always been an appointed staff man, not an elected officer, and the gulf between the two is even deeper in labor than in politics. All top union jobs are elective, out of reach for a man who lacks a political base.

The handicap doesn't seem to bother Alvin. Of all union topics, he says, politics interests him the very least.

Perhaps unconsciously, his office walls emphasize the point: no pictures of union officers, no pictures of U. S. Presidents, just a watercolor of a steelworker firing a furnace—the gift of a member.

"I've worked in places where 17 offices in a row all have the same pictures," he says. "I don't think loyalty depends on pictures."

He emphasizes, however, that union politics serves a useful purpose. "You'd be surprised what it does to sharpen ideas and keep members on their toes," he says.

Off-beat theories. Ideas obviously rank high in Alvin's scale of values. He has found satisfaction in working for USW all these years because "a union is a good place to discover yourself and generate ideas. Unions are still a place where ideas are discussed."

And the 13-week sabbaticals provided by some USW contracts are "a wonderful thing" because they enable steelworkers to broaden their ideas.

"Look at Socrates. Suppose he had to sew his own toga. Once people are divorced from work, they can make great contributions."

Alvin's own ideas tend to skid neatly off the beaten track.

On why workers join unions: "In addition to the economic reasons, for power. People want to join something so powerful it could shut down the steel industry. If it weren't for that, the PTA would do."

On union democracy: "Unions are much more democratic than the church or a university."

On his three children (with a wave of the hand toward the photo on his desk): "My own long-range sharing plan." **End**

Unions — Organizing

Yardstick for More Effective Organizing

by William L. Kircher

The pro-union voter in a National Labor Relations Board election is most likely to be a stable, well-informed person who has invested several years on the job he holds when the election is held.

There is a better than average chance that the sympathetic voter is married and a woman, and a good chance this voter is under 25.

Conversely, the anti-union voter is indecisive, conservative and often motivated by confusion as to what union representation will do for him.

These characteristics of typical voters and their reactions to organizing campaigns emerged from an impartial, in-depth survey and evaluation of 500 workers who had participated in NLRB collective bargaining representation elections over a two-year period in Los Angeles and Orange Counties, Calif.

At the request of the AFL-CIO Department of Organization, the Los Angeles-Orange Counties AFL-CIO Organizing Committee asked the political science department of the San Fernando Valley State College to conduct the sampling as part of the committee's overall organizing activities.

One of its primary purposes was, of course, to discover which organizing tools are most effective. The survey was seen as an ideal method of measuring union techniques based on experience against the scientific findings uncovered by the interviewers who conducted the poll.

The survey also was viewed as an effective way of implementing an AFL-CIO convention resolution challenging all affiliates to adopt a continuing program of evaluating their organizing operations with the aim of developing more effective means of organizing.

Probably of greater interest to the academicians who participated was the opportunity to obtain fresh data on the much-heralded, but unsubstantiated, "generation gap" between young workers and the trade union movement. Other interesting facets of the survey included sections designed to measure the degree of attractiveness unionism held for workers of both sexes and of various ethnic, regional and political backgrounds.

Believed to be the first of its kind ever undertaken by a trade union organization, the survey's uniqueness prompted Mrs. Ellen Studhalter, instructor in the state college's political science department, to remark:

"The proposal by the Organizing Committee that an outside, unbiased agency should examine these aspects of their inner dynamics was significant in itself . . . Few organizations welcome such scrutiny and fewer still seek it. . ."

Survey interviewers were upper division and graduate students selected from the political science and government departments of San Fernando Valley State College and California State College at Los Angeles.

Those interviewed represented employes who had participated in NLRB elections over a two-year period in which the percentage of union victories and defeats corresponded with the actual results in some 1,100 NLRB elections conducted over a five-year period.

Further, because of California's high immigration

WILLIAM L. KIRCHER is Director of the AFL-CIO Department of Organization.

rate, the sampling provided an insight into the attitudes of workers from all sections of the nation.

William L. Gilbert, now AFL-CIO assistant regional director in California and director of the Los Angeles-Orange Counties AFL-CIO Organizing Committee when the poll was taken, described it as one representative enough to apply the findings to union organizing committees in all sections of the country.

Questions were designed to enable the Organizing Committee to get a composite picture of each interviewee by covering birthplace, age, sex, marital status, political attitudes and reasons for voting for or against the union. Those sampled also were asked to evaluate which union and which management techniques they believed were most effective.

While confirming what most seasoned organizers had learned by experience, the poll results destroyed some myths concocted by some social experts.

One such mythical balloon which the survey burst involves the current belief that young people are generally alienated from much of society, including the trade union movement. Young people voted for the union at a rate within four percent of the overall pro-union average. Another indication that young workers are receptive to trade unionism was the revelation that more of those working on a job less than one year reported voting for the union than against.

An old theory held that women were not interested in the long-range benefits of union membership and representation because they just weren't interested in long-term employment. The conclusions drawn from the California study should crumble that notion.

Sociologists offer many reasons for this new attitude, including medical advances and technological advances in the home. The point is that there is now little doubt women are extremely receptive to unionism and can be a vital part of most organizing drives.

The pro-union vote of women sampled, half of whom were married, was 14 percent higher than that of male pro-union voters.

These California findings augment the findings of an earlier Kraft Poll which noted that women members were the strongest supporters of all major issues on which the AFL-CIO took a stand.

That survey of union members by professional pollster John Kraft was commissioned by the AFL-CIO Committee on Political Education and appeared in summary form in the August 1967 Federationist.

Organizers were not too surprised to learn that workers with conservative views are more inclined to vote with the company than those with progressive political ideas. The California survey revealed that nearly two-thirds of those who selected the union also voted against Governor Reagan in the 1966 California gubernatorial election.

Some of the questions dealing with personal characteristics helped complete the picture of the typical pro-union and anti-union voter.

Those who said they voted against the union often showed themselves to be "waverers" who changed their minds one or more times before the election.

Cross-analysis of answers to these questions also showed that pro-union voters were less apt to succumb to fear or other pressures in making their decision.

Interviewers found that persons who voted for the union were significantly more influenced by knowing their legal rights in an organizing drive than those who voted against it.

The strength of character of the pro-union voter was brought out in several questions dealing with political attitudes.

For instance, those who said they voted for the union were much more likely to describe themselves in positive terms as "strong" Democrats rather than as "usually" Democrats. The experts who prepared the report of findings after the survey was completed concluded that pro-union voters were more decisive because they were less likely to classify themselves as Independent. The experts concluded that the Independent voter falls in a category that voting studies indicate contains cross-pressured voters. Such voters, according to the political scientists, are unable to make up their minds until late in any campaign and at times never make them up.

Interviewers also found that married workers are slightly more pro-union than single workers. Those employed more than 10 years are more inclined to vote for the union than against, as are those with less than one year on the job. Those with more than one year of service and less than five are more inclined to be anti-union than those in any other category.

Previous union membership was also a factor in the decision of many voters. One-third of those who said they voted for the union also said they had benefited from union membership previously.

From the standpoint of organizing, two sections of the survey are most valuable.

The first dealt with the respondents' ratings of the respective techniques used by union and management in influencing decisions. The second covered projected reasons for voting for or against the union.

These questions were asked of all 500 persons.

The key question on the effectiveness of union efforts was: "What do you think influenced you or your co-workers most in the union campaign?"

All groups agreed that face-to-face contact was the most important and effective element in the campaign. Similarly, all groups rated management's face-to-face contact techniques as most effective.

The highest union ratings were given to union meetings and talks with fellow employes on the union committee. Since attendance at union meetings is not always practical during organizing drives, the most effective tool which emerges from the survey is a strong nucleus of pro-union workers equipped to talk with their co-workers.

Both pro-union and anti-union voters rated union leaflets as the third most effective technique and home discussions with organizers fourth, or the least effective of union techniques.

All groups sampled said they rated "captive audi-

EVALUATION OF UNION CAMPAIGN TECHNIQUES

UNION TECHNIQUES	TOTAL SAMPLE (491)

Source: Responses on effectiveness of union and management techniques, from "A Survey of Voters in National Labor Relations Board Elections" prepared by San Fernando Valley State College Political Science Department Research Analysts, Spring 1968.

ence" speeches at meetings by top company executives as the most influential technique. Second rating was given to talks by supervisors or foremen with small groups of employes. Rated third were management letters to employes' homes, which some respondents reported contained "threats."

Anti-union voters, however, ranked fear of management as one of the least important reasons for voting against.

Interviewers then asked each participant to rate in order of importance five reasons for voting for a union. The total selection was ranked by both pro-union and anti-union voters in the following order:

1. Union representation and collective bargaining ensure better pay and job security.
2. Improved fringe benefits such as pensions, holidays and sick leave.
3. Fair pay, fairness in promotions, seniority rights.
4. Grievance procedure. (Older workers tended to rank this higher.)
5. Better control over speedup, production standards and quotas.

In offering projected reasons why people might vote against unions, both pro-union and anti-union voters chose the "idea of having to join and paying dues" as the most important.

Anti-union voters chose as their second most influential reason the objection that "the union was not needed."

By and large, those voting for the union ranked fear of reprisal by management much higher than did "no" voters, who attached more significance to the belief that unions were unnecessary.

The findings of this survey can be of great value to the 14 million members of AFL-CIO affiliates who are all potential organizers. Its value lies not only in what it tells about the pro-union voter, but what it reveals about many of those who in past elections rejected the trade union movement.

The man or woman who votes against a union may not necessarily be anti-union. He may be confused, unclear about the need for unions and what representation may mean. He may, as the survey indicates, be a "swinger."

He may be one of the 25 percent of the anti-union voters who said they made up their minds to vote "no" late in the campaign or part of the 22 percent who decided on a "no" vote "right before the election."

Obviously, many of these basically neutral and indecisive voters might be motivated to vote union in campaigns geared to "last-minute" organizing activity.

Some negative voters (certainly the 27.5 percent who said they decided against the union "as soon as it came around") are intensely anti-union and likely cannot be motivated.

The survey seems to indicate that unions can enjoy more success by motivating the strongly pro-union employe (the 36 percent who were for the union "when it came around") to motivate the undecided co-worker.

By ignoring the obviously pro-union worker, an organizer may be giving management by default the waverer who could be greatly influenced by his pro-union fellow worker.

The survey certainly points up the great importance of women workers in organizing drives. If, as the survey demonstrates, women today are becoming more inclined to trade unionism, they should become actively enlisted in the campaign.

Young workers who participated in the poll appear to have hurled a challenge at organizers. Their pro-union vote was only 4 percent below the total sample. Four percent may sound familiar to many seasoned organizers because many campaigns have been won—and lost—by that amount or less.

In fact, experience has demonstrated that as the size of the bargaining unit increases, the winning percentage decreases. Put another way, the more ground an organizer has to cover in making face-to-face contact with potential members, the less successful he is—unless he has the help of an active employes' committee.

Recent figures indicate that in one year a 7 percent switch in votes in 18 percent of elections lost would have brought union benefits to 15,000 additional workers.

Against that background, we can say that perhaps the survey's greatest value lies in its reaffirmation of the simple success formula for organizing.

The ingredients for this formula are a seasoned organizer, a group of strong leaders to form the nucleus of the workers' committee and plenty of hard work from both.

The organizer's job is to coordinate the campaign with the technical experts in all AFL-CIO departments and to guide his committee over the pitfalls and through the maze of legal encumbrances. The committee's job is to motivate their fellow employes and the bigger the unit, the bigger this job becomes.

Both jobs are tough—but rewarding—work.

Unions — Organizing

How to keep the unions out of the plant

The labor relations field has produced its own underground hit, a film that has been shown privately by more than 350 companies—though none of them will admit it publicly. Unfortunately for connoisseurs of blue movies, the show is as clean as a whistle.

Labor Unions in America is not even sensational in its own genre, the fight-the-union category. Such films—or newspapers or pamphlets—traditionally paint the union organizer as a gorilla and unionization as forced labor or (south of Maryland) mongrelization of the races. But this show, a series of still photos and cartoons with voice commentary and musical accompaniment, is a reasonably well-balanced, technically expert presentation of a nonunion company's viewpoint, with nothing to make the flesh creep.

The film is aimed at first-line supervisors as the company's key contact with its employees, and its understanding of their crucial role in protecting a company against being unionized is probably a measure of its sophistication.

The bulk of the film's users are companies worried about potential inroads among white-collar workers—logically, labor's next big target as the percentage of blue-collar workers in the work force shrinks. Most major units of blue-collar workers are already organized; most clerical service, and technical workers are not. The employers who have made *Labor Unions in America* a hit want to keep things that way. Financial institutions and insurance companies are among its most enthusiastic fans.

The message. The film consists of three 20-minute segments: a management's eye view of U. S. labor history, a description of life in a unionized plant that stresses the loss of supervisory power and prestige that comes with unionism, and a series of suggestions on how supervisors can help prevent unions from coming in.

The supervisor's loss of status is illustrated by such examples as the transformation of a nonunion "complaint" into a union "grievance." The supervisor handles the complaint as he sees fit in a nonunion shop. Under a union contract, the grievance is a topic of discussion between ascending tiers of company and union representatives, with an outside arbitrator probably handing down the decision if they fail to agree.

The suggestions on how to discourage unionism may be summarized as:

- Don't create situations that will make workers want a union (for example, listen patiently to employees' complaints, however trivial they may seem to you).
- Keep your cool if an organizer does show up, (for example, don't discriminate against pro-union employees or the company may face unfair labor practice charges under the Taft-Hartley Act).

The series was prepared by Porter Henry & Co., a New York sales management training company, for the American Assn. of Industrial Management. It went on the road with Carl A. Becker, a labor relations consultant for management, who showed it to top executives at local association meetings in every section of the country. More than 350 companies bought the film as part of a $300 package that includes copies of the script, a meeting leader's guide, and a program of management preparation. The film is designed to be used as the focus of group discussion, with further supervisory training recommended.

Concern. The buyers' desire for anonymity stems from a number of reasons, some more logical than others. The least reasonable appears to be fear of past National Labor Relations Board decisions barring use of anti-union material. These cases, however, dealt with blatantly dishonest or "loaded" material circulated to workers during organizing drives.

Labor Unions in America not only relies on interpretation rather than falsifying fact; it also aims at supervisors, not workers, and—ideally—should be shown before a union enters the scene. So it would seem to be out of the NLRB's ballpark.

A more valid concern appears to be anxiety about the company image. It is undeniably poor market strategy to publicize an anti-union position if potential customers include union members.

But one of the most compelling reasons for the hush-hush atmosphere is also the most surprising: Many of the companies that have shown the film are highly unionized—in their blue-collar ranks.

This group includes companies that negotiate with that militant giant among unions, the United Auto Workers, and others in long-unionized areas such as metal manufacturing, utilities, and even construction. These companies want to arm themselves against possible organizing drives among their white-collar workers, but they would just as soon not stir up the resident union. ■

Management film advises supervisors

Assume an organizer is eying your company because he probably is . .

. . . So don't slavedrive employees into yearning for a union.

If you suspect union activity, don't grill workers: it is illegal . . .

. . . and may boomerang by creating the conditions for a union victory.

RWDSU Record 5-11-69

SOUTH

ON ALABAMA LINE: Newly-organized workers, on strike for union recognition since mid-February, man their picketline at the Whitney Nursing Home in Ashville, Alabama. Among the pickets are two members of the strike committee, Robert Thomas and chairman Elizabeth Eggers (second from right). Council Org. J. H. (Chuck) Foster is heading the walk-out.

Union Organizing – South

Labor Board Ruling Spurs Drive at Georgia Cannery

Copy into "Coalition"

ZEBULON, Ga.—The NLRB in Washington has upheld Local 315's charges that the Besco Products Co., canners of fruits and vegetables here, engaged in unfair labor practices and refused to bargain in good faith with the union.

Int'l Rep. Guy Dickinson, who filed the charges in February, said he was highly gratified at the NLRB ruling and hoped it would pave the way for the resumption of negotiations for a first contract with Besco.

The Besco Products case, which dates back to last September, presented a number of aspects not usually found in labor disputes nowadays.

On one side was William Edwards, the town's most prominent citizen, who not only owns Besco but also controls a second-hand car lot and a bank. Opposed to him were Negro workers who are employed nine months a year at most, at rates that barely reach the Federal minimum.

On Sept. 5 the workers walked off their jobs in support of a boycott of the town's school system resulting from the hiring of a white principal to replace a Negro who had resigned. Under the direction of the Southern Christian Leadership Conference, almost the entire Negro community of Zebulon joined the boycott.

One of the boycott leaders was Robert Curtis, shop chairman at Pomona Products plant in Griffin, 15 miles away, who lives here.

In support of the school boycott, the Besco workers walked out of the plant; soon afterward they got in touch with Curtis and said they wanted to join the RWDSU.

Org. Hershel Holmes, AFL-CIO staffer Jim Freeman, Dickinson and Curtis proceeded to sign up some 200 employees, a large majority of those working at the plant.

After a number of attempts to arrange a meeting with the company failed to get any response, the workers set up picketlines Sept. 9. The company retaliated by releasing its pimento growers from their contracts and later closed down the plant.

Union Responds

The union responded by petitioning the NLRB for a bargaining election.

At a board hearing Sept. 30, the company contended the employees had quit when they struck.

About 25 employees, mostly white, work the entire year, but when the canning season is at its peak, from June to November, the force is expanded to 300 workers, nearly all Negro.

Conditions and wages in the plant are very poor.

Some employees have worked at Besco for 30 years and earn only $1.60 an hour. They don't punch time cards; the supervisor simply jots down what he thinks the worker should be paid. None of them has ever had a paid holiday, a vacation or almost any other benefit.

Some years ago the company was found to have violated the Wage and Hour Law, and the U. S. Dept. of Labor ordered Besco to reimburse the workers for the differences that were uncovered. The company sent out checks, but later coerced the employees into returning them.

ACTION

OFFICIAL PUBLICATION OF THE ALLIANCE FOR LABOR ACTION

VOLUME 1 OCTOBER 1970 NO. 2

Fitzsimmons: "You have our full support"

ALA enlists students to back UAW strike

The Alliance for Labor Action is sponsoring a nationwide drive to enlist student support for the strike by 350,000 UAW members against General Motors, it was announced jointly this month by ALA Co-Chairmen Leonard Woodcock and Frank E. Fitzsimmons.

The innovative project is expected to provide some material aid to the strikers and to demonstrate that students and workers can find a basis for working together on issues, the two men said.

UAW ON THE MARCH for economic justice is symbolized by Leonard Woodcock, the union's president who takes a turn on the picket line. Some 350,000 members are in the second month of their strike against General Motors.

In other news, Fitzsimmons pledged "full support" for the UAW by "more than 2,000,000 Teamster members, many of who were recently involved in a great struggle for economic justice and personal dignity."

The Teamster leader told Woodcock, "Teamsters know the value of true union solidarity. We value our alliance with you and you can be assured of our full and active support."

ALA's student strike support project is being coordinated by 25-year-old Carl Wagner of the Washington staff and is currently operating in areas where there is the greatest concentration of strikers, Michigan, Los Angeles, Chicago, and New Jersey. As the strike moves into its second month, Wagner says that other areas are under consideration.

Regional student support committees are guided by an ALA student coordinator who works closely with UAW regional directors and representatives. Wagner says the students understand the need to accept union discipline to make certain the students don't go off "half cocked" and that their energies and good-will are effectively utilized "on behalf of the strikers."

Wagner emphasizes the students will not walk UAW picket lines but will perform a variety of tasks including raising food and funds for needy strikers and their families, manning day care centers for strikers wives who work while their husbands picket, and arranging for free medical and dental care for the strikers.

Law students will be available to advise strikers on their rights to welfare assistance, said Wagner who feels the students will play an important role in convincing their elders, especially parents, of the justice in the strikers' cause.

ALA leaders caution that the students are not expected to be decisive in the strike but that their sincere concern for a worker's issue is a hopeful sign for fulfilling one of the objects of the ALA as adopted by the founding conference: "To develop policies and carry out programs that will enable the American labor movement to repair the alienation of the liberal, intellectual and academic community and the youth of our nation in order to build and strengthen a new alliance of progressive forces in the broad effort to advance the common good."

So I can have access to [copy] Unions — Organizing - South

Atlanta Organizing Project Enters Second Year

• Win 52 of 78 elections

The Alliance for Labor Action's program to upgrade the wages and working conditions for unorganized workers in the Atlanta area moved smoothly into its second year this month with a reported success ratio of 66 percent.

Since the drive began on Labor day, 1969, ALA organizers, comprised of UAW, Teamster, Chemical and Distributive Workers representatives, have provided strong proof that the South can be organized. The ALA record works out to 52 wins in 78 elections and covers a total of 5,039 workers as of October 1.

According to William Genoese, ALA organizing director, the elections include plant sites in Metropolitan Atlanta and some surrounding Georgia cities.

ALA Co-Chairman Frank E. Fitzsimmons said that "despite the fact we have been in Atlanta only a matter of months and in the face of all kinds of opposition, ALA is keeping its commitments to upgrade working and living conditions for Atlanta workers." The Teamster leader, who chairs ALA's organizing committee, went on to say, "The pilot program is solidly off the ground and we are currently surveying other cities for additional organizing possibilities."

Fitzsimmons also pointed out that ALA has eight elections scheduled for October, and that those campaigns affect 611 workers. It was reported also that there are more than 100 additional drives being conducted from the Atlanta headquarters.

The Atlanta pilot project was initiated as a laboratory to prove the capabilities of intense organizing efforts in the largely unorganized South.

• Woodcock active in Atlanta

ALA co-chairman Leonard Woodcock made public appearances in Atlanta—southern center of ALA operations — three times in the first three months after his election to the presidency of the UAW.

Twenty-four hours after his election in Detroit, Woodcock was in Atlanta for the "March Against Repression," marching with Ralph Abernathy and Coretta King. Then he spoke at the rally climaxing the march that protested campus and street shootings in three U.S. cities.

Several weeks later he returned as guest speaker at the 13th annual convention of The Southern Christian Leadership Conference. He told a standing-room audience "one of the chief purposes of the Alliance for Labor Action is to help the working poor help themselves by organizing themselves and by fighting for freedom and dignity."

After visiting 19 union leadership meetings between his first two Atlanta visits, the ALA Co-Chairman said the Alliance message is "that we stand with Black America in their fight for freedom because if Black America is NOT free we can not be free."

He continued, "we stand too with Brown America and their fight for freedom."

SCLC's convention was keyed to the need for labor organizing. A night workshop panel was all-ALA. Speakers were UAW Vice President Pat Greathouse, Vice President Leslie Roberts of the National Council of Distributive Workers of America, and ALA Organizing Director Bill Genoese.

Woodcock's third visit to Atlanta was to visit workers on the assembly lines of the big General Motors and Ford plants and to appear at a press conference. This was just 10 days before the UAW struck General Motors on Sept. 15.

MAN'S ENVIRONMENT was the subject of a two day conference in July at the Walter and May Reuther Family Education Center sponsored by the Alliance for Labor Action. The meeting, run by environmental and earth day teach-in activists from campuses and communities across the U.S. and Canada, drew 240 delegates including several trade unionists, who helped develop a variety of meaningful anti-pollution community programs as a follow-up to the highly successful teach-ins held on most campuses last spring. Recommendations to establish effective worker-student coalitions to implement anti-pollution programs and a commitment to work toward the end of in-plant pollution (safety on the job) were major pledges made by conferees. Dennis Hayes, head of Environmental Action, Inc., addresses the conference. Hayes' organization was instrumental in planning Earth Day held April 22 to focus nationwide attention on the pollution of the environment.

PAGINATION INCORRECT

ALA Interns Dedicated to Service

BARBOURVILLE, Ky. — Poor whites in this tiny rural Appalachian community no longer consider college campuses the exclusive breeding ground of a vast array of hippie students as the result of an ALA-sponsored youth intern project that local leaders say has helped improve attitudes both toward the labor movement and the college set.

For three months this summer 14 students at Union College here, aided by small weekly stipends from the Alliance for Labor Action, have demonstrated deep practical concern for the urgent problems of the poor of Barbourville and the surrounding areas.

Under the day-to-day direction of Professor John Myers the young people have in a small way instilled a measure of hope to the people of this poverty-stricken community, hope that one long-time resident of the area says was virtually non-existent before.

The students, operating as members of Students for Appalachia (SFA), were involved in diverse activities ranging from teaching swimming to the children of the poor to acquainting people with local and federal aid programs which many of them did not know were available.

Alliance leaders Leonard Woodcock and Frank E. Fitzsimmons say they "are encouraged" by the evident improvement in feeling toward the trade union movement as a result of this program. "We recognize the need to educate people to the sincere concern of the labor movement for the problems of the poor," said the two men. ALA's support for the Appalachian program, they continued, is also important because it demonstrates ALA's understanding that poverty in America is not restricted to black people, that in fact seven of every 10 poor people in America are white and that their needs must be answered. "If you don't read past the headlines," said the two leaders, "you might be left with the impression that all of the poor in this nation are members of minority groups. That's simply not true and ALA's programs are and will be aimed at solving broad problems of poverty experienced by all kinds of people," they concluded.

Students for Appalachia was initiated by Professor Myers in the summer of 1969. Myers, working with other colleges and their students, wanted to establish an "outreach" program that would serve to involve Union College students in the problems of the poor of the community. Myers says that the majority of Union students are not from the immediate area and that in recent years resentment by the townspeople to the students had escalated. The program, he felt, was a practical way to show local residents of the college's interest in the community.

"The SFA program functioned for the summer of '69 and into the school year," said Myers, who explained that the original funding came from the Office of Economic Opportunity (OEO). A cutback in OEO funds at the national level forced the SFA to consider liquidation, but Myers was able to obtain a commitment from the ALA last spring.

Student Concern

Mark Goodhart is a 22-year-old Union College student from Lansdale, Pa. He and another intern, Pam Foley, have spent considerable time driving people to the University Hospital and Medical Arts Center in Lexington, Ky., some 90 miles away. They consider their time well spent.

Goodhart told **Action** recently: "We had one small girl, 7, she comes from a family of 13 who live over in the hollow. She received a third degree burn so we took her over to the hospital in Lexington and because of the treatment she received she's able to walk now. No treatment was immediately available in the Barbourville area and the little girl would be in serious trouble if she hadn't received treatment," explained the young student.

Pam Foley told of another little girl who needs surgery. Miss Foley is trying to arrange for an operation. "I talked to a social worker and we're arranging to have someone stay with the other small children in the family while the father goes with his daughter to the hospital."

ALA students help poor whites in Appalachia

"We've learned that poor people are human just like us. They don't want welfare, they'd rather earn a living. But, they ask us, what else can we do when there are no jobs? Our children are growing up and need to be fed."

Photo by Conklin

Meredith Knapp, 19, is from New Haven, Conn. She's been teaching adults to sew and young children to swim. Like many of the students in SFA she's experienced some problems explaining to her widowed mother why she's spending her spare time helping poor people.

"Slowly, my mother is learning to understand my values," Miss Knapp noted. But still the pretty junior has a hard time adjusting to her life in New Haven when she returns to visit.

"I went home last summer and sat on the beach with a bunch of people that had to outdo themselves in bathing suits and where they live and how many babysitters they had. All that seemed so unimportant when measured against the problems I had recently confronted," Miss Knapp sighed wearily.

Asked what more society could do to help the poverty-ridden area, Miss Knapp replied, "They need work here and someplace where they can earn necessary income. They don't want to collect money and most of them we've come across don't want welfare money. They'd rather earn their living . . ."

Another student says that many of the people who are on welfare are sick and others are still starving. "All of them ask ashamedly, I think, when trying to explain their need to take money, what else can we do? Our children are growing up and need to be fed."

Steve Fowler, 19, of Reading, Pa., thinks that SFA has helped poor people in the community to become more aware of what help is actually available. "We've been able to point people to adult education and to a variety of different programs like Head Start and the Neighborhood Youth Corps," he says.

Most of the students **Action** talked to agreed that their program has helped develop a feeling of trust of the students by the community. "They learned we make mistakes, are human like they are and that we can be friends, someone to tell their problems to," said one student.

Another student emphasized, "We ask them and do not always tell them things." He explained he had learned a great deal from the people he was helping.

All of the students think programs like SFA are a proper concern of the labor movement. Several students indicated they were kind of "lukewarm" to unions before but that the sincere interest in SFA by the Alliance had "gone a long way" toward improving their understanding of the labor movement as being concerned with much more than wages, hours and working conditions.

ALA leaders very concerned

Elections pose great threat to all trade unionists

Perhaps the most serious threat to the labor movement since the thirties is the way Alliance for Labor Action leaders characterize the November federal and state elections.

Frank E. Fitzsimmons and Leonard Woodcock, ALA co-chairmen and leaders of the nation's two biggest unions, the Teamsters and the UAW, say the record will support an argument that the Nixon Administration is in the midst of a calculated drive to blunt the effectiveness of the labor movement at the bargaining table and in the courts. "They appear to have been working toward that goal since Mr. Nixon was inaugurated Jan. 20, 1969," said the two men.

"Some trade unionists seem to accept surface explanations of serious social issues presented by Administration spokesmen" (Vice President Agnew is the prime example), and "too often fail to reflect on the Administration's seemingly deliberate drive to hurt labor behind the cover of emotionally heated issues," they declared.

But the evidence is too strong that Mr. Nixon and his people are working against the best interests of working people. The increase in unemployment by some 2,000,000 since early '69 is only the most obvious example, they emphasized.

Fitzsimmons and Woodcock said they were "deeply concerned" by the change in the National Labor Relations Board which, in effect, gives the conservative viewpoint at least a 3 to 2 and soon to be 4 to 1 majority. The retirement of Earl Warren and the ascendancy of Warren Burger to the Chief Justice's post on the U.S. Supreme Court has obviously altered the philosophical viewpoint of that body. Advanced ages of three longtime liberals generally favorable to labor's cause, William Douglas, Hugo Black and John Harlan indicate Mr. Nixon will soon be able to build deeper his conservative viewpoint into the highest court in the land. "Our proof is his attempt to appoint Haynsworth and Carswell, two arch-conservatives to the court." Only the dominance of favorable Democrats and a few farsighted Republicans in the U.S. Senate prevented Nixon's appointment of Haynsworth and Carswell.

"And that's the point," said ALA's leaders. "Nixon recognizes he needs the Senate to change the direction of this country and to alter drastically the labor-management relationships in this nation," they said. "That's why he's worked so hard to defeat men like Albert Gore in Tennessee, Harrison Williams in New Jersey, Charles Goodell or Richard Ottinger in New York, Adlai Stevenson, III in Illinois, John Tunney in California, Quentin Burdick in North Dakota, Vance Hartke in Indiana, Frank Moss in Utah, William Proxmire in Wisconsin and Stuart Symington in Missouri.

"The President needs the Senate to erode the hard won gains the labor movement has made over the past 35 years," said Fitzsimmons and Woodcock.

Both men pointed to a current proposal by Senator Robert Griffin (R-Mich.) that would be willing to trade a traditional labor issue, 14(b), for Labor's agreement to get out of politics entirely.

"Griffin hasn't got the votes now, but that could change Nov. 3 if unionists refuse to believe they are facing the most serious challenges facing us in the past three decades," Fitzsimmons and Woodcock concluded.

Union - Organizing

A Report to Management from

THE DARTNELL CORPORATION
4660 Ravenswood Avenue, Chicago, Illinois 60640

Joseph W. Lawson

Ralph N. Texter

J. W. Lawson, II

David V. Tudor

John R. Justice

These five men have built an impressive record of success in meeting the challenge of union organizing drives in close to a hundred key companies.

Now, in a new action manual for management, they reveal the methods they have developed and proved effective . . . ideas you can use immediately.

May we send it to you for free examination?

Dear Sir:

Public statements by national union officials leave little doubt that unions are accelerating their organizing activities for 1969. And, take note, prime targets will be white-collar employees, salesmen, technical and professional personnel, as well as those companies still non-union in the blue-collar field.

Will you be ready when the union organizer calls?

Can you afford not to be? For future profits of your company will depend to a large extent on how well you prepare. Keep in mind, a successful NLRB election can let loose a round of cost hikes, production set-backs, and a flock of other headaches you just wouldn't believe could happen.

What's needed is an action program for management that will discourage and defeat union drives wherever they hit.

To provide you with just such a working tool, Dartnell is proud to announce the publication of this brand new action guide for management--

HOW TO MEET THE CHALLENGE OF THE UNION ORGANIZER

We believe this 172-page manual is one of the most important guides to preventive action on labor relations ever prepared. It tells you how to deal with union organizers on every level of employment, from unskilled workers to engineers, salesmen,

(cont'd....)

Labor — Organizing

THE BUREAU OF NATIONAL AFFAIRS, INC., 1231 25th Street, Northwest, Washington, D.C. 20037 • Telephone 202-223-3500

Dear Sir:

Organizing and the Law, by Stephen I. Schlossberg, general counsel of the United Automobile Workers, has been revised with the assistance of Professor Fredrick E. Sherman, of the University of Wisconsin, to take account of the many changes in federal labor law since the book was first published in 1967. The new edition is now available from BNA Books.

Written for the avowed purpose of facilitating the unionization of workers, Organizing and the Law addresses itself squarely to the problems of the union organizer and shares with him the first-hand knowledge, experience, and legal expertise at the disposal of one of the most powerful and militant labor unions in the country.

It provides a clear and concise summary of the requirements of federal labor law and a step-by-step guide through the complex provisions of the Taft-Hartley Act that affect organizing. It tells how the law can be used to advantage, and what pitfalls must be avoided. It explains the rules of the National Labor Relations Board on the distribution of literature and the solicitation of workers, pinpoints employer and union conduct that may violate the law, outlines the rules on bargaining units, and tells what a union must do to qualify for an NLRB election.

Here are some of the things reviewers said about the first edition:

> "Writing about law for the layman is a special art, and Organizing and the Law is a model of its kind."--Theodore J. St. Antoine, University of Michigan.
>
> ". . . a complete and compact job in a highly complicated field."--Charles O. Gregory, University of Virginia.
>
> ". . . a superb presentation of the law as it affects union organization. I predict that it will become the indispensable companion of all union organizers."--Harold A. Katz, Member, Illinois State Legislature.
>
> ". . . a book that ought to be--and probably will be--carried in the briefcase of every labor organizer in the United States."--Agenda.

WORKBOOK № 3

Course Outline on Organizing

CWA Education Department
Jules Pagano, Director

HANDOUTS: Organizing Training #3
Miscellaneous Organizing Pamphlets

INTRODUCTION

Instructor The objective of this discussion will be to acquaint ourselves with one of the key problems that face our locals, namely:

ORGANIZING (Signing the nonmember)

Sometimes called internal organizing.

1. The purpose of this discussion is to help us develop a continuous organizing program and organizing techniques.

2. It is a proven fact that one of the serious problems in our Union is organizing the nonmember.

3. There are approximately 100,000 nonmembers now being represented by CWA.

There are _____ in _____Company of approximately _____eligible employees in our bargaining unit.

There are _____nonmembers in Local_____ of approximately _____eligible employees in this Local.

These figures indicate there is a tremendous job to be done in organizing.

We will discuss the structure, as established to meet this problem and our role as stewards and members in fulfilling our responsibility and helping to solve this problem. And from this see if we cannot only be better informed about organizing but also acquire some skill in training ourselves to be more effective organizing stewards.

Let us begin by asking ourselves why organizing is so important and why it is a major problem that faces each Local.

Instructor Place on the blackboard -

"Why is this organizing so important?"

Extract from the group, or offer one or two points yourself to stimulate discussion and then discuss fully all the following points, utilizing the blackboard for key phrases:

1. That the only way to build any Union is to get everyone who is eligible to be a member, because:

A. The bargaining strength of our locals, and thereby our International Union, depends on the membership percentage, which is, in effect our strength.

The greater the proportion of members in our industry the more effective our bargaining program will be. The greater proportion of members the greater the benefits and services our Union will be able to provide.

B. Management gauges the determination and strength of the Union to achieve its objectives by its percentage of membership.

C. The financial burden of the Union can be better met by more members, thereby making possible a larger treasury, larger Defense Fund, and more Union services and Union personnel to serve the membership.

D. The strength of our locals to police the contract, once it is bargained, and to effectively win all grievances, to a larger degree depends on the membership development.

Our real power to do the Union job rests in the numbers we have organized.

E. All employees in the communications industry, who are eligible, should be members of the Union, because:

1) The benefits won by our Union, CWA, in bargaining and by political action, go to all telephone workers - members and nonmembers.

2) Those who are nonmembers should be helping to share the load and do their part to make greater achievements possible.

Instructor Now that we have seen why it is so important for us to do this job of signing up the nonmembers, let us see what other methods can be used within our locals to achieve this.

We all know that the only way we can get anyone to join a Union is to contact them. We must approach the person who is not a member and solicit his membership. This takes understanding and hard work. In this session we are going to try to examine some techniques of contacting and persuading the workers in the communications industry to become members of CWA.

Instructor

Make the following point as effective as possible: This job of organizing within each local is the key responsibility of our locals: it is the one area in which each local has the complete authority and machinery to meet this problem of the nonmember; because internal organizing, in the final analysis, must be carried on by the locals. Our locals alone have or can build the machinery to do the job; they alone can reach the nonmembers; they alone can carry on this work day by day. No Union staff, no matter how large or competent, can be a substitute for the local's responsibility and effectiveness in meeting this problem.

Instructor
HANDOUT

Let us begin by asking the following question:
Organizing Workbook No. 3, Page 2.
"What machinery within our locals is especially designed to meet the everyday problem of organizing the nonmembers?"

Instructor

Place on the blackboard the answers which should be received:

1. Your Local Organizing Committee.

Discuss its function and responsibility to:

A. Analyze the local membership development problem

1) Who are the nonmembers.
2) Where are they.
3) How many are there.
4) Why, etc.

B. Developing an overall organizing program

1) Utilize the stewards.
2) Brief stewards.
3) Plan additional organizing work outside of the steward system.

C. Review and analyze organizing program from time to time.

1) Report to Executive Board.

2) Report to steward system
3) Report to membership

Instructor — Continue with - (Have group fill in pertinent blanks on Page 2 of workbook)
"What other machinery in our local logically fits in to help us answer this problem of organizing?"

Continue with placing the answer on the blackboard:
(Review top of Page 3. If they desire to take further notes on your comments, there is space at top of Page 7)

The steward system

Discuss briefly how they are especially designed to meet the problem of the nonmember.

1. The steward is the first Union spokesman that a new employee comes in contact with. To all intents and purposes, the steward is the Union to the new worker.

2. The "Steward System" is built on a basis that enables him to contact each and every worker under his jurisdiction.

3. He can personally contact all workers in his unit, since he works with them day in and day out, as their co-worker.

Instructor — Raise the following question with the group at this point:

Ascertain whether they have a functioning Organizing Committee or not. If they do not, impress the stewards with the importance of seeing to it that their local establishes an Organizing Committee, etc. If they do, follow through with the question, "Does anyone know the Chairman of the Organizing Committee?" "Have you been briefed on the organizing or nonmember problem within your local?"

If not, again make the point of the necessity of these and suggest strongly that they as stewards take it upon themselves to solve this bottleneck within their local, pointing out that every CWA Local has at its disposal a detailed internal organizing guide with overall programs and techniques outlined for thier utilization that was supplied to every local by the Organizing Department of the Union.

Instructor — Continue with -

Now let us assume for the sake of our discussion, that we will do the following things - (Use blackboard for key phrases.)

1. Get a complete list of all employees who are nonmembers and have a blank application and dues deduction card filled in with the name of each prospective member so that all the nonmembers will have to do is sign the card.

2. Have another blank nonmember card with merely the name and address of the nonmember on it on which the job steward will, after contacting the nonmember, record his reaction for future contacts, if he doesn't join. (Sample card, Page 2, workbook)

Instructor — Let us assume we have contacted a nonmember and we have found from our contact that the member does not desire to join the Union, but gives us a number of so-called reasons, and we have put the information on our contact card. At this point let us discuss what some of the reasons are that are given to us by potential members when we contact them requesting that they join the Union.

Instructor — Place on the blackboard -

Reasons given for not joining CWA

Continue with -

After we have done this, we will attempt to develop for ourselves a technique for approaching nonmembers the second time, based on reasons they have advanced.

Instructor — Extract from the group reasons for nonmembership.

Place key reasons on the blackboard.

Discuss each one FULLY, explaining that most of these reasons given will fall under a basic fundamental reason that they do not understand CWA's aims - or its methods - or the importance of CWA to them; that only a few people are indifferent; that most people who are nonmembers just appear anti-union.

Some of the reasons that will be offered will be the following:

If they are not - supply them:

Place on blackboard -

1. Fear and Suspicion.

People who do not understand the Union - or its real objectives -

fear it may harm them. They are suspicious of Union Leadership.

Add to blackboard -

2. Confused Individuals.

These people feel they can advance faster alone and that CWA membership may limit their chances of advancement.

Add to blackboard -

3. Legitimate and Imaginary Complaints Against the Union.

These are people who have real and imaginary grudges against the Union representative, etc., or against some action the Union has taken in the past.

Add to the blackboard -

4. Outside Influence

These are people who have been influenced by their friends and family and other organizations, including the newspapers, that have convinced them that all Unions are a bad thing.

Instructor — You will receive many others.

List them all and analyze them thoroughly - explaining, in detail, that the only way we can satisfy these types of excuses for nonmembership is to analyze each person's attitude as an individual and from that develop an individual approach that will bring about a favorable attitude toward CWA.

Ask the question:

"How can this be done?"

Instructor — Psychologists tell us people's attitudes come from their experiences; they tell us that our Union attitudes come from our experiences and associations with the Company and with the Unions they have known,and the only thing we can do is to analyze these attitudes and then attempt to approach them, based on our analysis.

Instructor (Explain and make introductory remarks distinguishing between the signing of a member and selling a product. Every steward is a salesman to some extent and his duties as a steward are not merely to sign a new member but to sell a product and that product is unionism with emphasis on CWA.)

"How are organizing and selling a product similar?"

A. What's needed to sell a product?

1. Know your product.
2. Believe in your product.
3. Get to know the buyer.

   a. Analyze the buyer.

4. Advantage of your product.
5. Approach.

   a. Be courteous.
   b. Get customer at ease.

6. Avoid defending your product.
7. Follow-up (analyze original contract)

   a. Research on customer.
   b. Seller will come back with new ideas, etc.

Allow time to copy - erase blackboard

Instructor These are the things we need to do to sell a product.

"What is needed to organize?" (Get from group and list on board. Discuss in detail:)

1. Knowledge of CWA
2. Advantages of belonging to a Union.
   a. Knowledge of gains CWA has made.
   b. What CWA's objectives are.
3. Believe in the Union.
4. Approach
   a. Courteous
   b. Be fair
   c. Put person at ease
   d. Let them talk
   e. Answer all questions honestly. If unable to answer question, get answer.
   f. Offer assistance on job
   g. Introduce to other members of work group

5. Analyze the non-member.
6. Avoid taking defensive stand.
7. Why member needs CWA.
   a. Grievances (Discuss briefly)
   b. Belong to the group
   c. Job protection
   d. Fellowship of other members, etc.
   e. Increased wages
   f. Better working conditions
   g. Seniority for hours, vacations, promotions, etc.
8. Follow-up

Allow time to copy - erase blackboard

Instructor Refer back to "How Are Organizing and Selling Similar?"

Now in discussing the methods of organizing we arrive at two basic methods; one being, a Union Security Clause in our contract, i.e., a Union Shop. Union Shop is one of our bargaining objectives. So far, we haven't been strong enough to win this kind of security from the Bell System. The other method of organizing and the most logical at this time is by personal contact. We will have to use this method until we become strong enough to secure Union Shop.

Every organizer in their personal contacts will need to understand individuals, size up situations, work with people, cope with different attitudes, etc.

Instructor Continue with -

We will now attempt to develop a technique that will help us to analyze a nonmember's attitude and, based on this technique, we will develop an approach to the nonmember.

Instructor Place on the blackboard - (Have group follow you on bottom half of page 3 of the workbook)

How to analyze the nonmember's attitude:

1. His background.

2. His relationship with the Union

3. His relationship with the Company.

Instructor Continue with -

Based on this analysis, we can then devise a proper approach for

each individual and attempt to change his attitude.

Instructor Place on the blackboard -

Approach

Instructor Let us take a simple case, one that would be typical of the non-member who had been approached once and had given us these alibis. We are assuming now that she has been contacted and we have taken all of this information down on the back of our 3 x 5 card, and we will now attempt to analyze the case. I will distribute to the group a copy of the case, which is the case of Betty Jones.

Instructor Refer the group to Page 4 of the workbook, "Sample Case" of Betty Jones and have a member of the group read it. Then - have the group fill in the "Sample Case" sheet, as you develop on the blackboard the analysis of the case.

Example: Betty Jones is an Operator. She has been with the Company for one year. She worked for the Company five years ago for a short period. When asked to join the Union by a union steward, she said, "I didn't belong to the Union five years ago, why should I belong now?" She goes on to say that she doesn't see any point in paying dues, that you don't get anything for your money and besides she came to work to make money to help support her family and she would rather spend the money for something for her family than on Union dues. She says, "I don't have anything against the Union because my husband is a member of another Union and I have friends working for the Company who are Union members, but I don't see any reason why I should join, the Company has always been nice to me. Also, all of the girls seem to like me."

Instructor Let's examine this case and begin by looking at Betty's background.

"What is her background?"

1. Husband is a union member.
2. Does not have anything against union.
3. One year's service with Company.
4. Company has been nice to her.
5. Worked for Company before for a short period of time.
6. Did not belong to the Union then.
7. Does not think she should pay dues when she gets same benefits.
8. Would rather spend money on family.
9. Working to help support family.

Instructor — By looking at Betty's background, we now have a better understanding of the individual and are better equipped to make our personal contacts. Who will be contacted?

Erase board

Write across top of board:

CONTACTS: BETTY ✓ HUSBAND ✓ FRIENDS ✓

Instructor — Who will be contacted first?

(Get group to say "Betty" and add "Betty" to board.

Instructor — What approach and techniques are we going to use when we contact Betty?

Write on board -

Approach & Techniques:

Get from group and add to board under "Approach and Techniques".

1. Tell her what union has done and can do for her.
2. Be helpful on the job.
3. Find out her difficulties on job.
4. Be patient when talking to her.
5. Be honest - get answers for questions you don't know.
6. Tell her what benefits you get as a member.
7. Ask if she has contract, if not, give her one.

Instructor — Now that we have talked about how we're going to contact Betty - Where are we going to contact her?
Get from group and add to board:

WHERE: JOB, CAFETERIA, LOUNGE, HOME.

# # # #

Instructor Our next contact will be Betty's husband.

What approach and techniques are we going to use when we contact Betty's husband and where will we contact him?

(Erase all but top line from board and build approach and techniques for "HUSBAND" using same questions used for developing approach for Betty. Completed chart will look like this) Get from group and list on board.

# # # #

Instructor — In our approach to Betty, her husband and friends in trying to get her to become a good active CWA member, what are we trying to sell her?

Answer: The Union - CWA

Instructor — We have just reviewed a technique and should be able to utilize this technique in analyzing our nonmembers so that we can develop a proper approach in soliciting their membership. This technique should enable us to do a more effective job in approaching the nonmembers and convince them they belong in CWA.

Instructor — Now that we have completed the example, I would like the group to reflect for a minute or two and pick two nonmembers that you know, ones that you have contacted. Write the facts on pages 5 & 6 of your workbook. Let me recommend that you pick two different types, a new employee and an old-timer; for example, an operator or a clerk, you get the general idea. Follow this through by filling in the three categories -

1. "background"
2. Relationship with the Union
3. Relationship with the Company.

Then fit in facts together and, recalling our sample case, write up your approach in detail.

Instructor — Advise the class, based on your time schedule, how long they will have to complete this assignment. Ten minutes are recommended as a minimum. After the class has completed their assignment, again keeping in mind your own time schedule, pick as many as you can to be read, analyzed and discuss fully the approach developed by the participant. Try to pick different examples so that the full gamut of nonmember types is covered. Allow comments to be made after each one so that other suggestions and ideas on possible approachs can be brought to light.

Instructor — Let us spend a little time now reviewing some of the things every organizing steward should know. We have reviewed our rights. They are spelled out on Page 3 of our workbook. Now let's move to Page 7 and discuss some of the things we must do as stewards who have been given the assignment of contacting nonmembers.

Instructor Place on blackboard -

"What are some of the things we must know to be effective in selling CWA?"

1. Review and discuss the following methods of organizing:

   A. Sign-Up Days
   B. House Calls
   C. Social Contacts

2. We must be informed about our Union - its goals - and how it operates.

   Then we will be able to give all the information and answers when the time comes.

   The best way to prepare to do this is to attend meetings, local and steward educational conferences, such as this, and to read our Union literature, especially our CWA News and the pamphlet, "34 Questions About Your Union".

Instructor At this time, distribute to the group the pamphlet entitled -

HANDOUT "34 Questions About Your Union," explaining, in detail, how this can be utilized and that it has the answers to most of the questions that will be posed by a potential member, and should be studied by every steward.

Instructor Summarize this session by making the following points:

The best way to keep a local in the high percentage mark is:

1. To constantly talk the Union up, on the job and wherever possible, that a Union-minded group will always be a highly organized group.

   Keep the Union before the membership so the nonmember will want to be a part of it.

2. Examine anti-Union attitudes.

   Try to figure out the best approach on an individual basis, as demonstrated in this conference.

3. Know the answers to the questions about the Union. If a person asks a question you cannot answer, do not try to bluff. Be honest and say you don't know but then make it your business to get the answer and report back to the worker.

4. Follow up your contacts. If a person wants to think it over, go back for his or her decision.

5. Develop the idea that there is something wrong with people who do not belong to the Union. Get your fellow Union workers to speak up for the Union. Get nonmembers to want to join.

Instructor At this point distribute the following pieces of literature that have been utilized in organizing and explain their proper use.

HANDOUT 1. Meet Your Union

Instructor This piece of literature was meant as an introduction of the steward to the new employee as he comes to work in the communications industry.

It has a place on the last page for the name, address and telephone number of the steward, so that the new employee has a real contact with the Union.

Instructor Ask: "How have you used this in your local?"

and develop discussion to assure proper utilization of these leaflets in the future.

Such as -

1. An Invitation to Join CWA.
2. About Ourselves.
3. All other Organizing Pamphlets now in use.

Fully discuss their use in organizing.

Then -

Instructor Ask: "How have you used this in your local?" and develop discussion to assure proper utilization of these leaflets in the future.

Instructor Inform the group that all of these pamphlets are available at low cost prices at the Education Department of the Union and, if their local does not have an adequate supply for their use, they should impress their officers with the importance of obtaining same.

Instructor Summarize this section by stating that all this literature is helpful and has answers to a great number of questions nonmembers may have. However, it is important to remember that literature is only a supplement and not the answer to organizing, i.e., getting the nonmember to join.

The most effective thing we know in persuading people to become members of CWA is the personal expression of the steward or other members.

Instructor Place on blackboard -

The Word-of-Mouth Method.

is the best selling technique or persuader yet devised by man. We must talk UNION to the nonmembers.

Instructor We are now going to discuss some of the answers to two of the most fundamental questions that nonmembers ask concerning joining the Union. I will place the questions on the blackboard and then we will attempt together to list all of the possible answers to these questions.

Instructor Place on the blackboard the following:

What has the Union done for me?

Get the group to give us answers, making sure they cover the following points, with you adding the necessary explanation for effectiveness:

1. WAGES

Impress the group with the importance of gearing your answer on wages to the actual history of bargaining in that given area, plus future bargaining.

2. WORKING CONDITIONS

Impress the group with the importance of gearing your answers on working conditions as outlined in the contract - with examples.

3. SECURITY

Impress the group with the importance of gearing your answers on security as outlined in the contract - with examples.

4. THE EFFECT OF CWA ON THE NATION

CWA is the voice of communication workers in all things. It fights for better legislation and represents communication workers in all matters that will make possible a better way of life for communication workers.

5. OTHERS THE GROUP MAY OFFER

Instructor Erase blackboard.

Place the following question on the blackboard.

"Why should I join? I get the benefits anyhow."

Get the group to give answers, making sure they cover the following points, with you adding the necessary explanation for effectiveness:

By staying out of the Union you are hurting yourself.

With 100 percent Union membership, we could have the strength and solidarity we need to secure the benefits we still deserve, better pensions, elimination of town reclassification, improved seniority and general increases. Only with the help of full membership support can our bargaining committee win these conditions, for the company uses the nonmembers as an argument against the union demands. Yes, it is true you do get the benefits anyhow, but is it fair? You would not think of receiving the benefits of your lodge without paying dues. We all support our government with taxes and share in its services. The same with our church. Is it fair to benefit from the Union and not pay your share?

Instructor Summarize this session by making the following points:

The best way to keep a local in the high percentage mark is:

1. To constantly talk the Union up, on the job and wherever possible, that a Union-minded group will always be a highly organized group.

   Keep the Union before the membership so that the nonmember will want to be a part of it.

2. Examine anti-union attitudes.

Instructor Now we have discussed organizing and some of the methods and techniques that will answer that key problem that faces our locals. You can accomplish this task of organizing the nonmembers. Hard work is required, but we know that the vast majority of stewards in CWA have accepted their position with the understanding that it will call for a sense of responsibility and hard work. We have just completed a thorough session in training ourselves to become more effective organizers. If we utilize this training and repeat personal contacts with the nonmembers and do everything that we have discussed in approaching them properly, plus create the best possible Union atmosphere on the job, we have the machinery to solve this problem. The important thing is to get this program into operation and to keep it going in high gear.

You, the stewards, and active members alone can solve our organizing problem. If we tackle this job now and work at it ceaselessly it will solve the problem and add inumerable benefits to ourselves and the members we represent.

REPORT ON EXPERIENCE WITH TWO MOLDERS' ORGANIZERS, DECEMBER, 1963

Cedar Falls, Iowa

1. The organizer

Robert Murray, in his early 30's, married, wife works, one eight year old son. Owns house in Cedar Falls. Waterloo-Cedar Falls area is his home town. Completed highschool. Father was molder and an active union man. Used to have discussions of union matters around dinner table.

Worked in Hawkeye Steel, Cedar Rapids, for nine years. Was local secretary (three years) and vice president (two years) before going on staff as local organizer (past 1½ years).

Has developed good relations with other union staff and local leaders in Central Iowa area. Knew many of them before he went on staff. Blackhawk Labor Council, Cedar Rapids, represents about 15,000 workers. Paul Larsen (Plumbers and Steamfitters) was president of council 1961-62 (and perhaps before); in 1962 Larsen went on AFL-CIO staff, Chicago Region, as organizer but stayed in Cedar Rapids. Under Larsen, Council sponsored two weekend organizing institutes, 1962 and 1963, with about 70 people present at each. Used some School for Workers materials at second institute, courtesy of Murray. Council has "contact forms" available for organizing purposes, runs Government bond contest for who turns in most potential contacts.

Larson and Murray have worked together in several situations. Talk things over. Larson has helped compose organizing letters, has talked at organizing meetings.

Murray talks with anyone and everyone in other unions who have had any experience with organizing.

2. Elections over two-year period (all he has been in)

Types of industry:

Box factory, shoe factory, stamping plant, knife works, warehouse, novelty shop, jacket factory, sheet metal, dime store, plastic factory, foundry

Won (size of unit):

12	- while local union officer	115
6	ditto	20
45	ditto	9
70		45
130		130
60		

Pending - 240

Lost (size of unit):

22 (but won on second effort)
130 (but won on second effort)
52
28
40
52
60
63

3. People visited with Murray

Paul Larson, AFL-CIO organizer
Don Lowe, Hotel and Restaurant
Don Harris, UAW International Rep.
Carl Dahl, UAW Sub-regional Director
Gene Condon, Sec. of Labor Council, Ed. of Paper, former UAW staff

Melvin Gauley, President, Midwest Local, Kellogg
Lee Pickens, member, Midwest Local, Grinnell
Peewee Hotchkiss, fin. sec., barg. com., Midwest local, Kellogg
Mrs. Hotchkiss, member, Midwest local, Kellogg
Naomi Fipps, secretary, Midwest local
Lois Niner, Sec., Ch. of Shop Committee, Grinnell Shoe, Grinnell
Mrs. Rutledge, Delong Jacket Factory, Grinnell
Gary Schuler, officer (?), Grey Iron, Marshalltown
Mrs. Schuler
Mr. Bear, Grey Iron, Marshalltown

4. Midwest Metal Stamping Company, Kellogg, Iowa; first campaign

127 in unit. UAW effort in past (UAW Maytag shop a few miles away). Plant has been in business 30 years.

Initial contact: gas station attendant in Grinnell. Said people were dissatisfied, had no paid holidays. Attendent had worked at Maytag, knew people at Midwest; had relative from Midwest come down to station that night, met with Murray in back of station. Murray visited six people that night. People were fearful. Murray showed them printed copy of Taft-Hartley to clarify workers' rights

Held general meeting next night in Grinnell, signed up 40 men and women, set up organizing committee.

Home visits by Murray and committee brought additional 28 cards by noon of next day. Filed petition forthwith with 68 cards. Six weeks between filing of petition and election

Company reaction: 1) Within four days of petition, held meeting in plant, no mention of union, general discussion of financial troubles including need to sell Canadian resort; speech reduced to letter and mailed to homes. 2) Sent letters once per week, discussing dues, initiation fee, the "Big, happy family", "someone coming between us."

3) During last six days, sent one letter per day; discussed dues, "right to refrain", the "family relationship," and the security of the Company. 4) Older women (60 to 70 years) went around saying that old people would lose jobs if company had to pay higher wages, that company would higher younger people. 5) Two hours before election company held meeting with foremen, sent them out to talk (mostly with women) saying that everyone would lose their "privileges" if the union came in.

Union campaign during six weeks: 1) Held general meetings every two weeks in Grinnell (7 miles from Kellogg) with 60 to 70 people in attendance; Murray talked, answered questions. 2) Home visits by Murray, with and without people from plant; saw just about everyone.

Union lost, 63 to 61.

Union protested election on basis of formen's activities, but was turned down because foremen did not act as group. Murray says protest had value in that it badly scared foremen and they were less active in the second campaign.

Company post-election activity: While protest was still in process, equalized rates (10¢ to 30¢ increases), gave 6 paid holidays, presented contract-like book spelling out "benefits".

Union post-election activity: Month and a half after defeat held general meeting of 30 to 40 people, explained turn-down by NLRB, said recent benefits had come because people had stood up for rights. Murray kept personal contact (once or twice per week) with about 8 people, always knew what was going on.

5. Midwest Metal Stamping Company, Second Campaign

Used "continuing committee" to plan election as soon as could file under 12 months rule. Started on August 26, 1963. Had area all mapped out, assignments made as to who would visit whom (with organizer taking the tough ones), visited 80% of people that night, signed them up and filed petition the next day.

On day of card-signing, company posted bulletin stating would consider wage increase as of Sept. 20, and followed this with letter saying that since petition was filed benefits could not be granted without danger of UFLP charge. Union has warned people to expect this.

Union sent letter, discussed company-granted wage and fringe benefits granted during post-election period, suggested it would be worth waiting for the recent company offer of added benefits, attached company contract-like book.

Union held periodic shift meetings (combined on Saturdays) right in Kellogg (formerly held in Grinnell), attendance not as good as in previous campaign especially from 2nd shift so organizer did much home visiting of second shift people. Had not been much turnover among workers. Organizing committee concentrated on new people, did not push very hard in plant.

Murray visited about 85% of the people, with and without accompaniment by local people. Concentrated on roggh ones like Naomi who had been radically against and was still against; company had been real good, was hurt (feelings) first campaign, loud-mouth worker with 6 months in plant claimed he would be officer and would not let her have her say at meeting she attended, no one ever asked her to sign card (had been out of town for funeral during card-signing period) - this time Murray signed her up, and she signed up her three sons.

Union held meeting in Grinnell two weeks before election, 49 present.

Company letters similar to previous campaign, with frequency working up to one per day five days before election.

Union sent letter two days before election; took issue with company statements, said wanted good relation with company after winning election (Employer later said he had appreciated this statement by union and that it had hurt the company in its attempt to beat the union).

Final union meeting in Grinnell with 46 present, Oct. 30, 1963. This was evening of same day that Murray lost election at Jacket Factory, 34 to 21, also in Grinnell. Explained at meeting why had lost a Jacket Factory (the "heart attack", visit to Jacket Factory by Midwest Management). Outside speakers included Paul Larson (AFL-CIO organizer), two UAW men from Waterloo from plant for which Midwest does work (talked on contract, how union was voted in, answered questions), woman from Grinnell Shoe Factory which Murray had won in February (she said: "we were slow to move around here, maybe it's too late to help ourselves much, but let's move now for the sake of our children.")

Murray met with committee after general meeting; decided on two or three challenges, keep eye on formmen's activities.

On election day, committee people did some talking during noon hour, on facts, comparing last year with this year.

Won, 72 to 48.

Right after certification (five days after election) and with the approval of local people, Murray and Larson persuaded company to take them on tour of plant. Company was initially tense, later relaxed. Murray thinks this helped ease things in negotiations. Also, since company passed word that union would tour shop, some of the 48 who voted against and had expected favorable treatment from union-hating management were somewhat deflated: hell, we might as well join.

Why did we win? - Organizer's estimate:

- the organizing committee
- the continued contact after the defeat
- the people knew you had not forgotten them
- no leaflets passed at gate (company watching, fear)
- kept notes through both campaigns, analyze if lose:
    - enough contacts?
    - right people on committee?
    - did I talk to those who were opposed?

6. Comments by the participants - Midwest

Melvin Gauley, members of organizing committee, president of local

After first campaign when raises came everyone figured it was the end of the union. However, little incidents kept coming up - an older man who had been against the union took a leave, when he returned the company tried to retire him, the guys got talking about it and the company brought him back.

On the second campaign we got pushing as soon as we could, signed the cards 59 days before the deadline, got necessary addresses and wrote letters to the people.

Change in attitude between first and second campaign came because people didn't get fair treatment; they worked harder in spite of the raise and the paid holidays.

The union's most effective technique was in personal visits and letters to the home.

The handbill which the union passed in the first campaign (and it passed only one) hurt the union - there was too much opportunity for observation by the company.

In its letters the company said there was no need for a union, there was a history of good relations, no one had been laid off, raises and holidays had been granted, more good things were coming, union dues and initiation fees, and why the MOLDERS union?

This business of which union had little effect; the people felt a union was a union.

The foremen were quiet in the second election - they had been scared by the Labor Board after the first election.

You win or lose at the tail end. The last meeting before the election was good, especially those who spoke who came from places where they have a union.

After the first election I saw Bob every two or three weeks and this contact with Bob was known about in the plant. Bob did right by coming around. If he had not been around people would have wondered "where is he at?" If he had waited ten months and then come back - well, it was better to come around.

Lee Pickens, member of organizing committee

The people worked in Kellogg and thought they had it made. Before the first campaign the company got dirty, would hire a man off the street and he'd get the overtime. Then a cut in hours reduced the weekly pay. The workers were scared, of discharge if active for the union, and of the company moving if the union came in. We had about 7 on the organizing committee. Held meetings in people's homes. We talked to other people in their homes. The organizer not leaving after the defeat was important.

The first campaign, it was hard to sign people up; easy the second time. There was not the fear. Younger people were more interested. We planned ahead and signed everyone up in one night.

Characteristics of a good organizer: a good mixer, a good talker. He pointed out some things. Everybody liked him.

(Pickens helped in the Shoe Factory campaign in Grinnell)

####

Naomi Fipps, Peewee Hotchkiss, Mrs. Hotchkiss

(Naomi is recording secretary, Peewee is financial secretary, Mrs. Hotchkiss is a member)

Naomi: was against it the first time. Had gone away to funeral, came back, heard there was a union meeting, went and was criticized for going by one of those present. Wasn't against the union, just didn't think we needed one. Those at meeting assumed I was a spy. Four months after the defeat I knew I'd been wrong. Had argument with foreman about use of rest room. Said I'd vote union next time, generally popped off at him. Foreman complained about public nature of conversation. Thereafter, couldn't wait for campaign to begin.

Peewee: There was great fear in first campaign. Rumor was that if you talked union, out you'd go. People afraid boss would know how they voted. Murray informed people on the law - what they could and couldn't do. One "radical" guy turned some against the union, talked about what he'd do when he became an officer. People said: "If there's going to be a guy like that in there, we don't want nothing to do with it."

I was an observer both times. First election was held in the superintendent's office, and the foremen stood around and glared. The second time the union aksed for the election off company property but had to settle for the warehouse; the foremen were not around.

The union stressed job security (seniority, protection against discharge), and wages. Husband and wife both had to work to make a living. There was a rumor that the union would demand that the people would have to take a physical exam or be fired.

Speeches by Murray at meetings were real good - the way he said it; he told the truth. Larson was good. UAW men were excellent - were honest, impressive that they should take time to attend the meeting. Letters were effective, got to all the people (wife liked the home visiting). During the second campaign we concentrated on the anti's.

Mrs. Hotchkiss: Local school teacher took out antiunion feelings on our kids - teacher had an interest in the factory. Kid was kicked in face on playground, teacher unsympathetic. Gave kid "the old drumsticks." Wouldn't let kid tell story in "show and tell." Service station attendent at station near plant talked against union. Hardware store refused credit for pro-unionist re: TV purchase - had to check man's credit through company. Bought set elsewhere.

What would be your advice to a union organizer just moving into a campaign? (Asked of all of them)

Be sincere, Be sober. Bet out of a shop. Visit the people in their homes - if you want to win: the personal touch, it shows you care about them.

7. Grinnell Shoe Campaign

Period of Nov. 1962 to Feb. 1963, won: 75 to 33

Company has been in town for 35 years. Had been approached re: organization about 15 years ago.

Murray began campaign directly after #$%@# loss at Midwest. Got one name from member of Midwest committee. Woman was scared. Explained her rights. She gave seven more names. Saw 13 people in two days, twelve of them favorable. Gave out no cards, said would be back. Returned, signed up the twelve and gave 10 cards to each. Signed up 53 and filed petition.

Held general meeting of 68 people in Legion Hall right next to factory. Talked legal rights because people were scared; company can't close plant to get rid of the union.

Attorney Jones from Des Moines handled campaign for company. Checked him out through AFL-CIO in Des Moines so knew what was coming and could tell the people. At Board hearing, Jones challenges whether Molders is union under the Act, gets organizer on stand, asks about his pay, constitution, then uses this information (re: staff salaries, etc.,) in his letters to the people. Election directed in November.

Meetings of organizing committee every week; general meetings every other week. Continuous home visits.

Company sent 12 letters (would close plant, going bankrupt, union dues, strikes, photo copies of news stories from trade journals on plant closings where unions involved, especially shoes) - Murray had sent, and always sends with first letter in campaign, "Look Out Below", and stresses what company is likely to do at all meetings and in home visits.

Company sent out supervisors, including superintendent, to make house calls.

Murray called Carducci in St. Louis and got copies of shoe contracts; used these at meetings, in home visits and in letters.

Union had 60 present for meeting the night before the election. The employer at Midwest (7 miles away) gave his post-first-election wage increases and paid holidays the day before the Shoe election. Murray had Midwest people at this meeting to explain what happened.

8. Comments by participant - Grinnell Shoe

Lois Niner It was interesting all the way, to watch the personalities of different people. It was a change of pace - you get to know the people you work with. Husband was always union minded - a former UAW member and now a foreman.

The most important element in the victory was the personal association with the organizer. The letters were good but not as forceful as the personal contact. You can't ask questions of letters. Personal contact is more tangible.

Issues leading to union had been building up over the years. No contact with management. Foremen would make promises and do the opposite. Favoritism. Wages low, no fringes. Piece work prices (had personal problem re: machine breakdown, new superintendent promised average earnings, never got it, superintendent said it wasn't company's fault machine broke down).

Company sent letters but this not as effective as personal visits by plant officials. Would phone ahead for appointment. Would discuss how it would be with union, no need for union, no need for outsiders. Was visited by superintendent. Company sent copies of clippings from trade papers about plants closings, strikes.

Those against union said, don't tell us how to live; posted clippings in plant on strikes, racketeering.

There was no dicussion of union in plant, except in washrooms. People scared. You'd wait outside for friend after shift to talk.

Held meetings after work in Legion Hall right next to plant; people were counted by girl whose husband was in business next door to Hall.

People were just fed up with the company's tactics and ways. There was going to be a union, or bust.

We didn't just have to win the election in the plant; we had to win it in the whole town. The druggist turned on me like a tiger (afraid that plant would move). A doctor jumped another worker. Safeway manager, Ritter Hardware, United Grocery manager were all OK.

9. The Jacket Factory Campaign - Grinnell

Lost, 34 to 21. No previous effort to organize. Mostly women. Long delay produced by tactics of company attorney Jones hurt the union. Company sent no letters although organizer had prepared people for them. Held general meetings with about 30 people present.

Damage was done by 1) "fake" illness by one of two main bosses, rumored to be at death's door shortly before election. Company held meeting, made people feel sorry - if only this union business hadn't tired him out so. He was back at work the day after the election; 2) the nature of the Shoe Company contract; the company showed copies around the plant.

10. Comments by participant - Jacket Factory

Mrs. Rutledge: Husband a UAW member at Maytag. Initial interest in union due to piece work prices and favoritism. Seniority idea was used against the union - the younger girls were afraid the older women would get the work. Money was not much of an issue; it was partiality, who got the light work.

We had an informal committee that met in the homes of workers.

Company didn't say too much, gave some individual piece work raises. But there was lots of talking to individuals. Some girls talked about the strike problem and union dues. Company held three meetings: talked of tough business conditions, union dues, Shoe Company contract.

A couple fo out-of-town girls were never asked to attend the union meetings and they voted against.

Big company tactic was the sickness of one of the two main bosses two days before the election. The other boss made a speech about the sickness. There is a clique that thinks the boss is God himself.

People were interested in what Murray had to say and the way he said it.

Since the election, company says no Christmas party this year because beating the union cost too much money. Company blaims "blond haired woman and dark-skinned woman." Company said it would have gone for a garment union.

11. Grey Iron Campaigns, Marshalltown

Lost first time, 90 to 25; won second election, reversing figures

Gary Schuler: First time, district representative was too busy to give campaign enough personal attention. Man in plant signed people up. No meetings were held, no homes visited. The molders were opposed as a group. The company sent a letter saying the union would get people's money and then they'd never see a representative. Fisher (plant owner and owner of other big plant in town) held meeting and talked to men in shop. Opposed union in first election.

Issues in second campaign: had been change in management, molders' wages had been "cut" - base rate for holidays and vacations instead of average earnings. Someone called the district representative and six or eight buys went to secretary of the conference board.

Three general meetings were held, with 27 at first, more later, beer served at last meeting. Murray assigned in May of '62. People signed up at noon hour, went after remainder on "Saturday sign-up", petition filed within week, election on July 22.

Company manager talked in plant several times, speeches then printed and mailed to people. Fisher talked day before election - "I own this, I own that, if union comes in I'll sell out or rent out and still make

money." This arrogance helped union. Foremen were quiet, some came from union shop backgrounds.

The things that made the difference were the meetings and having an organizer full-time. People got personal invitations to meetings in the plant. Had chance to ask questions at meetings, "what we could and couldn't do." Home visits were a good idea. There was fear of discharges and strikes.

Advice to organizers:

> Try to get hold of the people, first with a home visit. Have three or four from committee help with visiting. It's up to committee to get the cards signed. Then hold meetings, tell people what they can and can't do, warn them about propaganda, give them run-down on law. Have the organizer there where he can be asked any questions. Have more organizers in Iowa.

Mrs. Schuler Does not work in plant. Was leery first time. Had heard some things. When Murray started visiting he answered questions. Another wife was concerned about strikes. We had to find out what we could and couldn't do.

Mr. Bears Was opposed to union in first election. No one to talk to, no one to tell us what we could and couldn't do. Had known of an independent union at a local plant and didn't like it.

In first campaign, company used letters, foremen. New manager had just come and asked for a chance.

After defeat, change came because superintendent made promises and didn't keep them. Straight time for vacation and holiday pay (base rate). Seniority. Just little things.

In second campaign had good organizer; good speaker, said what we could and couldn't do. Union sent no letters, had no committee meetings. Held three or four general meetings and did house calls. Baily and Fisher talked for the company and it didn't help a damn bit.

It was good to be visited. You learned things. Someone higher up was taking an interest in you.

Advice to organizers:

> Do like Murray did. Visit homes. Get as many as possible to meetings so can figu# out what can and can't do. No leaflets: we want to talk to organizer, figure if he won't come and see you he's not much interested. The UAW went after Fisher's (big plant in town): set up office, didn't go to the boys, expected the boys to come to them. Clobbered.

12. Meeting at Labor Temple

Paul Larson, AFL-CIO organizer

Re: motel and hotel organizing. A different type of organizing. Far more fear. Different questions from people - money and security, not grievance procedure or pensions. Hotel people have found it hard to find any employment at all: they HAVE to keep this job. Retail people are more intelligent.

Re: retail stores. Food people "only here for a little while." "Here til married", or "til through college." Wives who don't really need the money. In department stores, get the career type people. Everyone has a title - sweeper is "assistant manager of stockroom." People identify with the boss even though they may not like him. Boss's emphasis is on "the family."

It is good to identify any drive with AFL-CIO, the central labor body and the local labor movement and not with any particular international. People then feel that all unions are behind the push.

How does a guy get cooperation from local labor? The movement has gotten so diverse what with COPE, Community Services, etc. These drain off interest and leadership from the number one job which is still organizing the unorganized. In our council we formed committee of good people from different internationals, held two-day organizing conference two years ago, followed it up with similar conference last year. Developed a survey (contact) sheet. Ed Haines (assistant director, Region 14, AFL-CIO, Chicago) in for keynote. 70 people at each conference. We have 15,000 people in area, all of whom have contacts. Had survey (contact) form contest, with $50 bond for most names. We won two elections from contacts made through this form.

Have to watch for odd-ball newspapers, radio and religion. "Common Sense" edited by Sherman Patterson (of "Militant Truth"). Hunt's "Life Line", Armstrong's "The World Tomorrow" on local radio. Some ministers preach anti-unionism from pulpits.

On the "first defeat": Let the company make promises during the campaign, then go back after the defeat and compare the performance with the promises. You build, lose, go back and build from there.

In Winnebago Trailer election, Forest City. If union came in, doctors said there would be no credit on bills. UAW coloring book: for Reuther, "color me, not red, but pink"; for Mazey, "color me cheap." Was put out by Midwest Employers Association.

Don Harris, Carl Dahl, Gene Condon - UAW

Get in quick while the issues are hot, before they cool off. The servicing rep can't spend the necessary time to organize - people say: "where is he? we have questions." International pulls the man out for a month and the people wonder "is this the kind of service we'll get?"

Too many of our own people say that labor is too strong. Too many are ashamed to say that they are members of a union. Our best salesmen are the new people.

13. Comments from the organizer

Why you win Get the cards signed. Get the petition in. Beat the employer to the punch. Reduce the amount of time the employer has to act. The people want you to be aggressive and if you are, so will the committee be. Leave as much as possible of card signing to the committee; then they feel they have done something, feel they are part of the drive, will stay with you. Build the union as you organize; help people learn to be leaders during the campaign.

Selection and use of organizing committee Senior people. Aggressive people. Add some later who were opposed and have swung over. Don't put too much about committee in your letters to people: non-committee people may look upon committee members as the "chosen"; and the people know that the committee didn't write the letter. Women can be espacially jealous when it comes to selection of committee members. Meet at least once a week and invite everyone who is interested - no secret meetings.

Small towns The people are ready to go and no one comes to see them. "We never before had an organizer knock on our door." The UAW has 3000 members in Newton, 7 miles from Grinnell; the Midwest people asked for help and the UAW organizer gave them cards and told them to go sign the people up, but the people are scared.

People who were against you 10 years ago are for you now. There is no place for the young man on the farm so he comes to the rural town, gets job in small plant for low wages, poor conditions; gets married, has kids, and must act to improve wages and conditions.

General observations

"What do the Molders know of your problems?" - says the plastic factory owner. But people don't care about the name of the international: AFL-CIO is what counts.

Three days or so before the election, have special meeting of the organizing committee: where are we weak? where should the organizer go? The list comes from the committee.

Explain the election procedure with great care: people have a basic fear that the employer will find out how they vote.

The wife's fear of husband's job loss - "If your wife has a few minutes, have her come in."

If you make a few home visits, see them all.

Make no promises, but this is what the boss pounds at.

Our best salesman is the newly organized worker - if you have gotten them a good contract.

File when you have a minimum of cards to lessen time the employer has to work out on the people. The union has access to the people only a small percent of the time when compared to the company.

Carries copy of Taft Hartley. Has people read Sec. 7, 8a1-5. Explains 8a3. Shows what union UFLP are. Talks from law at organizing meetings. This has better effect that mimeographing parts of law and using in letter or leaflet. The printed law is the straight dope, it has authority.

Use appropriate clippings in personal visits and at meetings.

Carries around weekly NLRB report for use in home visits and at meetings.

Uses publication of Iowa Employment Security Commission (a monthly) but uses orlder issues to say "look what was paid in your trade even back then." Uses at meetings, home visits. It is NOT turned out by union, hard for the employer to argue with

Uses publication "Distribution of Manufacturing Industry in Iowa" put out by Iowa Development Commission. It tells where plants are located, what is made, how many employees. When he goes to a town, he knows something.

What about use of novelties (pens, matchbooks, etc.): No - because has no money for such things, and besides doesn't want people to think they are involved in presidential election.

Has professor friend at Grinnell, former Democratic State Senator; talks things over with him, invokes him at meetings: people know of him. An authority.

St. Louis

1. The organizer

Frank Carducci, late 40's. Married. Two children, married daughter, son a senior in highschool. Father was a coal miner. Frank a former foundry worker, local officer, began organizing part-time while local officer, on staff about two years.

2. The score board

Leather Tannery, won, 37 - 12
Liquor stores, 250 in unit, lost by 1 vote
Items, Inc., Dog Food, Won, 17 - 0
Metal Processing, 27 in unit, got 3 votes
Southwest Rebuilders, Jigs and Dies, 35 in unit, got 6 votes:
IAM had 17 card carriers in shop, took election
Gideon Foundry, never petitioned
Carondelet Foundry, Lost 111 - 22 (still working on it)
Leonard Products, Sheet Metal and Foundry: working on it; 80 in unit
Sepco Plastic, 90 in unit; working on it.
Locke Stove, 170 in unit; working on it.

3. People visited with organizer

Nate Williams, worker in Locke Stove
Cliff Brown, shop chairman, American Brake Shoe
Albert, worker, Carondelet
Don (Albert's son), former worker, Carondelet, now in Molders shop
Robert Dale, Tannery worker
Mike Dunn, organizer, Local 688, Teamsters
Cab Calloway, Central States Conference, Teamsters
Dave Salmon, Central States Conference, Teamsters
Tex Hargraves, organizer, ILA

4. Locke Stove

170 in unit, 70% white. Sheet metal. In operation since late '30s. Was once organized and probably decertified (Stove Mounters?). Has been working on plant for year, has not yet petitioned. Company says if union comes in people may lose jobs because of wages it would be forced to pay, uses seniority to worry old help that it will be bumped by youngsters. Company pays higher than negotiated rates, gives all fringers plus 6% Christmas bonus. Company campaign is by word of mouth and through stooges; foremen are fairly quiet.

About 40% of people are from small farm communities in 75 mile radius; have beautiful dairy farms, are working for beer money.

There is fear of plant closing. Some of ex-Molders members are talking of three-day week. Company has bought out Mt. Vernon (Illinois) Stove 80 miles away. 320 people. Organizer is working on this shop, has committee. Mt. Vernon management says it will be increasing its work force

by 100 people. Locke people afraid that enamel shop (at least) will be moved to Mt. Vernon (30 people). Rates are poor at Mt. Vernon; people there thought that Locke was union plant. 1600 jobs recently lost in Mt. Vernon due to plant closing; a union was involved. Pattern in Mt. Vernon is for company to hire foremen from small communities who bring their own people in as workers.

At Locke, all organizing work has been by personal contact. First contact came from member in established local. Names came slowly, people cautious. Organizer keeps "favorable" and "unfavorable" list. Has plant committee of four who help with home visits. Is trying to develop leadership in the small rural towns; committee member sits in car after fingering the house, organizer walks half block to house.

Issues at Locke are seniority, grievance procedure and job security. Shop is non-incentive and people increased production by 25% with no corresponding increase in pay. Layoffs are not by seniority and people are hired off street to fill vacancies wanted by older hands.

There is a problem of "Uncle Toms" among the older Negroes. This company is "the only company"; against outsiders. Some of the ##### younger Negroes are more militant.

Oil workers campaigned in shop about three years ago. Handbills. Good response. A few housecalls. No meetings. Company used letters. Many people knew nothing about the union, never met the leaders. Several workers were fired and nothing was done about it.

Right across the street from Locke's is a shop with a long-established Molders local union.

5. Comments by participant: Locke Stove

Nate Williams A Negro, about 30 years old, 13 years in shop. There was once a union here more than 13 years ago. I tried to organize once, with Ike; wanted security, more money. No organizer; Ike was the spokesman. People stuck pretty well. Boss didn't like tactics. Before year was out, Ike was gone, fired for bad work. This worried the guys.

Six or seven years ago, lots of union talk. Company sent letter, all it had done for the people. Had election, but it was run wrong - the office people and foremen voted.

Recently, five men were fired or laid off; were caught off job in violation of two-month old rule. Were active for the union.

The guys are afraid - that they will lose their jobs and not be able to get another one.

Two-thirds of the people are prosperous farmers.

People are saying (in December, '63), "don't have the election now, we might lose our Christmas bonus." People are worried about the Mt. Vernon plant: figure some will be laid off. "If you talk union now, company will move everything to Mt. Vernon.

Current issue - satisfied with own jobs but don't like the idea of going to help someone else when done with own job.

Advice:

> Do like Frank does. Individual contact. Be careful of meetings - if there are 30 or 40 present, there are bound to be 3 or 4 the boys don't trust and they won't speak up. People will ask questions when they are alone. As for handbills, some will want to take them but they are afraid the Man will see. Letters are good. Wives - know you want to do betrer, but don't get the Man mad at you.

Nate's father was an active unions member (OCAW).

Older guys are opposed. They fear layoff or discharge.

Guys don't believe they are or will be the union: you pay your money and Frank will do the work.

6. Comments by participant: Tannery

Robert Dale In his 40s, a Negro. Local officer. Union won 37 to 12. Plant has been in business 90 years. People always felt should have union. Novelty workers had bargaining rights but were dormant after strike. Plant had simply shut down in one previous strike, all gone to Florida for year. Plant all Negro.

Frank made contact. Fear from strike carried over. People just like babies. No leaflets. All done in secret. I am in middle of floor, easily reachable, can run around shop. We signed people in the plant. I made phone and bar contacts. Older guys were scared.

Frank visited about 30. Had one meeting which was the turning point. 45 were present. Speech and questions.

Company sent no letters (but had in previous campaigns). Guys told company they were going to stick with Frank and company was too cheap to try to buy them off.

Issues: people were being pushed around, put on other jobs. Wages, job security, paid holidays, piece work, hospitalization. (Company now explains piece rates in nice way and the boys produce)

Guys were scared. Southern types, felt obligated to boss, borrowed money from office, favoritism. "Aren'T I nice to your fellows." Making more than ever before - $50 cash in hand at end of week.

Name of union meant little. Organizer must know what he is doing.

Advice:

Home visits. Careful with leaflets, company get hold of it, uses it. Might start discharging because leaflet publicizes fact that union campaign is on. Organizer must know what he is doing.

7. Carondelet Foundry

135 people, 220 when busy. Lost, 111 - 22. People were looking for help. Issues: increase in workload, obnoxious foremen, new management (son of much respscted owner). During later stages of campaign, old man came back from vacation, walked through plant: "you have union wages and fringes, Christmas bonus, accumulating fund (some have $12,000 in it), some base rates higher than union scale." Company wrote letters, used area Molders rates, stressed dues. Showed around wage figures from other employers. Too many people were above union scale. Company automatically gives negotiated increases (but may play favorites). Company stressed steady nature of work even though some people had to drop down to get work and be paid as laborers.

The "accumulating fund": Company used to match, dollar for dollar. Voluntary. New workers pay all. Buys stocks. Can take it out. For full benefit, must participate "X" years, receive 10 - 12 percent on investment.

The old man was always fair. Son is apparently not going to follow this pattern.

It was a good campaign. 85 cards, some coming through the mail. Saw 70% of the people in their homes. Held meeting at restaurant garage of worker and two at the union hall. 40 people came. But at last meeting at hall, 5 days before election, only 6 came.

8. Comments of participants: Carondelet campaign

Albert (father) and Don (son) There never had been a union in the shop. Committee consisted of Albert and three others. Foremen kept saying: "you don't want a union, why pay dues, you get a Christmas bonus."

Men were sore at the way they were doing everybody. The old man had gone. Company put in piece work.

The old man came back from his California vacation three weeks before the election, talked to people in shop as individuals, wrote letters; left right after the election.

Don - The young guys were scared they would lose Christmas bonus and accumulating fund.

Union had three or four meetings at the union hall, and a special meeting for the colored group in a garage (40 present at meetings). ?

When we try it again: continue home visits because this helps get# closer to the men (says Don). Hold the election away from the plant: was held in the lab, with the old man and management watching and the stooges hanging up Vote No signs). Would like to see more meetings with some beer. Move fast.

(Don had been observer at election and was laid off or fired or quit after campaign. However, no grounds for any action. Frank got him fine job in union foundry with which Don is well-satisfied. His only problem was ineligibility for Christmas bonus in Carondelet.)

9. Observations by other organizers

Mike Dunn, Local 688, Teamsters — Believes in the value of leaflets. Key thing to success is the inside committee. Does no home visiting.

Calloway and Salmon, Central States Conference, Teamsters

C - Attitudes have changed. There is more resistence. A feeling the "I am going to get mine."

S - The bosses are smarter, giving more. Modern management (the professional managers as distinct from the owner#-manager) are promoting their own positions rather than trying to maximize profits. But the small boss-owners try to squeeze all they can get out of#people. Workers are more cynical.

C - In approaching a plant, there are many factors to consider. Its size. Whether other unions are or will be involved. The psychological make-up of the work force to be considered in relation to use of leaflets, problems of fear. Where fear is evident, concentrate on housecalls. I have lost a lot of confidence in leaflets.

S - There are too many "boiler plate" leaflets (stock leaflets). But leaflets are good for the "quick answer." Use them to try to destroy confidence in the company and build confidence in the committee.

C - There is a tremendous amount of control from the top of the union. The organizer is not given enough leeway, has to operate under the thumb of the administrator.

S - The presumption of the administration is that the organizer is goofing off.

C - Re: race. In an IAM strike, company brought in Negro strike-breakers. I went in and talked with them (was president of NAACP); worked out agreement with IAM that if strike was won some effort would be made to integrate. ~~Negroes~~

Negroes are sensitive these days, are fighting Birmingham and Little Rock in the shops. You have to understand this.

S - There is pressure from Negroes to win grievances regardless of the implications for other workers or for the union, this in relation to Cab's statement above.

C - In an IUE shop, the oldtime Negro leadership smothered the younger men and Local 688 got them all because of IUE standpatism.

$ S - Watch out for the personal griper on the organizing committee.

Tex Hargraves, ILA A Negro, has been organizing since forever, once swam Mississippi at Memphis in the '30s to avoid howling mob.

Meets 2 or 3 people from a shop, out in the street. If they are interested, makes a house visit. People are more at ease at home. Gets other names.

Fear of the boss is high. High unemployment is what holds people back. There is skepticism about the union, motives of organizer.

Never goes to plant. Sees boss first at NLRB hearing. Has secret committee. Does own visiting. Sends one letter after petition, announcing fact of petition and telling what the boss will do.

During past 15 years, has conducted 40 to 50 elections, lost six of them. Units from 2 to 60 people: egg candling, rag sorting, foam rubber, scrap iron, auto parts junk yards.

Change in attitude: people more skeptical. There is less work and more unemployment than in the '30s. Installment buying. Fear of strikes. Racketeering (answer: "boss uses this to keep you where you are"). But people still view the union as their salvation.

Where there are slave-driving foremen, the people will look you up.

I takes my time. Keep it secret. Talk to everyone, but don't tell anyone who you've talked to so as to protect everyone. Tell people you will write to them when you petition, telling them what the boss will do.

Advice: contact people away from the boss, go to their homes, have the wife there, give people instructions - what they can and can't do and what constitute grounds for an UFLP charge.

10. Observations by the organizer

Re: Metal Processing campaign - 27 people, 22 signed cards, got three votes. Company shook the people up. 90% of people part time, but spending full-time in union shops. People afraid plant would shut down. Eleven were laid off after the petition was filed.

#e#$%&#$#

Re: Southwest Rebuilders campaign - 35 people. IAM intervened, had 17 people in shop already carrying IAM cards. Stayed in campaign because of committments to people. IAM won.

Re: Gideon Foundry - 30 people. 19 signed cards. Company called meeting, gave big party before meeting. Made speech: had bought plant in Arkansas, was buying elsewhere, but hoped to stay; fine, loyal employees. Never petitioned.

Re: Leonard Products - Sheetmetal and small foundry. 80 people. Many ex-members of different unions, each with a gripe against his former union.

Sepco Plastic - 90 people on three shifts. People appear to want union representation, but can't get one card signed or one leader in the plant. People want the union around to keep the pressure on the boss.

Picking targets - Picks his own. Gets little help from own local union people. Uses mostly own judgment in selection of target. Picks a plant, watches it to see where people go, makes contacts. Other unions may jump in after he has ggtten ball rolling.

Working with Negroes - Be careful to pick the right person as leader, one who is approved by his own people. People may worry that your choice is the type who is trying to elevate himself.

Most plants are racially mixed. In some union shops, Negroes are getting into the apprenticeship programs. Some companies are hiring Negro coremakers and molders. Such men are useful as speakers at organizing meetings.

In established locals, there are Negro officers in mixed locals. There are no all-Negro locals but ther are two all-Negro shops.

Negotiating the first contract - Policy is for the organizer to take part along with the Rep. It is recognized that the organizer is close to the people he has just organized and that the people may be nervous if there is too quick a switch to the staff representative.

Handbills, Leaflets - If local leadership say people need stimulation, may reluctantly pass a leaflet. If used, should be in big-shop situation. Leaflets put the company on guard, scares the people. Better to work under the table.

Personal contact is better. Carry material along with you. Tell the people: follow the rules, have nothing to fear. Tries to get all names. Visits all if possible. Usually goes alone.

General

Fear: "if I sign a card, will the boss see it?"

Attitude of other unions in area: if people want to organize, let them come to our office.

General meetings are helpful in certain instances. Leaders in shop help make decision as to whether or not to hold meetings and if so, when. There is fear of (1) who will be there (stooges), and (2) if attendance is poor, it may break the spirit of the people.

Employers' tactics: use# stooges, hold meetings, send letters. Talk about dues, strikes, union can't do any more for you, we have been good Joes. Not too much reference to racketeering.

Whether or not to go for a quick election depends . . .

The man that's an employee, he's in the plant 8 to 10 hours per day. The employer is the guy who gave him his job. In the '30s a man was hungry, had been exploited. Now the man is complascent, satisfied. Has five days work, now and then gets paid holiday. Boss is a great guy and you don't have to pay dues for it.

what services can union offer & why does situation call for special handling

When a plant is all-Negro: the Company takes advantage of these people, does favors, loans money, helps with garnishments.

Twenty-two plants have moved to outlying areas, doing the communities a favor. People are indoctrinated when the apply for employment. Chamber of Commerce checks out application and if you have a relative in union labor, you get no job.

In a campaign, each man makes his own issue.

Re: selection of committee - try to get the leaders in each department, a congenial fellow.

At meetings, watch for guys with loaded questions - the stooges who are trying to get you to make promises. Resist promises - this is what the boss wants you to do.

People are scared to be witnesses before the NLRB, especially since it involves giving their names.

When a man is fired during a campaign, file charges. Give him his day in court. People will feel better about it. They wonder why, when a man is fired, even though he is a known goof-off. There is doubt. People know he was for the union.

When to file for election: a problem of timing. Do I have enough information. Is it accurate? Is there too much fear? Watch out for the eager beaver who may represent only one small group and who says: "I think so" in answer to question, are the people ready? "I think so" is not enough.

Christmas time is good opportunity for someone to obtain names and addresses of all in shop from list posted by some companies for Christmas card purposes. I won't say you have the list stolen, but . . .

During the campaign, the boss suddenly gets nice, greets people in the morning, can't do enough for them. People are gullible.

Boss encourages people to "use your rights." The right to refrain. The organizer won't know how you vote. Signing the card does not commit you to voting for the union.

Boss says: we are a family. Why involve a third party. We always thought you knew our door was open. One company raised hell with the foremen about their conduct, then gave everyone a big beer party.

There have been lots of long strikes in this area. Companies point this out. They use the law: law says we have to bargain but doesn't say we have to agree to anything, and if we don't agree, what's likely to happen? Some guys with no union experience think that when the union comes in, the company is forced to give certain benefits.

Unfortunately, the "Right to Work" issue can be used to organize - it removes the union-shop ~~[illegible]~~ compulsion issue form the campaign.

Re: Trades Council. There is no coordination in organizing. Problems of jurisdiction. City is dead in the field of organizing. Too many organizers from other jurisdictions meet our approach to a plant in their jurisdiction by writing letters to headquarters complaining; if they'd go after the plant, they could have it.

Uses outside speakers at general meetings - Molders staff people, Tex, Cab, own Negro members.

Before: Frederick U. Reel, Trial Examiner.

INTERMEDIATE REPORT, RECOMMENDED ORDER, AND RECOMMENDATIONS

Statement of the Case

On October 18, 1961, the Board in Case No. 23-RC-1758 (herein called the representation case) certified Independent Metal Workers Union, Local No. 1, and Independent Metal Workers Union, Local No. 2 (herein called Local 1 and Local 2, respectively), to act jointly as the exclusive bargaining representative of the employees of Hughes Tool Company (herein called the Company) in an appropriate unit. Case No. 23-CB-429 (herein called the unfair labor practice case) originated on May 23, 1962, when Local 2 filed a charge against Local 1 alleging that the latter had violated Section 8(b)(1)(A) of the Act by refusing to process grievances on behalf of certain members of Local 2. The complaint in that proceeding, issued on August 31, 1962, alleges that Local 1 violated Section 8(b)(1)(A) of the Act by refusing to process a grievance filed by one Ivory Davis with respect to the Company's denial of his bid to participate in an apprenticeship program. Local 1 filed its answer on September 12, 1962, admitting the refusal to process Davis' grievance, but denying that such refusal violated the Act.

On October 25, 1962, after issue had thus been joined in the unfair labor practice case, but before the matter came on for hearing, Local 2 (and its president and treasurer, acting in their official capacities and as individuals) filed with the Board a motion to rescind the certification of October 18, 1961, on the ground that Local 1 had refused to represent fairly the Negro employees in the bargaining unit and had discriminated against those employees because of their race. By direction of the Board, this matter was consolidated with the unfair labor practice proceeding for purposes of hearing, and the Trial Examiner was directed to include in his report relevant findings, conclusions, and recommendations relating to both proceedings.

The matter, thus consolidated, was heard at Houston, Texas, on December 11-12, 1962. In the unfair labor practice proceeding, appearances were entered on behalf of the Charging Party, the Respondent, and the General Counsel. In the representation proceeding, appearances were entered by the original petitioner, United Steelworkers of America, AFL-CIO (herein called the Steelworkers), by the Company, and by Locals 1 and 2, who in the original representation proceeding had been joint intervenors but who now entered separate appearances as parties adverse to each other.

On December 17, 1962, Local 1 filed a motion with the Board (thereby superseding a motion to similar effect made orally at the close of the hearing) to amend the certification so that the name of the certified-bargaining agent would appear as "Independent Metal Workers Union, Local 1," urging that Locals 1 and 2 had merged. This motion was duly referred to the Trial Examiner and is disposed of below. 1/ On January 18, 1963, counsel for Local 1 filed a document in the name of Independent Metal Workers Union, asking that the record be reopened to adduce evidence. This matter is discussed further under "Post-hearing developments," infra. Thereafter briefs were received from General Counsel, Local 1, and Local 2, and have been fully considered.

Upon my observation of the witnesses and on the entire record, I make the following:

1/ On my own motion, I herewith admit the document into evidence as Trial Examiner's Exhibit 1.

Findings of Fact

I. The business of the Company, and the labor organizations involved

Hughes Tool Company is engaged at Houston, Texas, in the manufacture of oil drilling equipment, and annually ships over $500,000 worth of products to points outside the State of Texas. The Company is engaged in commerce within the meaning of the Act. Local 1, Local 2, and the Steelworkers are labor organizations within the meaning of the Act.

II. The alleged unfair labor practice, and the basis for the motion to rescind

A. Background

In the history of labor relations at the Company's plant--which history is touched on in the record before me, and is further detailed in various Board decisions concerning this Company--2/ one fact has remained constant from before the enactment of the Wagner Act to the hearing in this case: all jobs at the plant were either "white men's jobs" or "Negro jobs," and any job available to a member of one race was unavailable to a member of the other. While some jobs shifted during the years from one racial category into the other, at all times--at least since 1928--the jobs have been segregated," i.e., available to a particular employee or not available to him, depending upon his race. The record further establishes that Independent Metal Workers Union, Locals 1 and 2, came into existence in 1941 following the disestablishment, pursuant to Board Order, of two labor organizations, found to have been company-dominated (Employees Welfare Organization and Hughes Tool Colored Club), and that from their inception until after the issuance of the complaint in this case membership in Local 1 was available only to white employees of the Company while membership in Local 2 was confined exclusively to colored employees. Independent Metal Workers Union, Locals 1 and 2, competed in various Board-conducted elections during the two following decades with other labor organizations, and at one time were supplanted as the statutory-bargaining representative by the Steelworkers. During the period of the Steelworkers' incumbency, according to uncontradicted testimony in the record, it also maintained a white local and a colored local, and entered into contracts with the Company providing for exclusively white jobs and exclusively Negro jobs.

This pattern of racial segregation among the employees, both in their jobs and in their unions, was well known to the National Labor Relations Board. See Hughes Tool Co., 33 NLRB 1089, 1091, 1096-1099; 77 NLRB 1193, 1197, fn. 7; 104 NLRB 318, 319. With respect to segregated jobs and segregated locals, the record establishes that on occasion Negro employees have benefited from the segregation in jobs in the sense that white employees have been laid off notwithstanding their seniority over retained Negro employees, that the Negro employees constituted a minority (less than one-fourth) of the bargaining unit, and that the creation of two separate locals had been "at the suggestion and insistence of the colored men" who "wanted to be independent of /the white employees/ as far as certain functions were concerned" and "didn't want /the white employees/ to dominate their business." This attitude of 1941 appears to have changed during the intervening two decades and in its motion to rescind the

---

2/ See 27 NLRB 836, 33 NLRB 1089, 36 NLRB 904, 45 NLRB 821, 53 NLRB 547, 56 NLRB 981 (modified 147 F. 2d 69 (C.A. 5)), 69 NLRB 294, 77 NLRB 1193, 85 NLRB 663, 88 NLRB 1039, 97 NLRB 1107, 100 NLRB 208, 104 NLRB 318, 119 NLRB 739.

certification, filed October 24, 1962, Local 2 urges that no union may be certified "if it is composed of separate locals based on race and color . . . ." Indeed, within 6 weeks after the 1961 certification, Local 2 made its initial overt efforts toward elimination of segregation in jobs. We turn, therefore, to a consideration of these steps and other events surrounding the negotiation of a contract in 1961.

B. The 1961 negotiations

At the time of the 1961 certification of Locals 1 and 2 as joint bargaining representatives, they and the Company were operating under an agreement effective September 15, 1959, which provided, inter alia, that the agreement would remain in effect for 2 years, that it would continue from year to year thereafter unless terminated as therein provided, that it would be open to amendment at stated intervals, and that in the event of notice to amend, its terms would continue in effect until accord had been reached on amendments or until it was terminated. This agreement covered two groups of jobs designated in the agreement by Roman numerals I and II. Group I jobs were open only to white employees; Group II jobs were open only to Negroes. The contract referred to "employees represented by Local No. 1," meaning white employees, and to employees "represented by Local No. 2," meaning Negro employees. Separate lines of progression and demotion were established in that employees could not be promoted or demoted from Group I to Group II jobs or vice versa. With respect to employees represented by Local 1, the contract provided that when a reduction in force resulted in layoff of more than 25 men in a calendar month, the Company would establish a "labor pool" in which men demoted out of their own department would be reassigned to jobs or laid off on a plant seniority basis. With respect to employees represented by Local 2, the contract provided that employees scheduled for layoff would be considered for employment, if their plant seniority warranted, at the lowest labor grade in the general machine shop or in the general maintenance unit.

The procedure of the two locals in negotiating their agreement with the Company was for each to prepare proposals and, before going into negotiations with management, to hold a joint meeting at which they examined each other's proposals and decided which ones to submit to management. This procedure was followed in negotiations late in 1961 looking to amendments of the 1959 contract. Although negotiations were somewhat delayed by the then pending representation case, after the issuance of the certification on October 18, 1961, Locals 1 and 2 met and agreed on most of the matters to be presented to management.

The sole area of disagreement, at least prior to the latter part of November, concerned the foundry. The foundry had been considered part of the unit in the 1959 contract, which made provision for both Group I and Group II (i.e., white and Negro) jobs there. Apparently, however, the foundry had been inoperative for some time, and in 1961 Local 2 urged that the Company be asked to reactivate it. At Local 1's suggestion, however, the foundry matter was passed over in the expectation (later realized) that the Company would take the initiative on that issue.

Late in November 1961, Local 2 raised with Local 1 a further issue--the elimination of racial discrimination in job opportunities in the unit. When L. A. Ashley, president of Local 2, raised the issue, representatives of Local 1 replied that they would like to see a written proposal on the subject. On December 14, 1961, Local 2 presented the following proposal to Local 1:

> The Parties, Locals 1 and 2, herein agree that part one and part two of the current contract has created in its interpretation a problem between the Locals as to advancement opportunities for all employees.
>
> Therefore the Parties agreed that they will within a period of two years or sooner correct the above matter, and provide a greater and more equitable opportunities for all employees.

Local 1 took the position that this proposal came too late in the bargaining to be presented to the Company, as the two locals had previously presented a package of 23 proposals on which negotiations were nearly completed. President Everitt of Local 1 offered to discuss with Local 2 at a later time proposals looking toward elimination of segregation in job opportunities, and, as developed below, such discussions eventually occurred. The proposal quoted above was, therefore, not formally presented to the Company, as the two locals had not come to agreement on it, although there is evidence that the Company's director of industrial relations had a copy and told the president of Local 2 that the dispute between the two locals was their "own business" to "clean up" among themselves.

On December 18, 1961, the Company and Local 1 executed a document "amending and extending" the 1959 contract. Among other changes, the new agreement eliminated the foundry from the "units" covered by the contract and provided that a separate contract would be executed to cover the foundry which would be "completely separate with no relation to the present production and maintenance unit." The new agreement provided also for certain changes in wage rates, in the seniority system, in holiday pay, and in certain other matters. Local 2 however, refused to join in executing this agreement because Local 2 was, as its president testified, "in negotiations with Local 1 to try to put some language in the contract that would abolish segregation and discrimination because of race, creed or color." Notwithstanding Local 2's failure to execute it, the Company put the December 18, 1961, agreement into effect, and Local 2 promptly protested the Company's action in so doing.

Also on December 18, 1961, the Company and Local 1 executed an agreement to enlarge the number of apprentices by adding three crafts to the apprenticeships in the plant, and setting forth the wage rates to be paid to, and the tasks to be performed by, the apprentices. Unlike the general amendment to the 1959 agreement, executed by the Company and Local 1 on the same date, this agreement for apprentices did not contain any space for signature by Local 2. The proposed apprenticeships had been discussed during the bargaining negotiations, and representatives of both Local 2 and Local 1 had been present. Those present were aware that the proposed apprenticeships would fall in Grade I, i.e., would be available to white but not to Negro employees.

C. The apprenticeships, Davis' unsuccessful bid, and his effort to press his grievance

In mid-February 1962 3/ the Company posted a notice inviting applications or "bids" for six apprenticeships "in the Tool and Die Unit I." Although the Roman numeral in the notice, as well as the previous discussions during the contract negotiations, signified that the apprenticeships were

3/ Unless otherwise noted, all events mentioned in this and the following subsection, "D," transpired in 1962.

not open to Negroes, Ivory Davis, a Negro who had been in the Company's employ since 1942, and who was treasurer of Local 2, bid for an apprenticeship. About 1 week later, L. A. Ashley, president of Local 2, saw a company-prepared list of employees who had bid for such apprenticeships, which list did not include Davis' name. The grievance committee of Local 2 thereupon discussed the matter with company officials, who advised the committee that the Company was following its contract with the Independent Metal Workers Union. In an ensuing exchange of correspondence, Local 2 asked the Company whether Davis' bid was being accepted or rejected, and, if the latter, whether the rejection was based on his race, his qualifications, or his union membership. The Company replied that it would follow the 1959 contract and its amendments, and would consider all "eligible" employees.

On April 17, Davis, having heard nothing further from the Company, wrote T. B. Everitt, president of Local 1, advising Everitt that Davis' bid for the apprenticeship had been denied, and requesting "that Local No. 1 intercede in representing /Davis/ in this matter." This letter was unanswered. One month later, the charge was filed in this proceeding alleging that Local 1's refusal to process grievances on behalf of Davis and Ashley violated Section 8(b)(1)(A) of the Act.

In addition to Davis, some 70 odd employees, all white men, submitted bids for the apprenticeships. Six were selected, each of whom at some previous time had been employed in the Tool and Die Unit and had return rights there under the 1959 contract and any amendments thereto.

D. Further relations between Locals 1 and 2 relevant to segregation in jobs and segregated unions, up to the time of the hearing

As noted above, Local 1 had suggested that Local 2's proposal for the elimination of job segregation, advanced during the negotiations late in 1961, be discussed at a later time. In the latter part of March, Local 1 proposed that the two locals submit to the Company a proposed amendment to the contract reciting that "The parties agree that they will, within a period of two (2) years or sooner, attempt to provide a greater and more equitable opportunity for all employees." Local 2 found the language objectionably weak in its use of the word "attempt," and the matter was dropped.

On October 9, the Company posted a notice that it had reached an agreement to work on contracts for the United States Government, and that a condition of such contracts was the posting and carrying out of a policy of nondiscrimination in employment practices, including, inter alia, training and apprenticeships. On October 18, Local 1 issued a bulletin to all employees reciting that it had received a number of inquiries concerning the Company's notice of October 9, that Local 1 would expect the Company to honor the existing agreement between them with respect to employment opportunities, and that Local 1 contemplated no changes in the contract in that respect. As indicated below, however, Local 1 reversed its position within the next 2 weeks.

On October 25, Local 2 and two of its officers (Ashley and Davis) filed the motion to rescind the certification, which ran jointly to Locals 1 and 2, alleging that the practices of Local 1 in discriminating against Negroes and the existence of segregated locals rendered the certification invalid. In an exchange of correspondence among the officers

and counsel of both locals dating from October 26 to November 27 (i.e., up to only 2 weeks before the hearing), Local 1 offered to merge with Local 2 and to ask the Company to negotiate amendments to the contract eliminating all provisions which required discrimination on the basis of race or color. Representatives of the two locals met and drafted a new constitution and bylaws for the proposed merged union.

The proposed new bylaws, in providing for various committees, specified that on certain committees a specific number of the members would be white and a specific number colored (e.g., three of each on the legislative and information committee; five white and three colored members on the grievance committee; etc.), but in no other respect did the proposed constitution and bylaws refer to, or make special provision for, any particular race or color. These proposals apparently were satisfactory to the members of Local 2, subject to the approval of their counsel, who has refused to give his approval until the issues in this case shall have been decided by the Board. 4/ Nevertheless, some of the provisions of the proposed new constitution and bylaws had been given effect because the record shows that a joint grievance committee, composed of both colored and white employees, met with the Company during the week preceding the hearing. Also, the president of Local 1 testified that Local 1 would now accept Negroes into membership upon their application. He further testified that even in the event that Local 2 should not merge with Local 1, Local 1 would ask the Company to remove from the contract the provisions which require racial discrimination.

E. Posthearing developments

As noted above, on January 18, 1963, counsel for Local 1 filed a motion to reopen the record together with a supporting affidavit, alleging in substance that on January 14, 1963, the "Independent Metal Workers Union" and the Company had signed an "amendment to contract of September 15, 1959, as amended and extended December 18, 1961, to eliminate discrimination because of race, creed, color, or national origin." The motion alleges that "all references to Locals No. 1 and No. 2 have been stricken from the amended contract, and all union committees negotiate and represent the bargaining unit under the title of the Independent Metal Workers Union. These union committees are composed of members previously represented by Locals No. 1 and No. 2" The motion further recites that the amended contract was ratified at a membership meeting of the Independent Metal Workers Union on January 12, 1963, that the meeting was attended by 168 members, of whom 65 were members previously represented by Local No. 2, including Ashley and Davis, and that those 65 members all voted for ratification of the contract. The total vote on ratification, according to the motion, was 102 for, 23 opposed, 43 not voting. On January 28, 1963, I issued an order directing the parties to file with me a "Statement of

---

4/ The provisions guaranteeing a specified number of Negroes on certain committees were apparently inserted in response to the suggestion of counsel for Local 2, in his letter of November 9 to counsel for Local 1, that Negroes be assured of representation "at the policy making and administrative levels of the merged Union as well as on /certain/ committees." When the Trial Examiner suggested that provisions specifying the number of Negroes and whites on certain committees might be legally objectionable, counsel for Local 1 stated that, if so, Local 1 would be agreeable to rewriting those provisions "to eliminate any reference to white or colored" or to specify whatever jobs Local 2 might wish to designate as being represented on the committee "so long as it would not change the proportions now set forth." Later, counsel for Local 2 suggested in his brief that the question raised by the Trial Examiner is outside the area of the Board's responsibilities. Without necessarily agreeing with that observation, I conclude that I need not pass on the issue in this case.

Position" setting forth their respective views on the facts contained in the motion to reopen and on various issues posed thereby, and such statements were duly filed by General Counsel and by Local 2. 5/

The responses to the motion to reopen, read together with the briefs, substantially confirm the facts set forth in the motion with respect to the new contract. The response of Local 2 and the brief of Local 1 further establish that Columbus Henry has succeeded L. A. Ashley as president of Local 2, and that Henry signed the new agreement on January 23, 1962. According to Local 2, it has not merged with Local 1, it is still a separate entity, and Henry signed as its new president. According to Local 1, Henry signed "on behalf of the Negro employees."

The responses to my order of January 28 further confirm that on December 13, 1962, well before the negotiation and signing of the new "non-discriminatory" contract, the Steelworkers filed a new petition for certification, Case No. 23-RC-2011, covering the identical employee unit which is involved in the instant proceeding.

As no substantial dispute of fact exists with respect to these posthearing events, I see no reason to take additional testimony, and to that extent the motion to reopen the record is hereby denied. I regard the posthearing facts as relevant to the proceeding, and, as indicated above, I am admitting the pertinent papers into evidence. To that extent, the motion to reopen is hereby granted.

F. Concluding findings

As the foregoing discussion indicates, this case presents questions concerning the impact of the National Labor Relations Act on labor organizations which are themselves segregated on racial grounds or which execute collective-bargaining agreements which provide for racially segregated jobs and racially segregated lines of promotion and demotion. In my view, analysis of this problem can best begin with a consideration of the obligations imposed on a union by its assumption of the role of exclusive bargaining representative. For this reason we turn first to the issues raised by the motion to rescind the certification, and thereafter to those involved in the unfair labor practice case.

1. The certification

a. Unfair representation in bargaining

An exclusive bargaining representative, whether certified or not, is, of course, under a statutory duty to bargain on behalf of all the employees within the bargaining unit, and to represent them fairly and without discriminating among them because of their union membership or lack thereof. As I read the decisions in Steele v. Louisville & Nashville R. Co., 323 U.S. 192, and Syres v. Oil Workers, 350 U.S. 892, reversing 223 F. 2d 739 (C.A 5), the statute also requires that the bargaining representative not discriminate against employees within the unit because of their race or color. Putting aside the question whether other remedies may be invoked

---

5/ To facilitate further reference thereto, the motion to reopen and attached materials are hereby incorporated into the record as Trial Examiner's Exhibit 2; my order of January 28 is similarly made part of the record as Trial Examiner's Exhibit 3; and General Counsel's and Local 2's responses thereto are made part of the record as Trial Examiner's Exhibits 4 and 5, respectively.

against an exclusive bargaining representative which violates these statutory duties (among other possibilities may be mentioned unfair labor practice proceedings, private suits to compel performance of statutory duties and to enjoin misperformance, and complete loss of status as bargaining representative so as to privilege what would otherwise be an employer's unlawful refusal to recognize), there can be no doubt that where such a defaulting exclusive representative enjoys the status of Board certification, the Board may, should, and will revoke the certification. See, e.g., Pioneer Bus Co., 140 NLRB No. 18; Carter Mfg. Co., 59 NLRB 804; A. O. Smith Corp., 119 NLRB 621.

In the instant case, as shown above, Local 1, purporting to act as a certified bargaining representative, entered into an agreement with the Company in December 1961 (and threatened as late as October 1962 to enforce it) under which certain jobs in the bargaining unit were open only to white employees and others were open only to Negroes. This action by Local 1 may be viewed as dividing the certified unit into two units, one for white and one for Negro employees, or it may be viewed as discrimination within a single unit based on race and color. In either view, the action violates the statutory duty of an exclusive representative and hence warrants rescission of the certification. It is, of course, immaterial that Local 2 on earlier occasions was equally guilty of conduct which rendered its certification subject to revocation, for--even apart from the fact that Local 2 refused in 1961 to join in perpetuating the illegality--the Board may act to police its own certifications. Nor is the illegality cured by the fact that separate locals administered the two units or two sections of the same unit, because whatever arrangements may be worked out between the recipients of a joint certification in jointly acting as statutory bargaining representative, they must observe the same legal duties imposed on a single representative with respect to full and fair representation of the unit. See Allied Chemical & Dye Corp., 120 NLRB 63, 69. Finally, whatever may be said or thought with respect to the Board's past acquiescence in the practices here discussed, 6/ it is clear that the Board is not estopped by its prior actions and is not required to tolerate illegal conduct in the future merely because it has not seen fit to act heretofore. Utah Power & Light Co. v. United States, 243 U.S. 389, 409; United States v. San Francisco, 310 U.S. 16, 31-32; N.L.R.B. v. Baltimore Transit Co., 140 F. 2d 51, 54-55 (C.A. 4), certiorari denied, 321 U.S. 795.

b. Unfair representation in membership policies

What has been said should suffice to establish that the certification of October 18, 1961, is vulnerable to the motion to rescind. That motion,

6/ See, e.g., the comment in Aaron and Komaroff, Statutory Regulation of Internal Union Affairs, I, 44 Ill. L. R. 425, 445, that with respect to racial discrimination on the part of unions, the Board has erected a "facade of lofty sentiments" but its record is one of "distinctly minor achievement, characterized by numerous temporizations with seemingly basic principles of democracy." See also Professor Wellington's observation that the Board "has sometimes paid lip service to the principles of Steele . . . . But it has done no more than this," Union Democracy and Fair Representation, 67 Yale L. J. 1327, 1338, fn. 63. Accord: Hewitt, The Right to Membership in a Labor Union, 99 U. Penna. L. R. 919, 944: ". . . by its failure to recognize the inherent dangers of segregation, the Board has chosen to adhere to verbal theory rather than realistic solutions."

however, urges as an additional ground for rescission the policy of Local 1 (at the time the motion was made) of refusing to admit Negroes to membership, and the movants urge that a union which so discriminates should not be permitted to obtain or retain a Board certification. Although the record show that Local 1 has since abandoned the practice of excluding Negroes from membership, the record is silent as to the present practices of the Steelworkers and contains uncontradicted evidence that when the Steelworkers was the bargaining representative it "had a white local and a colored local." As appears above, the Steelworkers recently filed a new petition and is currently competing for the employees' votes. Under these circumstances I believe it appropriate, in framing my recommendations with respect to the issues involved in the reopened representation proceeding, to address myself to the argument raised in the motion to rescind that no bargaining agent may be certified if it is composed of separate locals based on race or color, or if it refuses to admit Negroes to full membership.

Early authority on the question of a union's right to bar applicants from membership upheld such right on the theory that a union was a private association, like a social club, whose membership policies were its own affair. This rationale, and holdings based thereon, cannot be viewed as persuasive in the light of current realities. A social club exercises no direct authority over the working or living or social conditions of nonmembers beyond that which is inherent in the fact of nonmembership itself, but a labor organization upon achieving majority status in an appropriate unit becomes the bargaining representative of nonmembers in the unit and, by the contracts it executes and administers, has profound and far-reaching impact on their wages and other conditions of employment. To be sure, the bargaining representative is forbidden to negotiate contracts which are more favorable to members than nonmembers (in itself an indication that the analogy to private associations is faulty). But the interest of nonmembers is not limited to protection against such discrimination. The bargaining representative makes contracts, handles grievances, and calls strikes--all matters which profoundly affect the nonmember (who has no voice in the bargaining representative's decision or in the selection of those who make the decision) in ways far more direct than any that can be remotely envisaged by his exclusion from a private club.

Such considerations of a union's activities underlie the Supreme Court's observation in Steele, supra, 323 U.S. at 202, and A.C.A. v. Douds, 339 U.S. 382, 401-402 that statutory bargaining representatives enjoy powers in some respects comparable to those of legislative bodies. This is not to say that the constitutional restrictions on legislative bodies are necessarily applicable to bargaining representatives. But, because the bargaining representative is under a duty to accord fair representation to all members of the bargaining unit, it is appropriate to inquire (free from any illusion that we are dealing with a mere private club) whether such fair representation is accorded employees who are ineligible for, or segregated in, membership in the bargaining agent because of race or color.

As a theoretical matter, and also in the light of practical experience, it would appear that a union which excludes applicants from membership or segregates them because of race or color is not extending fair representation to the excluded class. A union's deliberate exclusion of a class from full membership itself suggests that discrimination against the members of the class is contemplated. Moreover, exclusion from full membership and hence from the right to participate fully in union affairs necessarily tends to result in lack of fair representation of the excluded class, whose members--denied a voice in the formulation of union policies and in the choice of union officers--are unable to place their wishes or views formally before their own representative. And authorties in the

field indicate that what is thus theoretically suggested, and is further attested by the record in this case showing discrimination against Negroes in eligibility for apprenticeships, is substantiated by a host of other cases reflecting discrimination in contracts on the part of unions which discriminate with respect to membership. See, e.g., the cases collected by Professor Wellington in "The Constitution, the Labor Union, and Governmental Action," 70 Yale L. J. 345, 373, fn. 119, 120; see also Sovern, "The National Labor Relations Act and Racial Discrimination," 62 Columbia L. R. 563, 583, 598-604; Blumrosen, "Legal Protection against Exclusion from Union Activities," 22 Ohio St. L. J. 21, 25; Rauh, "Civil Rights and Liberties and Labor Unions," 8 Lab. L. J. 874, 875; Hewitt, "The Right to Membership in a Labor Union," 99 Penna. L. R. 919, 943.

What has been said with respect to unions which exclude Negroes is equally applicable, as the record here attests, to unions which place Negroes and white employees in separate locals. Such "separate but equal" treatment resulted in this case in Negroes' being precluded from eligibility for the higher paid jobs and even training as apprentices. Similar results of "separate but equal" locals were condemned by the courts in Betts v. Easley, 161 Kan. 459, 169 P. 2d 831; James v. Marinship Corp., 25 Cal. 2d 731, 155 P. 2d 329. See also, Sovern, supra, 62 Columbia L. R. at 602 and fn. 148. Assuming arguendo that the doctrine of "separate but equal" retains any vitality in this area, the record here shows that the separateness was accompanied by inequality. In any event, the same logic which led to the overruling of Plessy v. Ferguson, 163 U.S. 537, in Brown v. Board of Education, 347 U.S. 483--namely that "separate but equal" in the area of race relations is self-contradictory and that separateness of itself both connotes and creates inequality--leads here to the conclusion that racial discrimination in membership in itself creates an inequality inconsistent with the bargaining agent's duty of fair representation.

I am, of course, aware of the dictum in Steele that a bargaining representative has "the right to determine eligibility to its membership . . ." 323 U.S. at 204. One may well question whether this statement was intended to embrace the very racial discrimination which the Court itself termed "obviously irrelevant and invidious." 323 U.S. at 203. In any event, the dictum expressed in the Steele case on this issue should be considered in the light of the Court's more recent decisions in racial matters, including the overruling of Plessy. Indeed, if the Steele dictum had been controling, the Court would have had no occasion to take the unusual step of noting that it denied certiorari in Oliphant v. Brotherhood of Locomotive Firemen, 262 F. 2d 359 (C.A. 6), cert. den. 359 U.S. 935, "in view of the abstract context in which the questions sought to be raised are presented on this record." In Oliphant, the Sixth Circuit declined to compel a union to admit a Negro applicant, observing that the union was "a private association, whose membership policies are its own affair . . . " 262 F. 2d at 363. I find more persuasive reasoning in Betts v. Easley, 116 Kan. 459 P. 2d 831 (holding in effect that the bargaining representative should either admit Negroes or cease to be the bargaining representative); in James v. Marinship Corp., 25 Cal. 2d 721, 735, 155 P. 2d 329, 337, where the California Supreme Court observed, "It is difficult to see how a union can fairly represent all the employees of a bargaining unit unless it is willing to admit all to membership, giving them the opportunity to vote for union leaders and to participate in union policies"; in Judge Groner's concurrence in Brotherhood v. United Transport Service Employees, 137 F. 2d 817, 820 (C.A.D.C.), reversed on other grounds, 320 U.S. 715; and in the dissent of Justice Fairchild in Ross v. Ebert, 275 Wis. 532, 82 N.W. 2d 315, 320 (a case not involving a statutory bargaining representative).

Finally, I am, of course, aware of the proviso to Section 8(b)(1)(A) stating "That this paragraph shall not impair the right of a labor organization to prescribe its own rules with respect to the acquisition or retention of membership therein." But this proviso goes only to the Union's freedom from liability under Section 8(b)(1)(A), and sheds no light on its right to representative status or certified status under Section 9. 7/ In this connection it must be remembered that we are dealing at this point, not with unfair labor practices, nor even (as in Oliphant) with actions to compel admission to membership, but solely with the powers and policies of the Board with respect to certification of unions which practice discriminatory racial policies in determining eligibility for membership. Where a union segregates members or excludes or denies full-membership status to applicants, on racial grounds, it is violating its duty of fair representation to all members of the unit and should not be permitted to hold a certified status.

There is no need at this time to explore the outer limits of an exclusive representative's duty to admit applicants. Some unions restrict membership to the first-born legitimate sons of members. Others prescribe tests of proficiency or experience. Expulsion from a union may also result in a member of the bargaining unit's being ineligible for membership in his bargaining representative. Whatever may be the bases on which a statutory representative may properly exclude applicants, it seems clear to me that the bases must bear a reasonable relation to the union's role as bargaining representative or to its functioning as a labor organization; manifestly, racial discrimination bears no such relationship.

The argument is raised 8/ that the Board cannot constitutionally accord certified status to a union which discriminates on racial grounds. Certification, so the argument runs, is governmental action, and confers a preferred status on the union which receives it. It is argued that such governmental aid to an organization which uses its power in racially discriminatory ways (either by executing contracts which discriminate on racial grounds or by segregating or excluding applicants for membership on such grounds) violates the Federal Constitution as construed in recent Supreme Court decisions. Although I incline to the view that this argument has merit, I need not reach any constitutional issue in this case. My recommendations with respect to the certification are based, as noted above, on my construction of the statute and on the principle that an exclusive representative which, on racial grounds, segregates employees or excludes them from membership, or denies them full and complete membership equality with employees of the majority group, does not accord to them the fair representation which the status requires of a bargaining representative. See Wellington, "The Constitution, the Labor Union, and Governmental Action," 70 Yale L. J. 345, 374. 9/

7/ Whether the proviso was intended to exempt from the proscriptions of Section 8(b)(1)(A) a labor organization's racially discriminatory membership policies, and whether so construed the proviso would be unconstitutional, are matters outside the reach of this report.

8/ See Weiss, "Federal Remedies for Racial Discrimination by Labor Unions," 50 Georgetown L. J. 457.

9/ In earlier years the Board held that "Neither exclusion from membership nor segregated membership *per se* represents evasion on the part of a labor organization of its statutory duty to afford 'equal representation.'" Tenth Annual Report, p. 18. A Trial Examiner is bound by Board decisions and should not seek to anticipate authoritative reversal thereof merely because he disagrees with them or because a Court of Appeals has (Continued)

2. The unfair labor practices

The sole unfair labor practice alleged in the complaint is the refusal of Local 1 to process Davis' grievance, which refusal is alleged to constitute restraint and coercion of Davis in the exercise of his Section 7 rights, in violation of Section 8(b)(1)(A). Notwithstanding the existence of eminent authority which suggests that conduct like that of Local 1, with respect to Davis in particular and with respect to all the employees in the bargaining unit, violates Section 8(b)(3) and Section 8(b)(2) of the Act (see Cox, "The Duty of Fair Representation," 2 Villanova L. R. 151, 173; Sovern, "The National Labor Relations Act and Racial Discrimination," 62 Columbia L. R. 563, 569-571), General Counsel limited his complaint to the allegation that the refusal to process the grievance violated Section 8(b)(1)(A). Whatever may have been the General Counsel's reason for thus limiting the theory of his case, 10/ he has effectively precluded any consideration of the issues pressed by Charging Party other than those dealing with Davis' grievance. Even with respect to that grievance, General Counsel took the position that it was unnecessary to reach the question whether the conduct vis-a-vis Davis violated any section of the Act other than Section 8(b)(1)(A). As I read the applicable cases, however, I am not limited to the precise subsection of the Act named in the complaint, but may decide whether the conduct complained of violates other subsections. See Pecheur Lozenge, supra, 209 F. 2d at 402, quoting American Newspaper Publishers Assn. v. N.L.R.B, 193 F. 2d 782, 799-800 (C.A. 7), cert. den., 344 U.S. 16: "Where, as here, the complaint clearly describes an action which is alleged to constitute an unfair labor practice but fails to allege which subsection of the Act has been violated or alleges the wrong subsection, such failure or mistake does not prevent the Board from considering and deciding the charge as presented." Under those cases, I may pass upon whether the conduct alleged in the complaint violated any provision of the Act. (On the other hand, of course, other violations developed on the record such as the execution of an illegal contract, are not before me for decision because that conduct was not the subject of the complaint.)

That Local 1 ignored Davis' request to present his grievance is undenied. Local 1 argued before me that it properly declined to handle the grievance because (1) the grievance was totally lacking in merit as Davis was ineligible for the job which, by contract, was a Group I or "white" job; (2) the constitution of Independent Metal Workers Union then in effect provided that "Local No. 2 shall have complete, final, and exclusive authority to handle and negotiate with Hughes Tool Company all

---

9/ (Continued) reversed them. See Insurance Agents International Union, 119 NLRB 768, reversed on other grounds, 260 F. 2d 736 and 361 U.S. 477. But the trend of Supreme Court decisions, even prior to the overruling of Plessy, was to recognize the inequality inherent in separateness, and a Trial Examiner may reasonably disregard Board pronouncements on this issue which date from an earlier era. In any event, insofar as the certification is concerned, my function is merely to make recommendations to the Board, and not to issue a proposed order. I have little hesitancy in recommending that the Board overrule the cases in which it "temporiz/ed/ with seemingly basic principles of democracy." Aaron and Komaroff, fn. 6, supra.

10/ The fact that the charge was thus limited did not preclude General Counsel from issuing a more comprehensive complaint. See, e.g. N.L.R.B. v. Pecheur Lozenge Co., 209 F. 2d 393, 401 (C.A. 2), cert. den. 347 U.S. 953.

matters of every kind or character pertaining to its members and all other colored employees . . ."; and (3) the apprenticeships were all filled by white persons having reemployment rights in the toolroom, so that Davis' grievance was foredoomed to failure.

Assuming, for the moment, that Local 1's failure to handle the grievance establishes a prima facie violation of the Act, none of the three defenses just summarized would overturn such a prima facie showing. As to the third ground, it is perhaps true that Davis, even had Local 1 pressed his grievance, would have failed in his bid for an apprenticeship, and that even if Davis had been a member of Local 1 perhaps his bid would have failed because other applicants may have been more qualified. But the complaint against Local 1 is not based on Davis' failure to get the job, but on Local 1's failure to act in his behalf. The president of Local 1 admitted that if Davis had been a member of Local 1 or eligible for such membership, Local 1 would have investigated his grievance to form an opinion as to its merits. To that extent, at least, Local 1 gave Davis' grievance different treatment from that which would have been given had he been a member of, or eligible for membership in, Local 1.

The first two defenses summarized above reflect both the inherently discriminatory contract and the discrimination as to membership eligibility. With respect to the argument based on the contract--i.e., the argument that Davis' grievance lacked merit because of the agreement between the Company and Local 1 that the apprenticeships were Group I jobs--the simple answer is that the agreement furnishes no defense because it excludes from its benefits members of the bargaining unit not eligible for membership in Local 1. Compare N.L.R.B. v. Gaynor News Co., 197 F. 2d 719, 722 (C.A. 2), affirmed, 347 U.S. 17, 47-48. As the Supreme Court there stated with respect to a contract which gave benefits to members of the bargaining representative and withheld them from nonmembers: "Such discriminatory contracts are illegal and provide no defense to an action under Section 8(a)(3)," citing Steele and other cases. In the instant case, General Counsel expressly disclaimed any allegation that Local 1 violated the Act by executing the contract which restricted the apprenticeships to white employees. In the light of that disclaimer, I make no finding in this section of this Report that the making of the contract violated the Act, although such a finding might well be made, given the necessary allegations. But since Local 1 has injected the contract into the case as a defense, I am compelled to treat of its validity in spite of the General Counsel's failure to urge that it violated the Act, and under Gaynor I think it is clear that the contract is illegal and furnishes no defense, regardless of whether or not its execution by Local 1 is alleged to have constituted a violation of the Act.

A closer question is presented by the defense that Local 1 relied on the union constitution which vested Local 2 with the exclusive handling of grievances concerning Negro employees. But, as described above in connection with the reopened representation case, it is my view that a labor organization cannot, when acting as exclusive bargaining representative, lawfully exclude, segregate, or otherwise discriminate among members of the bargaining unit on racial grounds. It may be that when two unions are jointly certified, they may validly agree, for example, that certain jobs or departments would be the primary concern of one, and other jobs or departments the concern of the other, but they may not validly divide the unit on racial lines. Consequently, just as Local 1 may not rely on its illegal contract to justify its failure to handle Davis' grievance, so it may not rely on its "constitutional" restriction against representing Negro employees. And, insofar as the two locals might properly have divided their responsibility over the jobs, it is clear that Local 1 was the union responsible for handling matters relating to apprentices.

To dispose of the three defenses just discussed is not, however, to dispose of the case. We must also inquire whether any defenses were necessary, or, in other words, whether Local 1's failure to process Davis' grievance violated any provision of the Act.

General Counsel's basic contention is that Local 1's failure to process Davis' grievance constituted restraint and coercion in the exercise of Section 7 rights. Reliance is placed on such cases as Peerless Tool and Engineering Co., 111 NLRB 853, 858, enforced, 231 F. 2d 298 (C.A. 7), cert. den. 352 U.S. 833, and M. Eskin & Son, 135 NLRB 666, enforced as to the union respondent, 52 LRRM 2163 (C.A. 2, January 7, 1963). In those cases the unions involved conditioned the processing of grievances on the employees' engaging in a certain activity which the unions demanded of them. Although the cases stand for the well-settled proposition that the bargaining representative has the duty of accepting and processing grievances on which its aid is requested by an employee it represents (see also Conley v. Gibson, 355 U.S. 41, 45-46), their applicability here is considerably diminished by the fact that in those cases the Section 7 right involved was the right to refrain from union activity. No such right is involved here. What is involved here, instead, is Davis' right under Section 7 to have the bargaining agent represent him. If a labor organization which is the exclusive bargaining representative declines to process the grievance of a member of the unit, it has to that extent refused to represent him, and hence it has restrained or coerced him in his exercise of his right to be represented. In essence this is the analysis of the Board majority in Miranda Fuel Company, 140 NLRB No. 7. 11/ Moreover, it should be observed that the dissenters in Miranda noted that "the reduction of Lopuch's seniority for his absence from work is a far cry from the arbitrary and invidious discrimination" in such cases as Steele or (presumably) the instant case.

In my opinion, Local 1's refusal to process Davis' grievance also violated Section 8(b)(3) of the Act. That section requires the statutory-bargaining representative to bargain collectively with an employer. The processing of grievances is, of course, a part of the bargaining function. Conley v. Gibson, supra. A refusal to process a grievance is, therefore, a refusal to bargain. This does not mean, of course, that the bargaining representative must fight every grievance to the bitter end. As noted above, Local 1 might reasonably have found, after brief investigation, that the grievance was unmeritorious because other applicants were better qualified. But the record is clear that Local 1 did not make even this much inquiry into the matter, and refused to handle Davis' grievance for reasons unrelated to his qualifications for the job. It may be argued that the duty to bargain prescribed by Section 8(b)(3) is a duty the union owes to employers, not to employees in the unit. But nothing in the statutory language requires such a limitation on the union's duty; certainly the employer's corresponding duty runs both to the union and to the employee in the unit. See Louisville Refining Co., 4 NLRB 844,860-1, enforced 102 F.2d 678 (C.A. 6). If, for example, a union which represents a majority should seek to make a "members only" contract, it would appear to be violating its duty to bargain on behalf of all. In that example, it would be dealing with an employer, and hence plainly violating Section 8(b)(3). In the instant case it is, in effect, acting on behalf of "members only" when it refuses to deal with the employer concerning Davis' grievance, and its inaction is as much, if not more, of a refusal to bargain than would be its action on behalf of a minority. Cf. Cox, "The Duty of Fair Representation," 2 Villanova L. Rev. 151, 172-174. Since, as is well settled, the majority union has a statutory obligation to represent all employees in the unit fairly in collective bargaining, I find that a breach of that duty is a breach of the duty to bargain.

11/ I am referring, of course, to that part of Miranda which deals with Section 8(b)(1)(A). That decision plainly supersedes the position taken in the amicus brief filed on behalf of the Board in Ford Motor Co. v. Huffman, 345 U.S. 330, on which brief Local 1 places great reliance.

Finally, with respect to Section 8(b)(2) of the Act, Local 2 urges me to find that Local 1 in bargaining for contracts which discriminated on racial lines caused or attempted to cause the Company to discriminate against members of Local 2 and in favor of members of Local 1. Although I believe that the implications of Gaynor News, supra, support this analysis, I am precluded by the narrowness of the complaint from passing on such larger allegations and must confine myself at this point to the question whether Local 1's failure to handle Davis' grievance violated Section 8(b)(2). As I read Gaynor, however, the withholding from Davis of treatment which would have been given to him had he been eligible for membership in Local 1 establishes a violation of Section 8(b)(2).

In Gaynor, members of the union received certain wage and vacation payments which were not given nonmembers. In defense of the allegation that this discrimination encouraged union membership, the employer urged that no such encouragement could have occurred because union membership was available only to sons of members, and the charging party had already tried without success to join the union. The defense was rejected by the Second Circuit, which pointed out that union admission policies were subject to change, and by the Supreme Court, which noted that by the time the case reached it, the union had broadened its admission policies, 347 U.S. at 51-52. The parallel to the instant case, including the subsequent broadening of admission policies is clear. The union in Gaynor was not a respondent, but as the employer there was held to have violated Section 8(a)(3), it is scarcely open to question that the union in that case violated Section 8(b)(2) in that it caused the employer to violate Section 8(a)(3).

The instant case differs from Gaynor in that here the beneficiaries of the discrimination included not only members of Local 1 but also all persons eligible for such membership, i.e., all white employees in the unit. If any such employee had filed a grievance like that of Davis, Local 1 would have investigated it. But this distinction is not controlling. I believe the result in Gaynor would have been the same if the criterion for receipt of the benefits in that case had been expressed in terms of those eligible for union membership. Local 1 also may urge, with respect to Section 8(b)(2), as it urges with respect to Sections 8(b)(1)(A) and 8(b)(3), that it has not violated the Act with respect to Davis because Local 2, and not Local 1, was Davis' representative, and Local 1 (so its argument runs) did not by discrimination encourage his membership in Local 1 any more than it refused to bargain for him or restrained or coerced him in the right to be represented by the union of his choice. But the answer with respect to all three subsections is the same: Local 1 misconceives its duty as a joint-bargaining representative, and it may not divest itself of its bargaining responsibility toward employees in the unit merely because they are members of the other jointly certified union. See Allied Chemical & Dye Corp., 120 NLRB 63, 69; Sears, Roebuck & Co., 120 NLRB 1395, 1396. Moreover, only Local 1 had an agreement with the Company covering apprenticeships, and assuming arguendo that such agreement with only one of the jointly certified unions could be valid, the duty to handle grievances relating to that matter necessarily devolved upon that union.

Finally, the majority of the Board held in Miranda Fuel Co., 140 NLRB No. 7, that a labor organization violates Section 8(b)(2) when "for arbitrary or irrelevant reasons or upon the basis of an unfair classification the union attempts to cause or does cause an employer to derogate the employment status of an employee," and that "union membership is encouraged or discouraged whenever a union causes an employer to affect an individual's employment status." What is said in Miranda with respect to union action would appear equally applicable to inaction which was founded upon "arbitrary or irrelevant reasons or upon the basis of an unfair classification."

I find, therefore, that Local 1's failure to process or investigate Davis' grievance violated Sections 8(b)(1)(A), 8(b)(2) and 8(b)(3) of the Act.

Conclusion of Law

Local 1, by failing and refusing to investigate or handle the request of Ivory Davis that it intercede for him with respect to his bid on the apprentice program, restrained and coerced Davis in the exercise of his Section 7 right to be represented by a representative of his own choosing, refused to bargain on his behalf, and caused or attempted to cause unlawful discrimination against him violative of Section 8(a)(3), thereby engaging in unfair labor practices affecting commerce within the meaning of Section 8(b)(1)(A), (2), and (3) and Section 2(6) and (7) of the Act.

The Remedy for the Unfair Labor Practices

The conventional remedy for unfair labor practices is the issuance of an order directing the violator to cease and desist from his unlawful conduct and to take affirmative action to remedy the violations, including, inter alia, the posting of an explanatory notice to employees. The unfair labor practices here are unique, however, and several considerations necessitate the conclusion that use of a conventional order and notice in this case would not fully effectuate the purposes of the Act.

The fact that Local 1 approved amendments to its constitution and bylaws so as to eliminate racial discrimination, and the added fact that the new contract does not provide for such discrimination, do not, of course, make the case moot. The law is well settled that voluntary discontinuance of illegal conduct after the commencement of litigation does not moot a case. Moreover, this is not a situation where a respondent has ceased its unlawful conduct and also has ceased to exist. Local 2 apparently continues to exist and indeed has a new president chosen after the hearing in this case. Too, T. B. Everitt, president of Local 1 at the time of the unfair labor practices, signed an affidavit on January 18, 1963 (see Trial Examiner's Exhibit 2, fn. 5, supra) in which he refers to himself as president of Local 1, and he also signed the new contract on January 14, 1963, although the record contains no suggestion that any new selection of officers (other than that of Columbus Henry) occurred after the hearing. Under these circumstances I cannot find that the respondent has ceased to exist in the sense that it would be unable to comply with an appropriate remedial order.

A further consideration arises out of my belief, more fully set forth in the next section of this Report, that the certification issued jointly to Local 1 and Local 2 should be revoked. Because the violations arose out of Local 1's failure to perform the duties imposed on it as a bargaining representative of the employees, the normal remedy would be to direct it to perform those duties. But in this case I am recommending that Local 1 be shorn of its certified status. Moreover, as the Steelworkers have a petition on file, I deem it inappropriate to issue an order which would bestow upon Local 1 status as sole bargaining representative. Finally, insofar as the unfair labor practice case is concerned, the basic violation lies in the general racial discrimination practiced by Local 1 in its contracts and in its membership policies, but General Counsel saw fit to limit the case to the particular discrimination against Davis. To the extent, however, that the treatment of Davis reflects Local 1's treatment of an entire class, the remedy properly may go to the entire pattern of discrimination and need not be confined to the individual manifestation alleged in the complaint. See N.L.R.B. v. Piqua Munising Wood Products Co., 109 F. 2d 552, 557 (C.A. 6); cf. Fay v. Douds, 172 F. 2d 720, 725 (C.A. 2).

I shall therefore recommend that, if Local 1 should become the bargaining representative of the employees in the appropriate unit, it shall cease and desist from making any contracts or agreements in which job opportunities are dependent upon race or color or membership in Local 1, and from refusing to represent any employee in the handling of any grievance because of race or color or nonmembership in Local 1. Affirmatively, I shall recommend that Local 1 post a notice at appropriate places reciting in essence that if it should become the bargaining representative it will perform its statutory obligations without discrimination based on race or color or nonmembership. The Recommended Order will not require Local 1 to take any present action with respect to the Davis grievance because such action would be inconsistent with the forfeiture of status, because the record indicates that Davis for nondiscriminatory reaons would not have qualified for the job on which he bid, and because in the event of a recurrence of the situation (i.e., Local 1's becoming the representative and Davis' again requesting that it represent him), the proposed order will encompass the situation.

Recommendations Respecting the Certification

In Pioneer Bus Co., 140 NLRB No. 18, where the bargaining representative executed contracts which discriminated on racial lines, the Board stated that such action warranted revocation of the certification. The Board did not revoke in Pioneer (where no motion for revocation had been filed) because it deemed revocation unnecessary "in view of the impending election which we here direct." I am not empowered to, and do not, direct an election, but I regard Pioneer as dispositive on the issue of revocation. My recommendation that the certification be revoked rests not only on Pioneer, but also on the showing that the certified unions here operated under a policy which separated the members into separate locals on racial lines, a practice which I regard as basically incompatible with a bargaining agent's duty of fair representation of all employees in the unit. My recommendation further rests on the finding that the bargaining agent engaged in unfair labor practices inconsistent with the discharge of its statutory duty to represent fairly all employees in the unit.

Local 1 has moved that the certification be amended, not rescinded, in the light of reforms effected after the filing of the motion to rescind, including the elimination of racial discrimination from the contract and from the membership policies of Local 1. Local 1's motion is that the certification be amended to bestow sole representative status upon it. It well may be, as Local 1 argues, quoting Whitfield v. United Steelworkers of America, 263 F. 2d 546, 551 (C.A. 5), cert. denied, 360 U.S. 902, that "Angels could do no more." It also may be that a labor organization which aspires to exclusive bargaining status could do no less and have its name on the ballot in a Board election. In any event, giving all credit to Local 1 for its reforms--the more noteworthy in view of its insistence on racial discrimination as recently as 2 months before the hearing--I believe that rescission of the certification is essential in the light of the record.

Among other reasons for rescinding the certification, rather than amending it so that it would run only to Local 1, is the fact that the certification ran jointly to Local 1 and Local 2, and both Locals are still in existence. They jointly achieved certified status following a contest with the Steelworkers, but it is by no means a certainty that Local 1, after abandoning its policies of segregation, can obtain majority support. 12/

12/ Local 1 had between 900 and 1,000 members at the time of the hearing. At the meeting on the new contract, 37 members of Local 1 voted for it, 23 against, 43 abstained, and the rest were absent.

In this connection it should be noted that Steelworkers filed a petition in December 1962, when no contract existed between Local 2 and the Company, and when Local 1's contract, assuming that it had any vitality, did not bar the Steelworkers from raising a question concerning representation because the contract discriminated on racial lines. Pioneer Bus, supra. The present contract which appears to contain no racially discriminatory provisions was executed after the filing of the Steelworkers' petition, and I believe that under those circumstances the Board should not extend or amend a certification which was vulnerable to rescission and under challenge from another labor organization at the time the new contract was signed.

In A. O. Smith Corp., 119 NLRB 621, the Board rescinded a certification for 6 months because the certified union had failed to represent all employees in the unit. Apparently the Board felt that such disregard of the duty of fair representation should be met with rescission of the certification although there was no reason to believe that the union in that case would have acted unfairly in the future. The far more egregious conduct shown on this record should result in no lesser action.

In the light of the long history of racial discrimination at the Hughes plant, a history in which the Steelworkers and the Company, as well as the Independent Metal Workers Union, have played, in varying degrees, something more than acquiescent roles, I further recommend that in any future representation proceedings involving this plant the Board make it inexorably clear to all participants that the Board will not tolerate, racially discriminatory practices on the part of any union which it certifies. I recommend, therefore, that the Board require, as a condition of certifying any labor organization at the plant, that the certified organization post in its offices and on all plant bulletin boards on which it has permission to post notices, the following notice:

NOTICE TO ALL EMPLOYEES

> This labor organization has been certified by the National Labor Relations Board as the bargaining representative of the employees in the unit described below. The certification is conditioned upon our not discriminating against any employee because of his race or color, both with respect to membership in this labor organization on terms fully equal to those afforded any member and with respect to terms and conditions of employment and opportunities for advancement under any contract we may negotiate with management. Any person who believes that this labor organization is not observing a policy of nondiscrimination should bring the matter to the attention of the National Labor Relations Board, Washington 25, D. C., or the Board's Regional Office in Houston.

The above should be followed by a description of the unit, and by the name of the labor organization and the handwritten signature of its president. Such notice should remain posted during the life of the certification, not merely for 60 days nor even 1 year. Whether a similar notice should be required in subsequent certifications is a matter which may be left open, perhaps pending the advice at that time of the Regional Director.

RECOMMENDED ORDER

Upon the foregoing findings of fact and conclusion of law, and upon the entire record in this case, I recommend that the Respondent,

Independent Metal Workers Union, Local No. 1, its officers, agents, successors, and assigns, shall: 13/

1. Cease and desist from:

(a) Restraining or coercing employees in the exercise of their rights under Section 7 of the Act by failing or refusing to handle or investigate their grievances where such failure or refusal is occasioned by considerations of race, color, or union membership.

(b) Causing or attempting to cause Hughes Tool Company to discriminate against any employee by making or enforcing agreements which provide benefits to employees who are members of Local 1 or are eligible for membership, while withholding like benefits from employees to whom membership is unavailable.

(c) Refusing to bargain on behalf of any or all employees in the bargaining unit by failing or refusing to handle or investigate a grievance filed by a member of the bargaining unit where such failure or refusal is caused by the employee's race or color or union membership, or is caused by a belief that the grievance is ill-founded because of the employee's race or color or union membership.

2. Take the following affirmative action which is necessary to effectuate the policies of the Act:

(a) Upon request, investigate and handle grievances filed by Ivory Davis or any other member of the bargaining unit, without regard to the race, color, or union membership of the grievant.

(b) Post at its business office, meeting hall and all places where notices to members of the Respondent Union are customarily posted (including all such places in the Hughes plant) copies of the notice attached hereto as an Appendix. 14/ Copies of said notice, to be furnished by the Regional Director for the Twenty-third Region, shall, after being duly signed by an authorized representative of Respondent, be posted by it immediately upon receipt thereof and be maintained for a period of 60 consecutive days thereafter in conspicuous places including all places where notices to members are customarily posted. Reasonable steps shall be taken by it to ensure that said notices are not altered, defaced, or covered by any other material.

(c) Mail to said Regional Director signed copies of said notice for posting by Local 2, if that Local so desires, in places where notices to its members are customarily posted.

13/ Provisions 1(a) through 2(a) of this Order shall be inapplicable when Respondent shall not be the representative of the employees in an appropriate unit, pursuant to Section 9(a).

14/ In the event that this Recommended Order be adopted by the Board, the words "AS ORDERED BY" shall be substituted for the words "AS RECOMMENDED BY A TRIAL EXAMINER OF" in the notice. In the further event that the Board's Order be enforced by a decree of a United States Court of Appeals, the words "A DECREE OF THE UNITED STATES COURT OF APPEALS ENFORCING AN ORDER OF" shall be inserted immediately following the words "AS ORDERED BY."

(d) Notify said Regional Director in writing, within 20 days from the receipt of this Intermediate Report and Recommended Order, what steps it has taken to comply herewith. 15/

5 Dated at Washington, D. C.

Frederick U. Reel

Frederick U. Reel
Trial Examiner

55 15/ In the event that this Recommended Order be adopted by the Board, this provision shall be modified to read: "Notify said Regional Director, in writing, within 10 days from the date of this Order what steps Respondent has taken to comply herewith."

APPENDIX

NOTICE TO EMPLOYEES OF HUGHES TOOL COMPANY

AS RECOMMENDED BY A TRIAL EXAMINER OF
THE NATIONAL LABOR RELATIONS BOARD

and in order to conduct our union as required by the National Labor Relations Act, we notify you that in the event we should become the bargaining representative of the employees:

WE WILL NOT execute any contract which discriminates among employees as to job opportunities, or any other term or condition of employment, because of race or color.

WE WILL investigate and handle any grievance brought to us by an employee without regard to his race or color.

INDEPENDENT METAL WORKERS
UNION LOCAL NO. 1
(Labor Organization)

Dated _____ By _____
(Representative) (Title)

This notice must remain posted for 60 consecutive days from the date of posting, and must not be altered, defaced, or covered by any other material.

Employees may communicate directly with the Board's Regional Office, 6617 Federal Office Building, 515 Rusk Avenue, Houston 2, Texas (Tel. No. Capitol 8-0611, Ext. 296), if they have any question concerning this notice or compliance with its provisions.

W. J. Durham, Esq., Dallas, Tex., by E. Brice Cunningham, Esq., for Local 1368.

Before: Thomas N. Kessel, Trial Examiner.

TRIAL EXAMINER'S DECISION

Statement of the Case

Upon the filing of a charge on April 29, 1963, by Local 1368, International Longshoremen's Association, AFL-CIO, herein called Local 1368 against South Atlantic and Gulf Coast District, International Longshoremen's Association, AFL-CIO, herein called the District, and against Local 1367, International Longshoremen's Association, AFL-CIO, herein called Local 1367, the General Counsel of the National Labor Relations Board, herein called the Board, by the Regional Director for the Twenty-third Region, issued a complaint on May 13, 1963, alleging that the District and Local 1367 had engaged in and were engaging in conduct violative of Section 8(b)(1)(A), (2) and (3) of the National Labor Relations Act, 61 Stat. 136, herein called the Act. By amendment to the complaint Galveston Maritime Association, Inc., Houston Maritime Association, Inc., and Master Stevedores Association of Texas, herein collectively called the Association, were named Parties to the Contract. By their answers duly filed the District and Local 1367 in substance deny the complaint allegations of statutory violation. Pursuant to notice a hearing was held July 23, 24 and 25, 1963, at Brownsville, Texas, before the undersigned Trial Examiner. All parties except the Parties to

the Contract were represented by counsel. Briefs filed by the General Counsel, Local 1367, and the Charging Party after the close of the hearing have been considered.

Upon consideration of the entire record and from my observation of the witnesses, I make the following:

Findings and Conclusions

I. The pertinent commerce facts

The complaint alleges and Local 1367 and the District, herein collectively called the Respondents, admitted at the hearing that owners and operators and/or agents of deep sea vessels including but not limited to Port of Brownsville Stevedoring Company, Border Stevedoring Company, Lykes Bros. Steamship Co., Inc., Lallier and Company, Dix Shipping Company, and Plitt and Company, arriving at and/or departing from ports in Texas, including the Port of Brownsville, Texas, are members or associate members of Galveston Maritime Association, Inc., and/or Houston Maritime Association, Inc., and/or the Master Stevedores Association of Texas. It is further alleged and admitted that the foregoing assocations are and have at all times material herein been Texas corporations; that Galveston Maritime Assocation has its principal office and place of business in Galveston, Texas; that Houston Maritime Assocation, Inc., and Master Stevedores Association of Texas have their principal place of business in Houston, Texas; that the foregoing associations are associations of employers engaged in the loading and discharging of vessels in the ports of Texas including the port at Brownsville, Texas; that these associations exist for the purpose, inter alia, of negotiating and administering collective-bargaining agreements on behalf of their employer members with various labor organizations including the District, Locals 1367 and 1368, and the International Longshoremen's Association, AFL-CIO, herein called the ILA, and are now operating under the terms of a collective-bargaining agreement with these named labor organizations; that during the year preceding issuance of the complaint the employer members of the foregoing associations in the course of their operations furnished stevedoring services to steamship companies operating vessels in interstate and foreign commerce valued in excess of $500,000, and that Strachan Shipping Company, an employer member of all three foregoing associations, during the same period furnished stevedoring services to steamship companies operating vessels in interstate and foreign commerce valued in excess of $100,000. It is further alleged and admitted that the foregoing employers are engaged in commerce within the meaning of the Act. Accordingly, I find the purpose of the Act will be effectuated by the assertion of the Board's jurisdiction in this case.

II. The labor organizations involved

The District and Locals 1367 and 1368 are labor organizations within the meaning of the Act.

III. The unfair labor practices

Principally at issue are provisions in a labor contract allocating to two unions, one Local 1367 with an all white membership, and the other Local 1368, with an all Negro membership, fixed unequal percentages of work which may be referred by each to employees seeking jobs through their respective hiring halls with the employer Parties to the Contract. The General Counsel and Charging Party contend that the District and Local 1367 by maintaining and enforcing these contractual provisions are violating Section 8(B)(1)(A), (2) and (3) of the Act. The Respondents, particularly Local 1367, maintain that the foregoing work division is not discriminatory but instead represents a fair and equitable sharing of available work between the two racial groups. They further claim that the complained of

quotas may not be found to discriminate against Local 1368 because it had voluntarily agreed to them and had accepted them over the years. The Respondents furthermore disclaim responsibility for the establishment and maintenance of the foregoing quotas and attribute their creation to the ILA which is not a party to this proceeding. The failure to join the ILA as a party, they say, is a fatal defect requiring dismissal of the complaint.

A second issue involves the seizure of control over Local 1367 by an administrator appointed to run its affairs by the ILA at the behest of the District. Allegedly, the District's action was reprisal against Local 1367 because it had filed the charge in this proceeding. Thereby, contend the General Counsel and Charging Party, the District violated Section 8(b)(1)(A) of the Act. Apart from the denial in the District's answer that it had engaged in the conduct ascribed to it or that such conduct in this case was violative of the Act, the only explicated defense is the one made at the hearing, namely, that the trusteeship imposed over Local 1367 was lawful because this was done in accordance with the provisions of the constitution of the ILA and of Local 1368.

The ILA services its total membership through lesser affiliated organizations each with varying degrees of autonomy. Below the level of the parent organization are the districts with jurisdiction over the local organizations within their geographical ambits. The South Atlantic and Gulf Coast District, as implied by its name, has authority over an area comprising the ports on the South Atlantic and Gulf of Mexico. Included therein are the ports of Brownsville, Harlingen and Port Isabel all of which are located in Cameron County, Texas, at the southernmost part of that State on the Gulf of Mexico. The local organizations which by charter or other authorization from the ILA have jurisdiction over the longshore work at these ports are Locals 1367 and 1368. The alleged unlawful work quotas pertain to the longshore work which may be referred by Locals 1367 and 1368 at the three ports above mentioned, 75 percent by the former and 25 percent by the latter.

A contract, effective October 1, 1956, and which by its terms was to have terminated on September 30, 1959, was concededly made with the employing shipping and stevedoring companies operating in the Gulf Coast ports from Lake Charles, Louisiana, southward through all the Texas ports including the three ports under the jurisdiction of Locals 1367 and 1368. These are the companies referred to as the Association. The contract with the Association in evidence does not reveal who were the signators when it was made in 1956 but it does specify that the parties thereto are the Association, the ILA, and 26 designated affiliated locals including Locals 1367 and 1368. In 1959 the contract, with certain variations, was extended from October 1 of that year to October 1, 1962. Thereafter it was again extended until September 30, 1964. The document reveals that these extensions were signed in behalf of the District by its president ostensibly binding all the labor organizations privy to the original agreement.

By stipulation it is established that all employees of the Association engaged in deep sea longshore work at the ports from Lake Charles, Louisiana, southward to and including the Port at Brownsville, Texas, constitute a unit appropriate for collective bargaining within the Act's meaning. The ILA, the District, and all the ILA local organizations within the District from Lake Charles to Brownsville to which the foregoing employees belong are jointly the collective-bargaining representative of the employees in the foregoing appropriate unit. The joint bargaining representative performs the special function of negotiating a single contract with the Association for the unit employees. At the same time each local organization to which these employees belong autonomously performs services under its separate charter, constitution and bylaws for its particular members and in effect acts for these members as their collective-bargaining

representative in all respects in which such representative normally functions except for the negotiation of the unit contract which, as noted, is negotiated by the joint collective bargaining representative.

The only part of the 1956 contract relevant to the issues herein is contained in the section entitled "Hiring Halls." Provision therein is first made for the furnishing of longshoremen to service the needs of the Association through hiring halls operated and administered by the designated 26 local organizations. The section next provides that

> To assure that no discrimination will be made on account of race, it is agreed that the work will be divided between white and colored longshoremen, working in solid gangs of either white or colored on the same ratio basis as now exists in the respective ports covered by this agreement: Except that . . . Local 1368 to receive their proportion of work as agreed upon by the district office of the ILA.

These provisions were unchanged by the 1959 and 1962 extensions and were consequently continued as part of the extended agreement now in force. The complaint alleges and the Respondents admitted at the hearing that these provisions have at all times since October 1, 1956, been enforced and maintained by the Association, the District and Local 1367 as parties to the agreement.

It is the execution and the maintenance of the aforestated provision concerning the "proportion of work" to be received by Local 1368 which represents the crux of the case. To apprehend what is Local 1368's proportion and how it was determined requires consideration of the historical evidence which follows. To avoid any misconceptions it should be emphasized that this case is not concerned with the arrangement suggested by the foregoing contract for the division of work between ILA locals at any ports outside Cameron County. The General Counsel carefully assured the Respondents at the hearing it was not his intention in this proceeding to delve into conditions at these other ports and it was made clear that there would be no litigation of these matters in this case.

Before 1934 there were no ILA locals chartered in Cameron County. Construction was then proceeding of facilities for deep sea shipping at the Brownsville and Port Isabel ports and such longshore work as may have been available was only at the Port of Harlingen. Apparently, because of the expectation that the new facilities would provide work opportunities, Fred D. Wilson, a Baptist reverend at Brownsville, was inspired to organize a group of Negroes and to secure for them a local charter from the ILA. He obtained legal assistance and communicated with ILA President Ryan who referred him to District President Dwyer. The latter informed Reverend Brown that a charter could not be granted his group unless a corresponding charter were simultaneously granted to a local composed of white members. 1/

1/ The official record of the District's May 21, 1956, convention at Brownsville documents the facts concerning the creation of separate white and Negro locals in 1934 and the reasons therefore. It states

> In December 1934, during construction of the deep water Ports of Brownsville and Port Isabel, charters were issued by the International Union to Locals #1367, #1368, #1369, #1370, #1371, #1372 which consisted of three white and three colored locals. The necessity for this was the fact that the ILA rules at that time required that all Deep Sea Coastwise and Warehouse work be divided equally.

Locals 1369, 1370, 1371 and 1372 are chartered for Coastwise and Warehouse work. This case is not concerned with them.

Pursuant to these instructions Reverend Brown and his brethren organized the several Negro and white groups going so far as to lend the white locals the $10 payment for each demanded by the ILA for the charters which it granted.

Having secured its charter, Local 1368 engaged in a vain attempt to obtain longshore work at the Cameron County ports. It appears that employers were unwilling to employ its members because of their race, whereas Local 1367 did succeed in securing some work. There is no evidence to warrant any finding of responsibility on the part of the Respondents for the refusal in these years by the employers to give work to Negro longshoremen. This condition persisted and in 1940 the ILA revoked the Local 1368 charter because its members had no work and because no dues were received. The revocation was with the understanding that the charter would be reinstated as such time as there was need for more longshoremen in the area.

During the war years of the 1940s there was practically no longshore work at the Cameron County ports. In 1946, however, there was a dramatic resurgence in shipping at these ports and the interest of the Negro longshoremen in the area for work opportunities was rekindled. At the District's 1948 convention, a resolution was introduced for the re-issuance of the Local 1368 charter. There followed a 2-year investigation of the question with a recommendation in 1950 by the District for restoration of the charter. Local 1368's objective was not merely to regain its charter but also to share in the work then being obtained exclusively through referral by Local 1367. This matter was also studied by a subcommittee of the District's Executive Board. The minutes of the May 25, 1950, meeting of this subcommittee 2/ show the search for a formula by the committee for the sharing of Local 1367's work with Local 1368 at the Port of Brownsville and the decision of the subcommittee to resolve the question by a division of the work in accordance with the terms of an agreement devised by the subcommittee 3/ which provided that

> the General Longshore work at the port of Brownsville will be divided between the aforementioned locals (1367 and 1368) on a seventy-five percent (75%) and twenty-five (25%) basis.
>
> Local 1367 to dispatch three gangs each time Local 1368 dispatches one gang for work.

The agreement ultimately drafted and signed further provided that the foregoing arrangement was to become

> part of the present and all future contracts, and can only be changed by mutual consent of all parties concerned.

The foregoing minutes of the District's subcommittee meeting reveal the opposition by Local 1367's President Barton to the sharing of his organization's longshore work with Local 1368 for the stated reason that there was not enough work for both locals and that any diminution in Local 1367's work would constitute a hardship for its members. The persistence of the subcommittee to achieve a solution led to its conclusion that the agreement for the 75-25 percent arrangement should be made effective despite the opposition of Local 1367. Accordingly, as shown by the foregoing minutes,

---

2/ Appearing in the printed record of the proceedings of the District's Forty-First Annual Convention at Mobile, Alabama, May 21 to 24, 1951.

3/ Members of the subcommittee were also members of the District's Executive Board and included District President F. A. Yeager, Vice President W. M. Jones, and Assistant Secretary-Treasurer Dave Dennis.

It was unanimously agreed that the following agreement would be made an order of the District and if same would not be carried out the committee would recommend that the International revoke the charter of Local 1367 and use all of the resources of the International and the District to reorganize the Port of Brownsville.

The printed record of the District's Forty-First Annual Convention proceedings also contains an account of the resistance by Local 1367 to the subcommittee's action. After the 75-25 percent division was "recommended" to Local 1367, the plan was presented to its members who refused to concur in the recommendation. The District's Executive Board was so advised. Thereupon committees of Local 1367 and 1368 were informed the recommendation now was an "order" of the Board. In June 1950, the ILA notified Local 1367's president that the "policy" concerning the Local had been agreed upon by six International vice presidents and that the Local's membership must carry out that policy. In July the District's president and two Executive Board members met with Local 1367's president at Brownsville and were apprised by the latter that the Local's membership still refused to obey the Executive Board's order. Later that month, as a group consisting of a District subcommittee and the ILA Executive Board met with the employing companies at Brownsville to discuss the division of work ordered by the District Executive Board, the meeting place was picketed by a group led by Local 1367's president. Consequently, the District's president suspended the officers of Local 1367.

Ralph A. Massey, currently the District's president, assumed this office in 1954. Before then he had from 1947 been the District's secretary-treasurer. In his view the arrangement for the 75-25 percent division was accomplished by a committee designated by the ILA. To show further that this was action by the ILA rather than the District, he pointed to the fact that Alfred Chittenden, who in 1950 was a member of the District's Executive Board, was sent by ILA President Ryan to Brownsville as his special representative to obtain acquiescence in the plan by Local 1367 and 1368. It is to be noted in this respect that the document embodying the plan which was ultimately signed by the presidents of both locals states it was "attested to by a Special Representative of President Joseph F. Ryan I.L.A.," and bears Alfred Chittenden's signature as such representative.

The reluctant signature of Local 1367's president has been indicated. It should be added that Reverend Wilson also signed reluctantly in behalf of Local 1368, for a 25 percent share of the work fell short of his local's apparent aim to divide the work equally with Local 1367. 4/ ILA Special Representative Chittenden, however, prevailed upon Wilson to sign, albeit he did so under protest, with the encouragement that Local 1368 would thereby get its foot in the door and that the arrangement was not permanent.

Since the signing of the agreement and the incorporation of its terms in contracts with the Association, several attempts were made by Local 1368 to secure a more favorable revision of the work-sharing formula. Its appeals to the District and to Local 1367 have been unavailing. The District's 1956 convention at Brownsville referred various resolutions to a "committee" which considered and reviewed "all the facts, circumstances and evidence presented by the parties" and made recommendations which

---

4/ That Local 1368 sought an even split in the work is indicated from the position taken by President Barton of Local 1367 before the District's 1950 subcommittee. He suggested that unless all work in the District, presumably where dual locals exist along racial lines, were divided 50-50, Local 1367 would not give up any part of its work.

presumably were adopted by the convention. Among the resolutions was one, #13, calling for elimination of the "restriction of one-fourth of the work . . . and we work jointly, forward and aft, with other locals at said Ports in the same performance or class of work." The committee recommended rejection of the resolution and continuation of the status quo. It noted that

> The agreement, negotiated by International Representative, Al Chittenden, and consummated on August 6, 1950, was entered into by the parties in good faith, and therefore should continue to be binding and enforceable upon the parties until such time as they mutually agree otherwise. The committee finds that any change in the present status (25 percent colored--75 percent white) would cause chaos in other Ports where no such division of work exists.

As recently as 1962 and 1963, William O. Tisdale, the Local 1368 president, sought unsuccessfully to negotiate revision of the work sharing arrangement with District President Massey and Local 1367 President McCabe. Tisdale testified that the latter's response to his request in March or April 1963, for discussion of the subject was "this is the way that it is, and this was the way that his membership wanted it, and that was the way it was going to be." Although McCabe sought to refute Tisdale's claims that he had deliberately avoided certain meetings with him, he did not expressly deny that he had communicated the foregoing opposition to abandonment or revision of the work sharing plan. I credit Tisdale's testimony that McCabe had taken the position attributed to him.

Coupled with the work sharing formula is an arrangement which precludes the assignment of a white gang of longshoremen from Local 1367 and a Negro gang from Local 1368 to work side by side in a single hatch on a ship. Generally, only one gang is required to work in a hatch, but there are certain ships and cargoes which requires two gangs. On these occasions both gangs must be of the same race, necessarily from the same local. Because Local 1367 receives 75 percent of the work this means, stated otherwise, that it sends three gangs before Local 1368 sends one gang. If Local 1367 has already sent two gangs and has what is termed the next "out" for a third gang, and if the next out is for a gang to work in a double hatch, the local may choose to avail itself of the fourth out also so that both gangs in the hatch will be white. Local 1368 will eventually make up for the out it could not take in turn so that in the end it will receive its 25 percent share of the total work. Witnesses, however, claimed in its behalf that the arrangement results in the assignment to Local 1367's gangs of more lucrative work. Whether in fact the chance elements inherent in the arrangement produce this favorable result for Local 1367 at the expense of Local 1368 is not seriously disputed by the former which at the hearing and in its brief expressed its willingness to abandon the arrangement and to have its gangs work in the same hatch with Negro gangs. The brief goes so far as to invite a finding that the arrangement is violative of the Act.

There is no provision in the Association contract, nor has there ever been against doubling of white and Negro gangs in single hatches. Nor is this stricture contained in the work sharing agreement signed by the Locals. The arrangement originated, according to President McCabe, in 1950 when the 75-25 percent agreement was reached. Special Representative Chittenden and District President Yeager had then recommended that the turmoil and hard feelings engendered in the course of extracting the agreement made it inadvisable to place gangs from both locals in one hatch. McCabe testified that the hard feelings of that time no longer exist and that no turmoil would ensue if gangs from each local worked together in a hatch. He acknowledged that since the arrangement was instituted his local has complied with it by refusing to permit its gangs to work in a single hatch with Local 1368 gangs.

Upon the filing of the charge in this case by Local 1368, District President Massey initiated his own charge with the ILA against the local for failure to pursue procedures consistent with constitutional requirements of the ILA. 5/ As a result the ILA immediately ordered the imposition of a trusteeship over the local. W. H. Hopkins, the District's assistant secretary and member of its executive board, was authorized to carry out the ILA's mandate and accordingly came to Brownsville for this purpose. In advance of his arrival he had informed Local 1368 President Tisdale to communicate with Massey. By telephone Massey stated his refusal to confer with the Local's representatives unless the charge were first withdrawn. This condition was rejected. Hopkins arrived at Brownsville the next morning and installed an administrator, Henry Washingtom from ILA Local 872 in Houston, and an assistant administrator, Lee Smith, who had been the local's financial secretary-treasurer. The local's president, board chairman, and business agent were stripped of their authority. Smith assumed the duties of business agent. Having taken these actions, Hopkins advised Local 1368 that if its charge were withdrawn the ILA would remove the administrator.

Although Hopkins stated that the expense of operating Local 1368 during its trusteeship would be borne by the District, the record shows that additional expenses resulting from this action have been imposed on the local. Thus, the administrator at first received a weekly expense payment of $50, but from July 1, 1963, was paid a weekly salary of $154 in addition to the foregoing expense payment. Before imposition of the trusteeship only two persons received payments from the local for services. The business agent received $90 weekly salary plus $14 for expenses, and the secretary-treasurer received a weekly salary of $41. Funds for the additional expenses were derived from the initiation fees obtained from 13 new members admitted to the local by the administrator. In according these persons membership, the administrator did not abide by the constitution and bylaws of the local which provide for admission of members upon a favorable report from the local's Investigating Committee followed by election to membership by a vote, ostensibly by the local's members.

In the experience of Local 1367 President McCabe as a member of his organization since 1942 no Negro has ever applied to it for job referral. He maintained that if a Negro were to apply he, as president, "would have to give him consideration within the law," the same as any other person. 6/ Questioned how his organization could possibly refer a Negro to a job in an otherwise solid gang of white persons in view of the contractual provision calling for solid white or Negro gangs, he testified "Well, I would feel that if that part of the contract were illegal, we wouldn't be violating anything." On the other hand, Local 1368's president, Tisdale, related an incident in 1961 when his organization filled out a gang of Negroes with two white longshoremen. When the mixed gang appeared on the dock Local 1367's president at the time, T. T. Curry, protested to the then Local 1368 President Kirby that the integrated gang violated the contractual requirement for solid gangs. Homer White, Local 1367's business agent

---

5/ Neither the ILA constitution nor any other document relating to the procedures invoked by Massey's charge are in evidence. Massey's testimony indicates that Local 1368 should have been but was not furnished a copy of the charge he filed with the ILA.

6/ McCabe claimed that referrals by Local 1367 are governed by its seniority system based on years of employment through Local 1367 and Cameron County residence. Asked whether this system had been operative before 1963, he replied it had in that year for the first time been put in writing but that no change was thereby made.

at the time, recalled Curry's protest to Kirby. He inconsistently testified first that Kirby had protested because of the integration of the gang, and then testified that he did not protest for this reason but because Local 1368 had filled out its gang by procuring men from the unemployment office while there were Local 1367 longshoremen available. His confusion does not permit reliance on his testimony. I credit Tisdale's account that Curry had objected to the integration by Local 1368 of its gang because this was forbidden by the contract.

Although, as stated, Locals 1367 and 1368 were created as racially segregated unions, there are no constitutional, charter or bylaw provisions preventing either from accepting in membership persons regardless of race. Nevertheless, no white person has even applied to Local 1368 for membership, nor has a Negro applied to Local 1367. Racial segregation of these locals is not unique within the District. Although there are no ILA or District organic provisions compelling it, all locals within the District from Lake Charles, Louisiana, to Brownsville, are racially segregated. Negroes comprise 75 to 80 percent of the membership of these locals.

Local 1368 has never sought to become integrated. I do not regard this circumstance as proving a desire to remain segregated. Nor do I find such desire established by the document dated April 23, 1963, signed by its members denoting their intention to file the charge in this proceeding in order to obtain an equal division of work with Local 1367.

Relative to the defense that the 75-25 percent division relates equitably to the numbers of available white and Negro workers in the area, I have noticed, as requested, that the 1960 United States Census shows that in Cameron County, Texas, there are 45,857 male workers 14 years of age or older, and, of these, 45,366 are white and 491 are not white.

Counsel for Local 1367 asserted at the hearing that the 1950 quota agreement made with Local 1368 was intended to provide work for Cameron County, Texas, residents. He maintained then and in his brief that the agreement was breached by Local 1368 which imported Negroes from localities outside Cameron County. This assertedly was done to supplement the local labor pool which was insufficient to man all the jobs of the 25 percent share of the work allocated to Local 1368. Thus, according to the analysis of Local 1367 President McCabe, of 425 persons who sought referrals through Local 1368 from 1950 through 1962 only 74 listed addresses which indicated they were Cameron County residents. 7/ McCabe's analysis showed further that in 1963 up to the time of the hearing 171 persons had sought referrals from Local 1368 and that of these only 43 persons could with certainty be regarded as Cameron County residents. Local 1367 Business Agent Beene testified that 2,246 persons had sought referrals from Local 1367 from 1953 through 1962 and that of these all but 120 were Cameron County residents. McCabe testified that in 1963 up to the time of the hearing 460 persons had applied to Local 1367 for referral and all but 6 resided in the county.

The longshore work at the Cameron County ports is seasonal. One of the employer members of the Association, F. A. Lallier, testified that during the slow season Local 1368 encounters difficulty providing men to fill out its quota of gangs whenever there is a "flurry" of business. Local 1367, he maintained, always has enough men in the slow season. Local 1368's

---

7/ Among the 74 were 35 persons who were members of Local 1368. The total membership of the organization is 65. The balance of the membership, in McCabe's opinion, did not show bona fide Cameron County addresses.

acting business agent, the aforementioned Lee Smith, testified he normally can provide enough longshoremen to fill his organization's quota. Although Local 1368 members may be working out of the area during the slow season to supplement their earnings, he can on short notice summon them and they will return in sufficient number ready to work on the docks.

Section 8(b)(1)(A)

It is now axiomatic that an exclusive collective bargaining representative is obligated by the Act fairly and impartially to represent all the employees for which it is the representative. The Wallace Corp. v N.L.R.B., 323 U.S. 248, 255; Hughes Tool Co., v. N.L.R.B., 147 F. 2d 69, 74 (C.A. 5). Furthermore, the Supreme Court has held in the Steele 8/ Wallace, 9/and Tunstall 10/cases, and the Board has so recognized in Larus 11/ and Hughes 12/ that the fair and impartial representation which the bargaining agent is duty bound to give all whom it represents does not permit unequal and discriminatory treatment of members of the bargaining unit in matters of employment on the basis of race, color, or creed.

Proceeding from the foregoing established principles, the Board recently, in Miranda Fuel Company, Inc., 140 NLRB 181, interpreted Section 7 of the Act as guaranteeing the right of employees "to be free from unfair or irrelevant or invidious treatment by their exclusive bargaining representative in matters affecting their employment." The Board thereupon declared that "Section 8(b)(1)(A) of the Act accordingly prohibits labor organizations, when acting in a statutory capacity, from taking action against any employee upon considerations or classifications which are irrelevant, invidious or unfair." Although the Board's order was denied enforcement by the United States Court of Appeals, for the Second Circuit, decided December 11, 1963, Docket No. 26232, only one of the three judges who participated in the case took a position on the 8(b)(1)(A) issue. The General Counsel theorizes in the instant case that the maintenance and enforcement by the District and Local 1367 of the contractual provisions for the 75-25 percent division of work between Locals 1367 and 1368 constitute unlawful conduct by the joint collective bargaining representative for which the District and Local 1367 are responsible, because these provisions discriminate against a class of employees in the represented unit (Negroes who must unequally with the white employees seek job referrals through Local 1368) on the irrelevant, invidious and unfair basis of race and that these labor organizations thereby have violated and are violating Section 8(b)(1)(A) of the Act. I agree.

The record permits no challenge to the claim that employees seeking referral to longshore jobs from Local 1368 are in the bargaining unit for which the ILA, the District and the 26 local unions at the ports from Lake Charles, Louisiana, to Brownsville, Texas, are the joint exclusive representative, and that Local 1367 is one of those local unions. It is further incontestably shown that the contract with its extensions covering these unit employees is between the Association and the joint bargaining representative. The banding of all these labor organizations for the common purpose of negotiating the labor contract constitutes them joint venturers and, as such, each is jointly and severally responsible for the collective action of the joint representative. If the contract and its maintenance

and enforcement infringe the Act, each constituent member of the joint bargaining representative, including the District and Local 1367, is a violator of the Act. That only the District and Local 1367 have been charged in this case and therefore are the only Respondents named in the complaint does not require its dismissal. Had all the members of the joint representative been charged and named as Respondents, findings of violations of the Act could also have been made against them. That they were not does not invalidate the proceeding against the District and Local 1367. While the ILA and the other local unions not named herein are proper parties, they are not indispensable parties. As explicated below in the remedy section of this decision, an appropriate remedy is feasible based on action which the District and Local 1367 shall be directed to take.

Local 1368 is racially segregated, not through choice but by compulsion. This fact is unaltered by the absence of ILA, District, or local constitutional or other regulatory provisions compelling racial segregation in local unions. The evidence is clear and uncontroverted that Local 1368 would not have received its charter in 1934 had it not agreed to exist as a union of Negro members only, just as Local 1367 was required to be a union of white members only. There is no reason to doubt that what was thus required when these unions were first chartered is still the condition governing their existence. Everything which has transpired within the framework of the District, as evidenced by the documented reports of its conventions and committee studies, the contract with the Association, and the admissions of District President Massey, reflect that segregration in membership of locals by race within the District from Lake Charles to Brownsville is a uniform condition. I stated at the hearing, and, because I have been so reminded by brief from Local 1367, I repeat that in this proceeding the statutory validity of the mere racial segregation of membership in the District's locals has not been raised. This circumstance is relevant only to the extent that such racial segregation coupled with other conduct, as alleged in this case, infringed statutory rights of employees. I proceed to a consideration of such other conduct and how together with the racial segregation of Negroes in Local 1368 it resulted in the violations alleged by the complaint.

While the labor contract with the Assocation does not set out the 1950 work-sharing agreement between Locals 1367 and 1368, the reference in it to the "proportion of work as agreed upon by the district office of the ILA" is an obvious incorporation into the contract of the terms of the agreement. It means that by the contract, as stated in the agreement, the longshore work at the Cameron County ports is to be allocated on the basis of 75 percent to Local 1367 and 25 percent to Local 1368. This disparate distribution is prima facie discriminatory and no facts have been presented by the Respondents to show otherwise. Because of their race, Negroes are denied the opportunity to fill more than 25 percent of all the jobs allocated to Locals 1367 and 1368. The plain language of the contract reveals that it would be futile for a Negro to seek referral through Local 1367 notwithstanding the insistence of its president, McCabe, that a Negro applicant would receive the same consideration as any other person. McCabe could not accord equal consideration without a breach of the contract requirement that longshore gangs be solid white or Negro. If, as proved, Local 1367 had protested and prevented Local 1368's one attempt to breach this requirement by mixing a gang, how can I be persuaded that Local 1367 would itself similarly disregard the contract? I am not. Furthermore, it is conceded that the Respondents are in fact maintaining and enforcing the contract, and I construe this concession to mean the contract in its entirety. Thus, inevitably Negro applicants are limited to the one-quarter share of the work which the contract allocates to Local 1368.

I find no mitigation of this apparent discrimination in the statistics developed by the Respondents purporting to show that the 75-25 percent quotas equitably distribute available work on the basis of existing

numbers of white and Negro employees in the area. The census figures indicating an overwhelming white male working population as opposed to the Negro male workers in Cameron County shed no probative light on the actual numbers of Negro longshoremen who, absent the restrictive 25 percent quota, would seek job referrals from Local 1368. Assuming, without accepting, the validity of quotas however accurately they may relate to numbers of job seekers, there has been no objective demonstration by the defense that the 75-25 percent quotas represents a perfectly proportionate job distribution among all employees. Without such perfection there is necessarily some degree of discrimination. It could hardly be imagined that there has been no fluctuation in the ratio of white and Negro longshoremen seeking employment through both locals since the quotas were established in 1950. Surely, the quotas were from time to time less than perfect and hence discriminatory. Of course this must have happened and will on almost any given day or hour of any day. Even if the quotas could by some mathematical wizardry be adjusted from day to day or hour to hour as the numbers of workers in the racial groups vary, the accomplishment of such adjustment may not reasonably be expected, for the 1950 agreement, and hence the contract with its current extension, provides that the quotas shall not be changed without the "mutual consent of all parties concerned." This necessarily requires the consent of Local 1367 which its president has emphatically declared will never be given. It is useless in the face of this clear fact even to probe the remote possibility that relative numbers of white and Negro employees could in some unfathomable way ever in this case be a valid factor in setting nondiscriminatory quotas. 13/

There is no evidence to support any claim that the 1950 quota agreement committed Local 1368 to prefer Cameron County residents in filling its 25 percent quota. I doubt whether Local 1367 ever applied such criterion in referring applicants to jobs. But whether it did is inconsequential. It had no authority by agreement or otherwise to require Local 1368 to follow suit. Thus, I perceive no significance in the statistical studies presented by Local 1367 to show that large percentages of members or persons referred to jobs by Local 1368 did not have bona fide Cameron County residence. Whether these persons lived in Cameron County or elsewhere does not affect their status as employees in the bargaining unit which they acquired when they received employment through Local 1368. The duty of their bargaining representative to represent them fairly is not dependent upon their residence but their inclusion in the unit.

The Respondents can find no defense in their contention that the 1950 agreement was voluntarily made by Local 1368 and that that local has in the ensuing years acquiesced in and ratified jurisdiction over work quotas thereby established. In the first place the facts clearly show that the quotas were decided upon by a subcommittee of the District's Executive Board which ultimately "ordered" the signing by the locals of the agreement embodying these quotas. Furthermore, the record convincingly shows the frustrated attempts by Local 1368 up to the filing of the charge in this case to secure revision of the quotas by the District and Local 1367. I would not be persuaded that the conduct of the Respondents which unlawfully discriminated against represented Negro employees is defensible even if Local 1368 had voluntarily joined in or ratified that conduct. As a matter of fact it did not.

13/ It is possible as Local 1367's brief states, that "if anything, taking twenty-five percent of the work from 1367 and giving it to 1368 discriminated against Local 1367." The danger and futility of quotas is thus exposed. The Act is violated regardless of who is the victim of discrimination.

Nor may the Respondent obtain exoneration by shifting responsibility for the 1950 agreement to the ILA. Again, the facts disclose that the agreement is the handiwork of the District which called upon the parent organization to force acceptance of the agreement by Local 1367 when that organization resisted. This step was obviously necessitated because the strenuous opposition of the local required the parent's exercise of the authority which it, not the District, possessed to take over the administration of a rebellious local and to run its affairs with a trustee. In any event, it matters not in this case which labor organization was initially responsible for the creation and imposition of the quotas on the unwilling or even willing locals. What counts is the fact that the 1956 contract and the 1959 and 1962 extensions of that contract by the joint bargaining representative incorporated these quotas and that, as above stated, the District and Local 1367 are jointly and severally responsible for these actions and for the maintenance and enforcement of these quotas now established by contract.

Because the quota provisions in the contract unfairly deprive employees in the bargaining unit of an equal opportunity with all other represented employees to obtain available longshore work, and because this inequality of opportunity is based upon the irrelevant, invidious and unfair consideration of race, I find, in accord with the Board's Miranda principle, that the District and Local 1367, by maintaining and enforcing the foregoing contract provisions, have failed to comply with their duty to represent all employees in the bargaining unit fairly and impartially, and thereby violated Section 8(b)(1)(A) of the Act.

I further find that by maintaining and enforcing the no doubling arrangement forbidding the assignment of white and Negro gangs to work together in ship hatches the District and Local 1367 have violated Section 8(b)(1)(A) of the Act. I am persuaded by the testimony of the General Counsel's witnesses that the arrangement places an additional earnings limitation on Negro longshoremen seeking referral to jobs from Local 1368. Here, also, the discrimination against these employees is based on the irrelevant, invidious and unfair consideration of race. Although it has not been shown that the arrangement was expressly negotiated by the joint bargaining representative with the Association it has nevertheless been accepted by both parties as a condition of employment for the affected employees as though they had bargained for it. Any other conclusion would be unrealistic in the face of the conceded facts that the arrangement has endured for approximately 13 years, and was conceived and instigated by the ILA special representative and the District's president concomitantly with the 1950 quota agreement. No party concerned with these quotas or conditions of employment of the unit employees could during all these years have been unware of the existence and operation of the no doubling agreement. In these circumstances I must regard the arrangement as a condition which the joint bargaining representative maintains and enforces with the Association in its capacity as representative for the affected employees. Because of the discrimination by their representative against the Negro employees seeking referral from Local 1368 in the manner stated, I find that the joint bargaining representative, and consequently the District and Local 1367, have failed in violation of Section 8(b)(1)(A) to abide by the duty to represent all employees in the bargaining unit fairly and impartially.

From the credited testimony of the General Counsel's witnesses, I find that the District's initiation of action with the ILA against Local 1368 to impose a trustee or administrator over its affairs and to strip its officers and membership of their normal authority to run the business of their organization, was an act of reprisal against the local for filing the charge in this case with the Board, and was further intended to force the local to withdraw the charge. That the District's action may have been pursuant to the constitutions of the ILA and Local 1368 does not excuse its

conduct. By this conduct the District restrained and coerced employees in violation of Section 8(b)(1)(A) of the Act.

Section 8(b)(2)

The Act provides in Section 8(b)(2) that it shall be an unfair labor practice for a labor organization to cause or to attempt to cause an employer to discriminate against an employee in violation of Section 8(a)(3). The specific unlawful conduct attributed by the General Counsel to the District and Local 1367 is their refusal to "correct their discriminatory practices and policies based on racial and membership considerations." This refusal, according to the General Counsel, "caused the continuance of the complained of conditions" in the case, presumably the discriminatory quota provisions of the contract applicable to Local 1368. The General Counsel's theory, as I understand it, asserts that the application of the 75-25 percent quotas in the contract, based on race and union membership, discriminates against employees in violation of Section 8(a)(3) of the Act; that it was within the means of the District and Local 1367 to accomplish a termination or modification of this discriminatory condition; that they were requested by Local 1368 to do so but refused, and that by such refusal they caused the employer (the Association) to continue the discriminatory condition in violation of Section 8(a)(3), and that they thereby violated Section 8(b)(2) of the Act. I do not rely on the General Counsel's factual presentation or his theorization in concluding that the Respondents violated Section 8(b)(2) of the Act. I rely instead on a different approach, based on litigated facts, which shows more directly that the Respondents are responsible for the inclusion of the discriminatory quotas in the contract and their maintenance and enforcement.

The documentary record of the District's proceedings at its Forty-First Annual Convention, adverted to in the earlier recital of facts, reveals clearly that the Association was not involved in the formulation of the work sharing quotas for Locals 1367 and 1368. Nor is there any evidence to show that the Association had any interest in the establishment of these quotas or their inclusion in the 1956 contract and the 1959 and 1962 extensions of that contract. I infer from the facts in this case that the inclusion of the quotas in the contract is attributable to the special interest and instigation of the joint bargaining representative of the covered employees. I find that as the joint bargaining representative was the proponent of the quota provisions in the contract it caused the Association to establish them as a condition of employment affecting the Negro longshoremen referred by Local 1368. The contract in evidence states on its covering page that the 1962 extension was actually accomplished on January 25, 1963, approximately 3 months before the filing of the charge in this case on April 29, 1963. It is, therefore, proper within the limitations of Section 10(b) to look to the conduct of the joint bargaining representative at the time of the last extension to determine whether the Respondents at that time infringed the Act.

The General Counsel relies on the Board's Miranda decision, supra, as precedent for a finding that the Respondents by their conduct violated Section 8(b)(2). The General Counsel has excerpted from the majority opinion in Miranda the statement that a union violates Section 8(b)(2) and an employer Section 8(a)(3) when "for arbitrary or irrelevant reasons or upon the basis of an unfair classification the union attempts to cause or does cause an employer to derogate the employment status of an employee." This generalization provoked disagreement from the Board minority in Miranda which pointed out that the literal language of Section 8(b)(2) and 8(a)(3) and controlling Supreme Court cases "require something more than disparate treatment based upon 'arbitrary,' 'irrelevant,' or 'unfair' criteria. The 'something more' is that the discrimination must be 'to encourage or discourage membership in any labor organization.'" What generated this difference among the Board's members is the Supreme Court's

decision in Local 357 14/ which commented at length on the meaning of the Court's Radio Officers 15/ holding on which the Board majority in Miranda relied in postulating the foregoing excerpted principle and in reaching its conclusion in the case that Section 8(b)(2) and 8(a)(3) had been violated.

The Board minority in Miranda was critical of the majority holding because it assertedly reasoned to a conclusion that 8(b)(2) and 8(a)(3) had been violated without record evidence that "the action of the Union or the Company was motivated by a desire to encourage or discourage union membership." The minority maintained that the majority had substituted for such essential evidence an inference of motivation to encourage or discourage from the circumstance that "such desire . . . was a 'foreseeable' result of the Union's conduct." This, claimed the minority, disregarded the Supreme Court's admonition in 8(b)(2) and 8(a)(3) cases that "there must be evidence in the record--upon which the Board can reasonably conclude that the real purpose" for the action which affects the status of employees is to encourage or discourage union membership. The Board's majority opinion took note of this criticism and insisted that it had adhered to the Supreme Court's holdings in Radio Officers and Local 357. It said:

> "As we read Local 357, the Supreme Court did not overrule its holding in Radio Officers that union membership is encouraged or discouraged whenever a union causes an employer to affect an individual's employment status. What it does hold, in our opinion, is that an 8(a)(3) or 8(b)(2) violation does not necessarily flow from conduct which has the foreseeable result of encouraging union membership, but that given such 'foreseeable result' the finding of a violation may turn upon an evaluation of the disputed conduct 'in terms of legitimate employer or union purposes.' Unlike our colleagues, we do not interpret the Court's opinion as permitting unions and their agents an open season to affect an employee's employment status for any reason at all--personal, arbitrary, unfair, capricious, and alike--merely because the moving consideration does not involve the specific union membership or activities of the affected employees. Our colleagues however, miss the essence of our position when they view our present decision as resting on the theory rejected by the Supreme Court in Local 357."

Enforcement of the Board's Miranda 8(b)(2) and 8(a)(3) findings was denied in a split decision by the United States Court of Appeals for the Second Circuit, decided December 11, 1963, Docket No. 26322. Judge Medina's opinion, with concurrence by Chief Judge Lumbard as to the 8(b)(2)-8(a)(3) issues, observed that Local 357 held

> it is necessary in a particular case to show that the acts complained of were done with the unlawful intent and purpose of encouraging employees to join the union. It is not enough merely to show that the employer discriminated among employees at the behest of the union. An unfair labor practice has been committed only if the discrimination is deliberately designed to encourage membership in the union.

There is no necessity for preoccupation with the differing views concerning Miranda and the Supreme Court's holding in Radio Officers and

---

14/ Local 357, IBT, et al. v. N.L.R.B., 365 U.S. 667.
15/ Radio Officers v. N.L.R.B., 347 U.S. 17.

Local 357. I can, without reliance on the Board's generalizations in the Miranda majority opinion to which I have been referred by the General Counsel resolve the 8(b)(2) issue before me. In concluding that the Respondents herein violated Section 8(b)(2) I rely on the Supreme Court's decision in Gaynor News Co., Inc. v. Labor Board, 347 U.S. 17, as to which there have been no conflicting post decisional views to cloud its meaning and present application. Indeed, Mr. Justice Harlan, in his concurring opinion in Local 357, with Mr. Justice Stewart joining, included certain clarifying observations as to the meaning of Radio Officers using Gaynor's facts and law to illustrate and emphasize. What he said there concerning Gaynor is particularly appropriate for application here. Mr. Justice Harlan elaborated upon what he deemed to be the Board's misconception of the Court's holding in Radio Officers. He noted that a "mere showing of foreseeable encouragement of union status is not a sufficient basis for a finding of violation of the Statute . . . that a finding of violation of Section 8(a)(3) or Section 8(b)(2) requires an affirmative showing of a motivation of encouraging or discouraging union status or activity." He observed, however, there are exceptions to the necessity for a specific finding of motivation to discourage union membership. These exceptions include absence in the record of proof by the employer "of a nondiscriminatory purpose," or a "significant business justification" for his act, or, "if a union or employer is to be permitted to take action which substantially--though unintentionally--encourages or discourages union activity, union or employer ends served by the action must not only be of some significance, but they must also be legitimate, or at least not otherwise forbidden by the National Labor Relations Act." The Court's decision in Gaynor was utilized by Mr. Justice Harlan to exemplify the meaning of his last stated exception. He said concerning it:

> In Gaynor an employer, who pursuant to a nondiscriminatory business end of paying the least wages possible, agreed with the union which was the statutory representative of the employees to give certain benefits only to union members, was prevented from asserting the justifying business reasons for thus encouraging union membership because of his complicity in the union's breach of its duties as agent for all the employees. Indeed, the fact that a nondiscriminatory business purpose forbidden by the Act cannot be used by an employer to justify an action which incidentally encourages union membership seems to me to be the true basis of the Court's holding in Radio Officers that an employer violates Section 8(a)(3) when a union forces him to take action to encourage union membership.

I am satisfied that Gaynor, particularly as the Court's decision in that case is explained by Mr. Justice Harlan, is controlling precedent for the 8(b)(2) issue of the instant case and compels the conclusion that this statutory section was violated by the Respondents herein.

As to whether the quota provisions of the contract, concededly maintained and enforced by the parties thereto, tended to encourage or discourage employees within the meaning of Section 8(a)(3), there can be no doubt. Radio Officers reflected that "it is common experience that the desire of employees to unionize is raised or lowered by the advantages sought to be attained by such action." The unequal benefits received under the contract by white employees through Local 1367 and by Negro employees through Local 1368 tend, in the light of "common experience," to encourage adherence to the former and to discourage adherence to the latter. Negroes confronted by apparent discrimination against them reasonably may be expected to conclude that they gain no advantage by membership in or adherence to the disfavored union. Poignantly, they must ask why they should belong to and pay dues to a union which fails to secure

for them work opportunities equal to those derived from the other union whose white members have more bountiful benefits. Realistically, they doubtless concede the lack of advantage of belonging to and paying dues to their union.

The discriminatory feature of the 75-25 percent quotas is so apparent to the foregoing employees that it must also be found that the encouragement or discouragement of union membership to their employer a natural and foreseeable consequence of the inclusion of these quotas in the contract. While the record does not show specifically that the Association intended by the inclusion of these quotas and their maintenance to encourage or discourage the union membership of its employees, this exact evidence is not a necessary predicate to the finding of an 8(b)(2) violation herein. The Gaynor principle explicated by Mr. Justice Harlan in Local 357 dispenses with need for such proof.

As stated, if the action by union or employer, intentional or not, encourages or discourages union activity, the union or employer end served by the action must be legitimate or otherwise not forbidden by the Act. In Gaynor the union breached its duty to act as agent for all represented employees by securing benefits only for union members. Here the joint bargaining representative also breached its duty as bargaining representative for all employees in the unit, Negro as well as white, by securing greater benefits for the white than for the Negro employees for reasons which were irrelevant, invidious and arbitrary and thereby, as found, violated Section 8(b)(1)(A) of the Act. In Gaynor, the employer's complicity in the union's breach of duty as bargaining representative was accepted by the Court as reason for sustaining the Board's denial to the employer of opportunity even to offer as a defense to his conduct that he was motivated by a legitimate business purpose and not a desire to encourage or discourage union activity. Here, had the Association similarly offered to show a nondiscriminatory purpose or significant business justification for its acts, its complicity with the joint bargaining representative would have been reason for excluding such explanation. Actually, the Association, though a party to the proceeding with notice, did not enter an appearance and there was consequently no explanation offered for its conduct.

Having found that the joint bargaining representative, and thereby the District and Local 1367, instigated the execution on January 25, 1963, of the contract's 1962 extension, including the discriminatory work quotas, that the Association was thereby caused to execute and to maintain and enforce the contract containing these provisions which naturally and foreseeably encouraged or discouraged union activities of its employees, and that no legitimate union or employer justification for these acts has been shown, I find and conclude that the Respondents by their conduct violated Section 8(b)(2) of the Act.

Section 8(b)(3)

The General Counsel and Charging Party contend that the Respondents violated the mandate in Section 8(b)(3) of the Act that a labor organization shall not "refuse to bargain collectively with an employer, provided it is the representative of his employees subject to the provisions of Section 9(a)." They maintain that the joint bargaining representative, and hence the Respondents, breached the duty imposed by Section 8(b)(3) when it made the agreement with the Association discriminating against Negroes required to seek job referrals from Local 1368. They appear to reason that Section 8(b)(3) compelled the joint bargaining representative to refrain from bargaining on any basis which did not accord all the represented employees fair and impartial treatment with respect to matters affecting their employment.

No theoretical explanation has been offered in the briefs to support the foregoing contention except that provided by Professor Archibald Cox, now United States Solicitor General, in his article in 2 Villanova Law Review 151. Acknowledging that the definition in Section 8(d) of the Act of bargaining collectively within the meaning of Section 8(b)(3) may suggest that the union's duty under that section runs only to the employer, 16/ and that there is no revealing legistative history, he nevertheless concludes that a union's "breach of the duty to bargain fairly (in behalf of all the represented employees) should be held an unfair labor practice." This view is predicated on his belief that "a congressman who was sympathetic to the policies of the amended act, who intended to impose a duty of fair representation and who foresaw the present issue, would have made breach of the duty an unfair labor practice remediable by the NLRB" because of the following four considerations:

> (1) Breach of any other obligation imposed by the NLRB, upon employer or bargaining representative, is an unfair labor practice. This is true of the general duty to bargain collectively. There was no reason for making a single narrow exception to the general policy of reliance upon administrative proceedings.
>
> (2) Although the issues are usually distinct, separating the issues raised by a single course of bargaining may be so artificial as to produce gaps or conflict and inconsistency. For example, whether an employer has violated his duty to bargain in good faith may depend upon whether the union's proposals violate its obligation to employees in the bargaining unit.
>
> (3) Even though the legal issues may sometimes have the broad character of constitutional questions familiar to the courts, the administrative process offers several advantages similar to its values in familiar unfair labor practices cases. Persons thoroughly familiar with industrial practices may be a little wiser in appraising the evidence, and applying general standards and even in pricking out new generalizations--new law--for future cases. Precedents are easier to distinguish and even to overrule. Problems can sometimes be solved more easily by conference and compromise prior to formal proceedings. A single agency is better equipped than scattered judges to project the development of standards of fair representation which will protect minorities without constricting normal negotiations.
>
> (4) The General Counsel prosecutes complaints of unfair labor practices because of the general public interest in effectuating the national labor policy. The public welfare equally requires action to prevent unions from using their statutory powers in order to gain unfair advantage for a dominant faction. Private suits are not an effective sanction unless financed by an organized group. Individual victims of unfair bargaining seldom obtained the skilled legal assistance necessary to bring litigation to a successful conclusion in a novel field of law.

16/ Section 8(d) provides in part "to bargain collectively is the performance of the mutual obligation of the employer and the representative of the employees to meet at reasonable times and to confer in good faith with respect to wages, hours, and other terms and conditions of employment . . . ."

Professor Michael I. Sovern of Columbia University, in an article published in 4 Columbia Law Review, Volume 62, was critical of the view expressed by Professor Cox that a breach of the duty to represent fairly should be held to be a violation of Section 8(b)(3). Concerning the foregoing article by Professor Cox he said,

> the difficulty with this view is that the context in which the words 'conferring in good faith' appear, gives repeated evidence of concern with the duties of employer and union to each other, but no evidence at all of concern with the duty of unions to those they represent. For one thing, as Cox himself noted, the statute speaks of the 'mutual obligation of the employer and the representative of the employees,' thereby implying that obligations to others are not the subject of this provision. For another, the duty to "confer in good faith" is imposed upon employers and unions alike. On its face, then, it imports comparable obligations and, of course, an employer can have no obligation comparable to the duty of fair representation. That the duty of unions to bargain collectively was intended merely to parallel that of employers is also suggested by the fact that 8(b)(3), which imposes the duty on unions, was added to the National Labor Relations Act as an obvious counterpart to Section 8(a)(5), which imposes it on employers. The duty to bargain collectively, then, probably does not include the duty to represent fairly.

I am persuaded by Professor Sovern's logical analysis that a labor organization's duty to bargain under Section 8(b)(3) runs to the employer, and that there is no duty under this section of the Act by a labor organization relative to the employees which it represents which if breached requires a finding that this section of the Act has been violated. Accordingly, I find that the Respondents have not violated Section 8(b)(3) of the Act and shall recommend dismissal of this allegation in the complaint.

In reaching the foregoing conclusion I have considered certain legislative history to which reference was made in the brief amicus filed by the American Civil Liberties Union, in the Hughes Tool Company, Case No. 23-CB-429, presently being reviewed by the Board on exceptions filed to the decision of a Trial Examiner. It was noted in that brief that Congressman Hartley in introducing H. R. 3020, the bill authored by him in 1947 to amend The Wagner Act, provided in its Section 8(b)(2) the following:

> (b) It shall be an unfair labor practice for an employee, or for a representative or any officer of a representative, or for any individual acting for or under the direction of a representative, or for or under the direction of any officer thereof . . . .
>
> > (2) in the case of a representative acting and currently recognized by the employer, or certified under Section 9, as the representative of employees, to refuse to bargain collectively with the employer; . . . .

Speaking on the floor of the House, Congressman Hartley stated after H.R. 3020 was reported out of committee, and referring particularly to the foregoing Section 8(b)(2),

> Now let us see what is in this Bill of Rights. Let us see if it oppresses the working man, or if it liberates him and gives him a voice, free of fear, in the affairs of a union that has over

him the power that The National Labor Relations Board gives to his exclusive bargaining agent. This Bill guarantees to him . . . .

Fourth. The right to require the union that is his bargaining agent to represent him without discriminating against him in any way or for any reason, even if he is not a member of the union--Section 8(b)(2).

The 8(b)(2) section in H.R. 3020 concerning which Congressman Hartley commented ultimately became, in effect, the 8(b)(3) section of the present Act, as amended. Accordingly, the brief amicus argues that Section 8(b)(3) should be construed to mean that a labor organization violates its provision when it fails fairly to represent all employees for which it is the bargaining agent.

I am not persuaded by the foregoing meager reference that Congress intended Section 8(b)(3) to have the effect proposed by the brief. Judge Medina, in his opinion in Miranda Fuel Co., Inc. (C.A. 2), decided December 11, 1963, (Docket No. 26232) had before him the same legislative history and dismissed its suggested significance with the following comment:

> The Legislative History of the NLRA is not particularly illuminating on the issue before us. If anything the various expressions of Congressional intent would seem to indicate that the duty of the union to bargain as set forth in Section 8(b)(3) is merely the counterpart of the employers to bargain, expressed in Section 8(a)(5), and does not in this context impose an additional duty of fair representation. Cf. 93 Cong. Rec. 4021 (1947), 2 NLRB, Leg. Hist. L.M.R.A., 1947 at 1025. Moreover, we think the remark of Congressman Hartley, 93 Cong. Rec. 3425 (1947), 1 NLRB, Leg. Hist. L.M.R.A., 1947 at 616, to the effect that Section 8(b)(3) requires the union to represent the workingman (without discriminating against him for any reason, even if he is not a member of the union), refers rather plainly to discrimination between members and nonmembers of the union.

I share this view.

I have searched the Legislative History of the Act's 1947 amendments and find no other comment by Congressman Hartley concerning the 8(b)(2) section in H.R. 3020 which would lead to a belief that if he had meant this section to create a duty by a union running to represented employees he maintained this purpose in pressing for the adoption of the section. Moreover, there is a conspicuous absence in the exhaustive section by section interpretation and analysis of H.R. 3020 submitted by Congressman Hartley to the House in behalf of the Committee on Education and Labor, House Report No. 245 on H.R. 3020, 80th Congress, 1st session. Concerning Section 8(b)(2) the Report said:

> By Section 8(b)(2), the bill requires a union or other representative that is acting as and is currently recognized as an exclusive representative of employees, by an employer, or that is certified as such a representative, to bargain collectively with an employer. The standards and definitions which have been discussed in relation to Section 2(11) apply in the case of unions, as well as in the case of employers. The duty to bargain now becomes mutual. This, the Committee believes, will promote equality and responsibility in bargaining.

The definitions of "bargain collectively" and "collective bargaining" contained in Section 2(11) and the explanation of these definitions in the

Report convincingly show that what Congress was concerned with was establishing mutuality of obligation between employer and union during the bargaining process and in effect set up standards for good-faith bargaining comparable to if not identical with those presently included in Section 8(d) of the Act as amended. Professor Sovern's analysis and comments concerning the meaning of Section 8(d) in relation to Section 8(b)(3) satisfy me that whatever meaning may be ascribed to the foregoing remarks by Congressman Hartley to Section 8(b)(3) of the Act as it finally emerged did not impose upon a union the duty to employees of fair representation ascribed to it in the brief amicus.

IV. The effect of the unfair labor practices upon commerce

The activities of the Respondents set forth in section III, above, occurring in connection with the operations of the Association described in section I, above, have a close, intimate, and substantial relation to trade, traffic, and commerce among the several States, and tend to lead to labor disputes burdening and obstructing commerce and the free flow thereof.

V. The remedy

Having found that the District and Local 1367 have engaged in and are engaging in conduct violative of Sections 8(b)(1)(A) and 8(b)(2) of the Act I shall recommend that they cease and desist therefrom and take certain affirmative action designed to effectuate the policies of the Act.

Ordinarily, a backpay remedy is recommended where findings are made of violation of Section 8(b)(2). Although the General Counsel and Charging Party have elaborated requests in their briefs for specific findings and remedies, no mention has been made of a recommendation for backpay. I do not regard this as an oversight. Rather, I am convinced that they do not believe such remedy is necessary to cure the fundamental vice in the Respondent's misconduct, namely, the denial to employees of equal opportunity in employment for the invidious reason of race and of fair representation by their collective bargaining agent. I, too, do not believe that a backpay remedy is either necessary or practical in this case, and am satisfied that the other remedial action by the Respondent herein recommended will sufficiently cure the effects of the unfair labor practices to satisfy the purposes of the Act. Accordingly, no backpay remedy shall be recommended.

I will not, as requested by the Charging Party, recommend that there be substituted for the unlawful 75-25 percent quotas in the contract 50-50 percent quotas for Locals 1367 and 1368, or any other mathematical quotas for the sharing of work by employees seeking referral through their hiring halls. I shall recommend no particular nondiscriminatory hiring system for adoption by the parties, but leave to them the formulation and adoption of an appropriate method for granting employees opportunity for work in accordance with the requirements of the Act.

I shall recommend that the District terminate its trusteeship over the affairs of Local 1368 and restore the conduct of the affairs of this organization to its duly constituted officials. I shall also recommend that the District reimburse Local 1368 for all expenses incurred by the trustee and paid by or chargeable to Local 1368 in excess of those expenses which would have been normally incurred by this organization in the management of its affairs. I shall not, as requested by the Charging Party, recommend revocation of membership of those persons accepted into membership during the trusteeship, as this is an internal matter which can effectively be resolved by Local 1368 after autonomy over its affairs has been restored. Nor shall I specifically recommend payment to the local of an amount equal to the initiation fees collected by the trustee from new members accepted by him in disregard of Local 1368 procedures for admitting new members. If,

after action by the duly constituted officers and members of Local 1368, the membership of improperly admitted persons is revoked, these persons may be required to look to the trustee or his principal for restitution of their initiation fees. In any event all revenues, including initiation fees obtained from such new members, shall be taken into consideration in the general accounting which must necessarily be made to determine what financial restitution must be made by the District to Local 1368.

Upon the basis of the foregoing findings of fact and upon the entire record in the case, I make the following:

Conclusions of Law

1. The Association is an employer engaged in commerce within the meaning of Section 2(6) and (7) of the Act.

2. The District and Locals 1367 and 1368 are labor organizations within the meaning of Section 2(5) of the Act.

3. By the extension on January 25, 1963, of the 1956 contract with the Association and by the maintenance and enforcement of the provisions in that extended contract which, in effect, allocate jurisdiction to Locals 1367 and 1368 over 75-25 percent quotas based on race and union membership of referrals to jobs with the employer members of the Association, the District and Local 1367 restrained and coerced employees in the exercise of rights guaranteed by Section 7 of the Act and thereby violated Section 8(b)(1)(A) of the Act.

4. By the conduct set forth in paragraph 3, above, the District and Local 1367 caused or attempted to cause the employer members of the Association to discriminate against employees in violation of Section 8(a)(3) of the Act and thereby violated Section 8(b)(2) of the Act.

5. By maintaining and enforcing an arrangement with the Association forbidding the assignment of gangs of white and Negro employees referred to jobs to work together in single ship hatches, the District and Local 1367 have restrained and coerced employees in the exercise of rights guaranteed by Section 7 of the Act and thereby violated Section 8(b)(1)(A) of the Act.

6. By causing the imposition of a trustee over the affairs of Local 1368 in reprisal for the filing of the charge in this case and to compel the withdrawal of the charge the District restrained and coerced employees in the exercise of rights guaranteed by Section 7 of the Act and thereby violated Section 8(b)(1)(A) of the Act.

7. The aforesaid unfair labor practices are unfair labor practices affecting commerce within the meaning of Section 2(6) and (7) of the Act.

8. The allegation of the complaint that the District and Local 1367 here violated Section 8(b)(3) of the Act has not been sustained.

RECOMMENDATIONS

Upon the basis of the foregoing findings of fact and conclusions of law and upon the entire record in this proceeding I recommend that:

A. Local 1367 and the District, their officers, representatives, successors, agents, and assigns each, shall;

1. Cease and desist from:

(a) Performing or giving effect to the provisions of the 1956 contract with the Assocation extended on January 25, 1963, which,

in effect, allocate jurisdiction to Locals 1367 and 1368 over 75-25 percent quotas based on race and union membership of referrals to jobs with the employer members of the Association.

(b) Maintaining and enforcing the arrangement with the Association forbidding the assignment of white and Negro employees to work together in single ship hatches.

(c) In any like or related manner restraining or coercing employees in the exercise of rights guaranteed by Section 7 of the Act.

2. Take the following affirmative action which I find will effectuate the policies of the Act;

(a) Notify the employer members of the Association who employ longshoremen at the Cameron County, Texas, ports that they do not insist upon performing or giving effect to the provisions of the 1956 collective bargaining contract with the Association extended January 25, 1963, in effect allocating to Locals 1367 and 1368 jurisdiction by 75-25 percent quotas over referrals to longshore jobs with these employers, and that they also do not insist upon performing or giving effect to the arrangement forbidding assignment of gangs of white and Negro employees to work together in single ship hatches.

(b) Post in conspicuous places at their business offices and meeting halls or other places where notices to their members are customarily posted copies of the notices attached hereto, marked Appendix A for Local 1367's notice and Appendix B for the District's notice. 17/ Copies of said notices, to be furnished by the Regional Director for the Twenty-third Region, shall, after being duly signed by representatives of Local 1367 and the District, be posted immediately upon receipt thereof and maintained for at least 60 consecutive days thereafter. Reasonable steps shall be taken by them to insure that said notices are not altered, defaced, or covered by any other material. With the permission of employer members of the Association who employ longshoremen referred to jobs at the Cameron County, Texas, ports, copies of said notices shall be posted by the Regional Director at their places of business where notices or communications to their employees are customarily posted.

B. The District, its officers, representatives, successors, agents, and assigns shall, additionally;

1. Cease and desist from:

(a) Causing the imposition of a trustee over the affairs of Local 1368, and refusing to withdraw or take necessary action to accomplish the withdrawal of the trustee thus imposed over Local 1368 unless it withdraws the charge filed in this case.

17/ In the event these Recommendations shall be adopted by the Board the words "A DECISION AND ORDER" shall be substituted for the words "THE RECOMMENDATIONS OF A TRIAL EXAMINER" in the notice. In the further event that the Board's Order be enforced by a decree of the United States Court of Appeals, the words "A DECREE OF THE UNITED STATES COURT OF APPEALS ENFORCING AN ORDER" shall be substitued for the words "A DECISION AND ORDER."

(b) In any like or related manner restraining or coercing employees in the exercise of rights guaranteed by Section 7 of the Act.

2. Take the following affirmative action which I find will effectuate the policies of the Act.

(a) Notify the International Longshoremen's Association, AFL-CIO, that it has caused it to impose a trustee over the affairs of Local 1368 in reprisal for the filing of the charge in this case and to compel its withdrawal of that charge, and that it desires the withdrawal of the trustee and restoration of authority to the officers and membership of Local 1368 to manage their own affairs.

(b) Make whole Local 1368 for all expenses incurred during the trusteeship in excess of those expenses which normally would have been incurred by Local 1368 in the management of its affairs by its own officers and membership.

C. Local 1367 and the District, their officers, representatives, successors, agents, and assigns each shall notify the Regional Director for the Twenty-third Region, in writing within 20 days from the receipt of this Decision what steps they have taken to comply herewith. 18/

Dated at Washington, D. C.

Thomas N. Kessel

Thomas N. Kessel
Trial Examiner

18/ In the event that these Recommendations are adopted by the Board, this provision shall be modified to read: "Notify the Regional Director for the Twenty-third Region in writing within 10 days from the date of the receipt of this Order what steps the Respondent has taken to comply herewith."

APPENDIX A

NOTICE TO ALL MEMBERS
OF LOCAL 1367
INTERNATIONAL LONGSHOREMEN'S
ASSOCIATION, AFL-CIO

PURSUANT TO

THE RECOMMENDATIONS OF A TRIAL EXAMINER

of the National Labor Relations Board, and in order to effectuate the policies of the National Labor Relations Act, we hereby notify you that:

UNION MEMBERSHIP BY STATE

Three States accounted for about 1 out of 3 union members in 1964: New York (2.5 million), California (1.9 million), and Pennsylvania (1.4 million). Illinois and Ohio also had more than a million union members each, according to estimates prepared by the U.S. Department of Labor's Bureau of Labor Statistics.

Total union membership in the U. S. amounted to nearly 17.2 million, of whom 14.1 million were in unions affiliated with the AFL-CIO, 2.6 million in national unaffiliated unions, and about 450,000 in unaffiliated local organizations.

The percent of employees in nonfarm establishments organized in each State ranged from a high of 43 percent in Washington (367,000 union members out of 853,000 employees) to about 7 percent in North Carolina (89,000 out of 1,341,000). The national ratio was about 30 percent of the 58,188,000 nonagricultural work force. The proportion organized in States without right-to-work laws was almost twice the proportion in States with such laws—34 percent as against almost 15 percent.

Estimates for each State are presented in the following tabulation.

LABOR DEPARTMENT.—Union Membership by State
Page 2

State	Total Membership	Membership as a percent of employees in nonagricultural establishments
All States	17,187,700	29.5

West Virginia	192,000	42.0
Wisconsin	400,000	31.5
Wyoming	19,000	19.2
Membership not classifiable	181,000	-

NOTE: Estimates of total membership by State, prepared for the first time by the Bureau of Labor Statistics, are based largely on reports to the Bureau for its forthcoming Directory of National and International Labor Unions in the United States, 1965. For most of the unions unable to provide a State breakdown, the Bureau allocated membership among the States on the basis of local union per capita payments to the national union. Membership data for unaffiliated local and single-employer unions were taken from a previous survey (see BLS Bulletin No. 1348).

UNION MEMBERSHIP, 1964

Membership in national and international unions with headquarters in the United States climbed to 17,976,000 in 1964, an increase of 346,000 since 1962, according to preliminary estimates derived from the biennial survey conducted by the U. S. Department of Labor's Bureau of Labor Statistics. More than 1.1 million members were in Canadian divisions of U. S. unions. Excluding Canadian members, U. S. totals for 1962 and 1964 were 16,586,000 and 16,841,000, respectively, a gain of about 255,000.

Despite this rise, union membership in the U. S. as a proportion of the total labor force and of employees in nonagricultural establishments has, in general, continued to decline.

		Membership (exclusive of Canada) as a percentage of--			
		Total labor force		Employees in nonagricultural establishments	
Year	Total union membership, excluding Canada	Number (thousands)	Percent union members	Number (thousands)	Percent union members
1956 ---------	17,490	70,387	24.8	52,408	33.4
1957 ---------	17,369	70,744	24.6	52,894	32.8
1958 ---------	17,029	71,284	23.9	51,368	33.2
1959 ---------	17,117	71,946	23.8	53,297	32.1
1960 ---------	17,049	73,126	23.3	54,203	31.5
1961 ---------	16,303	74,175	22.0	53,989	30.2
1962 ---------	16,586	74,681	22.2	55,515	29.9
1963 ---------	16,559	75,712	21.9	56,643	29.2
1964 ---------	16,841	76,971	21.9	58,188	28.9

In 1964, AFL-CIO affiliates reported 15,150,000 members, compared with 14,835,000 in 1962, and national unaffiliated unions reported 2,825,000 members, as against 2,794,000 in 1962.

Sizeable gains were reported by the Auto Workers, Steelworkers, Teamsters, and a number of public employee unions, while losses were indicated among unions in the railroad industry.

More detailed information on union membership will be presented in a forthcoming issue of the Bureau's Monthly Labor Review and in the Directory of National and International Labor Unions in the United States, 1965.

How 'Right-to-Work' holds back unions

New evidence was put on the record last week showing how so-called "Right-to-Work" laws work to hold back union membership in most of the 19 states where they are in force.

The facts came out when the U.S. Department of Labor released its estimates of the number of union members in each state and the proportion of union members in each state's nonfarm work force. Those estimates are in the table below where the "Right-to-Work" states are shaded.

The table shows that 15 of the 20 states with the lowest percentage of union members are "Right-to-Work" states.

Furthermore, only one such state, Nevada, is above the national average for union membership—29.5 per cent. Nevada is unique in that the highly-organized entertainment industry is a major element in its economy.

The Labor Department reported that the proportion joining unions in states without "Right-to-Work" laws is more than twice the proportion in states with such laws—34 per cent as against about 15 per cent. You can check your state in the table.

Proportion of work force in unions

First Me card is to H

With a pen fr Johnson, former Pr S. Truman prepares to s No. 1 to become the first citizen to be protected by Medicare. Card No. 2 was issued to Mrs. Truman.

The signing ceremony took place at Independence, Mo., highlighting a drive to get all senior citizens to sign up for the Medicare program before the March 31 deadline. The program, first proposed by Mr. Truman more than 20 years ago, goes into effect on July 1 (see Editorial, page 12).

President Johnson was in Independence last week to help launch the Harry S. Truman Center for the Advancement of Peace. The center, to be located in Jerusalem, will be devoted to the destruction of the causes of war.

UPI PHOTO

All-out campaign urged to beat 14(b) filibuster

Across the USA last week the AFL-CIO was marshalling its forces for the fight to get a vote in the U.S. Senate on repeal of the Taft-Hartley Act's Sec. 14(b).

Labor viewed it as certain that the Republican floor leader, Sen. Everett Dirksen of Illinois, would resume last year's filibuster the moment that Majority Leader Mike Mansfield moved to bring up the 14(b) repeal bill.

Majority support

In talks with newsmen Mansfield stressed that a majority of the Senate supports the ending of so-called "Right-to-Work" laws by repeal of Sec. 14(b). The fight, he said, will be over the Senate's right to vote on the issue.

Dirksen announced that "no amicable compromise" is possible on the measure, that he will try to talk to death Mansfield's attempt to bring it up.

Dirksen's announcement was greeted happily by the National Right to Work Committee. The committee declared it was ready to take the offensive with drives for new "Right-to-Work" laws in at least 10 states. A committee spokesman told a news conference that Dirksen's effort would "hasten the day" when the union shop on the railroads—specifically authorized by the Railway Labor Act—would be eliminated.

Chamber campaign

The Chamber of Commerce of the U.S. jumped into the picture, too. It designated Feb. 1 as "14(b) Day" when businessmen would make cut-rate conference calls to their Senators opposing repeal.

In a message to all unions Andrew J. Biemiller, AFL-CIO legislative director, called on every local to contact their Senators again through calls, telegrams, or letters. He declared:

"Urge them to support the right to vote on Sec. 14(b).

"Urge them to stay in Washington near the Senate floor to help break the anti-labor filibuster."

The AFL-CIO Executive Council's position is this, Biemiller emphasized:

"Let us have a vote on the issue—a vote up or down—but let us have a vote."

If the filibuster can be broken, a simple majority vote is all that is required in the Senate to pass the repeal bill. The House has already approved it.

Dirksen also unveiled a new "Committee for the Government of the People" last week. This is a pressure group created to drum up support for his proposed Constitutional amendment to get around the U.S Supreme Court's "one man, one vote" decision.

That decision held that both houses of state legislatures must be apportioned on the basis of population.

Dirksen's campaign launching was handled by the famous California publicity firm of Whitaker & Baxter that has directed many drives for measures opposed by labor.

The deal

Numerous observers on Capitol Hill have speculated that Dirksen is attempting to stage the scene for some kind of a deal by which he would accede to a vote on 14(b) repeal in exchange for approval of his amendment on apportionment.

The AFL-CIO has stated repeatedly that it will never accept such a trade.

Data: Bureau of Labor Statistics

Counting the union buttons

Latest BLS survey shows membership growing—but not as fast as labor force

One-third of all union members in the U. S. are in the states of New York, California, and Pennsylvania, according to the Labor Dept.'s Bureau of Labor Statistics. In figures just released for 1966—the most recent government survey of union membership—the bureau found that the three big states accounted for 6-million of 18.3-million members.

Counting the million members of U. S. unions with locals in Canada, the over-all membership was 19.1-million two years ago—a sharp rise from 17.9-million two years before. (AFL-CIO reports a continuing rise.)

The government said that in the 1964-66 period, "sustained economic activity generally and organizing efforts among government workers . . . resulted in the largest growth in union membership since BLS began its biennial surveys in 1952."

Ratio slips. But the increase in union membership hasn't kept pace with the rise in nonfarm employment: BLS said the ratio has continued to slip, from 33.4% in 1956 to 28% in 1966. As a proportion of the total labor force, union membership was a relatively stable 22.7%—but less than a 1956 peak of 25.2%.

Forty-seven unions reported more than 100,000 members, while 91 had fewer than 25,000. The 10 largest unions, each reporting more than 400,000 members, accounted for 45% of total membership. The 91 small unions—nearly half of all U. S. unions—together have less than 4%.

Three major industries—metals (2.9-million), transportation (2.5-million), and construction (2.4-million)—accounted for more than two-fifths of all union members.

Unions reported 2.5-million members in New York, 2-million in California, and 1.5-million in Pennsylvania. But West Virginia was the most unionized, with 44.1%. **End**

Union	No. in South	% of U.S.

1964 COPE success spur city and state drives

Kentucky Labor News 3-8-1965

Bal Harbour, Florida — "From the White House to the Court House" is the direction which the AFL-CIO is looking as it surveys its successes of 1964 and lays plans for the future.

At a highly optimistic session of COPE's Administrative Committee held here, plans were laid for a sharp step up in activities on the state, city and county level beginning this year. This is the first time that the Federation has directed a major effort on the local front as well as for national elections.

Optimism for future successes was justified. AFL-CIO President George Meany told the meeting that COPE has proved itself increasingly strong and effective. He pointed out that in 1960 COPE-endorsed candidates had been successful in 57 per cent of the Congressional elections; that this victory ratio had increased to 60 per cent in 1962 and that it had further boomed to 68 per cent during the 1964 election.

On the local level speakers at the COPE meeting said that about 1,000 political offices in cities of more than 10,000 population will be determined in 1965. Local COPE organizations are expected to redouble their efforts to assure the election of liberal, and progressive candidates.

Turning to the 1966 National elections, Meany stressed the vital importance of getting out the vote among union members and workers in general. He pointed out that in only two elections since the 'Thirties' — 1934 and 1962 — had the party in power been able to maintain its gains during an off year election.

He urged that 1966 be made a year in which the liberal and progressive victories of 1964 could be maintained. A lot of excellent new and young Congressmen were elected in 1964, he said, and the AFL-CIO was determined to support them and help return them to Congress.

Meany said that election statistics showed that the greatest fall off in registration and voting in off years came in workers' dis-

(Continued on page 6, Col. 1)

(Continued from page 1)

tricts. The drop in some of the larger cities was as much as 20 per cent. This must be corrected, he declared adding: "If we get our own people, we can win."

Other speakers before the Committee, including Al Barkan, National COPE Director, and Roy Reuther, head of the registration campaign committee, said that the battle to get fair reapportionment on the state level was of the utmost importance. They expressed conviction that the states which reapportion fairly, will encourage registration and voting rather than discourage the use of the ballot.

In this connection, an AFL-CIO spokesman said that COPE was doing all it could to educate Negroes on their voting rights and to help them register in states which now deliberately bar them the vote. This, he said, was notably true in Alabama where the State COPE is highly active in helping to assure free registration.

Also as part of its deep concern that all citizens must have the right to vote, the AFL-CIO Executive Council will endorse legislation that would create Federal Registrars to assure the right of all Americans to vote in Federal elections.

COPE Charts Big '66 Drive

BAL HARBOUR, Fla.—COPE—the political action arm of the AFL-CIO—is preparing an all-out drive to bring out a maximum vote in the 1966 Congressional elections, it was announced here by the federation's executive council.

The campaign is aimed at reversing the "historic" losses of off-year contests.

The liberal gains in Congress resulting from the 1964 elections can be preserved, COPE believes, if trade unionists, their families and their friends will turn out in full strength next year.

Since 1932, there have been only two off-year elections when the administration in power did not lose strength in Congress—in 1934 and in 1962.

The fact that the off-year loss pattern can be reversed holds out hope that an intensive campaign in 1966 can safeguard the sharp increase in liberal strength registered last year.

The pattern of off-year losses, COPE noted, stems primarily from a drop-off in voting turnout in low- and middle-income wards and precincts.

Intensive register and get-out-the-vote campaigns, coupled with drives for changes in registration and voting laws—to make it easier and simpler for citizens to cast votes—can produce results in 1966, COPE stressed.

A major factor in preserving the 1964 Congressional gains will be in returning a number of new Congressmen who won by slim margins last year, according to COPE.

The best possible help these Congressmen can get is the passage of a legislative program that the voters indicated they need and want, COPE added.

Reviewing the results of the 1964 balloting, COPE noted the growth in effectiveness of labor political action.

In 1960, the committee pointed out, 57% of the COPE-endorsed Congressional candidates were elected. The figure rose to 60% in 1962 and to 68% in 1964.

COPE also focused attention on the more than 1,000 city and county elections scheduled for 1965 in places with populations of over 10,000.

Agenda (IUD)

Organizing – South

ORGANIZING NEWSLETTER

A Major Defect In Present Labor Laws

"The principal defect in the labor relations law today is that companies can, and with virtual immunity do, cold-bloodedly instill raw fear in their employees—fear of job loss, fear of plant shutdown, even physical fear—if they exercise their right to join a union."

This was one of the opening comments of Nick Zonarich, director of organization of the IUD, before a recent hearing by a subcommittee of the House Committee on Education and Labor. The committee is determining whether or not to proceed with a full investigative hearing on the administration of the Labor-Management Relations Act by the NLRB.

Director Zonarich expressed the concern of the labor movement when he stated that a "great number of . . . employees want and are struggling for the rights guaranteed by national law taken for granted in many places, but denied to them by unscrupulous employers with clever lawyers who have no hesitancy in deliberately violating the law in pursuit of their selfish interest.

"It is a rare organizing drive today that does not occasion at least one unfair labor practice charge against the company. Crafty lawyers have shown employers that it is cheap and virtually danger-free to threaten, coerce, and discharge employees as an effective deterrent to the representation effort of the union.

"Companies know that by the time the built-in delay factors of Labor Board processes have been taken advantage of, the employees and the union will frequently become completely discouraged. Moreover, the company may get off scot-free if the union-busting campaign is cleverly done with the full bag of tricks—including a flood of leaflets disguised as free speech but carefully phrased to convey the message of possible harm that it would be illegal to state openly.

"The present chairman of the National Labor Relations Board recently posed the following question which I think expresses in a nutshell the matter we believe this committee should consider and investigate. He said, 'Why should we, 30 years after adoption of Congressional policy to protect the right to organize, still find companies firing people for trying to form a union? Yet this is the great bulk of the work that comes to the NLRB in 1965.' "

The Statistics Tell The Story

Cold statistics down through the years point to the urgency of the problem:

NLRB's fiscal 1964 report shows that unfair practice cases now make up more than half the constantly rising workload. In 1948 the workload was 66 percent representation cases, 34 percent complaint cases. Since 1957 unfair labor practice charges have outnumbered representation petitions by a constantly increasing percentage, reversing a 17-year pattern in the years 1941 through 1957. By 1964 the load char-

acter almost reversed that of 1948, with 57 percent complaint cases and 43 percent representation matters. A significant development in unfair labor practice charges has been the dual growth of (1) number of cases and (2) those found to have merit, prompting issuance of formal complaints by the NLRB general counsel.

In fiscal 1964 the proportion of charges found to have merit rose to 33.4 percent compared to the 32.3 percent of fiscal 1963, with fewer cases and continuing the upward trend since the 20.7 percent of 1958.

In an article for the *Harvard Law Review*, Professor Derek C. Bok made this observation: **"The problems created by a rising volume of cases may also have bearing on remedial policy. As matters now stand, many remedies of the Board are trifling enough that an employer in a representation case can often profit from violating the law even if he is eventually brought to book. By encouraging violations in this manner inadequate remedies not only work hardship on the other parties involved, they may also increase the workload of the Board unnecessarily. Although we cannnot determine the extent to which these dangers have been realized, it is disturbing to note that over the past several years the number of cases involving discriminatory discharges and other interference with the rights of employees has risen much more rapidly than the number of representation elections. Under these circumstances, there is good reason to pay the most careful attention to devising more adequate sanctions."**

In his closing comments before the subcommittee of the House Education and Labor Committee, Director Zonarich urged that a subcommittee be designated to inquire into the problems and weaknesses of the present labor relations act with an eye toward devising some effective remedies for the existing weaknesses.

Teacher's Union Wins Two More

President Charles Cogen, American Federation of Teachers, reports the AFT has started off the new school year in the best possible way, by winning an important organizing victory and negotiation contracts at two important locations.

In a representation election the teachers in Hartford, Conn., voted in favor of the AFT over the Association by 527 to 498. President Cogen promises that this is but the first of other election victories in the coming year.

Contracts have been negotiated by AFT in Yonkers, N. Y. and Philadelphia, Pa. The details of the Yonkers agreement are not yet available, but in Philadelphia months of negotiations were concluded by the Philadelphia Teachers Union, Local 3, and the school bargainers on 225 contract items. Gains were registered in reduction of classroom size and increases in salary schedules starting at $5,500 a year and reaching a maximum of $10,400 in yearly steps, the number of which was reduced from 13 to 10. The wage increase averages $850 for 11,500 school employees.

Negroes in South push to sign up

Organizing is gaining momentum as result of ferment on civil rights

Southern Negroes, shaken out of apathy by civil rights movement, show new interest in unionism. These poultry workers meet in a Greensboro (Ala.) church.

Time and again, unionists have prematurely predicted the organization of the South.

Today, it may actually be happening—in a manner few predicted.

Southern Negroes are joining unions as an outgrowth of the civil rights movement. Sometimes the connection is direct. Negro workers at the Pomona Products Co. food packing plant in Griffin, Ga., signed membership cards in the Retail, Wholesale & Department Store Union while picketing the plant to protest the firing of a Negro who had used the white drinking fountain. Sometimes the connection is indirect—a matter of a new willingness to defy Mr. Charlie, union officials say. Either way, the situation offers organizing possibilities that didn't exist a year ago. Unions have reacted by hiring more Negro organizers.

Moreover labor officials insist the civil rights movement has also brought white Southerners into unions by teaching them the value of organization.

"They've learned from the Negro that the way to improve conditions is to join an organization and push," one official says.

Less static. Whatever the explanation, the facts are clear. Unions whose Southern membership had remained static or grown by handfuls during a decade of rapid industrial development now report substantial increases during the past year, often the past few months. A sampling:

- RWDSU claims 17,000 Southern members; 1,500 of them joined since June.
- The independent International Union of Laundry Workers claims 7,000 Southern members; 2,000 of them joined during the past year.
- The International Chemical Workers Union claims 15,000 Southern members; 2,000 of them joined during the past year. This includes the 800 employees of Scripto, Inc., 700 of them Negro, who walked an Atlanta picket line with Dr. Martin Luther King last winter. A "discriminatory" wage increase—2% for unskilled workers (mostly Negro) and 4% for skilled (mostly white)—led both to King's participation and the union's success.
- The American Federation of State, County & Municipal Employees claims 4,000 members in Georgia; 1,000 of them joined during the past year.

Old Confederacy gains. In all cases, Negroes make up a healthy percentage of these unions' Southern membership, ranging from 35% for RWDSU to 90% for the Laundry Workers. Five years ago, AFSCME's Georgia membership was 15% Negro. Today it is 40%.

Records of National Labor Relations Board elections in the 10 states of the Confederacy tell a similar story of increased receptiveness to unionism.

In fiscal 1963, 87,085 workers cast valid votes in NLRB collective bargaining elections. The unions won in bargaining units whose total work force numbered 44,372. In other words, 51% of the workers who participated in NLRB elections wound up with union representation.

In fiscal 1965—which ended June 30—99,351 workers cast valid votes in Southern NLRB elections. The unions won in bargaining units whose total work force numbered 67,104—67%.

The change is less striking when one compares the number of elections won rather than the number of employees covered in winning elections—635 out of 1,138 (or 56%) for 1963; 761 out of 1,286 (or 59%) in 1965. This suggests that union prospects are improving more quickly in large plants than they are in small.

Phenomenon. Even more significant in the view of historically minded unionists, a fair number of the newly organized plants came in "cold." Such plants have no previous record of organizing attempts and, often, no employees who ever worked in union plants elsewhere. They simply respond to their first contact with an organizer by joining the union. It took the RWDSU just three days to sign up the bulk of Pomona Products' 350 workers after hearing about their picket line from the NAACP.

This is phenomenal, especially in the South. There unions have hammered at their targets in campaign after campaign, sometimes with

Republic National Bank Tower

another "Buffalo-quality" air conditioning job

Air conditioning the new 50-story addition adjacent to the 36-story Republic National Bank Building in Dallas, Texas, presented several unusual problems. For example, the systems for the two buildings had to be integrated, and a variety of environmental requirements were encountered in the new building. ■ Buffalo's comprehensive line of air conditioning equipment was able to meet every requirement. In the Tower, over 75 'Buffalo' factory-fabricated air conditioning cabinets handle interior zones. 'Buffalo' fans and coil units serve peripheral zones through a high pressure system. ■ This is one more example of the confidence engineers and contractors place in 'Buffalo's' engineering and fabricating capabilities. For quality equipment correctly applied, see your Buffalo Engineering Representative. He's in the Yellow Pages of the business center near you.

Air Handling Equipment • Centrifugal Pumps • Machine Tools • Process Equipment

years in between, before painfully amassing a majority.

Large numbers of workers last signed up cold during the great organizing surges of the 1930s in the urban North. Perhaps the South is on the verge of a similar period, some laborites suggest.

Many reasons. Others offer more mundane explanations for union successes. Quicker NLRB elections give employers and anti-union communities less time to wear down union loyalties, one official notes. Others observe that some Southern employers, particularly those connected with national chains, no longer fight so hard.

Another school holds that it's natural for Negroes to join unions once they get over their fear because "they know they belong to the working class—there's no status problem there." And certainly it's true that recent Negro—and white—union recruits work mainly at unskilled, low-paying jobs.

Moreover, tarring unions with the civil rights brush is not the foolproof anti-labor technique it used to be, now that employers must avoid overt discrimination themselves if they want to keep government contracts —or simply keep out of trouble.

Natural direction. Overriding all these explanations is a more basic one: that industrial civilization inevitably brings unionism, and that the time has come for the South. A veteran organizer explains it like this.

"Of course, the civil rights movement has had a tremendous subliminal effect on the Southern worker. It's replaced the old fatalism with a new object lesson: Here are people even more downtrodden than he, helping themselves through their organizations.

"But the Southern worker would be moving in our direction anyway. He's been off the farm long enough. That $1.25 an hour doesn't look so great any more. He's seen other plants around, he's met other kinds of people, he doesn't think the boss and the jackleg preacher between them know everything.

"He's ready to join the union on logical grounds, and he won't be scared off so easily by talk of Red agitators or race mixing."

This official believes that a period of Southern membership growth lies ahead even for those unions—like his, the International Ladies' Garment Workers' Union—that have registered little organizing improvement so far. It's implicit in the new steadfastness shown even in losing campaigns today, he says. **End**

Organizing

ORGANIZING IN THE SOUTH

How RWDSU Has Gained 3,000 Members in 8 Months

By Max Greenberg
President, RWDSU

Generalizations are usually suspect, and hopes have been raised high in previous years, only to be frustrated, but I believe the experiences of our union over the past eight months lead to the conclusion that the conditions are ripe today. This appears to be the time for a great new effort to bring wages and labor relations in the South into the 20th century.

Max Greenberg

Since last May, the RWDSU has organized some 3,000 new members in 20 shops and plants in Georgia, Alabama, Tennessee, Florida and Texas. The drive is continuing, and in fact appears to be growing in scope. Of course, we are not the only union organizing in the South, and conditions for us may be entirely different from those facing other unions, but I believe that our experiences include a number of factors of interest to all of labor.

First and foremost, our organizing successes are a product of the civil rights revolution that has swept the South in recent years. In fact, the identification of our union with the civil rights movement has led to specific organizing leads—including entire shops of 300 and more workers, chiefly Negroes, marching into our union because they knew that we believed in their cause.

Negroes' Right to Living Wage

It is natural—perhaps inevitable—that Negroes who have secured such basic rights as the right to sit at a lunch counter, to use a swimming pool or golf course, to vote as any other American and attend a public school with other American children should turn now to that other great goal, without which the others fade into nothingness—the right to a living wage. Since this is obtainable for the masses of Americans only through the trade union movement, it was inevitable that the civil rights forces and the labor movement would seek each other out and join forces for a big push to end wages of $1.25 an hour and less that are prevalent in the South.

In Selma, Alabama, following the events of last spring that brought world-wide attention to this city, the Negro community emerged from the battles with a new sense of strength and self-respect, but the people still lived in hovels—as we saw ourselves during the Selma-to-Montgomery march—and the pay envelopes were mighty thin. When civil rights leaders in Selma came to the conclusion that a union was needed, they turned to the RWDSU. We now have a local on the move in Selma, with some 400 workers in the process of organizing, winning elections and negotiating contracts.

Vote Union Despite Klan

In Greensboro, a town near Selma, a plant of 300 workers voted by an 8 to 1 margin for our union despite all sorts of terroristic tactics used against them, including the direct participation of a band of Ku Klux'ers.

There have been many roads taken into the RWDSU by the 3,000 in the South who have joined since last May, but for most the civil rights movement has been the inspiration.

In Griffin, Georgia, several young Negro students working last summer at Pomona Products, a food packing plant of 400 workers, rebelled at a foreman's insistence that they use the "colored" water fountain. They were fired, but 350 of their fellow workers walked out with them. Civil rights leaders directed the workers to the RWDSU, and after nine days of strike a contract was signed which brought pay raises and other gains to all the workers, and additional raises for the Negro workers previously discriminated against in pay rates as well as in other ways.

Needless to say, employee facilities at Pomona have been totally integrated, so that a worker will no longer have to take care which water fountain he uses.

In another large company, the Kimco auto parts warehouse in Memphis, 300 workers, again predominantly Negro, organized speedily last fall and secured a fine contract. Raises of 45 cents an hour went to many Negro workers previously held to a maximum of $1.35 an hour despite seniority of up to twenty years. New classification rules will now permit job advances for Negroes for the first time, and here too, the prevailing discrimination in rest rooms and lunchroom facilities has been eliminated.

These are examples—in Alabama, Georgia and Tennessee— of good union work adding up to good civil rights work. We can see here the enormous potential implicit in an alliance between the various civil rights organizations and labor, directed at organizing the South.

It should be noted that white workers as well as Negroes are joining the RWDSU in this growing campaign in the South. In some instances the white workers have expressed opposition to the civil rights movement, but they feel an even greater opposition to the low pay they have been receiving, and they recognize that they must work with the Negroes so that both groups will overcome.

IUD Drive Wins in Texas

Our drive continues to progress. In Dallas, Texas, where the Industrial Union Dept. of the AFL-CIO is coordinating the campaign, the latest important achievement was organization of the Coca-Cola Bottling Company, with 350 employees made up equally of Negroes and whites. In Orlando, Florida, a late report shows that the Minute Maid citrus plant of 170 workers voted for the RWDSU. In other sections of the South widespread contacts are certain to keep the campaign moving foward.

Our organizing efforts in the South will continue, and will expand. We feel that no efforts of our union anywhere are more productive, and more significant for the future of our country. The South for too long has languished in the background—economically, politically, and in many other ways. The civil rights movement provided a necessary spark towards correcting this grievous imbalance. The labor movement must pick up the torch and carry it forward.

Yes, we in the RWDSU believe the South can be organized, and we are dedicating every effort and resource at our command towards that end.

Keeping Unions Out

Companies Fight Harder Against Labor Attempts To Organize Employes

Carpenter Steel Wins Election By Hard Campaign; Bakery Local Loses in New York

The Fuzziness of Labor Law

1/19/60

By NEIL ULMAN
Staff Reporter of THE WALL STREET JOURNAL

READING, Pa.—When the United Steelworkers recently launched a drive to organize Carpenter Steel Co.'s nonunion plant here, the victory hopes of USW officials were understandable. They had attempted to sign up the plant in 1956 and, although the effort failed, the election showing was encouraging—some 42% of the votes were cast for the union. Thus the disappointment when, in the recent contest, barely a third of the Carpenter workers voted for the USW.

What happened?

For one thing, Carpenter President John Moxon set a speech-making pace worthy of a hard-working politician in an election year. On the two days before the election alone, the executive made seven speeches in praise of Carpenter's benevolence; the speeches were made at different plant locations between shifts. In addition, the plant's 2,000-odd workers were bombarded with letters, bulletin-board messages and posters alleging all the advantages of nonunionism. Masterminding the campaign was a recently hired lawyer whose specialty is labor.

All this effort, which sharply contrasts with the company's relatively lethargic counterattack in 1956, helps point up an important new development on the management-labor front. Increasingly, companies are putting up a real battle against the organizing attempts of unions. And increasingly, as the recent election at Carpenter suggests, management is scoring a smashing victory—without any recourse to illegal measures but by the sort of hard campaigning carried on by Mr. Moxon.

"Greatest Organizing Campaign"

Management's stiffening resistance comes in the wake of what one AFL-CIO official calls "the greatest union organizing campaign of the century." Union membership, after declining for years, began to rise again in 1962. Whether this rise will continue, many labor analysts believe, hinges in large part on who mounts the most persuasive election campaigns in coming months, union organizers or management.

Testimony that management is putting up a stronger fight comes from the union organ-

All this effort, which sharply contrasts with the company's relatively lethargic counterattack in 1956, helps point up an important new development on the management-labor front. Increasingly, companies are putting up a real battle against the organizing attempts of unions. And increasingly, as the recent election at Carpenter suggests, management is scoring a smashing victory—without any recourse to illegal measures but by the sort of hard campaigning carried on by Mr. Moxon.

"Greatest Organizing Campaign"

Management's stiffening resistance comes in the wake of what one AFL-CIO official calls "the greatest union organizing campaign of the century." Union membership, after declining for years, began to rise again in 1962. Whether this rise will continue, many labor analysts believe, hinges in large part on who mounts the most persuasive election campaigns in coming months, union organizers or management.

Testimony that management is putting up a stronger fight comes from the union organizers themselves. "Employers have become very crafty and resourceful in resisting unions," reports Elmer Chatak, an AFL-CIO organizer. James M. Pierce, another AFL-CIO organizer with responsibilities in the South, worries over increasing management "sophistication" in organizing battles and attributes this development to "a few union-busting law firms and a few anti-union consultants who have made a specialty" of advising companies on ways to keep unions out.

The increasing attention executives are paying to keeping unions out also shows up at meetings arranged by the American Association of Industrial Management, an employers' group set up to "develop and preserve sound industrial relations." Its periodic discussions of unions, including ways to "combat union organizing drives," nowadays draw upward of 1,000 executives, reports an official of the nonprofit association. As recently as 1963, she recalls, similar discussions attracted barely 400 executives, on the average.

Similarly, Patrick B. Comer, Jr., a Greensboro, N.C., management consultant who specializes in union matters, says the circulation of his semimonthly bulletin on such matters as how to defeat union organizing efforts has more than doubled since 1960. And the Chicago Association of Commerce and Industry reports a "nationwide interest" in its 15-page 1964 pamphlet entitled "What to Do When the Union Calls." After the first printing of 500 copies was quickly sold out, the Chicago association hurriedly ran off three more printings and by now has sold "over 4,000 copies" at $1.50 each, "a good portion outside of Chicago," says a spokesman.

Long-Range Measures

In addition to such concerted pre-election tactics as Carpenter's recent campaign here, many companies increasingly are turning to long-range measures to thwart union organizers.

Some corporations, for instance, are overhauling the type of information they periodically give employes. Typically, Carpenter has changed its house organ so that personnel notes are relegated to the rear and financial data and important corporate moves are featured. The company also takes care to publicize situations in which Carpenter employes are doing better than comparable steelworkers under union contract.

An official of a medium-sized Pennsylvania manufacturer that has defeated two organizing drives attributes these successes partly to a series of monthly meetings between company executives and small employe groups. The discussions cover everything from the concern's pay structure to its production methods. "The subject of unions comes up regularly," says the official, "and we make our position known."

There can be no charge that management is selecting specific employes for anti-union pressure, he contends, because the conferences are set up without regard to whether a labor election is pending. Were the conferences bunched just before elections, the official says, union leaders might be able to bring a justifiable complaint to the National Labor Relations Board.

Some companies are cutting back on directories that bear the names and addresses of their employes. Such lists, according to consultant Comer, are "rare plums" for union organizers. He also warns companies to scrutinize any firms that volunteer to take care of mailing house organs and the like to employes; one such firm, he recalls, turned out

Please Turn to Page 12, Column 3

Keeping Unions Out: Companies Fight Harder Against Organizers

Continued From Page One

to be located at a Southern AFL-CIO union hall.

Many firms are resorting increasingly to cloak-and-dagger methods to fend off unions. John Sheridan, a Chicago management consultant, tells of a small client company in Michigan that discovered its switchboard operator was monitoring executives' phone calls and passing information on to a union trying to organize the employes. The company started feeding phony plans for campaign letters over the phone and then sat back while the unionists worked to prepare letters to counter company propaganda that never materialized.

"Sometimes it's really a colossal game," says Mr. Sheridan, adding that "most of my clients have paper shredders in their waste baskets" to keep confidential information from reaching union organizers.

A Broad Counterattack

In some cases, management's counterattack ranges over a very broad front. When a Teamsters unit tried this fall to organize a Washington, D.C., manufacturer and distributor of mattresses and appliances, the president responded with a combination of letter-writing, the personal touch, some psychology and electronic gadgetry. He also armed himself with a profile of the Teamsters Union published by Employee Relations Counselors, Inc., a New York nonprofit group, and a Government guide to the Labor Relations Act. The official then went through the plant to talk with each employe and personally distributed leaflets and letters stating the company's objections to unionization.

In addition, the day before the balloting, he delivered a speech in which, he confesses, he "got pretty emotionally wound up." Long active in civil-rights activities, he identified himself with the aspirations of his employes, some 85% of whom are Negroes, by showing slides of himself in the August 1963 March on Washington for minority-group rights. Then, stressing that unions don't automatically deliver on their promises but must bargain, the executive played tape recordings of a bargaining session the company had with the Teamsters back in 1957, when the firm was unionized. The recordings, which were taped with the knowledge of the union bargainers, contained a considerable amount of talk by the unionists about deducting union dues from employes paychecks, according to the executive. The company won the election 45 to 21.

Many companies are trying harder to reach the families of their workers with campaign propaganda. In an effort to get its message into the home, Consolidated Aluminum Co., Jackson, Tenn., recently distributed a phonograph record of a plant manager's voice for home playing. "Believe me when I tell you you would make the worst mistake of your life if you gambled your entire future and the security of your job and the security of your family on wild union promises," warns the voice. "I see no reason why we should exchange our freedom for the control of union bosses." The plant, the company's new Johnsonville, Tenn., facility, rejected the organizers in an election held in September.

Horn & Hardart Co., a New York-based restaurant and bakery chain, has successfully fended off efforts to organize its food-production workers by turning the campaign spotlight on a union's internal troubles. In the past five years, most recently in September, the company has won five election battles from Local Three of the Bakery and Confectionary Workers International Union of America.

Using the McClellan Hearings

"The company doesn't want to see Local Three get in because of Local Three's association with the corruption and dishonesty of its international union, which was thrown out of the AFL-CIO," says a multi-lingual Horn & Hardart letter circulated shortly before the latest election. The company also circulated excerpts from McClellan Committee hearings on labor rackets with the suggestion that employes "read what Local Three won't tell you about the disgusting and disgraceful record of the international union to which it belongs." The company noted that Frank Dutto, president of Local Three, took the Fifth Amendment before the McClellan Committee when asked by the Senators whether he had been a member of the Communist Party before 1950.

No unfair practice charges have been filed on the latest election thus far. The union has attacked some similar tactics used by Horn & Hardart in 1964, but with no success to date.

Not surprisingly, most companies are reluctant to discuss their counter-organizing tactics, fearing such talk will make them special targets for unions in the future. "A union campaign can be a powder keg," comments Carpenter's Mr. Moxon, who doesn't like to talk about his company's recent victory here.

Adding to this reluctance is the fact the National Labor Relations Board's interpretation of labor law is constantly changing; what once may have been a legitimate tactic may subsequently be banned. Harvard Law School Professor Derek Bok claims the legal doctrine on union election campaigns "has traditionally been referred to as a prime example of instability in labor law." And the Chicago Association of Commerce and Industry cautions businessmen that "the NLRB is not so predictable as to allow cataloging of permitted actions with any degree of certainty."

In many instances, to be sure, companies still resort to clearly illegal measures to keep unions out. NLRB records attest to this at length. The board reports more than 70% of all the cases it handles involve charges of illegal firing of employes for union organizing. Of course, not all such charges are well founded, but "given the high number of cases, there's probably something to the argument that men don't join unions because of employer discrimination," says Bernard Samoff, the NLRB's Philadelphia regional director.

The board reports that unfair labor practice charges filed against employers in the year ended last June 30 totaled 10,931, up slightly from 10,695 in fiscal 1964. These are only charges, it should be stressed, not findings; the NLRB compiles no record of findings.

Unit of 800:

Hotel Union Wins New Orleans Vote

New Orleans—The Hotel & Restaurant Employes won bargaining rights for more than 800 workers at a famous Deep South hotel here—the Roosevelt—after two closely-contested National Labor Relations Board elections.

Workers in the 900-room hostelry chose the union, 365 to 338 for no union, with 23 challenged ballots not sufficient to change the runoff result. The vote in an earlier election had been 340 for the union, 251 no union, 141 for the expelled Teamsters and one challenged ballot.

The long-unorganized hotel was sold by Seymour Weiss, former owner, during the organizing campaign. New owners, the Swig interests, staged a strong anti-union campaign whose edge was blunted with the aid of Hotel & Restaurant Employes representatives from other cities where the same management has union contracts.

Among them, Dir. of Organization Charles Paulsen said, was Pres. Joseph Belardi of the San Francisco AFL-CIO, who gave details of the contracts under which employes operate at two other Swig hotels—the Fairmont in San Francisco and the Mission Inn at Riverside, Calif.

Belardi spoke at several employe meetings here during the campaign. He heads the hotel union's San Francisco Joint Board.

Only two other local hotels had been organized before the vote at the Roosevelt — the Sheraton Charles and the Sheraton Delta, formerly the Claibourne Towers.

All Roosevelt departments are included in the bargaining unit—the housekeeping, front desk, food and beverage, laundry, maintenance and front office staffs. The Roosevelt has many Negro and white workers and, said Williams, "we organized them together." The workers will form one local union.

Paulsen said his organizers had the "fullest cooperation" of the AFL-CIO regional office staff headed by Dir. E. H. Williams.

Gypsum Pact Ends Walkout Of 168 Days

Fort Dodge, Ia.—A settlement called one of the best in the gypsum industry was won here after a 168-day strike by Oil, Chemical & Atomic Workers Local 6-503.

The strikers voted Jan. 16 to accept a three-year contract offer including wage hikes of 4.5, 3 and 3 percent in each year of the pact; a wage escalator tied to the cost-of-living index; and a pension plan effective in 1967.

The cost-of-living escalator clause was a major union objective in a plant where wages have long been substandard, OCAW Intl. Rep. Ernest J. Toth reported.

Other gains included a major medical plan, improved sickness and accident payments, life insurance, accelerated vacations and other benefits.

Assistance from the local labor movement and the AFL-CIO Industrial Union Dept. were called major factors in the strike's success.

ILGWU SE News

December Election Victories Bring In 400

Jan - Feb/64

Ala. Genesco Workers Vote Yes

The ILGWU won an election December 22 at Hobco Mfg. Co., a division of Genesco, in Hobson City, Ala. The company has continued to commit unfair labor practices and to try to delay negotiations for a contract.

After refusing to recognize the Union, the company tried to stall an election and, when the Union won by a vote of 60 to 49, the company petitioned to have the election set aside on the grounds that the ILGWU had injected "racial hatred" into the campaign. The Rev. Martin Luther King, Jr., had endorsed the ILG in a telegram to the employees, all of whom are Negroes.

The day of the election, after the votes were counted, the company laid off two thirds of its employees. They were called back the next day.

In a speech the day before the election, a company vice-president told the employees he would rather see Hobson City be nothing but sand and rocks again than have a union and reminded them that they could thank Genesco for all their cars and wigs and clothes. He held up an angry picture of ILG President David Dubinsky and asked "Is this who you want to represent you?"

Regional Director Martin Morand told a meeting of Hobson City workers in early January, "This company is trying to delay its *inevitable* legal responsibility to deal with the Union. Nothing could be more ridiculous than to accuse the ILGWU of using racial hatred."

Southeast Regional Counsel Jack G. Handler is defending the Union against the company's legal attempts to delay negotiations.

Tenn. Workers Vote ILG, File Charges

The ILG won an election Dec. 3 at Cherokee Sportswear in Madisonville, Tenn., filed unfair labor practice charges Dec. 27, and began negotiations with the company Jan. 7.

The election victory, 127 to 111, followed a campaign marked by discriminatory layoffs, threats to blackball union sympathizers and to close the plant, surveillance, promises of benefits for abandoning the union, and other illegal pressures on the workers.

HAPPY ABOUT SOMETHING — The Cherokee negotiating committee includes Benny Dansavage, David Russell, Nick Bonanno, Annie Rae Cole, Pearl Prince, and Clifton Foxx. Alene Moser is not shown.

Business Agent Carl Stafford, who went into Madisonville to offer ILG representation to the employees who had tried to join the Steelworkers, described the conditions in the plant: "Most of them were making $1.25; just a few made more. They were all on time work until the Union came around and the company started putting in piece rates. The company's been dictatorial, with favorites and no grievance procedure and no job security. These people are more interested in improving their working conditions than anything else."

Negotiating for the Cherokee workers are Southeast Assistant Director Nick Bonanno, Stafford, Organizing Coordinator Benny Dansavage, a committee of workers: Clifton Foxx, Pearl Prince, Annie Rae Cole, David Russell, and Alene Moser.

Annual Report

Union gains in South

Members of IAM District 75, Daleville, Ala., helped to bring union benefits to the employees of four more Southern firms during the past year.

A report of the year's activities in the district's newsletter, *Wiregrass Labor News*, shows that the union was won by employees at the Page Automatic Data Processing Center, Daleville; at Page Aircraft Co. for headquarters and clerical personnel; at the Dothan Paper Box Co., Dothan; and at Republic Aviation, Inc., Crestview, Fla.

Ted Maddin, union representative, reports that it is the first time that employees at Dothan, Ala., have won the IAM as their union.

New contracts covering employees at these firms have already been ratified.

Another new contract was negotiated for employees at the Hayes International Corp., Napier Field, Ala. The three-year contract, ratified after a strike of nearly three weeks, provides pay raises, hospital insurance benefits and other improvements.

Here are other highlights from the District 75 report:

- IAM Lodge 2003, Daleville, organized its own credit union. In just one year, membership in the credit union has grown to 300. Capital invested already totals more than $8,000.

- IAM Ladies Auxiliary 466 contributed much to the welfare of district members during the year. They assisted pickets during the strike at Hayes International Corp. They started a food bank to help needy families in the district area.

- IAM Lodge 42, Crestview, Fla., conducted its own school for officers and stewards with the assistance of Grand Lodge Rep. W. C. Clitheroe. Three district members attended the advanced Machinist Leadership School held at the University of Texas.

The report concludes with a discussion of the importance of the IAM Scholarship Program. District lodges were urged to support and increase support of the program so more IAM scholarships can be provided.

Vietnam Labor Fund

Want to help the South Vietnamese labor movement complete a welfare center and school for hard-hit families and children of union members? Send a dollar to Vietnam Labor Fund, Machinists Bldg., Washington, D.C. 20036. Make check or money order payable to Matthew DeMore, Secretary-Treasurer.

Big Wage Hike Sought in Va. At Planters

SUFFOLK, Va.—Local 26 will ask for a $2 an hour minimum wage in renewal talks for its 1,500 members at the Planters Peanut Co. here, which open March 11.

The local's present two-year contract, which expires in early May, provides a plant-wide minimum of $1.50 an hour.

In addition to the 50-cent boost in the minimum, the local will seek a 50-cent across-the-board wage increase and classification boosts for 200 to 300 workers. The present range in the plant is from $1.50 to $2.58.

The union will also propose improvements in pensions, health plan coverage, vacations and holidays. Employees presently get one week's vacation after 1,440 hours (about nine months) of service and two weeks after five years, and six holidays.

Reg. Dir. Irving Lebold, Vice-Pres. Lee Ray, Sec.-Treas. Robbie Mae Riddick, Org. Alfred Bailey and Parker will head the local's bargaining committee at Planters.

The company turns out a variety of peanut products, and is a subsidiary of the giant Standard Brands corporation.

The day after the Planters negotiations open, the local will start renewal talks on behalf of 150 members at the Suffolk Peanut Co.

Talks Slow Down, Strike Looming At Memphis Plant

MEMPHIS, Tenn. — Negotiations for a first contract for 50 employees of the National Manufacturing Co. here have come to a virtual standstill, and the possibility of strike action is being considered by the workers, members of Local 19.

"If there are no gains, we're going to have a strike," said Earl Fisher, Local 19 president. "The company hasn't changed its attitude since it tried to beat the union during our organizing drive."

Outstanding issues in the contract talks include the low wages, as many rates of pay as there are employees, the absence of a grievance procedure, and no vacations for Negro employees.

"The National workers understand now to what extent the company was working against them," said Fisher, "and they're ready to strike if necessary."

Union Helps Her Win $400 In Jobless Pay

PLYMOUTH, Fla.—With the help of her union, Local 1025, Henrietta Miller has won $400 in unemployment compensation.

After Mrs. Miller, a packer at Plymouth Citrus Growers Ass'n, was laid off last spring, she applied for unemployment compensation. An examiner held that she was not eligible, but Mrs. Miller went to Local Pres. Roy Jernegan and Int'l Rep. Harry Bush, who sent her to Nelson B. Stephens of the Tampa law firm of Hardee, Ott & Hamilton.

Stephens appealed the ruling to the compensation commission's board of review, and won a reversal of the examiner's findings, which brought Mrs. Miller $400.

"There are many things a union can help a member with other than job security, wages and working conditions," Bush said, "and Mrs. Miller's story illustrates one of them."

Big Ala. Shop Vows Fair Talks

GREENSBORO, Ala.—Big changes are taking place these days, and the RWDSU Alabama Council is playing its part in bringing them about. Several months after the owners of Massengale Poultry Co. tried to run Org. Henry Jenkins out of town, the company began honest-to-goodness negotiations with the Council for a first contract.

The opening of talks for 300 workers at Massengale Feb. 26 is the first set of negotiations that the Council has begun in the Selma-Greensboro area, where it has won five NLRB elections and organized 500 workers since August.

"It's newsworthy that we won a lot of elections over the past eight months," Ass't Southern Dir. Frank Parker said, "but now we are going to bring the fruits of the organizing campaigns to the workers."

The union has scheduled March 24 for the opening of negotiations for a first contract with the management of the Stuart, King & McKenzie wholesale grocery in Selma.

The union will also open talks shortly with the Henry Brick Co., where it won an NLRB election in November.

But the change in employer attitudes is most obvious at Massengale. At the time of the vote there in November, a gang of men believed to be Klansmen tried to frighten Jenkins into leaving town, and one man put something, at first believed to be a bomb, under the hood of his car. For 12 hours the gang kept Jenkins trapped in a minister's house, and it took the assistance of the Alabama Highway Patrol to get him out of town safely. The object placed under the car's hood turned out to be bottles of liquor, intended to frame Jenkins on a charge quite serious in Alabama.

Four months later, Massengale co-owner Charles Massengale sat down at the bargaining table, across from Jenkins, Org. John Parker and the shop committee, and said: "I think the union is best for me and for the people."

At the first session the company agreed to a dues check-off and to several other proposals, and said that it would have counter-proposals to present to the union within two weeks.

Also bargaining for the RWDSU members at Massengale are Mattie Miles, Andrew Holifield, Rosie Holifield, Jessie Dixon and Johnny Wilson.

ORGANIZING BOX SCORE

7th Shop Organized in Selma

SELMA, Ala.—A petition has been filed for an election among the 30 employees of the Central City Laundry and Dry Cleaning Co. in town, Org. Henry Jenkins announced. Central City is the seventh shop organized in the Selma area in the organizing drive which began last May.

The first contacts with the laundry's employees were made by workers at the Stuart-King and Coca-Cola plants, where the RWDSU won recent elections. Jenkins met with some of the Central City workers Feb. 24, and again on Feb. 27. One day later, having signed up 25 of the 30 employees, Jenkins notified the employer, and on March 1 filed his petition. The signed workers are all Negroes, the remaining five or six are white.

In this day and age, the Negro employees work 51 hours a week, and their pay runs from $17.50 to $20 a week. Some have worked at their jobs from 20 to 30 years, with no fringe benefits, no coffee breaks, and are permitted only 30 minutes for lunch.

Ga. Bakery Election Win Seen

AUGUSTA, Ga.—On March 18, the NLRB will be counting ballots in Augusta, and the RWDSU is counting on another victory as 150 employees at the Claussen Bakery cast their votes in a board-ordered election.

"With over 90 percent of the employees signed up, we're sure we have this wrapped up," said James Dickinson, RWDSU representative, who is heading the drive.

The election, the result of a recent board decision, crushes a last-ditch effort by Claussen to block the union with an "appropriate unit" squabble. The bakery is located in downtown Augusta, the seat of a long cherished tradition of anti-unionism.

In an unusual provision to accommodate 17 of the firm's 38 driver-salesmen who are stationed out-of-town at distances of up to 150 miles, the balloting will be held in two phases. The out-of-town drivers will vote by mail, with a return deadline of March 17 (the ballots will be mailed to them March 3), and regular employees—cake and bread production workers—will vote the next day.

50 at Peanut Plant Join in Va.

NORFOLK, Va.—Local 26 has petitioned the NLRB for an election among the 50 production and maintenance workers of the Old Dominion Peanut Corp., manufacturers of peanut and other hard candies. The hearing date on the petition has not yet been set, but with 45 signed cards Local Pres. Lock Parker has no worries about the outcome.

Organizing of the employees began about 3½ months ago through one of the local's members who knew several Old Dominion workers. Later, house visits were made, all in perfect secrecy, with the company unaware of the campaign.

The force of 50 workers expands to about 100 during the peak season of June-August, and is composed of about 90 percent Negroes, mainly women.

The prevailing wage rates are $1.25 an hour for women and $1.35 for the men, with just a few of the most skilled men, cookers and machine operators, earning $1.70 an hour. The women work very hard, often having to lift 125-pound bags of peanuts. They have to cook, roll out and cut the candy, work which is almost always performed by men at the Planter's factory in Suffolk, where the union represents the employees. At Old Dominion there are no vacations for the workers, no holidays, and no regard for seniority at layoff time. They do get a Christmas bonus—from $10 to a munificent $40.

The organizing campaign is headed by Org. Alfred Bailey and Parker.

5-Cent Raise Won At Ga. Cotton Oil Co.

MACON, Ga.—Twenty-eight members of Local 315, employees of the Southern Cotton Oil Co., a division of Hunt's Foods, have successfully negotiated a one-year wage reopener.

The agreement, effective March 20, calls for a five-cent across-the-board hourly increase and provides for reclassification of two jobs, which will bring an additional two-cent hourly increase to some of the Southern employees. The workers process cotton seed for food products.

"I WANT TO HAVE EVERYTHING PUT IN MY WIFE'S NAME"

NON-UNION WAGES outgain union pay, Federal officials find. 3/8/66

Government data indicate non-union pay raises were the fatter last year, reversing a pattern of several years. Federal experts point to the Southern textile industry's third round of pay boosts in 18 months as a sample of the non-union trend. Explanations for the increases: New cotton subsidies to the mills, increased union organizing pressures, more difficulties in recruiting mill labor.

Non-union pay increases this year are thought likely to be fatter than 1965's, too. Contributing factors: More flexibility for non-union employers to change rates to compete for labor, plus the impact on pocketbooks of higher living costs and a new social security tax bite.

Organizing - South

Initial Federal data for 1966 show pay for some occupations rising faster in less organized areas than for the same occupations in highly unionized territory.

Mississippi test site votes IAM, 168 to 38

Organizing - Miss.

McKimmey

The men and women who will run NASA's 142,000-acre rocket test facility in Southwest Mississippi have won the IAM as their union, IAM Vice President Eugene D. Glover reports. The campaign was directed by Grand Lodge Rep. Vernon McKimmey.

The Mississippi test site, near Gainesville, will perform the initial static tests on all future space projects beginning with the giant Saturn V launch vehicles to be used in the Apollo lunar landing mission.

Five contractors will maintain the site. Each was a separate voting unit in the recent Labor Board election. The results:

M & T Co. (Utilities) 24 for IAM, 3 against, 6 challenged.

H. R. Morgan Contracting Co. (Custodial) 34 for IAM, 8 for South Central Mississippi Metal Trades Council, 6 against.

James N. Travirca (roads), 44 for IAM, 1 for South Central Mississippi Metal Trades Council, 10 against.

Southern Cafeteria, 40 for IAM, 0 for South Central Mississippi Metal Trades Council, 1 void.

Space Services International (mechanical maintenance) 26 for IAM, 0 for IBEW, 3 against.

Also assisting in the organizing were Grand Lodge Reps. A. T. Adams and W. W. Fitzgerald, H. E. Higgins, Jr., union representative for IAM Lodge 405 and D. E. McClenahan of Lodge 405, New Orleans.

Answer to brain twister: Two. Bill drove 5,000 miles, then took off two tires and put on two spares. After another 5,000 miles, he changed again, replacing the two which had used up 10,000 miles with the two he took off first. At this point. all four tires had 5,000 miles left.

AFL-CIO News 3/12/66

UAW Wins Election At Georgia 'Runaway'

Hartwell, Ga.—The Auto Workers, "buried" in effigy in a public ceremony here three years ago, came back to win a National Labor Relations Board election at the plant of the runaway Monroe Auto Equipment Co.

The vote was 342-264 in a repeat election. A previous loss by a 466-147 margin in 1964 had been set aside by the NLRB because of management and community interference.

The local plant originally came here as a runaway operation from Monroe, Mich., where UAW Local 878 had represented workers for many years. When six union organizers showed up to handbill the local plant in 1963, the UAW reported, company foremen rounded up a gang of men who roughed them up and warned them to "clear out or be killed."

The burial incident occurred during a later visit of the organizers.

The governor of Georgia, the State Highway Patrol and county officials had been warned of possible violence and were asked to provide protection. But police and deputy sheriffs made no move to intervene, the UAW said, when the union men were attacked by a rock-throwing, club-wielding crowd of 150 company partisans.

Leaflets were seized and burned and the organizers were threatened, cursed, and called "Communists" and "NAACPers," they reported, and when they refused to leave they were pushed, pummeled and kicked up a hill toward watching police.

UAW Vice Pres. Pat Greathouse, one of the six who were driven out of Hartwell, recalled that "we promised we'd be back."

The UAW did come back frequently, reinforced by members working in other Georgia plants, and obtained enough signatures to petition for an election, held July 23, 1964. The vote went heavily against the union, but the NLRB agreed that the company-community campaign had been unfair and ordered a new election.

On the day of the second election, a UAW representative reported, "the town paper printed a slanted editorial," a local clergyman "prayed against us on the radio," and a Viet Nam veteran, on leave from his job in the factory, "made a speech saying he was fighting the Communists in Asia and came home to fight them here, too."

This time the tactics didn't work, UAW Rep. Lew Eccles observed.

"We didn't run for cover—we stood up to fight," he said. "The workers sort of admire guts."

Retail-Wholesale Union Wins 5 Selma Votes

Selma, Ala.—The Retail, Wholesale & Dept. Store Union has won five consecutive representation elections in six months in the Selma area, scene of historic civil rights demonstrations.

Nearly all of the newly-organized workers are Negroes, the union reported.

Organizing South

TWUA Spurs Campaign in Southern Mills

Charlotte, N. C.—The Textile Workers Union of America will expand its already intensive organizing activities in the Carolinas and Georgia, TWUA Pres. William Pollock announced here.

The expansion, Pollock told southeastern regional staff members at a meeting, is in response to appeals from southern workers "saddled with low wages and deprived of modern fringe benefits" at a time when the industry is reporting "record-shattering profits."

He called the industry's failure to share its profits "inexcusable" because, he said:

- Textile net income was 42 percent higher for the first nine months of 1965 than for the same period in 1964—more than twice the average U.S. rise for corporations.
- Textile companies averaged $1,500 a year profit before taxes for each production worker.
- The industry is operating at 99 percent of capacity with huge backlogs of orders, and some goods sold out a year in advance.
- Worker productivity rose by 64 percent more than the average of all workers in 1965 but wages now lag about $30 a week behind the national manufacturing average.

Textile Workers To Step Up Campaign In Southern Mills

Carolina Labor 3/13/66

CHARLOTTE—The Textile Workers Union of America will expand its already intensive organizing activities in the Carolinas and Georgia, TWUA Pres. William Pollock announced here.

The expansion, Pollock told southeastern regional staff members at a meeting, is in response to appeals from southern workers "saddled with low wages and deprived of modern fringe benefits" at a time when the industry is reporting "record-shattering profits."

He called the industry's failure to share its profits "inexcusable" because, he said:

- Textile net income was 42 percent higher for the first nine months of 1965 than for the same period in 1964—more than twice the average U.S. rise for corporations.
- Textile companies averaged $1,500 a year profit before taxes for each production worker.
- The industry is operating at 99 percent of capacity with huge backlogs of orders, and some goods sold out a year in advance.
- Worker productivity rose by 64 percent more than the average of all workers in 1965 but wages now lag about $30 a week behind the national manufacturing average.

Kircher Analyzes Problems:

Changing Workforce Poses New Organizing Challenges

"Vast changes" in American society and the makeup of the workforce pose "new challenges" to the labor movement, declared William L. Kircher, recently named director of organization for the AFL-CIO.

Kircher uses no rose-colored glasses in his analysis of labor's organizing problems, appearing in the March issue of the American Federationist.

He acknowledges the obstacles to union growth, including a contraction of the blue collar workforce and an expansion of employment in fields where unions have been weak. But he is convinced that these obstacles can be overcome, that the labor movement can and will continue to grow.

The claim that workers no longer need or want unions, Kircher declares, is "pure hogwash." Employers obviously don't think so, he points out, because they're spending vast sums to keep unions out.

As a starting point, he asks his fellow trade unionists to take a new look at the men and women they are trying to organize.

They're mostly young, the "baby boom" of postwar years come of working age.

They have no memory of the depression era, of the great labor struggles and triumphs of the late thirties and early forties.

What's more, they're not greatly interested.

The answer, Kircher is convinced, is not to try to give a short course in labor history to the workers you're trying to organize. "Hardly anyone joined unions in the late thirties and early forties just because the Knights of Labor had a difficult time," he points out.

As far as today's young worker is concerned, "before he accepts unionism, he is going to have to recognize it as a helpful method of getting at the things bothering him today."

One of the facts unions today must face, Kircher notes, is the changed economic conditions of the typical worker.

"Many, if not most, paychecks are committed before they are received. The worker who is meeting house payments, television payments, car payments, education bills, etc., is in hock so far in advance that he is apprehensive about anything that might rock his personal economic boat. The forces who are not interested in seeing unions grow do a fairly good job of equating unionism with boat-rocking."

Linked to this is the propaganda effort of employers to portray unionism as an institution, rather than as a movement of people, Kircher declares.

"The greatest thrust of the management resistance campaign," he writes, "is the effort to psychologically separate the worker from the union, to make him think of the union as a third-party entity. It is almost as though the employer would like the worker to sit up in the grandstand while management fights the union."

To organize successfully, he says, unions must develop "methods of penetrating the network of fear and misunderstanding that has been carefully woven around workers' attitudes toward unions."

There is no general "recipe" for organizing, he points out, because "organizing is a personal business" . . . the two-way communication between a union member and a non-member.

Help Available

But the resources for organizing successfully are available, Kircher emphasizes. There are the 128 national and international unions in the AFL-CIO which can "beef up" their organizing efforts. There are the 60,000 local unions, many with offices, meeting halls and fulltime personnel. There are some 800 local central bodies and 50 state bodies, six national departments of the AFL-CIO and many subordinate councils.

"It should be utterly impossible to look at the broad network of union representation spread over this nation and the vast source of talent and energy that it contains and shrink from the union growth challenge as an unattainable task," Kircher declares.

Added to these factors, he notes, is "the unique effectiveness of collective bargaining itself as a means of meeting the needs of workers." When workers see in unions the embodiment of the collective bargaining process "and at the same time understand their role in directing this process toward their problems, they become very firm in their determination to organize."

'Buried' Union Comes Back To Win Georgia NLRB Vote

HARTWELL, Ga. — The Auto Workers, "buried" in effigy in a public ceremony here three years ago, came back to win a Nat'l Labor Relations Board election at the plant of the runaway Monroe Auto Equipment Co.

The vote was 342-264 in a repeat election. A previous loss by a 466-147 margin in 1964 had been set aside by the NLRB because of management and community interference.

The local plant originally came here as a runaway operation from Monroe, Mich., where UAW Local 878 had represented workers for many years. When six union organizers showed up to handbill the local plant in 1963, the UAW reported, company foremen rounded up a gang of men who roughed them up and warned them to "clear out or be killed."

Leaflets were seized and burned and the organizers were threatened, cursed, and called "Communists" and "NAACPers." When they refused to leave they were pushed, pummeled and kicked up a hill toward watching police.

UAW Vice-Pres. Pat Greathouse, one of the six who were driven out of Hartwell, recalled that "we promised we'd be back."

The UAW did come back, reinforced by members working in other Georgia plants, and obtained enough signatures to petition for an election held July 23, 1964. The vote went heavily against the union, but the NLRB agreed that the company-community campaign had been unfair and ordered a new election.

On the day of the second election, a UAW representative reported, "the town paper printed a slanted editorial," a local clergyman "prayed against us on the radio," and a Viet Nam veteran on leave from his job in the factory "made a speech saying he was fighting the Communists in Asia and came home to fight them here too."

This time the tactics didn't work, UAW Rep. Lew Eccles observed.

"We didn't run for cover — we stood up to fight," he said. "The workers admire guts."

ST. PETERSBURG TIMES

Union Board Backs Hoffa

MIAMI BEACH (AP) — Teamster Union president James R. Hoffa, troubled by two federal court convictions, has won a resounding vote of confidence from the union's executive board.

At a meeting in Miami Beach Wednesday, the board roared its approval of Hoffa's candidacy to succeed himself as president and continue drawing his $75,000-a-year salary.

"Brother Hoffa is still in the ball game," the union leader quipped. "You can bet your britches he is."

The executive board also voted to endorse itself for reelection in the July 4 balloting by the 1.7-million member union at Miami Beach.

Hoffa is appealing convictions for jury tampering and for fraudulently negotiating loans from the Teamsters' pension fund. Should the convictions stand, he could serve 13 years in prison.

Guernsey Draws Laugh

Drawing a chuckle with one of his wry comments during a brief recess at the NILE Southern Staff Institute is George Guernsey, right, associate director of the AFL-CIO education department and a co-director of the institute.

Enjoying Guernsey's talk are, from left, Donald Slaiman, director, AFL-CIO Civil Rights department; Hugh B. Owen, OCAW international representative in District 3 and Anthony R. Hodnick, OCAW Education Department international representative. Third NILE institute was held in Athens, Ga., Jan. 16-22.

Bias Hamstrings Dixie Organizing, NILE Class Told

Discrimination against Negroes and poorly-timed drives have hurt labor union organizing efforts in the South, students at the third National Institute of Labor Education (NILE) were told.

Ray Marshall, of the University of Texas department of economics, made the claims in his classes. And students agreed with him, OCAW Education Department Intl. Rep. Anthony Hodnick reported.

Hodnick and Intl. Rep. Hugh B. Owen of District 3 attended the NILE sessions held at the University of Georgia in Athens, Ga.

Students also heard Marshall's theory of why Southern workers do not stick together. "His reasons should provide helpful information to organizers," Hodnick said.

Marshall said organizing efforts launched immediately after World War II and during the 1949 recession period were poorly timed. In covering "A History of Southern Unionists," he also made these points:

- The labor movement in the South will never reach its full membership potential while racial discrimination is allowed.
- The Negro has not been too willing to join labor unions.
- The AFL-type unions have been more successful organizing in the South than CIO unions.

Other courses Hodnick attended and reported on included one in speed reading conducted by Professor Hazel Simpson of the University of Georgia, and one on the new Civil Rights Bill led by Donald Slaiman, AFL-CIO Civil Rights department director.

George Guernsey, AFL-CIO Education Department associate director, was co-director of the institute.

Civic Gang-Up

How A Southern Community Helped To Break A Union

The story of how a community can be used to gang up on a trade union and help destroy it has been graphically illustrated in the southwestern Arkansas town of Hamburg. This community of 2,904 wanted industry, but not decent wages or conditions for those workers who might come with it.

In 1961 the businessmen of Hamburg, who sought industry, made a deal with Bernstein & Son Shirt Corp. which had a plant in Mississippi to set up a new plant in Hamburg. The plan called for the issuance of $300,000 in bonds to build a factory and to cover the cost of training local workers.

Everything went according to plan until an organizer for the Amalgamated Garment Workers signed up 92 out of 123 rank-and-file employes and asked for collective bargaining recognition. From that time on the battle was on.

NOT ONLY DID the Bernstein Co. and its local manager oppose the union, but the leaders of the local community also set out to break the union. According to testimony submitted to a Trial Examiner for the National Labor Relations Board "various businessmen of Hamburg conducted an anti-union campaign."

One of them "enlisted the services of his brother-in-law, Rev. Raymond Carpenter, minister of the Gardner Baptist Church and assistant postmaster of Hamburg, to speak to members of his church."

The Rev. Carpenter visited 10 of his parishioners who were workers at the factory "and asked them to vote against the union."

SOME OF THE prominent businessmen of the town visited other workers and told them that Bernstein would never accept the union, that he would shut down the plant and that the businessmen of Hamburg would lose the money they had put to get the plant for the town.

One of them was asked by a union worker why the plant would have to close down. He pointed out that other plants had unions and got along all right. The businessman, according to the NLRB report, "did not answer."

Two days before the election the "Ashly County Leader" which is published in Hamburg pushed up its publication date by one day "so that it would have an impact on the forthcoming election." It had a front page editorial urging the workers to vote "No" so as to keep the plant in Hamburg.

INSIDE WAS A full-page advertisement. "The top half of the page was a cartoon showing a hand (labeled 'Amalgamated') holding an ax (labeled 'Union') poised as though to strike a goose (labeled 'Hamburg Shirt Corp.'). The goose is pictured sitting on a nest containing an egg (labeled 'Hamburg')". Below the cartoon in bold faced letters almost one inch high appeared the following:

"DON'T KILL THE GOOSE THAT LAID THE GOLDEN EGG."

An extra 100 copies of the paper were printed and distributed free at the shirt plant from a box placed on a picnic table used by the employes to eat their lunch.

Meanwhile, seven top union workers had been fired allegedly for incompetence. All in all the union got the works and lost the election 43 to 67 with eight ballots challenged and one void. More than half of its original card signers had been scared off by the anti-union campaign.

Now the NLRB has set aside the election, has ordered the Hamburg Shirt Co. to "cease and desist" from discouraging membership in the Amalgamated and has further ordered them to offer the seven illegally fired workers their old jobs and pay them back wages in the bargain.

Borg-Warner in 'Right-to-Work' State

Strike Runaway Plant In Deep South

"Right to work" has a bitter twist for workers who are forced to go out on strike to earn a decent wage.

In Mississippi, one of those "R-T-W" states where low wages and the crawling economic and social development of the area have gone hand-in-hand, members of the USWA know the true meaning of open shop legislation.

Since Jan. 27, some 300 members of Local 1543, Atkins Saw Division of Borg-Warner, have been on strike in the Deep South city of Greenville, Miss. USWA Staff Representative William T. Edwards declares that the strike is one which can affect all workers in the area:

"The Atkins wages may compare with other industrial wages in Greenville—which is another way of saying that wages at Atkins are substandard and do not provide a decent living in 1966."

In 1961, the Borg-Warner Corp. moved its Atkins Saw Division from Indianapolis, Ind., to Greenville. Three-hundred members of USWA Local Union 1543 lost their jobs.

A NEW PLANT was built and turned over to the corporation by the taxpayers of Mississippi. Borg-Warner staffed the plant with Greenville workers and a few of the original members, paying all less than half the wages paid in Indianapolis.

In October of 1965, the USWA won representation rights by a vote of 180 to 146, after having lost two previous elections by close margins. A charter was issued and the new local assigned the old number, 1543.

Negotiations with Borg-Warner began on Dec. 3, 1965. It became obvious quickly that the corporation had not come to the table to do any serious bargaining. By Jan. 26, 1966, the corporation had still refused to offer a single item relating to either wages or benefits. It still refuses to either.

THE SHORT HISTORY of the new local with the old number has a strange and ironic twist as 300 bers of an old and honored local are trying to break out of the economic backwash of controlled area rates. It is a fight which involves every member of our union no matter where he lives. The low wage statistics of Mississippi and other Southern states gnaws away at the base of every bargaining table. The potential run-away plants know about Mississippi wages."

Borg-Warner in 'Right-to-Work' State

Strike Runaway Plant In Deep South

"Right to work" has a bitter twist for workers who are forced to go out on strike to earn a decent wage.

In Mississippi, one of those "R-T-W" states where low wages and the crawling economic and social development of the area have gone hand-in-hand, members of the USWA know the true meaning of open shop legislation.

Since Jan. 27, some 300 members of Local 1543, Atkins Saw Division of Borg-Warner, have been on strike in the Deep South city of Greenville, Miss. USWA Staff Representative William T. Edwards declares that the strike is one which can affect all workers in the area:

"The Atkins wages may compare with other industrial wages in Greenville—which is another way of saying that wages at Atkins are substandard and do not provide a decent living in 1966."

In 1961, the Borg-Warner Corp. moved its Atkins Saw Division from Indianapolis, Ind., to Greenville. Three-hundred members of USWA Local Union 1543 lost their jobs.

A NEW PLANT was built and turned over to the corporation by the taxpayers of Mississippi. Borg-Warner staffed the plant with Greenville workers and a few of the original members, paying all less than half the wages paid in Indianapolis.

In October of 1965, the USWA won representation rights by a vote of 180 to 146, after having lost two previous elections by close margins. A charter was issued and the new local assigned the old number, 1543.

Negotiations with Borg-Warner began on Dec. 3, 1965. It became obvious quickly that the corporation had not come to the table to do any serious bargaining. By Jan. 26, 1966, the corporation had still refused to offer a single item relating to either wages or benefits. It still refuses to either.

THE SHORT HISTORY of the new local with the old number has a strange and ironic twist as 300 Greenville members struck the plant and 300 members remain on strike.

But there is still the tragic aspect, as 300 Indianapolis members lost good-paying jobs. Now, 300 Greenville members have struck because their wages are so low they cannot provide for their families even while working a regularly scheduled six-day week of nine and 10 hours per day. Edwards adds: "The new members of an old and honored local are trying to break out of the economic backwash of controlled area rates. It is a fight which involves every member of our union no matter where he lives. The low wage statistics of Mississippi and other Southern states gnaws away at the base of every bargaining table. The potential run-away plants know about Mississippi wages."

On the Cover

Executive Board members of USWA Local 1543 at the Greenville, Miss., plant of Atkins Saw Division, Borg-Warner Corp., man the picket lin in the picture on page one. Front row, from left: C. R. Little, vice president; Mary Francis Smith, recording secretary; Harold Perminter, trustee; John A. Fortier, financial secretary; Tommy R. Lemons, trustee. Back row from right to left: Lewis H. Clayton, original member with 25 years' service with Atkins Saw; Clayton W. Moss, Jr., president; W. T. Edwards, staff representative; Carl E. Pittman, guard; O. J. Spurgeon, guard; Rufus H. Brooks, treasurer; Junior Guy, standing in for Curtis Martin, guide and Harry E. Allen, trustee.

State's Greatest Export

"Right-to-work" advocates in Mississippi have claimed that the open shop state has attracted "industrial development" (read runaway plants). A more profound observation has come from a University of Mississippi student, Robert Boyd, during a television debate on Section 14(b). Said Boyd: *"It is no accident that Mississippi's greatest export is skilled labor."*

GREAT GAINS for the members of Steelworkers Local Union 6918 were included in the contract recently signed (above) with R. Hoe & Co. in Birmingham, Ala.—with a total wage increase of no less than 48.7 cents per hour over the life of the three-year agreement. Staff Representative Maurice R. Allen reports the new pact to be "one of the best we have ever signed" in District 36. Other provisions call for one week vacation after six months service, two weeks after one year; 10 per cent over the hourly rate for shift differentials; three additional holidays, for a total of eight; Blue Cross-Blue Shield hospitalization paid by the company; life insurance from $1,000 up, computed on length of service and rate of pay. Seen here at the contract signing are: seated, left to right, Vincent F. Regan, secretary and personnel director of R. Hoe & Co., and USWA Representative Allen; standing—Horace W. Ward, Felton Harris and Vincent Zukowski, all members of the Negotiating Committee. The members of Local 6918 voted themselves into the Steelworkers on Oct. 28, 1965. Their contract was made retroactive to Nov. 1, 1965.

Two Volunteer State USWA Locals Gain New Contracts

Two new contract settlements—one a first—were recently completed for Steelworker local unions in District 35, reports Staff Representative R. E. Starnes from Johnson City, Tenn.

At Abingdon, Va., members of USWA Local 6891 ratified their first agreement with the Hapco Division of Kearney-National. Contract benefits included a nine cents per hour across-the-board wage increase, improved grievance procedure, gains in insurance programs, better over-time pay provisions, strengthened seniority rights and improved vacation programs. Bargaining Committee were George Schilbe, local president, Richard Musick, Ronnie Groseclose, George Owens, Paul Faw.

At Bristol Metal Products, Bristol, Tenn., members of Local 4586 gained a new three-year contract providing wage increases of 4.5 per cent in 1966, six cents in 1967 and six cents more in 1968, plus improvements in the insurance program and important changes in contract language. Bargaining Committee included Ben Price, local union president, Charles Ray, Marvin Cantor, Kelly McCall, William Dixon.

Representative Starnes assisted in the negotiation of both contracts.

Civic Gang-Up

How A Southern Community Helped To Break A Union

The story of how a community can be used to gang up on a trade union and help destroy it has been graphically illustrated in the southwestern Arkansas town of Hamburg. This community of 2,904 wanted industry, but not decent wages or conditions for those workers who might come with it.

In 1961 the businessmen of Hamburg, who sought industry, made a deal with Bernstein & Son Shirt Corp. which had a plant in Mississippi to set up a new plant in Hamburg. The plan called for the issuance of $300,000 in bonds to build a factory and to cover the cost of training local workers.

Everything went according to plan until an organizer for the Amalgamated Garment Workers signed up 92 out of 123 rank-and-file employes and asked for collective bargaining recognition. From that time on the battle was on.

NOT ONLY DID the Bernstein Co. and its local manager oppose the union, but the leaders of the local community also set out to break the union. Labor — Organizing — South

The New Challenges To Organizing

by William L. Kircher

As the labor movement resumes its long-term growth, it faces unprecedented challenges in its organizing efforts. In a long and often turbulent history, trade unions have been broken and have risen again despite depressions, company police, court injunctions, armed militia, political attacks and even such prosperity as the American Plan offered in the 1920s.

Today, with the labor movement solidly established, unions are finding they can progress only if they recognize the vast changes under way in American society. Rapid technological change, popularly called "automation," is remaking the workforce. The baby boom of the postwar years has come of working age. The civil rights revolution continues to ripple through every segment of American life. More women have become fulltime workers. The white-collar and technical occupations have emerged as the new growth areas. Education and training are clearly today's keys to advancement.

The new young look in the workforce has long been predicted. Experts say the average age in this nation will be 25 years by 1968. This means the "average person" will have been born in 1943. As far as the appeal of labor history is concerned, what can this young person be expected to know of the Great Depression, the sweatshops, the sitdown strikes, the union role in building the wartime "arsenal of democracy" and other early accomplishments? Most of the benefits for which union members struggled, bled and died were here when this young person arrived, so he may easily assume the benefits always existed.

To try to create in him an understanding and appreciation of days and conditions that existed before he was born as a means of exciting him towards embracing unionism just isn't going to get the job done. Before he accepts unionism, he is going to have to recognize it as a helpful method of getting at the things bothering him today.

Hardly anyone joined unions in the late thirties and early forties just because the Knights of Labor had a difficult time in the latter 19th century. It's just possible that the "good old days" of the thirties excite a desire in young workers to join unions today just about as much as the Knights of Labor excited the young fire-eaters in Flint or Gary 30 years ago.

Whether he is a technician or one of the working poor . . . a teacher or a drop-out in marginal employment . . . a Negro in the South or a Mexican-American in the West, one thing is certain—his receptivity to unionism is going to be in accord with his ability to see it as a device to help him with his problems today and to assist him in reaching the reasonable goals he has set for himself for tomorrow.

It is in facing these challenges as they exist today that the events of the past 10 years and an examination of how they contributed to the organizational dropoff become important. To face the fact that the categories of employment in which unions have traditionally grown are the areas where the least expansion is occurring, and at the same time to face the fact that the great expansion areas of the workforce are those in which unions have demonstrated the least organizational effectiveness, is to recognize the overwhelming need for some kind, perhaps many kinds, of change. Probably the greatest change is simply facing the fact that what the union stands for must be responsive to the needs of today's workers.

The growth rate of unions during the first 10 years of merger is a subject about which many writers have had a great deal to say.

There are many different sets of figures available on the union potential among the non-union segments of the national workforce. There is an even greater variety of percentage figures.

The variation in the figures is sometimes a matter of manipulation. At other times it is the result of honest differences in statistical methods. Whatever use is made of the figures, and whatever the method of arriving at them, one thing is certain—organized labor's growth rate has not reached expectations. Over

WILLIAM L. KIRCHER was recently appointed Director of the AFL-CIO Department of Organization.

TRENDS IN UNION GROWTH

Employes in units which voted union in National Labor Relations Board elections.

Source: National Labor Relations Board annual reports.
*1965 total based on NLRB data.

the past decade, union membership levels have remained rather constant. Organizing efforts have produced substantial growth in terms of new members, but this has barely offset the loss of membership through plant shutdowns, automation-shrunk workforces, runaway plants, etc. Simply maintaining the numerical total has meant the relative size of union membership has gradually worsened over the past decade as the workforce grew.

At the time of merger, for every two workers with union cards in their pockets there were three who could have had cards but didn't. Those three without union cards are now four and the fourth one represents the increase in the workforce with which union organizing efforts have not kept pace.

Why it happened that way is something every union is studying today in an effort to discover clues for better growth performance in the future.

There are those outside the labor movement who would like everyone to believe that all this means workers no longer need unions or that they no longer are attracted to unionism. This is pure hogwash.

The annual average number of workers in units for which unions have gained bargaining rights during this 10-year period is nearly a quarter million and the rate of acceptance in the last six-month period of 1965 hit a new 10-year high.

There is a noticeable upsurge of interest on the part of such critical groups as teachers, government workers, retail sales persons and others. The current increase in favorable organizing results is not, significantly, limited to any one geographical area.

One of the best indications of the fact that workers still need and want unions is a recent article in the Wall Street Journal which details the accelerated efforts and highpowered methods of managements to resist unionization by their employes. Obviously, if workers were losing interest in organizing into unions, there would be no necessity for such an acceleration and proliferation of anti-union campaigning.

Still, it is important to look at the reasons for the deceleration in the rate of union growth over the past decade—and there are reasons, many of them. They probably fall within five basic categories: the economic climate, the legislative encumbrances, the massive management resistance campaign, internal problems of organized labor and the changing nature of work and of the working population.

The economic characteristics of the past 10 years were substantially different from those of the periods in which the great growth of unionism occurred. The worker today who has become an "owner"—either in fact or through the phenomenon of credit—is a far cry from the worker of those early days who owned precious little, if anything. The memory of the Great Depression has almost disappeared completely.

Many, if not most, paychecks are committed before they are received. The worker who is meeting house payments, television payments, car payments, education bills, etc., is "in hock" so far in advance that he is apprehensive about anything that might rock his personal economic boat. The forces who are not interested in seeing unions grow do a fairly good job of equating unionism with boat-rocking.

Much of the management community interpreted the merger of the AFL and CIO as a call to arms. Labor relations became the science of preventing union relations. A new creature came to flourish—the "labor consultant." His expertese in frustrating workers' efforts to unionize became a highly marketable commodity in the management community.

The company labor relations director who in earlier days often rose from the ranks and got the job because of his ability to understand shop problems and get along with the workers has been replaced in many cases by college-trained psychologists whose ability lies in keeping company employe relations policies from going beyond the point where the workers might become interested in organizing. "Do-it-yourself" kits on what to do when the organizer shows up are available from many sources.

The time was ripe in 1955. Taft-Hartley, passed in 1947, was being administered by a National Labor Relations Board tuned in to the big business wishes of the "Eisenhower age." In the very first year of the Board under the Eisenhower Administration, the number of employes in units which voted union in NLRB elections dropped to almost half of what it had been

averaging annually. At the same time, the percentage of all the unfair labor practice cases issued against unions doubled and then later doubled again. Whereas less than one of six complaints had been against unions prior to 1954, in 1956 over half of all the complaints were issued against unions, even though the ratio of charges against unions and against employers remained relatively constant.

The McClellan hearings were daily grist for the opinion-making mills. Yet the AFL-CIO's voluntary accomplishments in the field of standards of conduct, labor's "Code of Ethical Practices," for example, received little more than passing reference.

The extra burdens placed on parent unions and their subordinate bodies by the Landrum-Griffin Act necessitated the assignment of manpower which normally would have been utilized in organizational efforts. The brush-fire wars carried on by "right-to-work" fanatics at the state level drained off money and manpower that otherwise would have been put into organizing.

Internally, there were the problems of "growing pains." Many unions were having to learn to "live together" with other unions under radically-changed circumstances. The problems of effecting a multitude of mergers at state and local levels were critical in many areas for several years. And through all these trying problems, the emphasis on autonomy, democracy and voluntarism was never lessened.

There never has been a recipe for successful organizing and there probably never will be. If such were the case, it would have been written in the great growth periods and the rate would never have slackened off.

U.S. UNION MEMBERSHIP COMPARED TO POTENTIAL AND TOTAL LABOR FORCE

* AFL-CIO calculations based on U. S. Department of Labor data on non-supervisory wage and salary workers.

** Excludes Canadian members.

EMPLOYMENT GROWTH IN UNIONIZED AND UNORGANIZED INDUSTRIES,* 1930-1965

The fact is that organizing is a personal business. As people and their conditions change, the nature of the organizing task changes. The basic tools remain pretty much the same, but they must be sharpened and reshaped constantly to meet the challenges as they develop.

Essentially, organizing is a communications process and a two-way process at that. It is as important for an organizer to know what workers' attitudes are as it is for workers to know what the union program is.

Devising methods of penetrating the network of fear and misunderstanding that has been carefully woven around workers' attitudes toward unions by the events of the past decade is what makes the skill requirement in organizing one of the greatest of any task in the movement today.

There are those who think that change means the introduction of many new techniques and methods, perhaps turning to the highly trained social scientist or psychologist, or utilizing skills similar to those of Madison Avenue. It may well be that some of these very things will be needed to help unions to better condition the climate within which they organize and to more effectively formulate and direct their organizational programs.

In the main, however, the idea of unionism is still going to have to be conveyed to the non-union member by unionists. Further, it's going to be done with essentially the same kind of machinery that has been used in the past. A look at that machinery is far from discouraging. It is there and in good shape, except for a little dust here and there.

There are 128 national and international unions in the AFL-CIO, nearly all of them having regional or district offices in various sections of the country, all with manpower and facilities which can "beef up"

organizational efforts. There are in excess of 60,000 local unions of these affiliates, embracing nearly 14 million members. Many of these locals have offices, meeting halls and fulltime personnel.

There are about 800 local central bodies in the nation and a functioning state body in each of the 50 states. There are six major nationally-chartered departments of the AFL-CIO, with many subordinate bodies and councils.

There are few localities where a public committee, commission or board operates for the general community betterment without some representation from the union movement of that locality. Local union members often are among those recognized and respected as community leaders.

It should be utterly impossible to look at the broad network of union representation spread over this nation and the vast source of talent and energy that it contains and shrink from the union growth challenge as an unattainable task. This is so especially if we add to all these factors the unique effectiveness of collective bargaining itself as a means of meeting the needs of workers.

The flexibility of collective bargaining is limited only by the imagination of those who use it. A great deal of the economic fabric of this nation and the fringe benefit structure about which even the employer boasts today resulted from the ideas of union leaders—ideas considered strange when first proposed.

Workers need to see unions as the embodiment of the collective bargaining process. When they do and at the same time understand their role in directing this process toward their problems, they become very firm in their determination to organize.

Unfortunately, too many people have accepted the false characterization of unionism as an institution rather than as the form which workers with common problems and mutual interests assume in order to bring their collective effort to bear on these problems.

The greatest thrust of the management resistance campaign is the effort to psychologically separate the worker from the union, to make him think of the union as a third-party entity. It is almost as though the employer would like the worker to sit up in the grandstand while management fights the union.

When an employer—or a "consultant" who is guiding him—can create such a situation, he enhances the effectiveness of his speeches and letters about strikes, high dues, violence, loss of employment and the other classic fear-producing propaganda.

It is just this kind of management activity that has led two chairmen of the National Labor Relations Board to deplore the failure of certain segments of the business community to accept the national labor policy as established by the Congress and upheld by the courts.

Lest someone consider them prejudiced in these statements, one was a Republican, the other a Democrat; one was a conservative, the other a liberal; one was appointed by President Eisenhower, the other by President Kennedy. Yet both reached similar conclusions with respect to the manner in which many employers skirt the law in order to avoid the responsibility of bargaining with their employes.

Unionism is not an institution—it is a movement, a movement of people. It has been and always will be that despite its critics, friendly and otherwise.

The Sixth AFL-CIO convention analyzed the total organizing situation and laid down essential guidelines for the future. Stating that "nothing but total commitment and total involvement" can meet the "challenge, the opportunity and the obligation" to help the organizing efforts of American workers who are still without the benefits of union representation, the delegates resolved:

"That all affiliates adopt a continuing program of evaluating their organizing operations with the aim of developing more effective means of organizing, increasing the organizing skills of their staffs and encouraging participation in coordinated organizing programs.

"That all members of AFL-CIO unions be viewed as potential and important participants in the overall organizing mission of the American labor movement."

It is the bringing together of all these factors—an understanding of workers' attitudes as they exist today, the marshaling of the vast array of talents and manpower available and then the skill of relating collective bargaining to progress and advancement—which is today accelerating union growth. And this combination is certain to do it even more so in the years ahead.

THE ORGANIZABLE WORKFORCE

* Of 60.5 million wage and salary employes in U. S. in 1965, 8.5 million are mainly supervisory personnel and so are ineligible; 2.5 million are considered beyond the practical reach of unions by reason of being in very small firms and in remote areas.

A New Punishment for Employers

Employers accused of unfairness to unions now face the threat of a new kind of punishment. The penalty, subject to rulings on appeals, has just been imposed in one unfair-labor-practice case.

In a unanimous ruling, the National Labor Relations Board ordered a big textile manufacturer, J. P. Stevens & Company, to do these things:

1. Call meetings of employes and have a company official read a promise, written by NLRB, not to interfere with union organizing efforts.

2. Mail to each employe a copy of the promise that Stevens will not engage in antiunion conduct.

3. Allow the Textile Workers Union to post union messages on plant bulletin boards for a period of one year.

The alleged offenses occurred in three cities in North and South Carolina. But NLRB ordered Stevens to call meetings, mail pledges to all its 30,000 employes in about 50 plants in the two States.

The company also was told to reinstate, with back wages, 71 employes allegedly fired because of union activities.

The order for an "apology" at employe meetings came under fire in Congress. The company has appealed the decision in the courts.

The union also has appealed, but on another point—refusal of NLRB to order the firm to bargain at three plants.

The NLRB said "conventional" remedies—such as posting notices—"are not completely adequate to undo the effect of the massive and deliberate unfair labor practices committed" by the firm.

The company, in reply, said that "approximately 7,000 votes have now been cast at eight of the company's plants. In each and every election the union has been decisively defeated. . . ."

Among other things, NLRB charged that the management spied on the union, questioned employes about union activities, and threatened reprisals.

Firemen Consider Teamster Hook-Up

Talks Weren't Sanctioned, Firefighters Local Says

Some city firemen have been talking with Teamster officials here about possible affiliation with the powerful truckers' union, it was reported Thursday.

"They're very unhappy," Teamster official Tony Zivalich said of the firemen, "and if their other efforts remain unsuccessful, we might take a shot at seeing what we can do."

An officer of the local firemen's association said that any talks by city firefreighters with the Teamsters had not been sanctioned or approved by the local's leadership.

Capt. John Burdette, vice president of the International Association of Firefighters local here, said he had heard that some firemen had approached the Teamsters and stressed that "they were acting on their own."

Zivalich, the Teamsters' organizer here, said the discussions with some firemen had been going on for some time. But he said he wasn't familiar with details of the talks because they had been handled mostly from the Teamster end "by some of our agents."

Zivalich said the Teamsters were not trying "to raid" any labor organization. "We need more members like we need a hole in the head," he said.

But he declared the Teamsters were "in sympathy" with the city firemen's objectives of trying to increase their pay and lower their 60-hour work week.

The firefighters local recently put these requests before the Atlanta aldermanic board, but the city finance committee turned them down on grounds that funds weren't available.

"I don't know what it will take to jar the mayor and aldermen into acting on these men's reasonable requests," said Zivalich.

He added that he understood some of the firemen's problems because "we've got a group of ex-firemen working out here with us."

He said they "started out moonlighting" but found the pay so much better they left their city jobs.

"a little child shall lead them"

How can a child learn to find his place in the world, and make it a better place to live?
We would answer, by having the great treasures of the Bible opened up to him, and learning its lessons of love and spiritual power. That's what goes on every Sunday at the Christian Science Sunday School.

Workers Needed

TORONTO (AP) — Ontario has published a fetching 60-page illustrated book to lure skilled workers from abroad. Officials estimate the province needs about 35,000 skilled people and is sending 30,000 books to Ontario House in London for distribution.

Atl Const.

Don't Need Teamsters

4/11/66

The Teamsters' Union reportedly is in contact with certain members of the Atlanta fire department with a view to possible affiliation with the Teamsters.

We hope the report is not true. The local firemen already are represented by the International Association of Firefighters which is capable of giving adequate voice to local needs. To tie in with the Teamsters would mean trouble for the firemen and for the city.

Ruthlessenss of Teamster tactics was well illustrated during the past few days by a threat to cut off deliveries of food and medical supplies to all municipal hospitals in the city of New York. It is incredible that such a threat should be made but that it was made seriously is a matter of record.

According to the New York Times, a Teamster spokesman spoke quite callously in saying there would be "innocent victims" but that these were comparable to persons killed in the air bombing of German cities during World War II. This was a cynical and brutal approach to the problems of the sick and dying.

We presume that the Teamsters, if they should gain control of the Fire department, would let the city of Atlanta burn to the ground to gain their ends. At least that is what we read into what happened in New York in what primarily was a jurisdictional dispute.

Charge Police Violence at Struck Florida Citrus Plant

The efforts of a big Florida citrus products processor to deny some 1400 workers a fruitful share in the cooperative firm's fat profits has touched off a bitter strike.

Newly organized United Steelworkers at Cypress Citrus Products, Inc., charged State Police and sheriff's deputies with violence in which seven women pickets were injured in a sudden eruption of club-swinging touched off by the police as the unionists sought to persuade a trucker from delivering cans to the struck plant.

The workers struck the plant in Winter Haven, Fla., on March 9 in support of contract proposals asking an equitable up-grading of substandard wages and fringe benefits. Plant workers—second in the citrus processing industry to be organized by the United Steelworkers—became members of the union after an NLRB election on Jan. 20 which followed a swift organizational campaign.

SPEARHEADING the successful drive were Charles Todd of Local 5409, American Can Co., Plymouth, Fla.; Carroll Lewis, Local 2120, American Can Co., Tampa, Fla., and Willie R. Bennett and Robert Cameron of Local 6148, Crown Cork & Seal Co., Bartow, Fla.

Three of the same "Fearsome Foursome"—a proud title which can be applied to determined union organizers as well as big pro football offensive line units — moved in with equal success to organize under the USWA banner the 800 workers at the Adams Packing Plant in Auburndale, Fla., about 10 miles from Winter Haven. Huey Cole of Local 6148 replaced Robert Cameron for the winning Adams drive.

Contract negotiations at Adams began March 17. The strategy in fruit processing negotiations is tied to the picking season, now at its height.

International Representative Pat Burke and his assistant, Estes Riffe, in charge of the Cypress Citrus Products contract drive, expected no quick capitulation there — nor any place else where the union has drives on in a notorious "right-to-work" state.

"THE POLICE SUPPOSEDLY were called out to 'preserve order,'" said one embittered picket. "But the way they pushed us around, we can only believe that the only 'order' they were interested in was the company's 'order' to bust the strike."

Despite the odds stacked against them, morale of the strikers remained high. There is "no doubt in their hearts and minds that eventual victory will result," said Mr. Burke.

Settlement talks were resumed at the request of federal mediators as STEEL LABOR went to press. No further developments were reported.

The first citrus processor organized by the Steelworkers was the 200-worker plant of the Birdseye Foods Corp., also in Winter Haven. USWA organized there because the plant—as many other citrus plants are starting to do put in its own can manufacturing lines.

Mr. Burke said the USWA will continue a determined drive to organize the entire processing industry. "There is a potential of at least 20,000 workers involved," he said. "We want to bring them an advancement in wages, working conditions and fringe benefits they deserve."

Unionizing Dixie

A Campaign to Organize Southern Plants Meets Formidable Opposition

NLRB Says Union Members Are Fired by Textile Mills; Civic Leaders Back Firms

5/11/66

The Battle at J. P. Stevens

By KENNETH G. SLOCUM
Staff Reporter of THE WALL STREET JOURNAL

GREENVLLE, S.C. — Charlie Jenkins worked 35 years for textile producer J. P. Stevens & Co. here. Half that time he was a mechanic, or "loom fixer," the highest paid hourly job in the industry. During his final eight years with Stevens, he didn't miss a day's work, and the company once awarded him five silver dollars for superior performance, he claims.

But for the past two and a half years the stocky, mustached 52-year-old hasn't been able to find work of any kind in textile mills in this part of the country. The reason for Mr. Jenkins' ostracism, from every indication, is that he has acquired a reputation as a "union agitator." As such, he is about as popular with most Dixie businessmen as a "civil rights agitator" would be at a gathering of white supremacists.

Stevens claims Mr. Jenkins was discharged for poor workmanship. But the National Labor Relations Board, after investigation, asserted that he was fired by Stevens for joining a union and urging fellow employes to do the same. Recently the NLRB ruled that Mr. Jenkins, who has been living lately off the earnings of his wife's factory job, had been discharged illegally for union activity and ordered him reinstated with back pay he estimates at $17,000. But union officials fear that the case of Mr. Jenkins, along with 70 other discharged Stevens employes whose cases were similarly decided by the NLRB, will drag on for years in the courts and that the NLRB finding perhaps may be reversed.

Formidable Obstacles

The discharged employes of Stevens, a family-run business with 42,000 workers at 70 plants largely concentrated in the Southeast, attest to formidable obstacles confronting unions in Dixie, much of which remains a holdout against unionism. Opposition comes not only from individual companies seeking to thwart unionization drives, but also from community leaders and organized groups of businessmen.

One such business group, Central Piedmont Industries, was formed in Charlotte in 1958 with the primary purpose of obstructing unionization. Says Edward J. Dowd, Jr., executive vice president: "'Labor down here is considerably more productive than elsewhere because workers don't know anything about featherbedding or make-work approaches of entrenched unionism. We plan to keep it that way."

Unions have tried off and on for many years to make headway in the South, and they are well established in some Dixie industries, such as Alabama steel plants. But still outside the union fold are some 7 million nonagricultural workers employed by hundreds of companies in nine Southern states. In hopes of speeding up unionization of these firms, unions in 1963

that he was fired by Stevens for joining a union and urging fellow employes to do the same. Recently the NLRB ruled that Mr. Jenkins, who has been living lately off the earnings of his wife's factory job, had been discharged illegally for union activity and ordered him reinstated with back pay he estimates at $17,000. But union officials fear that the case of Mr. Jenkins, along with 70 other discharged Stevens employes whose cases were similarly decided by the NLRB, will drag on for years in the courts and that the NLRB finding perhaps may be reversed.

Formidable Obstacles

The discharged employes of Stevens, a family-run business with 42,000 workers at 70 plants largely concentrated in the Southeast, attest to formidable obstacles confronting unions in Dixie, much of which remains a holdout against unionism. Opposition comes not only from individual companies seeking to thwart unionization drives, but also from community leaders and organized groups of businessmen.

One such business group, Central Piedmont Industries, was formed in Charlotte in 1958 with the primary purpose of obstructing unionization. Says Edward J. Dowd, Jr., executive vice president: "'Labor down here is considerably more productive than elsewhere because workers don't know anything about featherbedding or make-work approaches of entrenched unionism. We plan to keep it that way."

Unions have tried off and on for many years to make headway in the South, and they are well established in some Dixie industries, such as Alabama steel plants. But still outside the union fold are some 7 million nonagricultural workers employed by hundreds of companies in nine Southern states. In hopes of speeding up unionization of these firms, unions in 1963 began an all-out organizational drive in Dixie. Involved are 23 different unions, ranging from the United Auto Workers to the International Woodworkers of America. But the brunt of the effort is being borne by the AFL-CIO's Industrial Union Department (known as the IUD) and the AFL-CIO Textile Workers Union. And the main focus of their push is the textile industry in the Carolinas.

Ripe for Unionization?

Both North and South Carolina would seem to be ripe for unionization. North Carolina manufacturing workers averaged $1.82 an hour in 1965, ranking, along with Mississippians, as the lowest paid in the country, according to the U.S. Bureau of Labor Statistics. At $1.88 an hour, South Carolina factory hands weren't much better off. These wage levels compared with an average of $2.61 for the nation as a whole and $3.22 in heavily unionized Michigan.

North Carolina also ranks at the bottom in unionization, with only 6.7% of nonagricultural workers enrolled in unions. For South Carolina the proportion is 7.9%. Nationwide, 29.5% of nonagricultural workers are union members. The figure for Michigan is 38.9%, while Washington, at 43%, is even higher.

But if all this makes the Carolinas an inviting target for union organizers, it doesn't make them an easy one. Evidence of the difficulty of unionization is provided by the NLRB scorecard on elections for union representation of workers in the two states. From 1963 through last year unions won 236 of these certification elections and lost 279. While the number of elections won by unions may look fairly impressive, most of these victories involved small, single-plant operations averaging less than 100 workers, according to one labor leader. Four elections at Stevens plants in North and South Carolina were all lost by the Textile Workers Union.

Going After Stevens

The 153-year-old Stevens concern, which is headed by Robert T. Stevens, Secretary of the Army in the Eisenhower Administration, has become the chief target of the organizing campaign. One reason for the unionists' decision to go after Stevens with special vigor is that the company's workers initially seemed receptive to organization. Another consideration was the firm's sound financial state, which, the union felt, would make it difficult for officials to plead poverty when presented with union demands.

Perhaps the most obvious reason for singling out Stevens, however, was its reputation as the most militantly anti-union company in the generally anti-union textile industry. A union foothold at Stevens could carry symbolic significance for the whole organizing drive in the South.

"If we can crack Stevens—and we will—it will automatically follow that people in the other textile plants will want to unionize to obtain the wages and other benefits won there,"

Unionizing Dixie: Organizing Effort Encounters Formidable Opposition

Continued From Page One

declares Jim Pierce, who heads the Southeast drive for the IUD. "That would undoubtedly ease the way for organizing of plants other than textiles."

But, as the NLRB election results suggest, cracking Stevens is proving difficult. A look at the confrontation between Stevens and the union movement here in Greenville shows just how difficult.

Greenville, a bustling community of 70,000 people, likes to call itself "the textile capital." Within a 50-mile radius are clustered close to 100 textile plants, 15 of them belonging to Stevens.

The Stevens plant in a section of Greenville called Dunean has been the scene of two elections for representation by the Textile Workers Union. In the first, held last year, the union lost, but the NLRB set aside the vote on the ground the company had engaged in unfair labor practices—namely, threatening workers with reprisals if they voted for the union. A second election was held earlier this year. Once more the union was defeated—this time by a margin twice the size of the one in the previous vote; the union has asked the NLRB to overturn this vote, too.

Silence From Stevens

Though they have denied all charges of unfair labor practices, Stevens officials now refuse to discuss any aspect of the union organizing campaign or the NLRB rulings, saying their lawyers have advised them that any comments would be improper with the NLRB order to reinstate fired workers now being appealed before the Fourth Circuit Court of Appeals. Encountered recently in Atlanta at the annual meeting of General Electric Co., of which he is a director, President Stevens brusquely rebuffed a reporter seeking to question him about his company's labor situation. "It would be highly improper for me to discuss J. P. Stevens affairs on another company's time," he said.

Others sympathetic to management's point of view point to the results of the elections at the Stevens plant at Dunean as conclusive proof that the workers simply don't want a union; they say that Dunean workers, like others in the textile industry, have received three 5% pay increases in the past two years and are doing fine without a union.

Union organizers insist, however, that their defeats stem from workers' fears of management retaliation for supporting unions. "Our biggest problem in getting workers to join the union is people walking around like Charlie Jenkins—they're living proof the company can fire workers for union activity and get away with it," says Harold McIver, the square-jawed IUD representative who directs organizing efforts at the Dunean plant.

Mr. Jenkins, who worked at another Greenville-area Stevens mill, the Victor plant, says he hadn't received a "write-up" (written complaint by his superior) for 35 years until the troubles that led up to his discharge began. These troubles started, he asserts, shortly after he signed up for the Textile Workers Union in the summer of 1963 and began calling on co-workers after work as a member of the employe organizing committee. In quick suc-

Federal law, of course, and there is no proof such a conspiracy exists.

A North Carolina management consultant who helps companies fight unionization says no formal agreements are needed for the blackball system to function effectively. He explains it this way: "Say I'm an employer who doesn't want a union—and no one down here does—and I'm looking at this guy's job application. I look at the date of his termination and see that he left Stevens about the same time they had all their labor trouble. I'd be some kind of an idiot to take a chance on giving this guy a job when he might try to organize my plant."

Civic leaders often prove formidable allies for employers opposing unionization. The Rev. Paul F. Beacham, a pink-cheeked, white-haired man who is president of the 230-student Holmes Theological Seminary here, acknowledges that on one occasion he wrote anti-union letters to several of his students who worked at Stevens. "Presumably you know that labor unions today are dominated by the spirit of anti-Christ and therefore a Christian cannot have anything to do with them," said the letters from Mr. Beacham, a minister of the Pentecostal Holiness Church.

Greenville Mayor David G. Traxler also opposes unions. The Greenville area has added 12,000 new jobs in the past six years, he says, but "unionization would be a deterrent to new industry—companies don't want their hands strapped down."

In some instances in the South, unions have won what seemed to be victories—only to see their support quickly melt away. Such is the case at the Albemarle, N.C., plant of Collins & Aikman Corp., a producer of automobile carpeting.

Replacing Strikers

In the spring of last year the Textile Workers Union won the right to represent some 1,000 workers at the plant. After months of haggling over a contract, workers struck Sept. 30, although union leaders say it was against their advice. Within a month, the company had hired replacements for close to half the striking workers.

The union finally signed a contract it considered totally unsatisfactory "in order to get back in and start rebuilding," says Paul Swaity, regional director of the Textile Workers Union. But it now appears likely that the company will seek decertification of the union on the ground it no longer represents most workers at the plant.

"Strikes are less successful in the South than elsewhere because companies have no problem getting an injunction limiting pickets to about four people, which means they have no big impact," says Mr. Swaity. "Too there's always an abundance of people here looking for better jobs and Southerners are not oriented against crossing picket lines as are workers elsewhere."

Here in Greenville, the anti-union sentiments of Stevens and influential citizens have so permeated the atmosphere that it's difficult to conceive of unions making much progress in the near future, no matter how critical the NLRB may be of Stevens' conduct. So strong are the pressures against unions, says Aubrey Kent, a 20-year Stevens veteran who was fired last August for "failure to obey an order," that "some of my friends won't even be seen talking to me in downtown Greenville because I was associated with the union and they are afraid they'll get in trouble at the mill."

He adds: "Deep down, most of them feel J. P. Stevens is too big down here for the Federal Government—that the little NLRB isn't going to tell big J. P. what to do in South Carolina."

ceived three 5% pay increases in the past two years and are doing fine without a union.

Union organizers insist, however, that their defeats stem from workers' fears of management retaliation for supporting unions. "Our biggest problem in getting workers to join the union is people walking around like Charlie Jenkins—they're living proof the company can fire workers for union activity and get away with it," says Harold McIver, the square-jawed IUD representative who directs organizing efforts at the Dunean plant.

Mr. Jenkins, who worked at another Greenville-area Stevens mill, the Victor plant, says he hadn't received a "write-up" (written complaint by his superior) for 35 years until the troubles that led up to his discharge began. These troubles started, he asserts, shortly after he signed up for the Textile Workers Union in the summer of 1963 and began calling on co-workers after work as a member of the employe organizing committee. In quick succession he received three write-ups for violations such as laying a dirty wrench on cloth and failing to adjust a loom correctly.

Then, according to the NLRB report on his case, he was fired when he balked at signing a statement admitting poor loom fixing. The NLRB found that Stevens "discharged Jenkins because of his union membership, when it failed to obtain his resignation."

Organizers Thwarted

Whether Mr. Jenkins and others really were fired for union activity, as the union and the NLRB contend, or because of poor workmanship and violations of plant rules, as Stevens maintains, one thing is clear: The organizing effort at the Victor plant was effectively stymied. By the discharge of Mr. Jenkins and others, Stevens "eliminated the only known pocket of union activity in the Victor plant," an NLRB report states.

IUD organizer McIver claims the same situation prevails at the Dunean plant. "The employe organizing committee at Dunean is gone," he says. "Those who weren't fired quit on their own."

The NLRB says Stevens' anti-union activities haven't been restricted to the discharges at these two plants. NLRB examiner Horace A. Ruckel drafted a report containing broad charges that Stevens has spied on employes, intimidated some who had given statements to the NLRB, threatened to shut a plant if it was unionized and interrogated employes concerning union activities of fellow workers.

Mr. Ruckel said, however, that it was at Stevens' Watts plant, near Greenville, that "the respondent's (Stevens') efforts to drive employes out of the union, or out of Stevens' employ, perhaps reached its finest fruition. Here the respondent furnished anti-union employes the services of its typewriters and mimeograph machines and the services of an employe to reproduce withdrawal announcements which were then distributed among the employes for signing and mailing to the union."

By this means, Mr. Ruckel concluded, "the respondent procured the resignation from the union of all but two of the 46 employes . . . whose names had been sent the respondent as union members. These two employes the respondent then discharged. The union in the Watts plant was wiped out."

Other Firings Protested

NLRB proceedings are still under way in cases involving two other groups of workers formerly employed at a number of different Stevens plants. In one of these proceedings, an NLRB examiner has concluded that Stevens fired 19 workers for union activity; this case is now before the full board. In the other case, an examiner currently is taking workers' testimony on a union complaint that Stevens fired 20 employes because of union activity.

An obstacle to unionization almost as great as the loss of an employe organizing team, union leaders say, is workers' fear of the "blackball"—the branding of a worker as a union sympathizer. Albert Sanders, now 50 years old, was fired in 1963 after 16 years with Stevens; Stevens attributed the discharge to "poor loom fixing," but the NLRB decided the cause was "association with the union, which he was known to favor."

Whatever the reason, Mr. Sanders says that today "there isn't a textile mill in South Carolina that will touch me—I've tried them all. And that's the only work I know." Mr. Jenkins and most of the other workers discharged during the course of the organizing effort say they have shared Mr. Sander's experience.

A conspiracy by Stevens and other textile employers to prevent union sympathizers from finding work would be a violation of

Organizing South

SOUTHERN RWDSU BOASTS 5,000 ORGANIZED IN YEAR

BIRMINGHAM, Ala.—Delegates from RWDSU Southern locals arriving in Miami Beach this month for the union's Tenth Constitutional Convention have every reason to march in proudly.

In the last year, the union has organized nearly 5,000 new members across the South, from Selma, Ala., and Griffin, Ga. to Memphis, Dallas, Jacksonville, Fla. and Suffolk, Va.

So far, in one year, the union has won elections at 29 shops employing 3,220 workers, while losing only three elections among 225 workers. Eight other campaigns among nearly 1,800 workers are now in progress.

The union has also met difficulty. Right now 300 newly-organized workers in Memphis and Dallas are on strike for first agreements, and both strikes are tough—but the union is on the move, with new contacts made regularly, new elections coming up and contracts being negotiated and signed.

Several reasons for the union's success were suggested by Ass't Southern Dir. Frank Parker.

"Organizers are doing a lot of hard work, and that is a big factor in our success," he said. "But we have worked just as hard at other times in the South with less success. Today workers in the South are less afraid to join the union then they were ten or 12 years ago. Civil rights activities in certain areas—like the Black Belt of Alabama, some areas of Georgia and more recently in Jacksonville and Hertford, N.C.—have been an important factor in reducing the workers' fears. The change in the attitude of the Nat'l Labor Relations Board has also helped. We get elections with less delay.

"We ourselves, when we talk to people about joining the union, are more confident that if they are fired for union activities, they will be reinstated to their jobs with full back pay for their losses, as the law provides."

The Selma area is a good example of the union's participation in a changing South. In March 1965, when the Freedom March to Montgomery was held, the RWDSU had no members in the area. Today it has 500, mostly Negroes, including 300 at Massengale Poultry in Greensboro, 40 miles from Selma. On the November day that the RWDSU won an overwhelming NLRB victory, Org. Henry Jenkins, in fear for his life, had to hide from Klansmen. Yet in March the boss sat down with the union committee, white and Negro, and negotiated a contract. "I think the union is best for me and for the people," he said.

"Massengale is the sweetest victory because of how far we've come," Parker said. "One time it was worth your life to go in there. Today the workers have negotiated a good two-year contract and they really have a functioning union, and a Negro is in a run-off for sheriff in that county."

RWDSU Record. (over)

Unionism Returns to 'No. 1 Heel' After 10 Years

WINCHESTER, Va.—Workers at the plant of the O'Sullivan Rubber Corp. here—the site of a classic union-busting effort under the Taft-Hartley Act in the 1950s—voted to be represented by a union for the first time in nearly a decade. (See story "You'd Have to Work Here to Believe It" on Page 10.)

The vote, in an election conducted by the Nat'l Labor Relations Board among 505 eligible employees, was 325 for the Auto Workers, 137 against, with six votes challenged.

Only a handful remained in the O'Sullivan workforce of the hundreds who struck the plant during a contract dispute 10 years ago. Others who stayed out while the labor movement conducted a nationwide boycott against the struck plant's products were not on hand to enjoy the victory.

All but 37 of the eligible workers voted. The UAW polled 64 percent of the eligible vote and 70.5 percent of the valid votes cast.

The organizing campaign was brief and vigorous. An AFL-CIO staff member, in town for a campaign at a nearby plant, passed out union leaflets at the plant gates and was contacted by workers who said they were tired of their non-union status.

Regional Dir. Oliver Singleton of the AFL-CIO's Baltimore office assigned staff members and met with a 30-member in-plant committee which reported the time was right for a union organizing campaign.

Cards were signed by a majority, a petition for an NLRB election was filed and a date set after a three-week campaign. The UAW was the only union on the ballot, the Rubber Workers having agreed not to assert their interest in their former unit.

AFL-CIO Organization Dir. William L. Kircher welcomed the O'Sullivan workers back into the labor movement and expressed his appreciation to the UAW and the URW.

The two affiliates, he said, "displayed the finest example of trade union statesmanship, fraternal cooperation, and commitment to the best interest of the workers."

Kircher stressed the claim the URW could have made because of its former status as the legal bargaining agent, its support of a lengthy and costly strike and a sustained boycott. In waiving its primary organizing rights, he said, the rubber union was "clearly motivated by a concern for the welfare of the workers which it placed above the union's legitimate claim."

The new UAW unit will draft contract proposals after the election result is certified, Staff Rep. Cecil Strickland said.

The first O'Sullivan union struck May 13, 1956, when the company refused to discuss contract terms. Originally, a directly chartered federal local, it had become an affiliate of the URW. The latter union supported the strikers and waged a nationwide boycott against O'Sullivan as "America's No. 1 Heel."

The firm hired strikebreakers and the URW eventually was decertified.

Upholsterers Set Up Fund for Organizing

Palm Beach, Fla.—The Upholsterers 35th convention here took action to move the union forward on the organizing, political and international fronts.

The delegates attacked the problem of organizing in the South by voting a monthly assessment of 25 cents for the next four years, which is expected to build a fund of some $700,000 over that period.

Responding to a call from AFL-CIO Sec.-Treas. William F. Schnitzler for renewed efforts to elect liberals to Congress this year, the convention approved the report of the convention committee on political education requiring written explanations from locals that fail to collect contributions to COPE in 1966.

UIU Pres. Sal B. Hoffmann declared during discussion of the report "that the long struggles of locals to get gains are endangered" when unfriendly congressmen are elected.

"When union members staved home and did not vote in 1946, we got Taft-Hartley," he observed. "Compared to what can happen, we may consider Taft-Hartley a good law. A hostile congress can turn locals into debating societies."

Hoffmann pointed out that wages have risen from $1.75 to as high as $3 an hour in the industry because collective bargaining is guaranteed by Section 7A of the Wagner Act.

"We live by grace of 7A," he said. "Once they take that section out of the law, we will have to strike for recognition."

COPE Drive Backed

He concluded with the appeal to "go back home and do your job" in collecting COPE dollars.

At the concluding evening session of the convention, the delegates themselves voluntarily contributed $600 to COPE.

The convention voted to double Hoffmann's salary of $10,400 a year, which was set in 1948. He said he would accept half of that amount but that future presidents should receive the total proposed increase.

The seriousness with which the need for organizing was viewed was demonstrated also at the final session of the convention when UIU First Vice Pres. Al Rota said he would urge his local to give $5,000 to aid the international's organizing effort.

Rota is also secretary and business representative of Local 13, Chicago. Several other delegates said they would also seek local contributions for organizing.

A statement on foreign policy in the report of the general executive board, approved by the convention, attacked an "alliance of pacifists of both religious and socialist inspiration, liberal isolationists, the usual small but intensely egotistical and willful band of U.S. senators, and radical extremists of right and left orchestrated by a widened variety of domestic communists."

The report charged that these groups "are concentrating on the attempt to brainwash our nation of the memory of the fatal consequence to the free world of the appeasement of Hitler by Chamberlain. . . ."

A resolution on Viet Nam said that "Pres. Johnson needs all the moral support he can get to bring the South Viet Nam conflict to a successful conclusion in stopping communism."

Retail-Wholesale Union Cites Organizing Progress in South

By Gervase N. Love

Miami Beach, Fla.—The Retail, Wholesale & Dept. Store Union has had "amazing success" in organizing during the past year in Georgia and Alabama, Pres. Max Greenberg told some 600 delegates to the union's 10th constitutional convention.

In cooperation with civil rights forces, Greenberg said in his keynote address, the RWDSU has "succeeded in channeling the energies of Negro workers" to the point that "the example set by these most exploited and most downtrodden workers has inspired white workers as well."

"Shops with a total of 5,000 workers have been organized in the past year in such places as Selma and Greensboro, Ala., Griffin, Ga., various towns in Florida and other communities which have never before felt the impact of unionism," he said.

"The success of these efforts is a tribute to the leaders and members of our southern affiliates."

Executive Sec. Jack Paley reported that the union has 239 locals in the United States and Canada. Since the previous convention four years ago, he said, 29 new locals were chartered and 31 went out of existence, half by merger with other locals and the rest in small plants that went out of business or fled to non-union areas.

Sec. of Labor W. Willard Wirtz, making his second speech of the day to a union convention, ridiculed talk of "tired blood" in the labor movement and declared that "most of what we've gained in the last couple of years is what labor has been fighting for for years—and much of the leadership over those years has come from the labor movement."

Earlier in the day he had spoken to the Clothing Workers' convention in Atlantic City, N. J. He left the RWDSU session to fly to St. Louis to appear before the Hotel & Restaurant Employes convention. In 16 days, he said, he was traveling 27,000 miles and making nine speeches in six states and two countries.

Wirtz read to the delegates a message of greeting from Pres. Johnson, who hailed the union's contribution to the "dramatic social and economic progress" the nation has made, and to the country's high level of prosperity.

The President pointed out, however, that much remains to be done and declared he would "welcome the continued efforts" of the RWDSU to built the Great Society.

Wirtz, who said he came "to talk over some of our common problems," recounted the country's economic and social gains since the last RWDSU convention in 1962, briefly discussed "where we are" and outlined "where we're going."

In examining the legislative picture, he said flatly that "I don't like the denial of the right to vote" on repeal of Section 14(b).

"But I can't count that year entirely lost despite the failure to repeal 14(b)," he added, "because we've had solid evidence of the resurgence of the organizing spirit, especially in the areas in which this union operates."

He urged letter-writing campaigns to members of Congress in support of consumer legislation, which he said would be the equivalent of a 10 to 20 percent wage increase for those at poverty levels, and for federal unemployment compensation standards.

Wirtz was given a standing ovation when he pleaded for a rethinking of the liberal position and a "new agenda" based on today's needs instead of the "desperation" philosophy of the 1930s.

Greenberg and Wirtz touched common ground in their approach to civil rights, emphasizing the need of translating legal gains into social and economic realities for members of minority groups who have suffered from discrimination and inadequate training and education.

Dir. Al Barkan of the AFL-CIO Committee on Political Education declared that in the coming congressional and gubernatorial elections the labor movement "faces a crisis of the first magnitude."

The convention COPE committee filed two reports—one for the U.S. and the other for Canada, where the union has 20,000 members. The U.S. section, headed by Vice Pres. Jack Kirkwood, outlined a detailed program for increased political action aimed at strengthening the liberal and labor forces in Congress. The Canadian section, led by Hugh Buchanan, RWDSU supervisor in Ontario, called for a still further increase of affiliations to the New Democratic Party.

Gen. Sec. Juul Paulsen of the Intl. Union of Food & Allied Workers, with which the RWDSU is affiliated, explained the functioning of the international trade secretariat, its services to members and its aid to unions in developing nations. He thanked Greenberg, a member of the IUFAW Management Committee, or executive board for his "never-failing cooperation."

Facing the delegates was an executive board recommendation that the per capita payments, unchanged since 1958, be raised from 85 cents to $1.15 per member per month. Among speakers still to be heard were Sen. Robert F. Kennedy (D-N.Y.); Pres. Claude Jodoin of the Canadian Labor Congress, Dir. Don Slaiman of the AFL-CIO Dept. of Civil Rights, Executive Dir. Jack Conway of the AFL-CIO Industrial Union Dept., Assistant Dir. H. H. Bookbinder of the Office of Economic Opportunity and Bayard Rustin, civil rights leader.

Company's Union-Busting Cited

TWUA Raps Apologists for Stevens

TWUA has sharply rebuked and refuted four southern Congressmen who used the floor of the House of Representatives to attack the NLRB's findings that J. P. Stevens & Co. is guilty of "massive unfair labor practices" (*Textile Labor,* April).

In a letter to all members of both houses of Congress, General President William Pollock said the March 24 remarks of Representatives Landrum of Georgia and Rivers, McMillan and Dorn of South Carolina "not only indicate a regrettable lack of knowledge of the facts in the (Stevens) case but, more important, reflect a callous disregard for the interests of southern working people."

Citing NRLB's findings that Stevens conducted a conscious, carefully-calculated program to keep its workers from organizing and illegally fired 71 workers in that process, Pollock said the labor board justifiably concluded that conventional remedies were inadequate in this case.

Yet, the TWUA president noted, the NLRB declined to invoke "the one remedy that would breathe life and meaning into the law's guarantee of the right of workers to organize; that is, an order directing the company to bargain with the union at those plants where, but for the illegal practices, the union would have had a majority."

These four Congressmen, Pollock said, suggest that the fact that the NLRB imposed a new remedy, requiring Stevens to post cease-and-desist notices in all of its plants and also read such notices to its workers, somehow "amounts to setting itself up as a 'policy-making' body."

"The fact is, and the Supreme Court has so held from the earliest days of the NLRB, that questions as to what remedy will best effectuate the purposes of the labor act are best decided by the agency itself, in light of its expert knowledge of the field.

"Notice-posting has long been the typical remedy imposed. A requirement that a firm as far-flung as Stevens should also read the notice to its workers hardly is revolutionary," the TWUA president wrote members of Congress.

"Until new and effective remedies are devised, this company will go on its merry way violating the law. In fact, it has never stopped doing so since the board's proceedings against it began some two and one-half years ago. This chronic and contemptuous law-breaking, it should be noted, characterizes the behavior and history of the southern textile industry in general," Pollock said.

Far from crying out against the remedies the NLRB has directed in the Stevens case, Pollock said, Congress should regard this "shocking" situation as "a challenge and an opportunity to devise rules and remedies that will give life and meaning to what is now only a hollow promise that workers shall have the right to self-organization, free from employer intimidation."

Local 1493 negotiators and management representatives sit for their photo after signing pact for a 36.8¢ package at Gold Mills Inc.

Pine Grove Workers Gain 36¢ Package at Gold Mills

PINE GROVE, Pa.—A new three-year settlement incorporating a wage-fringe package estimated at 36.8¢ an hour has been signed between Local 1493 and Gold Mills Inc. here, according to Joseph P. Coponi, Allentown District Joint Board manager.

The wage portion of the package provides for increases of 15¢ an hour plus inequity adjustments of 3.3¢ in the first year, a raise of 8½¢ in the second year and 7¢ an hour more in the third year of the agreement.

Fringe gains include increases in Blue Cross and Blue Shield benefits together with improvements in contract language.

Joining with Coponi in contract negotiations was a committee composed of the following: Gene Griffiths, president; William S. Wessner, recording secretary; Donald Adams, vice president; Ronald Boyer, financial secretary, and Thomas Morgan, sergeant-at-arms.

Assisting the bargaining teams were Elvin Fidler, Paul Reinhart, Paul Schaeffer, Earl Knarr, Jacque White, Robert Lemke, Tom Morgan, Edwin Fritz, Lawrence Troup, Charles E. Keefer, Arlene Hoke and Gene Ferrebee (see feature Page 5).

Organizing – South

A Case History Of Union Busting...

J. P. Stevens in the South

by Rep. Frank Thompson, Jr.

On March 22, 1966, the five members of the National Labor Relations Board unanimously upheld the findings of an independent trial examiner that the J. P. Stevens Company had flagrantly violated those provisions of the National Labor Relations Act expressly designed to guarantee to all employes the rights to "self-organization."

The Labor Board found an effort by the J. P. Stevens Company "to crush the union movement in its plants with small regard for the means employed." The "flagrant unlawfulness" contained in the record includes:

1. The wholesale discharge of union members;
2. Spying on union meetings and employe attendance;
3. Reprisals to discourage union adherence;
4. Stripping employes of union insignia;
5. Posting lists of union members on the company bulletin boards and inducing those so listed to "scratch" their names.

The Labor Board ordered the company to remedy its violations by (1) reinstating all discharged employes with back pay; (2) posting a notice on its bulletin boards that it would not again violate the law; (3) sending copies of this notice to all employes at their homes; (4) reading the notice aloud in plant meetings; and (5) affording the union reasonable access to company bulletin boards.

This decision was handed down by the Labor Board at 9:30 a.m. on March 22, 1966. The company immediately appealed to the United States Court of Appeals for the Fourth Circuit. In fact, the original appeal was filed at 8:30 a.m., an amended appeal at 9:03 a.m. and the finalized appeal shortly after the Labor Board announced its decision.

There was also haste on the floor of this House.

On March 24, 1966, two days after the Labor Board decision was announced, a distinguished former Labor Committee member denounced it on this floor. He claimed that the J. P. Stevens Company decision

REP. FRANK THOMPSON, JR. (D-N.J.), is a six-termer and a ranking member of the House Education and Labor Committee. He chairs a special subcommittee on labor which is considering amendments to the National Labor Relations Act. He delivered these remarks on the House floor May 24, 1966.

"creates unrest and creates a lack of confidence in the executive branch of our government." He claimed that the Board order requiring the Stevens Company to publicize the "cease and desist order" ("that they have sinned but will sin no more," as our colleague put it) "infringes upon a fundamental right of every American employer."

The gentleman from South Carolina (Mr. Dorn) joined in this denunciation and characterized the Labor Board's opinion as "an attack upon our free enterprise system." He claimed that the decision, if affirmed, "could well destroy enlightened industrial labor relations." He did not elaborate his assumptions. On May 23, 1966, Mr. Dorn again addressed himself to this subject and announced that he was sending President Johnson a telegram. Again Mr. Dorn did not elaborate.

Mr. Rivers and Mr. McMillan of South Carolina associated themselves with these remarks.

These comments, as I have indicated, came two days after the 117-page opinion was made available and the gentlemen admitted that their comments were based upon reports in the press.

On April 27, the gentleman from Virginia (Mr. Tuck) joined in the attack. He described the decision as "base," "unwarranted" and "reprehensible." He claimed that "the persons responsible for this decision (presumably the five members of the Labor Board) "have undoubtedly become exposed to the methods employed by communists." He concluded that "every patriotic and thoughtful American should rally to the defense of the Stevens Company."

I find a certain irony in this charge. Just over a decade ago, the head of the J. P. Stevens Company was the target of the same inference by some members of the other body. The eventual hearings developing out of an exchange of charges were widely followed on national television.

By April 27, the gentleman from Virginia had had the opportunity to study the labor board decision. But he based his assertions instead on his "long friendship with the Honorable Robert T. Stevens," who heads what the gentleman from Virginia describes as a "fine organization." He did not elaborate this assumption either.

I share the concern of my distinguished colleagues for this decision, as an illustration of labor relations in the textile industry in our southeastern states. I have taken the time to study the decision and, frankly, my reaction is not the reaction of my colleagues who have spoken earlier on the subject.

However, since the opinion has raised such a furor, I would like to withhold my reaction until I can put the case before you in the perspective of the statutory background and the facts of record.

I. The Statutory Background

Over 30 years ago, this Congress passed the Wagner Act, the Magna Charta of labor. This Act declared and recognized that it is the "policy of the United States to encourage the practice and procedure of collective bargaining." This basic policy of the 1935 Wagner Act was reaffirmed in the 1947 Taft-Hartley amendments and again in the 1959 Landrum-Griffin amendments. It is the policy of the United States today.

In the 1935 Wagner Act, this Congress gave to all employes "the right to self-organization," the right "to form, join or assist labor organizations." This was continued in the 1947 Taft-Hartley amendments and in the 1959 Landrum-Griffin amendments and is a right promised by Congress today.

To enforce this "right to self-organization," this Congress directed the National Labor Relations Board to hold secret ballot elections wherein the employes could vote for the union of their choice or for no union. The Labor Board since 1935 has held these secret ballot elections. It was early discovered that, on occasion, fraud, bribes or other undue pressures by management or the participating unions made it impossible for the election to fairly reflect the honest views of the voters. On such occasions, the Labor Board would set aside the results of the tainted election and conduct what was known as "re-run" elections. This is an administrative practice of some 30 years standing, a practice which we have adopted through repeated re-enactment of the basic laws.

Congress in 1935 sought to guarantee the right of employe "self-organization" by making it unlawful for employers to interfere with or to retaliate because of the exercise of this right. The Labor Act of 1935, as enacted and as amended in 1947 and in 1959, makes it an unfair labor practice for the employer "to interfere with, restrain or coerce employes" in the exercise of their rights to self-organization; and further makes it unlawful for an employer to discourage membership in any labor organization by "discrimination in regards to hire or tenure of employment."

In short, for over 30 years now, the law of the land makes it unlawful for an employer to restrain or coerce his employes from joining a union or to fire them from their jobs if they do join a union.

II. The J. P. Stevens Reaction

On March 22, 1966, the five members of the National Labor Relations Board unanimously upheld the findings of a trial examiner that the J. P. Stevens Company had flagrantly violated these two basic prohibitions of the Act in an unsophisticated effort "to crush the union movement in its plants with small regard for the means employed." Seventy-one workers were discharged in a Company anti-union campaign marked, as the Labor Board described it, by "flagrant unlawfulness."

While the proceedings leading to this initial opinion were pending, the anti-union campaign continued. At a second series of hearings, the same NLRB trial examiner found that the J. P. Stevens Company had discharged not only union members but also those

employes (some of whom were not union members) who had testified under subpoena against the company in the original Labor Board proceedings. I would like to remind the Congress that, since our enactment of the Wagner Act in 1935, it has been unlawful for an employer "to discharge or otherwise discriminate against an employe because he has filed charges or given testimony under this Act."

Incredible as it may sound, while the second round of hearings was going on, the company continued its policy of discharge, and the independent General Counsel of the National Labor Relations Board has issued a third complaint charging still more violations of the basic prohibitions of our 30 year-old law. The charges in this case are presently being heard by Trial Examiner Boyd Leedom, Chairman of the NLRB during the Eisenhower Administration.

This is not a new story, but how long will it continue?

III. The General Background

I would like to discuss the organizing campaign at the J. P. Stevens Company and some of the facts of record. I think this is important if we are to assess the effectiveness of the Wagner Act, now 30 years old. I think we shall learn that the Act is not effective in the face of recalcitrant and deliberate obstruction to the congressional mandate therein expressed.

First, a bit of background. The southern textile industry is the largest open-shop industry in America. The anti-union animus of the employers certainly plays a major role in keeping the workers unorganized. Discharge of union adherents, surveillance of union organizers, the use of race-hate propaganda to associate and discredit the unions with civil rights efforts, threats of plant closing if the union comes in—these are some of the weapons in the anti-union armory. We all remember the Darlington story, typical of many others. The workers in Darlington, South Carolina, were warned that the plant would be closed if they voted for the union; and the plant was closed when they voted for the union. We may minimize the impact of this story, but the southern textile worker cannot.

The J. P. Stevens Company is a giant in this open shop industry, second only to the Burlington Industries. With headquarters in New York, it operates more than 60 mills and employs some 40,000 workers. In early 1963, the Industrial Union Department of the AFL-CIO selected the Stevens Company as a prime target for a mass organizing drive, primarily because the plants were localized in the Carolinas and because the company could well afford to improve the pay and working conditions. The company's 1964 report to the stockholders boasted that "net income has more than doubled in the past ten years." Wages for most employes centered between $1.38 to $1.75 an hour, averaging around $62 for a 40-hour week.

The union drive was unique in several ways. Rather

than going at it on a plant by plant basis (inviting the company to close down an organized plant as at Darlington), the union tackled some 25 of the 40-odd Stevens plants in the Carolinas almost simultaneously. There was another departure from the past organizing techniques. Whereas customarily the fact of individual union membership was kept secret (to protect against discharge), the union here decided to inform the company of its membership on a current basis. The reason for this decision is found in the Labor Board requirements that company knowledge of union membership is an indispensable element in proving that discharges were based on such union membership.

IV. The Pattern of Company Resistance

The organizing campaign got under way in June 1963. Shortly thereafter, the company posted a notice on the bulletin boards in its plants that "it is our positive intention to oppose this union and by every proper means to prevent it from coming in here." Copies of this notice were mailed to all employes at their homes with a covering letter describing it as of "vital importance." It is clear from the record that the company did oppose the union, and not always with "proper means." The pattern as described to the NLRB trial examiner went something like this.

The union, despite the company's declared hostility, signed up a substantial number of employes. These were, of course, the bolder and more active spirits. With their consent, the union sent their names to the company. The company promptly posted the names on the bulletin board. Supervisors then approached and asked the individual employes if the union was telling the truth, if they in fact had joined the union. The supervisors offered to help them withdraw from the union if they so wished. If the individual decided to withdraw, he was marched to the bulletin board where he was permitted to cross out his name from the list of union members. If he refused to withdraw from the union, his work was watched carefully, fault was found and he was discharged for inefficiency, usually within a day or so of the time he was publicly named as a union member.

V. Some Individual Examples

Some individual examples will give flavor and content to this general policy of discharge outlined above:

• **Republic Plant No. 2, in the Rock Hill Area**

Arthur Wright, Idolene Steele, Charles Knight and two other employes at Republic Plant No. 2 were the first five to join the union. Their names were sent to the company and posted on the bulletin board on August 17. The next day, on August 18, Wright, Steele and Knight were discharged for inefficiency, the first ones so fired in that plant in over four years. The other two union members immediately went to the supervisor and said they wanted to get out of the union. They were told they would have to "prove" themselves, which they did by disclosing the homes where the union meetings were held and the identity of those in attendance.

• **Republic Plant No. 3**

At Republic Plant No. 3, James Walden was one of the first employes to join the union. His name was posted by the company on August 18. He was fired on August 22 for "tying doubles." There was undisputed evidence that no one in 20 years had been fired for this reason, "though doubles were continually being tied."

The next day, three co-workers of Walden went to the superintendent's office to resign from the union. They were told to "prove" themselves. They did so by disclosing the identity of other union members. When the name of one such individual was mentioned, the company official said:

"He's got six children. I don't know why in the world he would want to put his name on that thing; to start with, if he was to lose his job, he couldn't even get back on."

William Sibley was also a union member and had been employed at this plant for 21 years. He was fired shortly after he joined the union for "mixing waste." His supervisor subsequently testified that he could not recall ever before discharging a man for "mixing waste." After the discharge, a co-worker intervened and asked for reconsideration for the sake of Sibley's four children. The superintendent agreed to think it over, but did nothing after he spotted Sibley handing out union leaflets at the gate of Plant No. 3.

• **The Whitmire Plant**

There was a very unusual situation at Whitmire, where most of the 3,500 inhabitants worked at the mill. Jess Cudd and his son, Donald, were the first two employes to join the union. Jess had worked for the mill for 50 years, since he was 13. Donald, his son, came to work in 1949.

Donald, the son, was discharged for inefficiency, the first "doffer" so fired to the memory of the shift foreman. Although removed from the plant, Donald continued on in the village and was active in union organizational work. The company devised a plan to get Donald out of the community and his father, Jess, out of the plant, without discharging a man with 50 years' seniority.

The general overseer approached the father, suggested that he quit and adopt his grandchildren. This

would make him eligible for $250 a month in public relief which, with his social security, would almost equal what the company was paying him. With the children cared for by the grandfather, the son would then be free to leave town. As Jess Cudd related the conversation with the plant manager:

"He said if I'd run Donald, my son, off, and adopt them two young'uns and quit myself, it'd be all right."

Jess rejected this suggestion and was discharged for inefficiency. The plant was thus rid of the union's presence.

• **The Blackhawk Tuftin Plant and Warehouse**

James Goodwin was employed for ten years in the warehouse of the Blackhawk Mill in the Greenville area. He was one of 27 employes in the warehouse who had joined the union. Shortly after this was made known to the company, the union employes were called publicly to the management office and asked if they had any "questions." They did not and shortly after that they began to be fired, one by one, on various pretexts. Goodwin was fired because he went across to a restaurant for a sandwich (as was customary) without obtaining permission to leave the plant. Thereafter, he returned asking for his job back. The foreman called the other union warehouse employes together and told them Goodwin would have a better chance of being reemployed if they would admit that they were wrong in joining the union. He said:

"If enough of you go up there and take your name off, they will hire James Goodwin back."

• **Other Situations**

The record is replete with similar situations. At the White Horse Plant, Horace Anderson had been employed for 11 years and his work was "excellent." He joined the union on October 6 and was discharged on October 7 for spending too much time in the bathroom. Alvin Baker was employed as a sweeper and joined the union on October 10. The company was so informed on October 11. On the next working day, the assistant overseer followed him around all day, suggesting he resweep here, that he had missed some dirt there, etc. At the end of the day, his pay was reduced from $1.31 to $1.25 an hour. The next day, the assistant overseer again was at his side, even

following him to the bathroom. Baker then quit in disgust.

At the Greer Plant, Charles Plemmons was one of five men in his work area who joined the union on August 13. His name was posted on the company bulletin board as a union member and on August 24 he was fired for "horse play." A few minutes before going on duty, while waiting for the bell to ring, he swung a mop like a baseball bat and "hollered" in a loud voice, "not at nobody or nothing," "just hollering." His overseer admitted that in the 12 years he had been on the job he had not discharged any other employe for this reason.

Shirley Hobbs was employed at the Rosemary Fabrication Plant. Her job was to sort napkins into "firsts" and "seconds" and to count them into bundles of 100. On an average day, an inspector sorts and counts 8,500 napkins. She joined the union and attended an open meeting on October 3. On October 6, the general overseer of the plant recounted all her bundles, found one bundle one napkin short and discharged her for inefficiency. This was her first, and only, "write-up."

Virginia Ray was also an inspector at the Rosemary Fabrication Plant. Her job was to inspect several thousand towels (of poor quality and loosely woven) each day and separate them as "firsts" and "seconds" into bundles of 24. She joined the union and her name was sent to the company on August 27. Three days later, the assistant department overseer "spot-checked" her bundles and discharged her upon finding five "seconds" in a bundle of "firsts." The overseer admitted on examination that Virginia Ray was one of the best of the inspectors.

I believe this very limited sample of individual situations gives flavor and content to support the generalized conclusion of the trial examiner concerning the general pattern of the company anti-union practices:

"The normal pattern was a union meeting, generally on a weekend, at which a number of employes joined, the company advised the same day by letter or telegram, the name received the next working day, the names posted, and a personnel action report, or even discharge, the same day or the next. . . . The triggering act was clearly the employe's advising (the company) that he had joined the union. The write-up or discharge, or both, followed as quickly as a pretext could be found. . . . In many instances, the write-ups would be the first ever received by the employes during a long course of employment, or the first received for many years, or the first for the same alleged dereliction."

I might interpolate here that these events took place and this pattern of anti-unionism flourished in an area governed, thanks to Section 14(b) of the Taft-Hartley Act, by so-called "right-to-work" laws. This history of events indicates what was repeatedly said in this chamber last summer—these laws do not give any one the right to work. A better and more accurate name for such laws, based upon the record of events in the Stevens case, might well be "right-to-be-fired" laws.

VI. The Fairness of the Trial Examiner

It might be thought that the trial examiner's decision might reflect a pro-union bias. But such a thought is dispelled by the record.

I do not believe that the trial examiner was biased in favor of the union. If anything, he leaned over backwards to favor the company.

I think two cases will suffice to prove his open-handed approach. It was charged that these two employes were discharged because they had testified under subpoena against the company in the earlier Labor Board proceedings. One, Daniel Murray, was employed at the Patterson Plant in the Roanoke Rapids area as a "sweeper," to clean 11 toilets. He was discharged for inefficiency after he testified in the Labor Board proceedings against the company. There was a great deal of conflicting testimony on how clean he kept the toilets, but the trial examiner ruled for the company on the theory that the General Counsel had failed to establish a prima facie case. So, too, in the case of Juanita Faulkenberry, a weaver with 30 years' experience employed at Republic Plant No. 1 in the Rock Hill area. She testified in the Labor Board hearing and thereafter was discharged for inefficiency. She had never before been issued a personnel action report complaining of her work, but the trial examiner ruled for the company:

"Since Faulkenberry was not associated with the union and since her testimony at the first hearing was relatively innocuous, I do not find that the General Counsel has met the burden of proof which rests upon him and I shall recommend that the complaint be dismissed as to Faulkenberry."

VII. The Problem of Remedies

To summarize the situation so far, the trial examiner went into the minutiae of the evidence concerning many employes at many of the company's plants, usually finding that the individual had been fired for union activity, sometimes not. He did, however, find a company pattern of interference, restraint and coer-

cion with the employe's statutory right to "self-organization."

The Labor Board members heard the appeal, affirmed in general, but found fault with some particulars of the individual situations.

The J. P. Stevens Company appealed to the Court of Appeals. The employes, discharged in the spring, summer and fall of 1963, must wait another year or more before the reinstatement order becomes final. Meanwhile, the union organizing drive has been blunted, if not destroyed. This raises serious questions concerning the effectiveness of the NLRB remedial orders.

The normal Labor Board remedial order is little more than a slap on the wrist. The guilty party is told to cease and desist from like future conduct and to post the cease and desist order in a conspicuous place. If employes are discharged, the Board is authorized to order their reinstatement, with or without back pay. Sums earned, or which could have been earned during the discharge period, are offset against the amount owing. These normal remedial orders were issued in the J. P. Stevens Company case.

But the J. P. Stevens Company situation was not normal. The company had notified all employes by mail of its determination to resist the union, so the Labor Board ordered the company to mail copies of the cease and desist order to each employe.

Many of the employes are illiterate, so the Labor Board ordered the company to read aloud the cease and desist order to assembled groups of employes.

The channels of public communication in the southern mill village are often closed to the union, so the Labor Board ordered the company to provide bulletin board space to the union message.

The Labor Board denied the remedy requested by the union: an order that the company bargain with the union on a "members only" basis. This request was bottomed on the theory that "but for" the company law violations, the union would have signed up a majority of the employes and the right to bargain on their behalf. To deny the union bargaining rights, at least on a "members only" basis permits the company to profit by its own misdeeds. As I said, this union request was denied by the Labor Board.

How effective is this order? Does it do any good for the Labor Board or a court to compel an employer to publicize a "cease and desist" order—two, three or four years after the event—that the employer was wrong when he interfered with, restrained and coerced the employes from exercising their statutory rights? I submit that in many cases the order is entirely ineffective. It does not unscramble the egg. The organizing drive cannot be put on ice for this period of time and is long since destroyed.

Does it do any good for the Labor Board, or a court, to order the reinstatement of employes discharged for union activity, even with back pay? Many of them have moved elsewhere and can't be found; others have found employment and can't prove financial loss; and, in any event, the back pay awards are tax deductible as a business expense. But, more important, the back pay awards in no way compensate for the anxiety and strain in making ends meet while all income is cut off.

The remedies of the Labor Board are too little and come too late. This situation, however, can be changed. I would like to discuss just a few of the current proposals on how this can be done.

a. The Section 10(j) Injunction

In 1947, this Congress recognized that the justice delayed by the due process procedures of the NLRB hearings was in fact no justice at all in many instances. Accordingly, we provided in Section 10(l) of the Taft-Hartley amendments that the Labor Board *must* seek a temporary restraining order from the lower federal courts whenever there is good cause to believe that a labor union has engaged in unlawful secondary boycott activities. In the 1959 Landrum-Griffin amendments, we extended this requirement that the Labor Board *must* seek federal court injunctions in "hot cargo" and "recognitional picketing" situations. In short, when an allegation is made against a labor union unfair labor practice, the federal courts step in with immediate relief while the merits are slowly decided by the administrative processes.

In 1947, we also *authorized* the Labor Board to seek judicial injunctive relief (pending the administrative processes) when a complaint was issued alleging other violations of the labor act by unions or by management. Section 10(j) of the Taft-Hartley amendments authorizes the Labor Board in this situation to seek "appropriate temporary relief or restraining order."

We recognized in the 1947 Taft-Hartley amendments that there may be a local or regional prejudice for or against labor unions. Accordingly, we authorized the Labor Board to seek the judicial relief under both Section 10(j) and under Section 10(e) either "within any district wherein the unfair labor practice in question is alleged to have occurred" *or* "wherein such person resides or transacts business."

I understand that the Labor Board has sought Section 10(j) injunctions when a complaint was issued alleging unlawful discharges based on union activities.

The Labor Board sought this judicial relief in the J. P. Stevens Company case. I further understand that the Labor Board has obtained temporary court orders putting the discharged employe back on the job in other sections of the country, but never in the southern textile mill states. It did not get this relief here in the J. P. Stevens case. Why has not the Labor Board sought a court injunction in the district "wherein such person resides or transacts business?" Specifically, why did not the Labor Board seek the 10(j) injunction in the federal court in New York where the J. P. Stevens Company has its headquarters? Why has not the Labor Board exhausted the possibilities

for interim judicial relief which we set out in our 1947 Taft-Hartley amendments? I wish this had been tried.

b. Section 10(e) Interim Relief

In Sections 10(j) and 10(l), we recognized the necessity for temporary judicial relief from the United States District Courts pending the administrative adjudication by the Labor Board and its trial examiners. In Section 10(e) of the Act, we recognized the necessity for temporary relief while the Labor Board decision was reviewed on appeal to the courts of appeal.

In Section 10(e), we authorized the Labor Board (pending review of its decisions by the courts of appeal) to petition such reviewing courts for "appropriate temporary relief or restraining order." We also authorized the reviewing courts "to grant such temporary relief or restraining order as it deems just and proper."

I understand this is a dead letter, that the Labor Board seldom if ever asks for "temporary relief." This means judicial delay of a year or more and compounds the damage caused by the administrative delay. Relief is in sight, but never in hand. I do not understand why the Labor Board does not utilize the congressional authorization to seek "temporary relief" from the reviewing courts, especially, as here, where the Labor Board has found unlawful discharges and the dischargees are obviously in financial straits.

Let me briefly review the situation.

The union here charged that a number of employes had been discharged because of union membership. The regional office of the NLRB investigated these charges and found reason to issue a complaint against the company. Thereafter a trial examiner heard days of evidence and, in a lengthy (117-page) opinion, found that some of the employes had been discharged because of union activity and other employes for legitimate reason. There was an appeal to the Labor Board. Five members of the Board (Republican and Democrat alike) reviewed the evidence and the findings and thereafter affirmed the trial examiner in almost all particulars.

The case now moves on to the Court of Appeals for review. In that forum, according to our statutory mandate in Section 10(e) of the Act, "the findings of the Board with respect to questions of fact, if supported by substantial evidence on the record considered as a whole, shall be conclusive." Statistically, there is very little likelihood that the reviewing court will reverse the Labor Board findings of fact concerning the reasons for the discharges.

The only real issue in this appeal concerns an entirely different question: whether the Labor Board has power to require the employer to read aloud the order which concedingly he must post upon the bulletin boards. Why must the discharged employes be denied their reinstatement pending the review of this unrelated issue? Why does not the Labor Board utilize the remedial weapons we enacted into law? I hope this is tried, if not in this case, at least soon in another.

c. Some Legislative Reforms

I have been discussing remedies presently available but untried. I do not think the successful use of these techniques will solve the problem. Something further must be done.

The J. P. Stevens Company has so far lost all the battles but has won the war. It has achieved its objective—to keep the union out. Its violations of the law, assuming the reviewing court upholds the Labor Board, will be punished by a wrist-slapping. The contest between the J. P. Stevens Company and the United States Government is unequal.

We send the Labor Board with a slingshot to enforce our laws against an armored Goliath and the days of David are over. If we want the laws we pass to be enforced, we must equip the agencies we create with power to deter the law violators. There are several necessary legislative reforms which have been proposed to my subcommitee. I would like to present a few of them here.

1. Currently, the National Labor Relations Act authorizes the Labor Board to order the reinstatement of employes discharged for union affiliation with back pay. This back pay award does not compensate the employe for his financial loss; nor does it deter the wrongdoer. The back pay award has been called "nothing more than a hunting license for union-busters." I suggest that the Labor Board have authority to assess double or treble damages against certain violators—those who have been deliberate or repeated or flagrant in their violation of our laws.

2. The law should be amended so a violation will hurt where it counts—in the pocketbook. Moreover, it does not make sense for the federal government to subsidize with lucrative contracts the individuals and companies which violate our laws. Accordingly, I propose amendments to the Davis-Bacon and Walsh-Healey Acts so as to give the contracting agencies of our government power to withhold contracts from companies which the Labor Board finds to be in open, flagrant, knowing and purposeful violation of our laws. I made a similar proposal in connection with those who violate our anti-trust laws and I think the same rationale is applicable here.

Action, I say, is urgent if we are to demonstrate that the United States Government is larger than the total of its parts.

Plant location

subsidized plant migration

by Frank L. Fernbach

In the spring of 1961, something was happening in two small American communities which, although hardly noted elsewhere, was a forewarning of a significant and dangerous trend.

In Muskegon, Michigan, the management of the Norge Division of the Borg-Warner Corporation suddenly announced plans to close down its plant. Not even the bargaining representative of the company's 1,400 plant workers—Local 404 of the Allied Industrial Workers, AFL-CIO—had been consulted in advance. Yet these workers had given 21,000 years of their lives—an average of 15 years per employe—to the production of Norge refrigerators and the earning of substantial profits for this wealthy corporation. Almost 900 of the soon-to-be-abandoned workers were over 40 years old; 235 were over 55 years of age.

During the same springtime that this disaster was overtaking Muskegon—it was already a depressed, labor-surplus area even before the shutdown announcement—a more pleasant prospect was unfolding for Greenwood, Arkansas, 700 miles away. In that small community, a brand new $7.5 million factory, financed by the proceeds from the sale of tax-free municipal bonds, was nearing completion. It was being built for, and according to the precise specifications of, the Norge Division of the Borg-Warner Corporation, the Muskegon runaway. What is more, in large measure the plant would be subsidized not only by the citizens of Greenwood but by all the taxpayers of the United States.

American workers always have had to face the grim fact that unavoidable economic circumstances—for example, the changing market for a product or a dwindling local raw material supply—sometimes make a plant closing and its relocation a necessity. In all too many cases, however, employers are lured away by a deliberate act of plant piracy. Many states and communities have spent and still spend vast sums to dramatize the attraction of their cheap non-union labor, their low-benefit, and thus low-cost, welfare laws and their special tax-avoidance schemes. These enticements—used for years as bait to pirate plants from one community to another—played their part in luring Borg-Warner from Michigan to Arkansas.

In this instance, however, a much newer and more sophisticated plant-pirating device was employed. It is known in the investment banking trade as "industrial-bond financing."

Arkansas set the stage for the use of this device in 1958 when it authorized its cities, counties or municipalities to sell tax-free public bonds and use the proceeds to build and lease publicly-subsidized plants for private use. Greenwood was not the first Arkansas community to utilize this newly legalized industry-luring scheme, but its $7.5 million bond issue in behalf of Borg-Warner was the largest approved up to

NLRB Examiner 'Chickens Out' In Darlington Decision—Recommends Dismissal of Charges

Labor News - Fri Aug 19, 1966

Organizing - South

LABOR NEWS - FRIDAY Aug 9, 1966

WASHINGTON—An examiner for the National Labor Relations Board has recommended that the board close out the 10-year-old labor-management dispute over the shutdown of a Darlington, S.C., textile mill by dismissing union charges of unfair labor practices.

Examiner Lloyd Buchanan suggested also that the Supreme Court modify its 1965 decision in the case because, he said, the court had injected an aspect that had not been considered by the board or the U.S. Court of Appeals.

That aspect was whether Deering Milliken & Co. had closed its Darlington plant to discourage union activities in its other mills.

Acceptance by the board of Buchanan's recommendation for dismissal of the case could mean the end of the prolonged dispute. The examiner ruled that evidence received in a new hearing, after the supreme court sent the case back to the NLRB, did not prove the Darlington plant was closed in 1956 to discourage unionization of employes in other mills fo the company.

He also held that evidence failed to show that the Darlington closing would cause workers in other Deering Milliken mills to fear the shutdown of additional plants if they persisted in union organization activities.

In proposing that the Supreme Court reconsider its decision, Buchanan said neither the board nor the appellate court "considered the aspect of an intention to chill unionism elsewhere, but the Supreme Court directed that this be considered. . . ."

Buchanan said this element had been injected despite the belief of the NLRB general counsel, the complaining union, the trial examiner (Buchanan), the board and the court of appeals "that the issues raised by the pleadings and evidence received were sufficient and properly called for a decision based on the issues which had long before been settled."

The Darlington case stemmed from charges by the Textile Workers Union of America of unfair labor practices against the company and Roger Milliken of Spartanburg, S.C., its president.

In 1956 employes of the Darlington plant voted the union their bargaining agent. The company's board of directors then recommended liquidation of the plant. Shortly afterward its doors were closed and the plant's equipment was sold.

The union countered with its complaint of unfair labor practices and in 1962 the NLRB ruled the company in violation of the Labor Relations Act. The company appealed to the Supreme Court. The court ruled last year that a company had the right to go out of business but could not close one branch of a business to chill unionism elsewhere.

The court sent the case back to the NLRB, saying the board had failed in its 1962 decision to show that the Darlington plant was shut down to discourage unionism or that its closing had any effect on union activities in other Deerling Milliken plants.

Buchanan said he was suggesting that the Supreme Court may want to modify its decision because the court had injected the possibility of an intention on the part of the company to discourage unionism in its other plants. He said neither the board nor the U.S. Court of Appeals had considered such an aspect.

Therefore, he wrote, "it is logically, if remotely, possible that the Supreme Court may modify its holding because of the problems indicated. But that will not be done on my mere suggestion that there are problems with delineation of them."

43 Ordered Back With Pay to May 1965

NLRB HITS SOUTHERN UNION-BUSTERS

BIRMINGHAM, Ala.—The RWDSU has won two NLRB decisions that should help workers, particularly in the South, to organize and win contracts despite the intense opposition of their employer.

In the first, a trial examiner has recommended that the NLRB in Washington order the Benson Wholesale Co. of Geneva, Ala., to recognize the RWDSU without an election, to bargain with the union and reinstate three union leaders to their jobs.

The second was an order by the board in Washington that four building supply firms in New Bern, N.C., bargain in good faith with the RWDSU for a first contract and restore 43 workers to their jobs. Backing a trial examiner's decision, the board held that an employer's insistence on maintaining discriminatory wages and working conditions for Negro workers would be an unfair labor practice.

At Benson, a grocery warehouse, the RWDSU Alabama Council organized a majority of the 70 employees a year ago and asked for recognition. The company refused, fired three leaders—Leon Holland Jr., Robert J. Stewart and William J. McGowan—and threatened other union supporters.

The union filed NLRB charges against Benson and asked the board to order the company to recognize it without an election—since the company's actions had destroyed the union's majority—and bargain.

After hearings in April in Geneva, Trial Examiner Joseph I. Nachman found for the union.

"Assuming no appeal," Ass't Southern Dir. Frank Parker said, "we will request recognition and the opening of negotiations. We have been meeting regularly with the workers since October, and we have discussed contract proposals, and we are ready to submit our proposals at the appropriate time."

The union will seek union security and job security clauses, arbitration, grievance procedure, wage increases, insurance and company-paid pensions in the talks.

Orgs. John Parker and Lester Bettice are in charge of the campaign at Benson.

Would 'Freeze' Discrimination

At New Bern, 43 union members, all Negroes, walked off their jobs at four jointly-owned supply companies—General Building Supplies, Stevenson Brick, Redi-Mix Concrete and New Bern Building Supplies—May 3, 1965 after months of negotiations had gotten nowhere. Their employer refused to give the union members a wage increase, an arbitration clause or seniority. Since the effect of his refusal would have been to freeze discriminatory wages and working conditions for Negroes into a union contract, the union said that this would have made it a party to discrimination against some of its own members, an unfair labor practice.

Trial Examiner Robert E. Mullin found for the union last March, stating that the union was under an obligation to represent "equally and in good faith" the interests of all workers in the shop, whites and Negroes.

The board has now affirmed Mullin's decision, ordered the company to reinstate the 43 workers and bargain with the union, which won an NLRB election at the companies in November 1964.

The company is appealing to the Federal courts.

At the time of the strike, the company employed 59 Negro workers and 16 whites. The 16 other Negro workers also struck, but their present whereabouts are not known.

The workers ended their strike May 23, but the employer had replaced them and the union immediately filed an unfair labor practice charge.

The eventual cost to the company is likely to be in the hundreds of thousands of dollars. The board has ordered the strikers' reinstatement as of May 23, 1965, with full back pay. Some of the men have had odd jobs since then, but Reg. Dir. Irving Lebold said that others have not worked, and the company will have to make good all lost wages. The company also — ironically — paid the replacements higher wages than the strikers, so the union members are entitled to the higher rates although they have no contract.

Int'l Rep. R. W. Parker has been in charge of the RWDSU campaign, along with Lebold.

"We're going to win this case and get a contract and demonstrate that we won't walk away from a civil rights struggle," Parker said.

Vote Against The Union

Nov. Tuesday, September 27, another election is going to be held at Proctor-Silex in Southern Pines to determine whether the employees want to have the International Electrical Workers Union represent them or whether they don't. This is going to be a re-run of a previous election, in which the employees voted against union representation. The reason is it being held again is because of certain citizen groups, such as the Moore County Industrial Development Committee, went to work in a concerted effort to defeat the union,-so they say.

This is the finding of the National Labor Relations Board, an organization designed to promote the cause of unionism,-another arm of the federal government, committed to the destruction of individual and collective liberties under the free enterprise system. Only under government sanction is it allowed to exist, but, like all other government regulative bodies it would seem that it has taken unto itself, responsibilities and authority, with the aid and comfort of the United States Supreme Court, that really were not intended for it in the first place.

A union organizer is allowed to come into Moore County, harass management, and disrupt traffic to dispense his scurrilous literature, but a group of local citizens who wish to fight back, is committing an unpardonable sin, and as a result the election is declared null and void. No organization is allowed to work against unionization, the board in effect is saying- Is this freedom?

There is no doubt that when the company first came to Moore County, it has organizational pains. You don't just push a button and start up a whole new industry and way of life for so many people in such a short time. Unionism feeds on discontent, and apparently the field was well scouted before an attempt was made, but, we hope,-and fervently so,-that the growing pain stage is now over. There is no place for a union in this county. The good people of this area, and this apparently includes the majority of the Proctor-Silex workers, can see through the veil of pretense that the union henchmen have cast. They contribute nothing to wages, to the taxes of the community, to the support of the local churches, nor any other charitable organization. Their only thought is to line their own pockets, and those of their bosses, to further their own cause against individual liberty and freedom.

We have seen sufficient evidence to prove that the federal government is determined to collectivize us all. Our schools are a good example. Now, another tentacle reaches out to pull us under. IT MUST BE CUT OFF. If you know any worker at the plant, let him known the danger that he and the community is facing, and urge him to vote AGAINST union representation. By so doing he will be voting FOR his own individual freedom, and a full paycheck, without union deductions.

Yes Yes Yes Yes Yes

Miracle in Wilmington

By JAMES PIERCE

IUD Coordinator for the Carolinas

THE BRIGHTEST spot on the Carolina labor scene these days is Wilmington, N.C., for the working people of this coastal town have made so much progress in such a short time that it almost seems like a miracle.

For years, practically everything in and around Wilmington has been owned or controlled by a group of powerful and wealthy conservatives who called themselves the committee of 100. Members of this group were able to dictate what wages would be in the Wilmington area for they owned most of the businesses.

The were able to decide which new industries would be allowed to come to Wilmington and which would be kept away because they owned practically all of the industrial property. They controlled city and county politics to such an extent that elections only served to give the people an opportunity to vote on candidates who had already been hand-picked at the country club.

The committee of 100 seemed to think that Wilmington and all that was in it was their personal property and that the whole town should be run for their personal benefit. Members of the committee prospered and grew rich through the ruthless use of their power while the average citizen lived in a substandard house and worked for substandard pay.

It seemed that the only choice a working man had was to stay in Wilmington and work for what the committee of 100 wanted to give him or to leave and go elsewhere to earn a living.

Two years ago the situation in Wilmington seemed hopeless but since then a series of events have taken place which have completely changed the picture. It began with a union election at Ideal Cement Co. The Ideal Cement plant was one of the most modern in the country and wages and benefits were far above the average for the Wilmington area.

But the employees of Ideal were not satisfied with getting more than average, they wanted to get the same as workers in their industry were getting. After a hard-fought campaign, a majority of Ideal employees voted "yes" and then went on to negotiate a contract that left the working people of Wilmington buzzing for weeks.

Two of the items which caused the most comment were wage increases up to 35¢ per hour and guaranteed income of $105 per week in case of lay-off.

The next event which was a big factor in changing the situation in Wilmington was the union election at Timme Manufacturing, a large textile plant. The Timme election was held during the time that Ideal Cement employees were negotiating their first contract. It was won by a large majority. [Timme workers joined TWUA.]

Following the election, Timme employees were able to negotiate such a good contract that even those employees who had worked the hardest to keep the union out, quickly became members.

The next big election was at B&W Boiler Works and this was the one that really counted for B&W was the key to the whole Wilmington situation. Even though B&W plants were under contract all over the U.S., the management of the Wilmington plant was the recognized leader of the anti-union movement.

For years it had seemed just about impossible to organize B&W for this company had the reputation of firing an employee who even said "union" out loud. But then the impossible happened. B&W employees voted to organize by a big majority and went on to negotiate an excellent contract.

After their first contract was signed, the employees formed their own local union and began doing a wonderful job of handling grievances and improving working conditions.

With the organizing of Ideal Cement, Timme and B&W, the resistance was broken and the employees of Tenney Engineering, Allied Chemical and Reasor Chemical joined the parade to better wages and working conditions through union contracts. Six major industries of the Wilmington area were organized in one short period of less than two years.

As a result of this organization, the committee of 100 big shots has lost its power to dictate to the citizens of Wilmington. It has been replaced by a committee of several thousand working people.

The working people of Wilmington have done something that seemed like a hopeless dream only two years ago. They have already won their first goal, gaining an effective voice in their wages and working conditions. They are now winning their second goal which may be even a greater victory than their first.

They are changing the political setup in Wilmington and New Hanover County. They are changing from a government of "by the few and for the few" to a government of "by the people and for the people."

The victory in Wilmington was a community effort. It was made possible by people from six different plants and five different industries working together for a common goal. What they have done proves once again that the way for working people to get ahead is through teamwork and the way to build that teamwork is through unions.

Workers, Company Both Benefit

RWDSU Comes In . . . Production Goes Up

FT. MYERS, Fla.—Four months after the RWDSU won a contract at Yoder Brothers, a big flower grower, one union member described the changes that the union has brought to him, his 400 fellow employees and to the company.

His letter to the Ft. Myers News-Post was sent to The Record by Buck Connell, a retired Int'l Representative who lives nearby and took part in the campaign. The member prefers to be anonymous.

Some months ago [he wrote] there was considerable discussion in the Mailbag concerning the low wages being paid in this area to unskilled and semi-skilled persons and the need of a union to help correct the situation.

The people at the place where I work found a union and brought it into town, and we now have an office with a full-time representative to help us with our problems and to help others who are working for a mere existence and, in most cases, below what the Federal Government says is the poverty level.

In our first contract, with the help of experienced union representation we received a 25 cents per hour wage increase, paid holidays, paid hospitalization, increased vacation, better working conditions and many other benefits, and we are certain this would not have happened had we sat on our hind quarters and done nothing but gripe.

We were only able to do these things by sticking together, each for the other, so the company could not play one against the other. All things are possible if you are determined to fight as a group.

The employees where I work are much happier and respect each other more because we fought a battle together and won.

Our production has increased, not because the company put pressure on but because we work with one another much better, we have shared a common cause together, and the company has made an honest effort at our insistence to correct mistakes made in the past.

I am extremely glad we found our union so willing to help. We are willing to help others enjoy a better life for themselves and their families, and the Ft. Myers community will be much better off over the long haul, for the union not only helps its members but the community.

We are willing to share our good fortune with others who are willing to help themselves and the community to grow. Low wages never helped anyone and poor working conditions can only work hardships on the individual and the community can only become stagnant and complacent.

UNION MEMBER

Ala. Council Scores Big Win In Demopolis Plant Election

DEMOPOLIS, Ala. — The RWDSU Alabama Council scored a smashing 82 to 30 NLRB election victory Sept. 11 at the A. R. Taylor Veneer Co. The election is expected to lead to other wins by the union in Demopolis, which is in the heart of Alabama's Black Belt.

"This victory opens the door for us," said Org. Henry Jenkins, who led the drive at Taylor, a plywood producer.

The new Taylor members will meet Monday, Oct. 17, to draw up contract proposals. They will ask for union security, seniority, a dues check-off, big wage increases, holidays and vacation, and company-paid health and welfare benefits.

At present a few workers earn $1.35 and $1.40 an hour, but most get only $1.25, the Federal minimum. There are no fringes at all—no holidays, no vacations, no health coverage.

The big Taylor win climaxed a campaign that began in late July when Jenkins, working on another campaign in the area, started talking to a workman, who turned out to be a Taylor employee. Several days later, Jenkins was invited to a meeting of the workers, and organized a majority in short order.

Willie Pond served as the union's observer at the election.

Unusual Aspects

The campaign had its unusual aspects. A number of employees helped build the Taylor plant 18 years ago and have worked there since.

Another unusual aspect is that although Demopolis is in the heart of anti-union country, the workers had no fear of organizing or attending union meetings.

"We held our meetings six blocks from the plant and we would always have good attendance," Jenkins said. "The workers didn't care about the company seeing them at union meetings. They had no fear."

This is in contrast to the experiences of many other Negro workers in the Black Belt, who have faced threats and intimidation for supporting the RWDSU in an organizing drive, and just a year ago, Jenkins himself was threatened by marauding whites in nearby Greensboro. But it's a lot different in Demopolis.

With the atmosphere favorable and the Taylor success, the union expects to win among the 50 workers at the Griffith Packing plant here when the board orders an election.

Industrial Towel Strike Ends

DALLAS, Tex.—The five-month strike of 161 workers against Industrial Uniform and Towel Service, which began April 26, has been settled under terms worked out with the help of the NLRB.

The settlement calls for all strikers to be returned to work by Oct. 15, and at The Record's presstime, Oct. 12, all except two—Mrs. Victor Marie Templeton, shop chairman, and Betty Davis, a committee member—were back on the job.

As soon as they are back, the union will ask the company to renew talks for a first contract.

"We're very hopeful of winning an agreement," Int'l Rep. Jake Stewart, who was in charge of the strike, said.

He said that the strikers had held up very well during the long walkout. "We have some of the best union people I've seen in my career in the labor movement," he said.

'Oh, No–Not You Again!'

Would You Believe — First Vacations?

MEMPHIS, Tenn.—Local 19 won wage increases of ten to 14 cents an hour and a $1.50 an hour minimum for 125 members in a wage re-opener with the Buckeye Oil Co., a subsidiary of Proctor and Gamble Co.

Local Pres. Earl H. Fisher also reports the union has won a first contract for eight truck drivers employed by Kelly & Jamison. The three-year agreement calls for wage increases of 35 cents an hour; one week's vacation after one year, two after five and three after 15; and six paid holidays.

These are the first vacations and holidays the workers, all of whom are Negroes, have had.

Fisher headed the bargaining committee.

Police Harass Coke Pickets

DALLAS, Tex.—The strike of 300 members of the RWDSU at Coca-Cola Bottling Co. for a first contract continued with no sign of a settlement at The Record's presstime.

The walk-out began in July, after months of talks with Coke failed to get the company to bargain on a dues check-off, seniority and grievance procedure.

Picketlines at Coke are up from five in the morning until 11 at night, and the company's business has been sharply cut.

The union helped many strikers find temporary work, and the Int'l Union Strike Fund is also assisting the strikers.

Morale of the RWDSU members remains high although there is harassment of the strikers.

"The police are picking persons up off the street at random for 'investigation,' and they have a list of every striker at Coke," said Int'l Rep. Jake Stewart, in charge of the strike. "They check over the list, say 'yes, you're a Coke striker,' throw him in jail overnight and turn him loose in the morning."

Stewart is also being harassed. He has received a number of parking tickets without cause, his phone calls are sometimes disconnected in the middle, and he is being followed by men believed to be off-duty police.

"They follow me from the picketline to the office, to meetings, wherever I'm going," Stewart said. "They must find it a pretty dull assignment, because I don't go much of anywhere."

He was, however, forced to leave the motel where he lived for three years before the strike started. Threatening phone calls scared workers at the motel, and Stewart moved.

"There's a hot Senate race on, and we can't get any politician to do anything about the police," Stewart said. "Nobody wants to rock the boat."

Company Fires 5, RWDSU Finds Jobs

DALLAS, Tex.—The RWDSU has organized all 16 employees of the H. B. Meyers & Sons chemical warehouse, a division of Huntington Laboratories, and filed an NLRB petition for an election.

The company responded by firing the five members of the in-shop committee, and the union filed unfair labor practice charges with the board against Meyers.

The five discharged employees have been placed in RWDSU and IUE shops.

Labor Program
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Emory:

I'm sorry about the delay in responding to your letter earlier this month asking for some data about organizing gains.

The news items to which you referred were based upon some comments made by Director of Organization Bill Kircher to the AFL-CIO General Board meeting in mid November.

Attached is a copy of the summary he used when he was making his report.

Bill did not read this to the Board, but extracted the statistics from this summary.

Sincerely,

Alan

Organizing — South

NLRB COMMENTS 11/16/66

The National Labor Relations Board has not yet released its official report for fiscal 1966.

Analysis of the monthly reports published by NLRB for the 12 months included in fiscal 1966 gives an approximate statistical picture, however.

That picture confirms the earlier observation that unions are enjoying improved organizing success.

AFL-CIO unions took part in 5,461 collective bargaining elections conducted by NLRB, in fiscal 1966. This is the highest number for the last 13 years.

AFL-CIO unions won 3,159 of those elections -- also the highest number for the past 13 years.

The percentage victory figure is 57.8% -- highest in the last 7 years.

Through these election victories, AFL-CIO unions were certified as the bargaining agents for 243,994 workers -- the highest such number in the past 11 years.

Making this performance even more noteworthy is the fact that in fiscal 1965, the previous year, AFL-CIO unions had achieved record-breaking results in every one of the above categories -- the number of elections, number won, percentage won, and number of people covered.

And the year before that, fiscal 1964, AFL-CIO unions had established a post-merger record of people certified in NLRB elections and had compiled the second best score for number of elections in which they had participated and the number they ahad won.

So there is a three year running demonstration that AFL-CIO unions are organizing more, are organizing more effectively.

Examination of the election results this calendar year also bear out the improved picture, especially when a comparison is made, month by month, with the last several years.

NLRB monthly figures are available thru August. Comparing the eight-month totals with similar period for the last four years (the period for which NLRB monthly figures are available) we see that there has been an uninterrupted three year improvement in the number of elections, the number won, and the number of people covered by certification. The numerical improvement in the last named category -- the number of people in units certified has been continuous over the four year stretch. In addition the year by year increase has been greater in each of the last three years over the previous year.

Naval Air Station contract covers 4,500

The first pact between IAM Lodge 39 and the Naval Air Station, Norfolk, Va., was signed recently, William J. Barnes, lodge president, reports. The agreement covers nearly 4,500 blue-collar employees who won the IAM as their union in an election last year.

The agreement was negotiated under terms of Executive Order 10988 which guarantees Federal employees the right to bargain collectively. Most employees covered by the two-year pact are employed in the Overhaul and Repair Department at the Naval Air Station.

The new contract provides for apprentice training, proper distribution of overtime, and sets up a grievance procedure with arbitration. Other provisions include vacation selection, and promotions.

On hand as Captain A. H. Sallenger signed the contract were, l to r, Walter Savelle, recording secretary; John Hinnant, chief steward; Barnes; George Griffin, vice president; Jack Dollar, financial secretary; Tom King, chief steward; Robert C. Spillane, president elect; George Duncan, chief steward; Willie Bowser, chief steward. The pact was negotiated with the assistance of Grande Lodge Rep. Dalford D. Smith.

Georgia's Labor Organizers Have a Hard Row to Hoe

Organizing South

By JIM MONTGOMERY
Constitution Business Editor

Life is a bed of roses for labor organizers in Georgia and other Southern states. Very thorny roses.

Item: The Textile Workers Union of America, AFL-CIO, last month urged the AFL-CIO executive council to declare war on "a South-wide anti-union conspiracy," and called for Congressional investigation of and sanctions against "illegal interference by major Southern textile employers with the right of their workers to organize."

Item: Although the TWUA in January won by 1,139 to 917 a representation election at the Lindale, Ga., mill of West Point-Pepperell, Inc., industry sources say only six of Georgia's 175 textile mills now are in the union fold even after many years of organizational activity.

Item: The entire union movement couldn't muster enough political influence last year to knock the legal props out from under the "right-to-work" laws that restrain union power in 20 (mostly Southern) states.

Item: Even organizing organizers can be hazardous, a case in point being the pending trial in Atlanta of the International Association of Machinists & Aerospace Workers, AFL-CIO, as an employer, on National Labor Relations Board charges of unfair labor practices in dealing with an independent union of IAM employes.

All but the last of these events reflect the laboriously difficult and frustrating task that still confronts labor organizers in the South despite the region's continued rapid industrial expansion and below-average wage rates.

And nowhere is the sheer frustration of organizing Dixie more eloquently expressed than in the TWUA's despairing allegation that unions are being blockaded by a regional conspiracy.

A new survey by The Constitution shows that during the past seven years union membership gains in the South were far exceeded by the region's growth in both blue-collar and white-collar employment, indicating that the relative strength of organized labor in Dixie is even less now than in 1960.

Contrast employment trends with the results of representation elections conducted by the NLRB, and you get a reasonably valid idea of the status of unions in the South inasmuch as most union elections are processed through the federal ballot machinery.

Since 1960, nine Southern states have increased their total nonfarm employment by nearly 2.2 million persons, including some 650,000 new manufacturing workers.

From mid-1959 through mid-1966, the NLRB conducted 6,252 of 252 elections involving 27,063 employes. Comparable?

The seven-year record in Georgia is 460 union wins, or 56 per cent of the 827 elections that involved 65,933 workers. During roughly the same period, Georgia registered increases of 83,600 in manufacturing employment and 294,000 in total nonfarm employment. But some of these were in construction

(Seven-year union victory ratios in the other states are 57 per cent in Louisiana, 56 per cent in Alabama, 55 per cent in Arkansas and Tennessee, and 53 per cent in Florida.)

Somewhat more current figures on NLRB elections in Georgia, as complied by Associated Industries of Georgia for the 12 months ended Dec. 31, 1966, credit unions with 88 victories out of 144 elections involving 15,135 workers, a ratio of 61 per cent.

According to the AIG report, 37 different unions were engaged in organizational activity in the state last year. In terms of election results, the Teamsters led with 22 wins in 30 elections, followed by the Meat Cutters & Butcher Workmen with seven out of 10, and the Communication Workers of America with five out of eight. The United Mine Workers engaged in 12 contests, but won only three.

Throughout the South, organized labor has repeatedly sought in vain to make significant inroads, banking on regional wage-rate comparisons (among other bones of contention) to induce a growing wave of enlistements. They cite Bureau of Labor Stastics reports such as the one showing that weekly earnings of factory workers this past December averaged $114.68 nationally, but only $88.40 in the Southeast and $87.95 in Georgia.

Ask why unions remain relatively impotent in the South, and businessmen and the chambers of commerce that represent them stress the Southern worker's "independent frame of mind' and moral compulsion to perform "a day's work for a day's pay.'

Labor organizers tell a rather different story, charging Southern employers generally with financial intimidation of their employes and with physical intimidation — allegedly applied by local police and sheriffs, especially in towns dominated by one or two industries—of labor organizers.

And unions curse the predominantly Southern devices known as "right-to-work" laws, which prohibit union-shop and certain other union-strengthening practices that are legal in 30 of the 50 states. The South preserved these laws by leading last year's successful battle against organized labor's drive for Congressional repeal of section 14b of the Taft-Hartley law.

The backwash of bitterness from that episode was evident in last month's denunciation by the textile workers' union of "the unbridled arrogance and growing intensity of this (South-wide anti-union) conspiracy."

But mainly it reflected unended decades of accumulated disappointment for all organized labor in the South.

Reserve Bank Sees Building Loans Easing

Economists at the Atlanta Federal Reserve Bank say large banks in the Fed's Sixth District are encouraging construction loans after withdrawing from this type of lending for many months. The Sixth District includes, Georgia, Alabama, Florida and parts of Louisiana, Tennessee and Mississippi.

The bank's Monthly Review reports "business watchers" in the district taking a close look at building plans and activity this month.

"An easing in the demand for funds in the private non-construction sections of the economy, coupled with consumers' shift toward saving, returned money to the mortgage market faster than was anticipated," the report stated.

80% CONVENTIONAL HOME

in both blue-collar and white-collar employment, indicating that the relative strength of organized labor in Dixie is even less now than in 1960.

Contrast employment trends with the results of representation elections conducted by the NLRB, and you get a reasonably valid idea of the status of unions in the South inasmuch as most union elections are processed through the federal ballot machinery.

Since 1960, nine Southern states have increased their total nonfarm employment by nearly 2.2 million persons, including some 650,000 new manufacturing workers.

From mid-1959 through mid-1966, the NLRB conducted 6,252 elections in Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina and Tennessee. They involved 546,875 employes. But the unions won only slightly over half (54 per cent) of the elections, or 3,378.

The ratio of union victories was somewhat greater in 1966 than in 1960 in all but two of the states, Arkansas and Florida, where there were slight declines. But in North Carolina and South Carolina, the nation's two largest textile states, unions have carried less than half (46 per cent) of all the elections conducted by the NLRB over the past seven years. And in 1966 they batted only .430 in South Carolina and .400 in North Carolina.

Paradoxically, organized labor has persistently posted its best record in the least industrialized of these states, Mississippi, where it carried 62 per cent of the seven-year elections total. But the numbers are very small—156 union wins out

Louisiana, Tennessee and Mississippi.

'Out of Tune...

with honor, justice, decent treatment'

FOR the third time an NLRB trial examiner has found J. P. Stevens & Co. guilty of massive and deliberate violations of the labor law (Page 24).

The findings in this third round that the company acted with cruelty and lack of morality in dealing with its workers comes with special force since the trial examiner was Boyd Leedom —board chairman under the Eisenhower administration and a man described as a "responsible conservative."

Shocking as his findings were, they came as no surprise to the men and women employed in the Stevens' empire in the Carolinas. These workers have had every-day, first-hand experience of the company's gross violations of their rights under the laws of the land.

Leedom's findings that there is an anti-union conspiracy in the southern textile industry—which deprives "thousands of employees" and "wide geographic areas" of the benefits of the labor law—came as no startling news to TWUA. For years, the union has been alerting Congress and the public at large to this state of affairs.

But Leedom's decision did underscore what TWUA has long maintained. The Stevens case is not a matter that concerns only textile workers and their union. It concerns every American, no matter what his position in life, no matter whether he believes in unions or not. It concerns every American because it involves the fundamental structure of American law and society. The case is no longer simply a matter of labor law—it involves the laws of morality, decency and democracy too.

Reviewing the testimony of numerous officials at the hearing, Leedom bluntly charges them with lying under oath "without compunction" in the conviction that lying on the witness stand is the right and accepted thing to do because of company policy.

"I have the inescapable but independently-reached conviction . . ." Leedom says, "from having heard innumerable witnesses at the trial, and having carefully digested and reviewed their testimony from the typewritten transcript that many of the witnesses called by respondent (Stevens) testified as they did pursuant to a policy made at a

Justice Labor

higher level of management than theirs, to defeat this union's organizational effort at the cost, if necessary, of committing unfair labor practices and then denying the unlawful act in the process."

Why did these company officials, whom Leedom called "good and decent citizens" otherwise, blithely violate the biblical injunction not to bear false witness against thy neighbor?

Leedom, himself, answers the question. The anti-union policy directed by "one man or a few men at the top" is of such a nature that any action against unions is justified even if it involves "dual standard" morality and a "flagrant breach by many of the promise made under oath to tell the truth."

The trial examiner went on to express "the faint hope that something here written might produce a new appraisal in some quarters of the methods used in opposing employees' right to organize.

"For if, as I believe and find," Leedom states, "that there has been a deliberate intention on the part of some to bring about a result in this case not based on the truth, such persons will not only add substantially to the measure of human misery if they succeed, but more importantly, perhaps, they have added their very considerable weight to the persistent and persuasive disregard of the rule of law that now afflicts our society."

This hearing and the two preceding it in the Stevens case, Leedom noted, "could serve as an incentive for a sober reappraisal of the importance of the simple principle that those who take

an oath to tell the truth should do so."

The damage done to human beings by violations of the labor act and the "related problem" of finding a "remedy commensurate with the offense" was illustrated by an incident at the hearing:

While the hearing was in progress, Leedom wrote, an employee was seized with an illness. He had a "background of long service in the industry in which he was skilled. He too was unlawfully discharged.

"If an employer will offend to the extent of unlawfully discharging an employee thereby depriving him of the means of livelihood under circumstances making other employment most difficult," said Leedom, and then will "compound such wrong in a forum of law by misrepresenting the facts," then such an employer "would hardly hesitate to commit the other wrongs" of denying decent pay, suitable working conditions and adequate fringe benefits.

Such additional wrongs, he said, if heaped on the unlawful discharge, create a situation "so out of tune with a humane civilized approach in industrial relations" that "they should shock even those least sensitive to honor, justice and decent treatment."

Such employer attitude, he added, "suggests retrogression to the unbelieveable practices involving child labor 100 years ago."

A signal from top management, Leedom writes, would not only correct the offenses committed against the workers but would relieve personnel in the lower levels of management of the "obviously distasteful duty" of participating in an "active program of perversion of justice."

As for remedies, Leedom recommended that the NLRB issue a "cease and desist order" directing the Stevens chain to halt its illegal conduct, including threats, intimidation and interference with the rights of its workers to self-organization and an order restoring 13 fired workers to their jobs, with back pay for time lost.

But he expressed doubt that any legal remedy devised within the framework of the labor act "will right the wrongs" done to the workers.

"Other arms of the government, with a different approach may have to take action," he concluded, if workers are to be protected in the right supposedly guaranteed them by federal law—the right to organize and bargain collectively.

Organizing South

Stevens Tagged Law-Breaker In Third Round of Hearings

TEXTILE LABOR

WASHINGTON—"Clear and unqualified confirmation" of TWUA's long-standing charges that "a vicious anti-union conspiracy exists throughout the southern textile industry" are embodied in the latest findings of a trial examiner following the third round of hearings on unfair labor practices against J. P. Stevens & Co., according to General President William Pollock.

Pollock made this comment after the report of Boyd Leedom was released by the National Labor Relations Board here last month. Pollock also called for a Congressional investigation of this situation and an end to the award of government contracts to J. P. Stevens as long as it violates federal labor law.

Among steps recommended by Leedom to curb the violations of the nation's second largest textile combine was the reinstatement with back pay plus 6% interest of 13 more Stevens workers discharged for union activity. Pollock said this brings to a total of 103 the number of Stevens workers recommended for reinstatement by NLRB trial examiners so far.

"Mr. Leedom's findings are truly significant, inasmuch as they come from a man who, as chairman of the NLRB during the Eisenhower Adminis-

(Continued on Page 21)

Joint Labor Action Urged To Curb Anti-Union Plotters

BAL HARBOUR, Fla. — Joint action by organized labor to counter a South-wide, anti-union conspiracy was urged by TWUA upon the AFL-CIO Executive Council at its meeting here last month.

TWUA's Executive Council also called for a Congressional investigation of "illegal interference by major southern textile employers with the right of their workers to organize."

The TWUA council's call was prompted by several new developments which "point up the unbridled arrogance and growing intensity of this conspiracy." It listed them as:

▸ The latest National Labor Relations Board findings against J. P. Stevens & Co., No. 2 textile combine in the U.S., in which Trial Examiner Boyd Leedom "confirms the existence of this conspiracy and adds another shocking chapter to the long list of labor law violations committed by this company" (story this page).

▸ Showdowns with Cone Mills Corp., Erwin Mills, Burlington Industries subsidiary; Chatham Manufacturing Co. and GARCO's Raybestos-Manhattan division, employing between them a total of nearly 12,000 North and South Carolina workers. Tensions in these plants are the direct result of numerous and continuing unfair labor practices and refusal to bargain in good faith on the part of the various managements, the TWUA statement charged.

The Erwin Mills showdown was forced upon 1,400 workers by management's demands for 57 changes in the current contract which union members had offered to extend, without any change whatever (see cover).

General President William Pollock said that the latest NLRB report on J. P. Stevens & Co. brings to a total of 103 the number of workers found to have been illegally discharged.

"The shameful inadequacy of federal labor law and its administration is reflected by the fact that, although reinstatement of the first group of these illegally discharged workers was recommended as long ago as July 1965 and confirmed by the full NLRB in March

(Continued on Page 18)

COVER PHOTO: As is the custom among southern locals, this picketline strike meeting of Erwin (N.C.) Mills workers begins with a prayer. The Rev. James D. Tart, himself a striker, leads the prayer (Photo credit: Luci Uvvle).

"Member of the Year" award by Allentown District Joint Board for "devotion to TWUA" went to Harold Thompson (seated, center). Joint board members who honored him were (seated) Becky Krick and Neil McCauley and standing (l. to r.) Anthony Borrelli, Joseph P. Coponi, manager; Thomas Richards, Francis Halleman and Martin Bukovina.

Organizing - South

Government Must Take Lead

Assure Jobs for All, Council Urges

The federal government "must take the lead" in assuring training and "a job for everyone willing and able to work," according to TWUA's Executive Council.

A council resolution noted that the need for such action is underscored by the fact that there are no jobs for nearly three million workers and that an additional 1.5 million breadwinners must take part-time jobs because full-time employment is not available.

"As a backdrop and final reservoir of jobs," the resolution added, the federal government must stand ready to provide productive work for all who are unable to find gainful employment.

One of the techniques proposed by the council for carrying out this public service employment concept was the coordination of all present national, state and local manpower agencies.

Under this setup, local agencies would examine their job needs and propose a set of priorities for filling them. Each community's proposal would then be integrated into an overall, omnibus state plant which, in turn, would be reviewed at the federal level.

Such a review, the resolution said, "would assure conformance with agreed-upon standards."

Upon approval, these plans would become eligible for federal financial assistance. The federal agency would also extend help in planning the job programs so that these would provide for progress toward the social goals still unfulfilled and make the greatest possible use of the unemployed.

Local and state plans should include job testing, placement training, job development, recruitment and on-the-job experience, the resolution said.

Along with, and as "an essential part" of this effort, there must be a national program of education and training designed to equip the unemployed with the skills they need to be self-sufficient, dignified members of the work-force.

Participants in these programs should be paid at a rate not less than equivalent employment in the private sector, but in no case less than the federal minimum wage, the resolution stated.

Stevens Tagged Law-Breaker

(Continued from Page 24)

tration, has never been accused of having a pro-union bias," Pollock said.

"Like his fellow trial examiners, Mr. Leedom has found widespread, cynical and deliberate violations at Stevens. Moreover, he flatly accuses company supervisors of lying under oath and, in his words, 'adding substantially to the measure of human misery' which is generated by 'persistent and pervasive disregard for the rule of law'," Pollock said.

"Nearly four years have elapsed since the proceedings against J. P. Stevens began. Not one of the 103 discharged workers has yet been reinstated. Trial Examiner Leedom has now found that a conspiracy exists in the southern textile industry that has 'denied thousands of employees . . . of such economic benefits as may flow from the Labor-Management Relations Act.'

"Like the trial examiner in the first two rounds of Stevens hearings, Mr. Leedom calls for new remedies to overcome the scandalous inadequacies of current labor law. This is a matter to which the 90th Congress should turn its immediate attention," the TWUA president said.

"The fact that Stevens, while cynically indulging itself in mass violations of federal labor law, continues to fatten itself on millions of dollars of federal contracts is a matter for the Johnson Administration's immediate attention.

"There is no justification whatever for rewarding lawbreakers with federal contracts," Pollock maintained.

NLRB Complaint Names Chatham

ELKIN, N. C.—A complaint charging Chatham Manufacturing Co. here with unfair labor practices has been issued by the NLRB's regional office at Winston-Salem.

Issued by Reed Johnson, regional director, the complaint alleges that the company refused to bargain in good faith with TWUA.

A hearing on the charges was scheduled to get under way at presstime.

The 10th annual installation party of the Northeastern Massachusetts Joint Board brings together (l. to r.) the Rev. Vincent A. McQuade, Alton M. Hodgman, manager; Daniel P. Kiley, Mayor of Lawrence, and Henry Wormald, president.

A - CIO News Organizing - South

New Ruling Hits Firings By Stevens

4/1/67

A trial examiner for the National Labor Relations Board ruled that three more employes of J. P. Stevens & Co. were fired on flimsy grounds in a continuing union-busting campaign by the big textile chain.

The finding, by Examiner Thomas A. Ricci, was the fourth in a row upholding charges filed by the Textile Workers Union of America and the AFL-CIO Industrial Union Dept. alleging illegal actions to stop union organizing.

Ricci recommended that the Stevens firm—a U.S. government contractor — be ordered to reinstate three union supporters fired last August, with backpay for lost time.

He advised also that management be required to post notices of its willingness to comply with the law in all the chain's North and South Carolina plants, send a notice to all Carolina employes, and give the union access to its bulletin boards for a year and the names and addresses of all employes in the Carolina plants.

"This is an extraordinary case," Ricci said in reviewing the charges. "The unfair labor practices found up to this writing have been 'massive and deliberate.' An unbroken pattern runs through them."

Campaign Charged

On one of the three discharges at issue, the examiner said the "widespread and flagrant nature" of management's "disregard, even contempt, of employe rights" under the law dictates a finding that the worker was "chosen for discharge in furtherance of the overall companywide campaign to weed out every last supporter of the union."

In recent cases involving Stevens, the NLRB has upheld trial examiners' findings that 93 union supporters were unlawfully fired from early 1963 to early 1965. Findings for later periods of 1965 and 1966 await board review.

In the two cases already passed on, the NLRB ruled that management squelched all union sentiment by firing TWUA supporters on various pretexts.

In a third case, Examiner Boyd Leedom, former NLRB chairman in Republican days, concluded that most law violations at Stevens plants "must stem from the decision of one man or a very few men at the top of the management structure." A signal "from the top" would correct such decisions, said Leedom in finding management guilty of wrongfully firing 13 union sympathizers.

Shortly afterward the AFL-CIO

(Continued on Page 2)

...lent fees" paid to

4th NLRB ... Blasts Stev...

(Continued from Page 1)

Executive Council, at its February meeting, announced it would urge Pres. Johnson to issue an executive order barring government contracts to companies that persist in illegal anti-union conduct. Stevens is such a company, AFL-CIO Pres. George Meany declared.

The latest examiner's finding was that Stevens' supervisors fired three veteran employes last year, allegedly for incompetence but actually to discourage union support. Ricci called for the rehiring of:

- James Griggs, discharged after 12 years of service at the company's Dunean plant in Greenville, S. C., allegedly for placing the wrong gear on a machine. No one ever had been disciplined for such an error and management proof was flimsy, Ricci reported. Griggs was a "particular irritant to the company" because he had switched from being an instigator of the firm's anti-union drive to being an "outspoken recruiter" of union supporters, the examiner found.
- Mrs. Ollie Vernadore, who worked as a weaver at Plant 3 in Rock Hill, S. C., from 1951 without once being criticized for the quality of her work until August 1966. She was then fired because an error of mixed colors appeared in the cloth from one of her 25 looms. No one else ever had been fired for that reason in her time at Rock Hill, she testified.

Mrs. Vernadore was the last of her family to be fired by Stevens, the examiner said. The same supervisor who fired her had previously discharged her husband and his brother—wrongfully, according to Ricci.

- Norman A. Shearin, a finishing inspector in a Stevens plant near

...of un-
lawful conduct and has asked the U.S. Court of Appeals to set aside two board orders against it.

300 Get Aid Under Auto Trade Pact

About 300 employes of the Lyon Division of the Rockwell-Standard Corp in Adrian, Mich., have been ruled eligible for benefits under the Automotive Products Trade Act of 1965 because the bulk of the firm's operations is being transferred to Windsor, Ont.

The certification was made by the Automotive Agreement Adjustment Assistance Board on the basis of a petition by the Machinists in which the Metal Polishers cooperated. The plant has been making auto wheel covers and hubcaps.

Under the act, which eliminates tariffs on motor vehicles and parts between the United States and Canada, workers who lose their jobs as a result are eligible for readjustment allowances of $70 weekly for up to 52 weeks, counseling and training, and relocation allowances.

LABOR DEVELOPMENTS

66. Survey rates management techniques in resisting unions

What are the most effective methods an employer can use when trying to influence his employees to vote "no union" during an organizing campaign? Here are some answers provided by employees themselves in a survey conducted by San Fernando Valley State College in California.

Rated "most influential" were speeches by top company executives at captive audience meetings arranged by the companies.

Rated second were talks to small groups of employees by foremen or other supervisors.

(Both pro- and anti-union employees agreed that face-to-face contact was the most important and effective element used by both employers and unions during organizing campaigns.)

Rated less effective were letters by management to employees addressed to their homes.

The survey also indicated that employers are correct in putting a lot of emphasis in their propaganda on the distastefulness of joining an alien organization and having to pay union dues. These were listed first among the factors that the employees surveyed believe are most likely to influence a no-union vote. The opinion that a union isn't necessary was listed as the next most important factor by employees who had voted against unions.

The survey, based on interviews with 500 employees who voted in representation elections within the last two years, was sponsored by an AFL-CIO organizing committee in Los Angeles and Orange Counties. It is receiving considerable attention from top echelons of the federation, and was written up in the March, 1969 edition of *The American Federationist*.

When asked which organizing tactics used by *unions* were most effective, employees gave the highest rating to talks by union officials at union meetings. Next came talks with fellow employees who were serving on union committees. Union leaflets were rated third most effective, with organizers' visits to employees' homes for individual talks rated least effective. This latter finding provides a considerable surprise. Union organizers have generally put great stock in home visits.

Other findings:

- Although a considerable number of employees make up their minds whether to vote for or against a union as soon as it arrives on the scene, an equally large group does not. This indicates that the campaigns waged by employers and unions for employees' allegiance are well worth-while.
- It cannot be presumed that younger employees, those under 25, are inclined to oppose unions. Union supporters among them come within 4% of the proportion of pro-union employees in the survey group as a whole.
- Among employees on the job less than a year, more will vote for a union than will vote against it.
- Employees with between one and five years' service tend to vote against the union.
- Contrary to opinion, women appear to be more favorably inclined toward unions than men. The proportion of women in the survey group who had voted pro-union was 14% larger than the comparable proportion of men.

Collective Bargaining

GE Strike: An End to Boulwarism?

By DAVID GUMPERT

NEW YORK — Paul Jennings is relaxed and almost stoical as he sits in his hotel room, arms folded and feet propped up on the nearby bed.

"General Electric makes militants out of gentle people," he says with little trace of emotion. "We have young people who come into the union and think that you should always be able to reason things out objectively. Are they surprised!"

Across the street at General Electric Co. headquarters, the bargaining rooms are empty. Mr. Jennings' International Union of Electrical Workers (IUE) and 12 other unions that had been negotiating with GE for more than two months on a new national contract have been on strike since midnight Sunday. During the final days of the talks, Mr. Jennings considered the whole process so pointless that except for the last-minute sessions, he did not even stop in to observe how things were going. So now about 147,000 workers, or about 95% of GE's production and maintenance work force, are tightening their belts for what could be a long strike. (GE's total work force numbers more than 300,000.)

The unions, some of them bitter enemies in the past, have formed a united front in a bid to force GE to change its approach to collective bargaining, which they call Boulwarism, and in the end to gain monetary concessions. They are convinced that only a strike will change GE. "It's going to be a rough and big strike and they'll be dragged screaming into the 20th century," says Mr. Jennings, sounding more like a breaker of new ground instead of a union president conducting an ordinary strike against the nation's largest manufacturer of electrical products.

A 23-Year Policy

If the unions do force GE to change its attitude toward collective bargaining, however, not only will they be breaking new ground, they'll be breaking a 23-year GE policy. That policy was established in 1947 by Lemuel Boulware, then a GE vice president for employe relations and now retired. Mr. Boulware was called in to deal with the unions after a successful nine-week strike against the company in 1946 by the United Electrical Workers (UE).

Mr. Boulware's philosophy toward union negotiations has become GE's philosophy. tens to union demands as negotiations begin, and on the basis of its past research and consideration of the union's requests, presents its offer.

At this point, negotiations in the usual sense of the word are over. GE says it will explain its offer and make modifications within the framework of the offer, but will add nothing more unless the unions present new information. Says John Baldwin, GE's chief negotiator, "The important point is that we do not modify solely for the charade of last-minute concessions. Once you become known for playing that game, all credibility is lost for future negotiations, and strikes become part of the game to squeeze out extra concessions."

The company's position is also that, while obligated to negotiate with the union, it has no obligation whatsoever to forgo communication with its own employes. Says its management publication, "Relations Reviews": "Contrary to the impression in some quarters, Mr. Boulware emphasized *employe* relations rather than union relations. Ironically, his name became associated largely with the union part, which always was—and still is—only a subsidiary aspect of General Electric's total employe relations."

The GE policy has worked on one important level: There hasn't been a successful national strike against GE since 1946. In 1960, the IUE went on strike for three weeks, but in the end accepted GE's basic offer when some of its members broke the strike and went back to work. GE says its close and constant communication with employes allowed them to make up their own minds and to see that the GE offer was worth accepting.

But Mr. Jennings feels that in 1960 GE was able to exploit division within the union and the absence of a labor coalition. Now, he notes, the members of all the unions have overwhelmingly endorsed a strike instead of a slim majority of only the IUE, which represents about 60% of GE's production and maintenance employes.

The fact that the various national unions with GE contracts have been able to unite is in itself an indication of their strong anti-Boulwarism positions. The IUE and UE have been bitter enemies since the late 1940s when the UE was expelled from the old CIO for having Communist leanings and the IUE replaced it as the leading electrical workers from its Boulwarism philosophy and gave the unions more than they had originally offered —a more flexible cost of living increase.

GE has traditionally avoided any kind of outside interference in union disputes, however. Unlike most other companies, GE does not even allow arbitration on local union grievances, and is willing instead to face a strike. In the current situation, GE says it does not want a repetition of 1966, but rather wants Boulwarism to win out.

The unions see Boulwarism not only as demeaning the importance of the union, but as making "true" negotiations impossible. They argue that GE, by saying only it knows what is best for its workers, is infringing on the unions' role as representatives of the workers and partners in the negotiating process. "What GE really stands for is 'God Endorsed'," jokes Mr. Jennings. More seriously, he charges that "GE goes around the unions. They are continuously trying to discredit the unions."

Offering an example, he criticizes the way in which this year's company offer was presented to the unions. The unions had asked GE for a 72-hour news blackout between the time the offer was presented to the unions and the time it was made public to allow the unions time to study the offer and explain it to their members.

'Battle for the Minds'

Instead, GE told the unions one morning earlier this month that it was ready to make its offer, and as the unions caucused to decide on their procedure, messengers delivered copies of the proposal to the hotel where the union representatives were staying. A few hours later company leaflets explaining the offer had been distributed to workers in plants around the country. Mr. Jennings considers this an effort by GE to "engage in a battle for the minds of the workers."

What happens at the negotiating table, maintains the IUE's chief negotiator, John Shambow, is that "there's no real give-and-take. We're explaining our proposals and they're saying, 'Our proposal is on the table.' It's like shoveling smoke. You're working and working and nothing gets done."

The charge that GE stands over the unions as an authority figure is denied by GE negotiator Edward Kneeland: "I don't think it makes you an authority figure to say our offer is right and why it's right. What we're

going. So now about 147,000 workers, or about 95% of GE's production and maintenance work force, are tightening their belts for what could be a long strike. (GE's total work force numbers more than 300,000.)

The unions, some of them bitter enemies in the past, have formed a united front in a bid to force GE to change its approach to collective bargaining, which they call Boulwarism, and in the end to gain monetary concessions. They are convinced that only a strike will change GE. "It's going to be a rough and big strike and they'll be dragged screaming into the 20th century," says Mr. Jennings, sounding more like a breaker of new ground instead of a union president conducting an ordinary strike against the nation's largest manufacturer of electrical products.

A 23-Year Policy

If the unions do force GE to change its attitude toward collective bargaining, however, not only will they be breaking new ground, they'll be breaking a 23-year GE policy. That policy was established in 1947 by Lemuel Boulware, then a GE vice president for employe relations and now retired. Mr. Boulware was called in to deal with the unions after a successful nine-week strike against the company in 1946 by the United Electrical Workers (UE).

Mr. Boulware's philosophy toward union negotiations has become GE's philosophy. Most companies, like the auto makers and the steel producers, deal with their unions by presenting an offer, listening to the union's counteroffer, and then working toward a point somewhere in between, sometimes with the weapon of a strike. GE, however, first does heavy research on, for instance, what other companies are offering, political pressures on the unions, the state of the economy, employe attitudes, and anything else considered relevant to coming up with a fair offer.

This research, says GE, is more extensive than that done by companies that engage in ordinary collective bargaining. GE then lis-

"Contrary to the impression in some quarters, Mr. Boulware emphasized *employe* relations rather than union relations. Ironically, his name became associated largely with the union part, which always was—and still is—only a subsidiary aspect of General Electric's total employe relations."

The GE policy has worked on one important level: There hasn't been a successful national strike against GE since 1946. In 1960, the IUE went on strike for three weeks, but in the end accepted GE's basic offer when some of its members broke the strike and went back to work. GE says its close and constant communication with employes allowed them to make up their own minds and to see that the GE offer was worth accepting.

But Mr. Jennings feels that in 1960 GE was able to exploit division within the union and the absence of a labor coalition. Now, he notes, the members of all the unions have overwhelmingly endorsed a strike instead of a slim majority of only the IUE, which represents about 60% of GE's production and maintenance employes.

The fact that the various national unions with GE contracts have been able to unite is in itself an indication of their strong anti-Boulwarism positions. The IUE and UE have been bitter enemies since the late 1940s when the UE was expelled from the old CIO for having Communist leanings and the IUE replaced it as the leading electrical workers union. And the Teamsters and the United Auto Workers, with small numbers of GE employes, usually take pleasure in asserting their independence of the AFL-CIO, which the IUE represents.

In 1966, the first year of the coalition, the unions had called a strike, but then-President Johnson intervened. He called on GE and the unions to negotiate two weeks beyond the contract's expiration because he considered GE's production vital to the Vietnam war effort. Under the pressure of government mediators, GE deviated slightly

Offering an example, he criticizes the way in which this year's company offer was presented to the unions. The unions had asked GE for a 72-hour news blackout between the time the offer was presented to the unions and the time it was made public to allow the unions time to study the offer and explain it to their members.

'Battle for the Minds'

Instead, GE told the unions one morning earlier this month that it was ready to make its offer, and as the unions caucused to decide on their procedure, messengers delivered copies of the proposal to the hotel where the union representatives were staying. A few hours later company leaflets explaining the offer had been distributed to workers in plants around the country. Mr. Jennings considers this an effort by GE to "engage in a battle for the minds of the workers."

What happens at the negotiating table, maintains the IUE's chief negotiator, John Shambow, is that "there's no real give-and-take. We're explaining our proposals and they're saying, 'Our proposal is on the table.' It's like shoveling smoke. You're working and working and nothing gets done."

The charge that GE stands over the unions as an authority figure is denied by GE negotiator Edward Kneeland: "I don't think it makes you an authority figure to say our offer is right and why it's right. What we're offering very nicely matches what else is being offered." But he adds that his concept of the union's role is "that they come to us with proposals and argue them and if they can convince us, fine."

The union demands and GE's contract offer are far apart, but no farther than many other demands and offers in other industries. The unions have demanded a 30-month contract calling for a 35-cent hourly pay increase the first year, a 30-cent increase the second year and a 25-cent increase during the final six months. They also want an additional 50-cent hourly supplement for highly skilled workers, and a cost of living clause.

GE has offered a 3-year contract covering benefits and specifying an immediate 20-cent-an-hour wage increase for all production and maintenance employes, with skilled employes getting an extra five cents to 25 cents hourly. The company has tacked on a wage reopener clause that would allow wage negotiations during the second and third years of the contract and give the unions the right to strike.

State of the Economy

The union and company arguments about their respective offers are tied in with the current unpredictable state of the economy. With the threat of a slowdown, the unions say they want wages for the entire length of the contract agreed upon beforehand. The possibility of continued inflation spurs their demand for automatic cost-of-living increases. GE argues that the uncertain state of the economy makes it necessary to reopen negotiations a year later rather than agreeing on wages for that period now.

The possibility of government interference still exists, but is remote. The unions, though, are suspicious of President Nixon. They view his recent speech calling for voluntary economic restraints as, in part, directed against them. They feel Mr. Nixon might still try to impose the Taft-Hartley law in GE's defense-related production and in this way try to break the strike.

Both sides insist they are ready for long strikes. Says a GE employe bulletin, in part, "How long will the strike last? Until Thanksgiving? . . . Until Christmas? . . . Until next spring? . . . It will end when union members want it to end. The coalitionists seem to be planning for a long one. We don't feel employes want a long strike and sooner or later will say so."

Mr. Jennings argues that GE has misjudged the mood of its workers. "We'll hold out as long as we have to to get what we deserve," he says. "What we'll get is an acceptance of unions and an end to Boulwarism."

Much more than a strike over dollars and cents, the GE strike is a strike over principle. If the unions sign for the same basic offer as GE has proposed, Boulwarism will have won out again. But says Mr. Jennings, still quietly, "They're going to have to improve that offer and the minute they do that they've killed Boulwarism."

UNION BRAWL LAST WEEK

Southern Organizing

100 Riot Policemen Guard Miami Construction Site

MIAMI (AP) — More than 100 riot-trained policemen stood guard at a downtown construction site yesterday against an anticipated battle between rival unions.

But the expected showdown between members of the International Brotherhood of Electrical Workers and the International Union of Operating Engineers fizzled when they learned they had no job to fight about.

ABOUT 1,500 electrical workers — some from as far away as Tampa, Daytona Beach and St. Petersburg — gathered before dawn at the local union hall.

They donned hard hats, armed themselves with clubs, wrenches and screwdrivers, and used spray cans to paint a large blue "X" on their shirts for easy identification in a fight.

But no operating engineers showed up at the construction site where about 150 members of the two unions staged a bloody brawl last Monday, and the electricians union sent its men back to their jobs.

THE CONTRACTOR, Harbert Construction Co., which was laying cable for Florida Power and Light Co., suspended the job indefinitely.

The dispute is over which union will do the non-electrical work. The operating engineers, who run the heavy equipment, have been paying the electricians a "permit fee" of 3 per cent of each man's gross salary.

Union Organizing

AFL-CIO Unions Extend Three-Year Organizing Gains

AFL-CIO unions broke all recent yearly records for organizing success in fiscal 1966.

For the year ended last June 30, affiliated unions won 3,159 representation elections conducted by the National Labor Relations Board—the highest number in 13 years—and took part in 5,461 elections, also the greatest number for the period.

The percentage of wins was 57.8, highest since fiscal 1956. As a result, AFL-CIO unions were certified as bargaining agents for 243,994 workers—the highest such number in seven years.

The fiscal 1966 figures were assembled from monthly NLRB reports by the AFL-CIO Dept. of Organization, which noted that they followed sharp gains in 1965 and 1964 in every category—the number of elections, number won, percentage of elections won, and number of persons covered. In fiscal 1964, affiliated unions had established a post-merger record for the number of persons newly represented, and compiled the second best score for the number of elections participated in and the number won, the analysis showed.

Department Dir. William L. Kircher said the record constituted "a three-year demonstration that AFL-CIO unions are organizing more, and are organizing more effectively."

NEW NLRB ACTIONS URGED TO CURB EMPLOYER'S CAMPAIGN OF VIOLENCE

A New York-based company waged such a campaign of violence against union organizers at its seven southern plants that a National Labor Relations Board trial examiner recommended that the board order a series of unusual remedies to help balance the scales for the union.

Examiner Paul E. Weil ruled that the Marlene Industries Corp., which has plants in Tennessee, Alabama and South Carolina, violated the National Labor Relations Act by "instigating, encouraging, causing and permitting employes" and supervisors to smash organizing attempts by the Ladies' Garment Workers in 1965.

The unlawful actions, Weil said, included smashing the headlights of union organizers' cars, kicking and banging car bodies, destroying a car radio aerial, seizing union pamphlets, squirting ink on ILGWU handbill crews and trying to run a union car off the road after chasing it out of town.

Marlene Industries makes women's clothing in plants at Frisco City, Ala., Aynor and Loris, S.C., and Decatursville, Hartsville and Westmoreland, Tenn. Company-incited mobs attacked organizers in Hartsville and Decatursville, and women employes organized by a woman supervisor squirted ink from water-pistols on union men and women at two Marlene plants in Loris, the examiner reported.

He listed numerous other law violations in management's anti-union campaign—firing 17 employes who signed union cards or attended union meetings; changing working conditions discriminatorily; spying on and photographing union supporters; threatening plant closings to thwart the union; enforcing unlawful rules against union membership soliciting or handbilling.

The examiner recommended that Marlene Industries be ordered to rehire the discharged workers with full backpay for time lost, and to stop interfering with the access of employes to union organizers during non-working time on plant approaches or parking lots.

Because so many employes live in outlying areas and are "insulated" from ordinary contact with union sources by unlawful management tactics, the examiner directed also, subject to board approval, that:

- Marlene Industries grant the union "reasonable access for a reasonable time" to its bulletin boards.
- The company make available to the union on request, at a mutually agreeable time within three months, suitable facilities for a one-hour meeting on company time at which union representatives may speak to the assembled employes.
- Management at its own expense publish the NLRB's official notice in newspapers in each plant community—the newspapers to be selected by the NLRB regional director and the notices to be published at least once in each of three consecutive weeks.

The examiner also directed that the firm instruct its employes, including supervisors, that "physical assault or threats of physical violence directed at any labor organization will not be permitted on plant premises at any time."

Goldner Tells Of Union's Election Bid

Organizing

St. Petersburg -- Feb. - 1966 (?)

Mayor Herman Goldner revealed yesterday he had received three telegrams this week from a representative of the Amalgamated Transit Union — the union that is trying to organize the city's bus drivers.

Goldner brought the matter up during a council meeting recess.

The reaction of the councilmen, the city's administration and City Attorney Harry Young was the same as last month: No deal and no negotiations.

WHILE THE CITY officials talked in the mayor's office, the union's representative, Dan V. Maroney, was down the hall in the press room.

Maroney said the city officials had refused to meet with him to discuss holding elections among the city transit workers. He said the union has 93 applications from the city's 112 bus drivers.

But state law makes it illegal for a city employe to belong to a union that asserts the right to strike, and it is St. Petersburg's position that Amalgamated Transit is such a union.

MARONEY'S first telegram to Goldner this week was on Tuesday. It asked the city to conduct or supervise an election among the bus drivers on the question of union membership.

City Attorney Harry Young answered this telegram Tuesday with a telegram, saying that the City Council did not have the authority to conduct an election.

Maroney fired back a telegram — it was still Tuesday — noting the 93 applications from city drivers and asking that Amalgamated Transit be recognized as representatives of the drivers.

THIS TELEGRAM was not answered.

Wednesday, Maroney sent the city another telegram. He said Richard Youngman, director of the Florida State Mediation and Conciliation Serivce, had agreed to conduct an election, if both the city and the union requested it.

"I would suggest we not answer any of this fellow's telegrams," City Manager Lynn Andrews said yesterday in the mayor's office.

AND THAT'S where the matter stands.

Maroney hinted the case might end up in court, but said it would be up to the union's lawyers in Washington.

He said the union — although it has a strike clause in its contract — was willing to sign a no-strike agreement with the city.

Organizing – South

White Collar, Southern Trend Cited:

Bargaining Grows As Unions Expand

Cleveland, O.—"The future of collective bargaining is a bright one" and especially so in the South and the white collar fields, two areas formerly "off limits" for union organizers, Member Sam Zagoria of the National Labor Relations Board said here.

Currently the South is the "hottest" union organizing area, Zagoria told the Federal Bar Association at a labor-management relations institute. But unions are attracting white collar workers in other areas too—teachers, nurses, salesmen, engineers and government employes.

The best years for collective bargaining "still lie ahead," he declared.

Because of "booming" union efforts in southern states, the NLRB has had to dispatch emergency help to its regional offices—attorneys, field examiners and law clerks on temporary assignment to cope with the flood of board business, Zagoria revealed. He added:

"Some of these have been on a fireman basis—one or two at a time for brief periods; some in teams, on assignments running from 30 days to five and six months" during the last fiscal year.

Zagoria cited these figures:

- The NLRB held 2,236 elections in fiscal 1966 in the 17 southern and border states—an increase of more than 100 percent in 10 years—and 114,959 workers voted for union representation—another increase of more than 100 percent.
- Sharp increases in union strength were recorded for Alabama, with 143 elections and 7,533 pro-union votes; Mississippi, where elections nearly tripled in number and pro-union votes were five times as large as those 10 years ago; Georgia and Texas, where both the number of elections and votes for unions were almost doubled.
- By way of contrast, Ohio had an increase of more than one-third in NLRB elections over the decade but votes for unions rose less than 10 percent; New Jersey elections were about one-third more numerous but the union share of the vote "decreased substantially," Zagoria reported.

Tracing recent labor history from the days of the sweatshop and the 84-hour week, the NLRB's newest member recalled that when workers tried to organize, "they frequently found the full might of company and community arrayed against them." In the 1930s, "armed guards, armed policemen, even armed

Board Member Cites Union Trend in South

(Continued from Page 1)

soldiers faced the demonstrators." The result was "bloodshed, violence and bitterness."

Since Congress enacted the Wagner Act of 1935, the concept of collective bargaining has won acceptance as a "peaceful and orderly way" to settle industrial arguments, he declared, to the end that "hundreds of thousands of labor-management contracts are testimony to the law and order" now existing.

Non-Unionists Benefit

"The impact of collective bargaining has not been limited to the organized," he declared. "It has forced major improvements in working conditions for the unorganized as well" by firms seeking to remain unorganized, and by labor's legislative efforts in putting floors under wages and getting safety standards into law.

As conditions of employment improved, some workers began to question the need for joining a union and thus made unions "the victims of their own success." But recent union gains indicate a turn in the road, Zagoria said.

AFL-CIO Organizing Dir. William L. Kircher reported recently that affiliated unions in fiscal 1966 won 57.8 percent of the elections they took part in, the best mark in a decade. Unions took part in 5,461 representation elections and won 3,159—the highest number in 13 years for both categories.

Zagoria said the AFL-CIO victories won bargaining rights for 243,994 workers, the greatest number in seven years.

He predicted that collective bargaining will grow as unions attract more white collar workers. Arbitration of grievances, now required in 9 of every 10 contracts, will continue to gain in popularity, he said.

As to compulsory arbitration, he noted that a Gallup Poll showed a 54 percent segment of those polled suporting it. But "those who earn their daily bread and butter in industrial relations—lawyers for unions and managements—voted 2 to 1 against it in a recent American Bar Association discussions," Zagoria said.

Second Big Walkout in Texas City

300 Strike Coca-Cola Plant in Dallas

DALLAS, Tex.—A second bitter strike is under way in Dallas, this one at the big Coca-Cola plant with more than 300 workers out. The strike at Industrial Towel and Uniform Service, involving 161 workers, is now in its 17th week, while the one at the city's Coca-Cola Bottling Company began on Tuesday, July 27.

At Industrial, the union filed unfair labor practice charges with the NLRB under Sections 8-a-1 and 8-a-5 of the Nat'l Labor Relations Act. In the first instance, the union charged the company with intimidation and coercion, and under Section 8-a-5 with failure to bargain in good faith. The board has scheduled a hearing for Sept. 1.

The Coke strike was called after more than seven months of fruitless meetings during which the company consistently refused to grant a checkoff, seniority rights or grievance procedures, the very issues on which the union had placed the highest priority.

Int'l Rep. Jake Stewart, in charge of both strikes, reports that Coca-Cola has hired a great number of scabs, mostly from nearby college campuses. At best, these scabs can only work for a short time, or until their colleges reopen for the fall semester.

The morale of the strikers remains high, and the pickets at Industrial have not had a single defection in the 17 weeks since their lines were formed. They, as well as the Coke strikers, are receiving help from the RWDSU, other local unions, civil rights organizations and hundreds of townspeople.

Regardless of how long it takes, Stewart said, "These strikes will be won, and the right of workers to live and work decently and securely will once again be assured."

Committee that bargained for 80 Local 589 members at Mullis was headed by Pres. Erskine Hepburn (seated, third from left).

Negro Women Stand Fast To Win Jacksonville Strike

JACKSONVILLE, Fla.—A militant one-day strike brought the 80 members of newly-chartered Local 589—all Negroes and mostly women—their first contract with the Mullis Poultry Co.

The one-year agreement provides seniority and arbitration; a ten-cent an hour wage boost, raising the minimum in the plant to $1.35 an hour; five paid holidays; one week's vacation after one year of service and two after eight—the first holidays and vacations the Mullis workers have ever had—and rest periods each day.

The contract expires Aug. 4, 1967.

argaining for the local were Pres. ne Hepburn, Earlie Mae Cuthbert, e Hunter, Charlie Mae Brooks, Washington, Hattie Mae Jackson bell Cotton.

ep. Harry Bush assisted the mittee throughout the organ- the plant and the negotia- t'l Exec. Vice-Pres. Arthur RWDSU's Southern area vided overall guidance for

egan at 5:15 in the morn- Aug. 5, an hour and a he work day starts at ll the workers walked out and set up picketlines. The company tried to bring armed scabs through the lines, but the union members stood their ground and turned the scabs around.

Picketing continued for the rest of the day with the plant shut tight. Durin the day Hepburn and Mrs. Hunter were detained by the police, but were released after several hours.

The next day the state conciliation service arranged a meeting between the company and the union, and at the meeting the strike-ending settlement was reached.

The local began organizing at Mullis in the spring, and won an NLRB election by an overwhelming 58-19 vote in May. Negotiations began the next month, but the company's final offer, made July 29, was unacceptable, and the workers walked out the next week. Federal mediator Nat Kazin took part in the contract talks.

Selma Drive Enrolls 200 More in 3 Shops

SELMA, Ala.—The organizing pace set by the RWDSU in Alabama's Black Belt is continuing without a let-up, with three new campaigns resulting in an overwhelming majority of more than 200 workers in these plants joining the union. Petitions for elections at each of the plants were filed Aug. 5.

The latest successes bring to more than 1,500 the number of workers organized during June and July, and to 2,000 the total organized in this section of Alabama by the RWDSU since a campaign began there 13 months ago.

Alabama Council Org. Henry Jenkins, in charge of the drives, has signed up 90 percent of the 115 employees of the A.R. Taylor Veneer Co. of Demopolis, dealers in plywood and related lumber products. A majority of the workers are Negroes, engaged in production or as truck drivers.

Jenkins held two membership meetings prior to filing the petition, and the attendance each time was large and enthusiastic.

The second plant is the Griffith Packing Co., also of Demopolis, packers of meat products. The company employs about 50 workers, mostly Negro, and more than 40 have joined the union.

State Trooper Comes Calling

Shortly after Jenkins notified the owners that he intended to file for an election, they made an appointment to discuss the situation. When Jenkins arrived to keep the appointment, a secretary told him the date was canceled. Coincidentally, he saw a state trooper's car in the company's parking lot. Later that day he observed the same car with the trooper inside parked on a road leading out of Demopolis.

Speaking of the incident, Jenkins said, "Nothing can stop us from winning. No bosses, and no state troopers; our people want the union."

The third newly-organized shop is the Centrala Farmers' Co-op in Forkland. The company is a fertilizer dealer, and employs some 35 workers, mostly Negro. A substantial majority have signed up. The union is making an extra special effort to win this election because last March it lost an election at the company's Selma plant, and is determined that the Forkland story will be different.

Angelina Janusa Retires; '503' Charter Member

NEW ORLEANS, La. — Local 503 has extended its congratulations to Angelina Janusa, a charter member of the local, on her retirement from the Blue Plate Division of Hunt's Foods after 22 years of service.

"Our sincere wishes for health and happiness, with the hope that it's just the start of a whole new life filled with joy and contentment," Catherine Stortz, secretary-treasurer, said.

NLRB Sets Memphis Vote

MEMPHIS, Tenn. — The NLRB has set a bargaining election among 18 delivery drivers and warehousemen employed by the S. C. Toof office supply and furniture company here for Sept. 14.

"We have every confidence that we'll win the election," Local 19 Pres. Earl H. Fisher said. "Nearly 75 per cent of the workers h

Organizing — South

Mississippi AFL-CIO Votes Organizing Drive

Jackson, Miss.—A concerted organizing drive aimed at broadening the base of trade unionism in Mississippi was unanimously approved by delegates to the State AFL-CIO convention here.

Preliminary plans were laid at an all-day post-convention session at which AFL-CIO Assistant Organizing Dir. Alan Kistler met with state labor leaders. Representatives of several unions undertook to secure aid from their internationals, and another meeting was set for Oct. 29 and 30 in Jackson.

Pres. Claude Ramsay and Sec.-Treas. Thomas Knight were reelected by acclamation and for the first time the convention elected a Negro member of the executive board—Robert Woodson, assistant business agent of Carpenters Local 3031, Jackson, an industrial local with the membership about equally divided between whites and Negroes.

In other actions the convention condemned extremism of both right and left; endorsed AFL-CIO convention policy resolutions on the National Labor Relations Act, including repeal of Section 14(b) of the Taft-Hartley Act; supported the Johnson Administration's course in Viet Nam, and backed the anti-poverty program and truth-in-packaging and truth-in-lending legislation.

Speakers included E. T. Kehrer, southern representative of the AFL-CIO Dept. of Civil Rights; Hodding Carter III, chairman of the biracial Mississippi Young Democrats; State Treas. William Winter, who is regarded as a potential Democratic candidate for governor, and State Superintendent of Education J. M. Tubb.

ALABAMA ORGANIZING GAINS HAILED

GADSDEN, Ala.—The tremendous organizing successes of the RWDSU in this state were highlighted at an all-day meeting of the Alabama Council at the union hall here Sunday, June 26.

In the past year, more than 1,000 workers, many of them Negro workers in the state's Black Belt, have been organized in Alabama.

"The Alabama Council has made tremendous progress in the last year," Ass't Southern Dir. Frank Parker said, "and the reports on our future possibilities are even more impressive."

The 175 delegates of the 5,000-member council voted a 50-cent monthly per capita dues increase and named Gloria Lavoy of Birmingham as financial officer of the council. She replaces Nona Bell of the Whitfield Pickle Co. in Montgomery, who resigned to go into business.

The council and the Birmingham RWDSU building fund committee presented a water cooler to the Gadsden union hall, which was opened March 13 after ten years of work by the locals for their own building.

The RWDSU locals in Gadsden, Locals 453, 506 and 645, were the hosts for the meeting.

"They were very hospitable and really made the delegates welcome," Parker said.

After the council met, the Alabama RWDSU Dairy Conference, which represents 2,000 members in the dairy industry in Alabama, also held a meeting.

COOL, CLEAR WATER: Margaret Robbins and Org. John Parker (right), present water cooler for new Gadsden union hall to J. O. Parker, chairman of Gadsden building fund committee.

COUNCIL LEADERS: Among leaders of dairy workers at council meeting are (seated, left to right) C. A. Brock, Org. C. T. Daniel, president of Dairy Workers Conference; Hiram Robertson, Arlie Yarbrough, and (standing) Billy Joe Walker, Henry Provencher, Rep. Lester Bettice, Bob Hawkins, Ed Maske and Howard Carter.

Total for South in 14 Months: 6,500

Two More Plants Organized in Georgia Drive

ATLANTA, Ga.—Continuing its progress through Georgia, the RWDSU's Southern organizing drive has swept two more plants, Castleberry Foods in Augusta, which employs 75 people, and the Burton-Dixie Corp. plant in Atlanta, which employs 40 workers. Since May 1, 1965, the RDWSU has signed up more than 6,500 workers in the South. At Castleberry, where the union has signed up nearly two-thirds of the workers, an NLRB election has been set for Aug. 5.

The RWDSU began organizing at the plant early this yaer, but held the drive back so as not to interfere with the organizing campaign at the big Murray Biscuit plant. The 500 Murray workers will be voting in an NLRB election Aug. 11.

Reps. Dock Dickinson and Arthur Hullam have been heading up the Castleberry drive.

Castleberry prepares barbequed meats and barbeque sauce.

At Burton-Dixie in Atlanta, the union is on the verge of signing a substantial majority of the workers.

An odd chance played a part in the campaign, which began when Int'l Rep. Guy Dickinson, in his car, followed one of the workers home from the plant. Dickinson drove into the man's driveway, introduced himself and asked if the man were interested in helping to organize his shop. The man was —as a matter of fact, he had spoken to a neighbor who belongs to the RWDSU, had gotten Dickinson's name and intended to call him.

Employees Meet, Sign

The employee soon got a group of 12 workers together, and Dickinson met with them Monday, July 11, and signed all of them up.

"We hope to get a majority very soon," Dickinson said.

The RWDSU represents 85 workers at the Burton-Dixie plant in Dallas, and is now seeking a first contract for them.

Facts Don't Support Anti-Union Boasts That Southern Employes Don't Want Unions

How valid are the claims of Southern employers that their employes do not want unions? Spokesmen for the J. P. Stevens Co. have said repeatedly that the wishes of their employes have been clearly stated in numerous NLRB-conducted elections where the union has been defeated every time.

Yes, the unions have been "defeated" at J. P. Stevens Co. and at other Southern textile and manufacturing plants, and the unions have filed unfair labor practice charges on behalf of the workers against the companies. They have been time and again sustained by the NLRB trial examiners and the National Board.

Does it do any good for the Labor Board or a court to compel an employer to publicize a "cease and desist" order—two, three, or four years after the event—stating that the employer was wrong when he interfered with, restrained and coerced the employes from exercising their statutory rights? In far too many cases the order is entirely ineffective: Organizing drives cannot be put on ice for such long periods, and employes' attempts to self-organization completely destroyed.

Rep. Frank Thompson Jr., (D., N.J.) spoke in the House of his deep concern about the lack of effective remedies under the present law, and suggested some legislative reforms of the Natl. Labor Relations Act. He criticized the infamous record of the J. P. Stevens Co. in thwarting the will of its workers for union representation, declaring that "the J. P. Stevens Co. has so far lost all the battles but has won the war. It has achieved its objective—to keep the union out. Its violation of the law, assuming the reviewing court upholds the Labor Board, will be punished by a wrist-slapping. The contest between the J. P. Stevens Co. and the United States Government is unequal.

"We send the Labor Board with a slingshot to enforce our laws against an armored Goliath, and the days of David are over. If we want the laws we pass to be enforced, we must equip the agencies we create with power to deter the law violators," Rep. Thompson said.

He pointed out that the Special Subcommittee on Labor, of which he is chairman, is considering a number of legislative reforms which certainly deserve prompt action.

"1. Currently, the National Labor Relations Act authorizes the Labor Board to order the reinstatement of employes discharged for union affiliation with back pay. This back pay award does not compensate the employe for his financial loss, nor does it deter the wrongdoer. The back pay award has been called 'nothing more than a hunting license for union-busters.'

"I suggest that we give the Labor Board authority to assess double or treble damages against certain violators — those who have been deliberate or repeated or flagrant in their violation of our laws," the Congressman said.

"2. The laws should be amended so a violation will hurt where it counts—in the pocketbook. Moreover, it does not make sense for the federal government to subsidize with lucrative contracts the individuals and companies which violate our laws.

"Accordingly, I propose amendments to the Davis-Bacon and Walsh-Healy Acts so as to give the contracting agencies of our government power to withhold contracts from companies which the Labor Board finds to be in open, flagrant, knowing and purposeful violation of our laws. I made a similar proposal in connection with those who violate our antitrust laws, and I think the same rationale is applicable here."

Rep. Thompson concluded by calling for immediate action, "if we are to demonstrate that the United States Government is larger than the total of its parts."

Are Southern workers unresponsive to the need for unions as many of their employers would like to have the public believe? The answer is an emphatic "no." When workers have an opportunity to make a choice, free from fear or reprisals, they do choose bargaining representatives.

This is amply demonstrated by workers in the public sector—municipal, county and state and most dramatically federal employes. Executive Order 10988, issued in 1962, states in the preamble:

"Whereas participation of employes in the formulation and implementation of personnel policies affecting them contributes to effective conduct of public business." . . . has been the key factor in the upsurge of union organizing among government workers.

Despite a number of shortcomings, Executive Order 10988 is a positive mechanism that permits employes to make an intelligent, free choice as to whether or not they want a union.

An example of the workers' attitude was demonstrated recently at the Warner-Robins Air Force Base near Macon, Ga. The American Federation of Government Employes had requested, after months of organizing, an election to determine union representation for the entire civilian workforce. It won big.

Despite adverse weather conditions and a last-minute effort by a small independent union to discourage voting, over 8,000 votes were cast. Among these only 725 voted no union, less than 10 percent.

The AFGE has grown phenomenally in the last three years, gaining most in the southeastern part of the United tSates, where, according to employers, the workers don't want unions.

Subject: Questionnaire, study of retail workers attitudes towards unionism

Enclosed are several copies of a questionnaire which I've put together for possible use in the study of retail store employee attitudes towards unions and collective bargaining. As you undoubtedly know, I am not an expert in "questionnaire draftsmenship." The enclosed questionnaire is simply a starting point. I think that it asks the kinds of questions which need answering. But I'm far from convinced that this is the most effective form for the questionnaire to take.

I think you can get a pretty good idea of the kinds of questions which this study should attempt to answer. Perhaps Sharp and/or other members of our staff can think of additional variables which ought to be included in the questionnaire. I'm open to suggestions.

You will notice that the questionnaire does not ask: "How did you vote?" I think this question entails a number of potential problems. There are several ways of getting around this problem:

a) Don't ask the question at all. I think that the overall responses, in particular those to the section headed "General attitudes towards unions and collective bargaining," will provide us with this answer.

b) Use some device, such as a secret ballot which the respondent will mark and put into an envelope, which would at least obviate the necessity of asking the question point blank. We would still need to match up the ballot and the questionnaire, but if no names are used, this may be a way of avoiding the problems inherent in asking the question directly.

I'm sure there will be lots of other problems which I haven't even considered. You may want to distribute the questionnaire to the staff, and get their reactions. The next step, I think, is to meet with Mr. Sharp to get his reactions.

Let me know what your feelings are in this matter. If we are going to go ahead with the study, it should be put into motion quickly. From my own standpoint, "have questionnaire, will interview and tabulate."

SCHOOL FOR WORKERS

October 16, 1963

MEMO

It is our hope to keep the total cost of these surveys to a minimum; if it is not necessary to use special funds for work performed by Survey Research Laboratory, it would suit us fine. It has been suggested that the Division might match funds used from the School for Workers I.U.L.E.C. account. This is acceptable to us. However, since we would like to use these funds, and to a degree this project, to stimulate further research funds, we would not want them depleted unnecessarily.

Gary F. Vest

RESEARCH PROPOSAL

Attitudes of Retail Store Employees Towards Unions

~~INTRODUCTORY STATEMENT~~. Although collective bargaining has long been accepted and its use recognized ~~too~~ by law as public policy in the United States, relatively little is known about an essential key in the establishment of bargaining relations. That key is simply the decision by employees to join or not to join Unions. Even less is known about ~~the important~~ white collar employees and the decision ~~to join~~ regarding a Union.

For a number of years it has been the public policy of the United States to not only recognize the function of collective bargaining but to encourage it. Collective bargaining occurs where employees have made a decision to join together to secure an organizational representative to gain economic strength and a common voice. ~~Briefly, The forming of a union is crucial to beginning the bargaining relationship. Why and how white collar workers decide to either join or not join a union -- to become a part of the collective bargaining process -- is of great inherent interest and all too poorly understood. The projects proposed here ~~are~~ is a beginning efforts towards developing reliable insights and information in this important area.~~

In recent years, a number of studies have demonstrated that trade unions have failed to make significant progress towards organizing white collar workers. Other studies dealing with the characteristics of the labor force show that the number of blue collar jobs in manufacturing, mining, transportation and construction industries - areas in which the American labor movement has achieved its greatest organizing successes - is shrinking, while the number of white collar jobs in government, services and retail trade is increasing.

As a result of a shift between blue collar, production jobs to white collar, non-production jobs, the relative proportion of the nonagricultural work force which is organized by trade unions has declined slightly. Although the trade unions have been able to maintain a total membership which is slightly in excess of 17 million, union membership probably represents a smaller percentage of the "organizable"

work force than it did 10 years ago.[1]

One of the areas in which the trade unions have achieved a relatively small degree of success in organizing is the retailing industry. As of January 1963 over 6 million workers were employed in retail trade, exclusive of restaurants and other eating places.[2] Although several unions have been active in this industry for a number of years, it is estimated that only between 10 percent and 15 percent of the total work force in retail trade is organized into trade unions.

This represents an interesting paradox, since retail trade is a relatively low wage industry. As of January 1963, average hourly earnings in this industry were $1.79, including overtime. Wage rates within the various branches of the industry ranged from $1.21 in limited price variety stores to $1.89 in grocery, meat and vegetable stores.[3] Given the relatively low wage status of workers in the retailing industry, the lack of success enjoyed by the unions which have attempted to organize retail store employees seems to demonstrate that income is not the sole criterion by which workers accept or reject unionism and collective bargaining.

STATEMENT OF THE PROPOSED RESEARCH PROJECT. The city of Milwaukee offers a good opportunity to study the factors which influence the behavior of retail workers in union representation elections, and their attitudes towards union organization. The city has a large number of

1. John W. Livingston, Employment Data for Organizing Policy, A report to the meeting of the AFL-CIO General Board, October 9, 1961.

2. U. S. Department of Labor, Bureau of Labor Statistics, Monthly Labor Review, April, 1963, p. 454.

3. Ibid., p. 470.

retail establishments; a relatively large local union of the Retail Clerks International Association, the major union in the retail industry, conducts numerous organizing campaigns among workers in the Milwaukee retail industry. Its efforts have met with mixed success. The Union has indicated a willingness to co-operate with the University in projects designed to study the attitude of retail store employees towards unionism. One of the handicaps in pursuing the kind of research interest expressed here has been the inaccessibility of appropriate situations. In this instance we have some assurance, through the union's cooperation, that we will have access to the essential facts surrounding the election situation and an opportunity to reach the persons who participated in the election. Such access is indispensible to the success of the project.

Since the union conducts numerous organizing campaigns which often involve a relatively small number of workers, an excellent opportunity exists to study the relationship between such variables as age, education, sex, occupation, income and marital status and attitudes towards union membership. Initially as a pilot project, we propose to study ~~one~~ two or ~~more~~ three recently concluded representation elections in order to determine the relationship between the variables listed above and workers' responses to organizing campaigns in the retailing industry.

The particular sites for other surveys have not been selected. But we are looking for other accesible situations which will provide appropriate contrasting and supportive information to the first survey. We would expect to survey at least two other situations in this first exploratory phase of the project for which funds are now requested. The other situations would likely include one in which the union had

been successful in its bid to become the bargaining representative. A third situation, if adequate access is possible, might well be a survey of white collar employees where no organizational activities had been undertaken nor anticipated. Subsequent surveys would not necessarily be limited to the Milwaukee area.

METHODOLOGY. It is proposed that the initial research project consist of an examination of the factors which contribute to employee rejection of unionism in the retailing industry:

1. Selection of the group to be studied. This will be done ~~after consulting~~ with the Retail Clerks International Association to determine ~~what elections have been conducted in the very recent past~~. ~~The group to be selected for the initial survey will be relatively small~~ (probably under 100), and will have voted ~~against representation by the Retail Clerks~~ union in a ~~representation election conducted by the National Labor Relations Board.~~

4a

2. Questionnaire design. ~~The questionnaire to be used in the survey will be designed after consultation with the union, the University of Wisconsin Research Survey Center and staff members of the School for Workers, University of Wisconsin.~~ ~~It will be~~ The questionnaire is designed to obtain information relating to the respondents' attitudes toward ~~the~~ union and ~~reactions to the organizing techniques used by the union, as well as to the methods used by the company to discourage union organization among its employees.~~ ~~The questionnaire will also solicit~~

~~information pertaining to the age, education~~, income and ~~marital status of the respondents, and as to whether or not the respondent or members of his immediate family have been union members at any time~~.

(5) ~~7~~. Interviewing and tabulation. The actual interviewing of employees involved in a recent representation election will be conducted by interviewers from ~~members of~~ the Research Survey Laboratory ~~Center~~, the University of Wisconsin. ~~Wherever possible~~, Responses ~~solicited to the interviewers by the questionnaire and interview~~ will be key punched and tabulated.

~~8~~. Analysis of results. Following the completion of the interviews, the results will be studied and analyzed by a staff member of the School for Workers. It is ~~hoped~~ that the results will be of sufficient interest to warrant publication. On the basis of the results of the initial survey, a decision will be made as to whether further studies of this type are warranted, and whether comparative studies dealing with elections presenting other variables ~~which have been won by the union~~ should be undertaken.

(6) COST. It is expected that the cost of the initial surveys will be approximately $3000. The major expense will be the cost of interviewing and of tabulating the results of the interviews. The Research Survey Laboratory ~~Center~~ estimates that the cost of each interview will be $6.00. Some funds will be needed for clerical costs, purchase of necessary materials, ~~any~~ necessary travel and other miscellaneous expenses.

If money is needed for this project beyond the services normally available through SRL the School for Workers will be happy to match other ~~Extension funds~~ funds from the Extension Division out of its funds in the I.U.L.E.C. account. It is ~~not~~ our intention, however, to use the I.U.L.E.C. funds as seed money for the stimulation of further faculty research in the hope of procuring further outside funds. We would, therefore, not wish to deplete this source for any one project.

— Some changes;

~~The literature relating to white collar workers~~

(3)

A survey ~~will be~~ is being made of the existing literature relevant to both white collar employees and to the decision to become a part of a collective bargaining agency. A rough bench mark or profile of white collar employees will be established against which the findings of the survey proposed below may be measured..

~~The proposal made here is the beginning first part of a larger study.~~

~~This proposal is the beginning of an envisioned larger study~~
~~the proposed project~~
~~This proposal to some degree will be a pilot~~

(1a)

What is porposed here will serve as a pilot project for a larger study seeking to uncover salient characteristics, relevant to collective bargaining, of ~~specialized portions of~~ selected segments of the work force specified ~~which are relevant to collective bargaining.~~

This research will contribute to our understanding of subject areas in which we teach and in which new insights and factual information are needed and expected. Our departmnet ~~had~~ ~~had a long time~~ has a continuing and necessary interest in collective bargaing, ~~and~~ the changing character of the work force makes it imperative that we expand our interest in white collar employees.

(4)

The Proposal

Selection of Groups

The School for Workers will undertake locating suitable survey situations, ~~for surveying.~~ Suitability, here, means primarily recency of a a bragaining agency election and access to the participants in the ~~s~~election. The first three surveys will be, ~~be~~ in all probability, ~~be~~ of situations in the retail trades where the unit is of such size as to make it possible to survey all its members. ~~of it.~~ The first survey, and perhaps all three, will be made in the Milwaukee area. In each case it is our intention to select the survey group prior to the conduct of the actual electon. A survey situation will be rejected however if the election results are such as to prevent the securing of data that will allow for sufficient comparison. In other words we would not want all three survey situations ~~b~~ to have resulted in either union victories or union losses. ~~union win or loss~~

Access to the Participants

Arrangements have already been made with the leading union in the retail field to notify us of impending elections; the union will provide us with ~~the~~ names and addresses for survey purposes. This cooperation provides the degree of access which is essential to the project. However, the union knows that the research is the undertaking of University staff and is subject to the general rules of objectivity, anonymity of individuals and establishments, ~~anonimity,~~ and that the results ~~are~~ will be publish~~able~~ed if ~~found~~ found suitable by the reserachers. The union also understands that it will have no special access to the survey material.

The Survey Instrument

A questionnaire is attached to this proposal. It has been developed by Irving Brotslaw, the chief investigator for the project, in cooperation with other members of the School for Workers staff and informally with a member of the University's sociology department. The questionnaire has been in the hands of the Survey Research Laboratory ~~ofr~~ for some time; SRL made some suggestions and we have asked that this instrutment be scanned critically and readied for a pre-test.

(4a — insert

Oct. 17, 1963

Irv:

I will summarize roughly some of the comments that have been made re your questionnaire. You will need to look them over and rationalize them as best you can. I will not be much help to you on this score because of other pressures. It may well be that we should consult with other professionals over here as well as Sharp. Also a group meeting of our staff might be ehelpful — there has been no attempt to reconcile points of view.

Jim: Would ask they how voted; use as one index of validation, if it correlates with reality, but not too serious if it does not.

In which department does employee work(did he work)

What influence from foremen and supervisors; were employees treated differently in different departments(I would add: anytime information can be reliably obtained from the union rather than through questionnaire it would be wise to get it that way.

Emory: Are you still employed? What Kind of work does spouse do?
p1, q.5 add: less han 6 months, six months to year(at time of vote, or in way so that this can be calculated.)

q.6,7 what hours or what shift

p.3, q.2 sharpen, present alternatives

q3 In what ways did they feel the union might have harmed them.

Jack: p. 1. get at job classification, more precise. Possibly use store or the most specifically relevant term rather than "company"

how many hours were they working at time of election
p2 q.3, What was not convincing or persuaded you not to vote

q. 3,4,5, What do you rembere, or what sticks in your mind, most; use questioning that reflects the critical incident and which also avoids their attempt to evaluate and perhaps makes less pointed in terms of making them defenseive.

p3, 1. leave out"was also interested"; phrase this question and its mate re union the same way and as neutrally as possible.

don't use "devices" and again what do you remember technique.

2. no good purpose served as stated; could ask whcih they rember and

how they rember

p3, q.3 question too critical to ask this way; perhaps: How did fellow workers react; or a semantic dif erential test — range of words or phrases reflecting a continuum of the key concepts.

Check other questionnaries used in similar instances: UAW has surveyed some of its drives; the Oil workers had U.Of Chicago do a study

This questionnaire probably does not get at the subtleties of workers image of the union.

Some of the people with whom we might meet here are Burt Fisher(soc.), Bob Alfurd(soc.) Percy Tannenbaum(mass comm.)

Pardon the jumble but you will get the essence of the comments this way and this is by all odds the quickest way to get it back to you.

I am enclsoing a copy of Norris' comments on copy of your questionnaire.

I hope that you will be able to keep right after this and that you will soon have the interviews rolling.

Emory

November 12, 1963

Professor Harry P. Sharp
Wisconsin Survey Research Laboratory
905 University Avenue, Room 401
Madison, Wisconsin

Dear Professor Sharp:

Enclosed are two copies of the revised questionnaire which we plan to use in connection with our survey of retail store employees' attitudes towards union organization. I'm sure there are numerous ways in which the questionnaire is deficient. Please make any changes, additions or deletions which you think are necessary. If you have any questions about what I'm trying to do via the questionnaire, please let me know. My extension at the University is 575.

Also enclosed is a list of the names and addresses (and telephone numbers, in some cases) of the employees at the U-Tel Corporation, who are the subject of the present investigation. The full name and address of the store in question is as follows:

The U-Tel Corporation
5321 South 108th Street
Hales Corners, Wisconsin

Emory Via has told me that the financial arrangements for underwriting the cost of the survey have been taken care of, and that you will contact the employer to inform him that his employees will be the subject of a survey. The name of the man to contact is Peter Karides, at the above address. I'm sorry, but I couldn't find out what his exact title is.

I have arranged for a room in which the interviewers can meet on the evening of November 25. I will write to Mrs. Hockstad, and give her the pertinent information. I will also send her a draft of a letter explaining the nature and purpose of the study which you indicated would be sent to each of the respondents.

Thank you for your interest and cooperation.

Sincerely yours,

Irving Brotslaw, Lecturer
Labor Education

November 13, 1963

Mrs. Nina C. Hockstad
Project Associate
Wisconsin Survey Research Laboratory
905 University Avenue, Room 401
Madison, Wisconsin

Dear Mrs. Hockstad:

I have arranged for a room in which the interview team can meet on the evening of November 25 to discuss the details of our survey of retail store employees' attitudes towards union organization. We will use the conference room, which is Room 118 in the South Building of the downtown campus, University of Wisconsin-Milwaukee, 600 West Kilbourn Avenue.

The room is on the first floor of the South Building, and can be reached most easily from the Kilbourn Avenue entrance. It is a very pleasant room, but will be slightly cramped for 18 persons. I will try to arrange for parking privileges for the interviewers. Mr. Trover, who has jurisdiction over these matters, is out of town today. It seems likely, however, that we can make satisfactory arrangements.

Enclosed is a copy of a letter which you can use to inform the respondents of their participation in the forthcoming survey. Please make any revisions you think are necessary.

I look forward to meeting with you and the interviewers on November 25.

Sincerely yours,

Irving Brotslaw, Lecturer
Labor Education

COPY

Draft

November 13, 1963

Dear Sir or Madam:

The Survey Research Laboratory of the University of Wisconsin conducts various public opinion surveys in the State of Wisconsin in order to find out how people feel about various topics. The surveys are a part of the research program of the University of Wisconsin.

One of the topics of interest to researchers in the University is how employees feel about their jobs and how they react to attempts by trade unions to organize the places at which they work. In connection with this interest, the Survey Research Laboratory will be talking to various groups of employees, including yourself and your fellow employees.

These interviews are completely confidential. This is a statistical study and no names will be used in any report. The company at which you work and the union which recently tried to organize you and your fellow employees know about the survey, but they are not sponsoring it. Copies of the report which the university prepares will be available to all interested persons, but that individual responses to the various questions which our interviewers will ask will not be identified.

An interviewer from the Wisconsin Survey Research Laboratory will be calling on you within a week or so. Let me emphasize that this interviewer is an employee of the University of Wisconsin, and is <u>not</u> a salesman for any product or service. In order to conduct the interview on the most efficient basis, we would like to talk with you alone. On the basis of past experience, I think I can safely say that you will enjoy the interview. We look forward to meeting with you, and to an interesting interview.

Sincerely yours,

Harry Sharp
Director

NLRB Upholds Unfair Charges Filed by Clerks at U-Tell Corp.

RUSH

The national labor relations board has upheld unfair labor practice charges against the U-Tell Corp. and has ordered a new election to be held in the near future.

The charges were filed by Retail Clerks Local 444, which charged the firm with a number of unfair practices leading to the union's loss in a representation election last month. Retail Clerks Local 444 Business Manager Edward Stadelmann hailed the board decision as complete vindication of the union's position and said his organization would redouble its efforts to bring long overdue union benefits to the U-Tell employes. He said the first goal of the union, if successful in the new election, would be to bring U-Tell employe wage rates up to those being paid in other unionized stores of similar nature.

Attorney Jerry Goldberg of the law firm Goldberg, Previant and Uelmen said that among the charges the board found U-Tell guilty of were the following:

The employer threatened employes with economic retaliation and loss of benefits.

The employer made unlawful promises of benefits to employes and promised them better working hours and higher wages if the union didn't win the election.

The employer interrogated threatened and coerced employes.

The employer promised employes better wages and working conditions in the event that the union lost the election, and threatened employes with loss of benefits in the event the union won the election.

The board found that the employer paid employes to attend a meeting at which time the employer had anti-union campaigning.

Accordingly the board has held that there will be a new election for the employes to vote.

Prof. Emory F. Via
825 Extension Building
University of Wisconsin
Madison, Wisconsin

Dear Emory:

We had better talk personally about any work you plan to have for the Survey Research Laboratory in the near future. Because of some unforseen delays, our field operations could be pretty well committed for the remainder of this fiscal year. At the moment I'm not even sure myself just what we will be doing and when. These problems must be resolved one way or the other by Friday, February 7. Would you contact me then, or shortly after that date? I do feel that some pre-test of your interview schedule will be necessary before it can go into production interviewing.

This letter should not at all imply that WSRL is reluctant to work with you on your research. Our problems at the moment relate to the over-committment of our field staff.

Sincerely,

Harry Sharp
Director

HS/ch

Professor Harry P. Sharp, Director
Wisconsin Survey Research Laboratory
905 University Avenue
Madison, Wisconsin

Dear Professor Sharp:

Emory Via told me that you wanted about 10 names and addresses of persons involved in recent representation elections conducted by the Retail Clerks Union for a pre-test of our opinion questionnaire. These are enclosed.

The Union tells me that they are conducting an election which involves approximately 150 persons on February 28. If possible, I'd like to use this election for the first part of our study. If we can get the questionnaire in shape relatively soon, and field staff is available, we can get the names and addresses of the persons voting in the election in quick order.

Sincerely yours,

Irving Brotslaw, Lecturer
Labor Education

Mr. Morris Katz
More-Way Stores, Inc.
10130 West Appleton
Milwaukee, Wisconsin

Dear Mr. Katz:

Professor George Strother of the Extension Department of the University of Wisconsin telephoned the Laboratory in regard to the call he had from you a day or so ago.

I am enclosing a thermo-fax copy of a letter which was mailed to Mr. Silberman on March 12th explaining the purpose of the research project. This copy was made from the original which was submitted to the Laboratory by the faculty participant and we made a few minor changes in wording. In essence, however, it is the letter which was sent to Mr. Silberman. The second enclosure is a copy of the letter which was mailed to each employee of More-Way.

You will notice the emphasis which is placed on the confidentiality of all information collected. The interviews were taken by staff interviewers of the Wisconsin Survey Research Laboratory who are carefully trained to record all responses verbatim and without bias.

When the questionnaires have been coded and the data analyzed, we feel that we will be making a substantial contribution to the body of information which is being compiled by researchers interested in employee attitudes towards unionization.

I hope this will reassure you as to the legitimacy of the research being done.

Please get in touch with us if you have any further questions.

Sincerely,

Mina C. Hockstad, Head
Field Section

Dear Mr. Katz:

The Survey Research Laboratory never initiates any research projects. We are actually a "service" organization with facilities available to University faculty members who want to gather information which will increase their knowledge in particular areas.

I have, however, sent copies of your letter of May 5th to several professors on the Madison campus whose research interests might include a study along the lines you suggested.

I hope if such a survey is made that I shall have an opportunity to meet you personally.

As Professor Strother told you, your name will certainly be included in the list of persons receiving results of the recent Moreway study.

Sincerely,

Mina C. Hockstad, Head
Field Section

Dear Mrs. Hochstadt:

Thank you for your letter of April 6. Just a note to let you know that our stores have just been accused of unfair labor practices by the NLRB. This would certainly be an area to investigate (NLRB power) by some university group. It is a lamentable fact that a situation exists whereby because of union loss an election overwhelmingly, it must resort to unbelievable <u>insistence</u> to get a re-election.

If any particular individual would like to meet to discuss this I personally feel it would make a most noticeable research project & would be glad to do so at any time.

In the interim, would it be asking too much for a copy of the results of your survey. I believe I infer from letter this would be the case when the results are tabulated.

Sincerely
Morris Katz, Pres.

RESEARCH PROPOSAL

Attitudes of Retail Store Employees Towards Unions

INTRODUCTORY STATEMENT. For a number of years it has been the public policy of the United States to not only recognize the function of collective bargaining but to encourage it. Collective bargaining occurs where employees have made a decision to join together to secure an organizational representative to gain economic strength and a common voice. Briefly, the forming of a union is crucial to beginning the bargaining relationship. Why and how workers decide to either join or not join a union -- to become a part of the collective bargaining process -- is of great inherent interest and all too poorly understood. The projects proposed here are beginning efforts towards developing reliable insights and information in this important area.

In recent years, a number of studies have demonstrated that trade unions have failed to make significant progress towards organizing white collar workers. Other studies dealing with the characteristics of the labor force show that the number of blue collar jobs in manufacturing, mining, transportation and construction industries - areas in which the American labor movement has achieved its greatest organizing successes - is shrinking, while the number of white collar jobs in government, services and retail trade is increasing.

As a result of a shift between blue collar, production jobs to white collar, non-production jobs, the relative proportion of the nonagricultural work force which is organized by trade unions has declined slightly. Although the trade unions have been able to maintain a total membership which is slightly in excess of 17 million, union membership probably represents a smaller percentage of the "organizable"

work force than it did 10 years ago.[1]

One of the areas in which the trade unions have achieved a relatively small degree of success in organizing is the retailing industry. As of January 1963 over 6 million workers were employed in retail trade, exclusive of restaurants and other eating places.[2] Although several unions have been active in this industry for a number of years, it is estimated that only between 10 percent and 15 percent of the total work force in retail trade is organized into trade unions.

This represents an interesting paradox, since retail trade is a relatively low wage industry. As of January 1963, average hourly earnings in this industry were $1.79, including overtime. Wage rates within the various branches of the industry ranged from $1.21 in limited price variety stores to $1.89 in grocery, meat and vegetable stores.[3] Given the relatively low wage status of workers in the retailing industry, the lack of success enjoyed by the unions which have attempted to organize retail store employees seems to demonstrate that income is not the sole criterion by which workers accept or reject unionism and collective bargaining.

STATEMENT OF THE PROPOSED RESEARCH PROJECT. The city of Milwaukee offers a good opportunity to study the factors which influence the behavior of retail workers in union representation elections, and their attitudes towards union organization. The city has a large number of

2. U. S. Department of Labor, Bureau of Labor Statistics, Monthly Labor Review, April, 1963, p. 454.

3. Ibid., p. 470.

retail establishments; a relatively large local union of the Retail Clerks International Association, the major union in the retail industry, conducts numerous organizing campaigns among workers in the Milwaukee retail industry. Its efforts have met with mixed success. The Union has indicated a willingness to co-operate with the University in projects designed to study the attitude of retail store employees towards unionism. One of the handicaps in pursuing the kind of research interest expressed here has been the inaccessibility of appropriate situations. In this instance we have some assurance, through the union's cooperation, that we will have access to the essential facts surrounding the election situation and an opportunity to reach the persons who participated in the election. Such assess is indispensible to the success of the project.

Since the union conducts numerous organizing campaigns which often involve a relatively small number of workers, an excellent opportunity exists to study the relationship between such variables as age, education, sex, occupation, income and marital status and attitudes towards union membership. Initially as a pilot project, we propose to study one or more recently concluded representation elections in order to determine the relationship between the variables listed above and workers' responses to organizing campaigns in the retailing industry.

The particular sites for other surveys have not been selected. But we are looking for other accesible situations which will provide appropriate contrasting and supportive information to the first survey. We would expect to survey at least two other situations in this first exploratory phase of the project for which funds are now requested. The other situations would likely include one in which the union had

been successful in its bid to become the bargaining representative. A third situation, if adequate access is possible, might well be a survey of white collar employees where no organizational activities had been undertaken nor anticipated. Subsequent surveys would not necessarily be limited to the Milwaukee area.

METHODOLOGY. It is proposed that the initial research project consist of an examination of the factors which contribute to employee rejection of unionism in the retailing industry:

1. Selection of the group to be studied. This will be done after consulting with the Retail Clerks International Association to determine what elections have been conducted in the very recent past. The group to be selected for the initial survey will be relatively small (probably under 100), and will have voted against representation by the Retail Clerks union in a representation election conducted by the National Labor Relations Board.

2. Questionnaire design. The questionnaire to be used in the survey will be designed after consultation with the union, the University of Wisconsin Research Survey Center and staff members of the School for Workers, University of Wisconsin. It will be designed to obtain information relating to the respondents' attitude toward the union and reactions to the organizing techniques used by the union, as well as to the methods used by the company to discourage union organization among its employees. The questionnaire will also solicit

information pertaining to the age, education, income and marital status of the respondents, and as to whether or not the respondent or members of his immediate family have been union members at any time.

3. Interviewing and tabulation. The actual interviewing of employees involved in a recent representation election will be conducted by members of the Research Survey Center, the University of Wisconsin. Wherever possible, responses solicited by the questionnaire and interview will be key punched and tabulated.

4. Analysis of results. Following the completion of the interviews, the results will be studied and analyzed by a staff member of the School for Workers. It is hoped that the results will be of sufficient interest to warrant publication. On the basis of the results of the initial survey, a decision will be made as to whether further studies of this type are warranted, and whether comparative studies dealing with elections which have been won by the union should be undertaken.

COST. It is expected that the cost of the initial surveys will be approximately $3000. The major expense will be the cost of interviewing and of tabulating the results of the interviews. The Research Survey Center estimates that the cost of each interview will be $6.00. Some funds will be needed for clerical costs, purchase of necessary materials, any necessary travel and other miscellaneous expenses.

RESEARCH PROPOSAL

Attitudes of Retail Store Employees Towards Unions

What is proposed here will serve as a pilot project for a larger study seeking to uncover salient characteristics relevant to collective bargaining of selected segments of the work force. This research will contribute to our understanding of subject areas in which we teach and in which new insights and factual information are needed and expected. Our department has a continuing and necessary interest in collective bargaining; the changing character of the work force makes it imperative that we expand our interest in white collar employees.

Although collective bargaining has long been accepted and its use recognized by law as public policy in the United States, relatively little is known about an essential key in the establishment of bargaining relations. That key is simply the decision by employees to join or not to join unions. Even less is known about white collar employees and their decisions regarding unions.

A survey is being made of the existing literature relevant to both white collar employees and to the decision to become a part of a collective bargaining agency. A rough bench mark or profile of white collar employees will be established against which the findings of the survey proposed below may be measured.

The Proposal

Selection of Groups

The School for Workers will undertake locating suitable survey situations. Suitability, here, primarily means recency of a bargaining

agency election and access to the participants in the election. The first three surveys will be, in all probability, of situations in the retail trades where the unit is of such size as to make it possible to survey all its members. The first survey, and perhaps all three, will be made in the Milwaukee area. In each case it is our intention to select the survey group prior to the conduct of the actual election. A survey situation will be rejected however if the election results are such as to prevent the securing of data that will allow for sufficient comparison. In other words we would not want all three survey situations to have resulted in either union victories or union losses.

Access to the Participants

Arrangements have already been made with the leading union in the retail field to notify us of impending elections; the union will provide us with names and addresses for survey purposes. This cooperation provides the degree of access which is essential to the project. However, the union knows that the research is the undertaking of University staff and is subject to the general rules of objectivity, anonymity of individuals and establishments, and that the results will be published if found suitable by the researchers. The union also understands that it will have no special access to the survey material.

The Survey Instrument

A questionnaire is attached to this proposal. It has been developed by Irving Brotslaw, the chief investigator for the project, in cooperation with other members of the School for Workers staff and informally with a member of The University's sociology department. The questionnaire

has been in the hands of the Survey Research Laboratory for some time; SRL made some suggestions and we have asked that this instrument be scanned critically and readied for a pre-test. The questionnaire is designed to obtain information relating to the respondents' attitudes toward union and management practices during the time of the organizing campaign, attitudes towards unions in general, attitude toward their jobs, and pertinent biographical and job data.

Interviewing and tabulation.

The actual interviewing of employees involved in a recent representation election will be conducted by interviewers from the Research Survey Laboratory, the University of Wisconsin. Responses to the interviews will be key punched and tabulated.

Analysis of results.

Following the completion of the interviews, the results will be studied and analyzed by a staff member of the School for Workers. It is hoped that the results will be of sufficient interest to warrant publication. On the basis of the results of the initial survey, a decision will be made as to whether further studies of this type are warranted, and whether comparative studies dealing with elections presenting other variables should be undertaken.

Cost.

It is expected that the cost of the initial surveys will be approximately $3000. The major expense will be the cost of interviewing and of tabulating the results of the interviews. The Research Survey Laboratory estimates that the cost of each interview will be $6.00. Some funds will be needed for clerical costs, purchase of necessary materials, necessary travel and other miscellaneous expenses.

If money is needed for this project beyond the services normally available through SRL, the School for Workers will be happy to match other funds from the Extension Division out of its funds in the I.U.L.E.C. account. It is our intention, however, to use the I.U.L.E.C. funds as seed money for the stimulation of further faculty research in the hope of procurring further outside research money; we would, therefore, not wish to deplete this source for any one project.

RESEARCH PROPOSAL

Attitudes of Retail Store Employees Towards Unions

Insert (1)

INTRODUCTORY STATEMENT. In recent years, a number of studies have demonstrated that trade unions have failed to make significant progress towards organizing white collar workers. Other studies dealing with the characteristics of the labor force show that the number of blue collar jobs in manufacturing, mining, transportation and construction industries - areas in which the American labor movement has achieved its greatest organizing successes - ~~are~~ is shrinking, while the number of white collar jobs in government, services and retail trade is increasing.

As a result of a shift between blue collar, production jobs to white collar, non-production jobs, the relative proportion of the nonagricultural work force which is organized by trade unions has declined slightly. Although the trade unions have been able to maintain a total membership which is slightly in excess of 17 million, union membership probably represents a smaller percentage of the "organizable" work force than it did 10 years ago.1/

One of the areas in which the trade unions have achieved a relatively small degree of success in organizing is the retailing industry. As of January, 1963 over 6 million workers were employed in retail trade, exclusive of restaurants and other eating places.2/ Although several unions have been active in this industry for a number of years, it is estimated that only between 10 percent and 15 percent

2/ U.S. Department of Labor, Bureau of Labor Statistics, Monthly Labor Review, April, 1963, p. 454.

of the total work force in retail trade is organized into trade unions.

This represents an interesting paradox, since retail trade is a relatively low wage industry. As of January, 1963, average hourly earnings in this industry were $1.79, including overtime. Wage rates within the various branches of the industry ranged from $1.21 in limited price variety stores to $1.89 in grocery, meat and vegetable stores.[1] Given the relatively low wage status of workers in the retailing industry, the lack of success enjoyed by the unions which have attempted to organize retail store employees seems to demonstrate that income is not the sole criterion by which workers accept or reject unionism and collective bargaining.

STATEMENT OF THE PROPOSED RESEARCH PROJECT. The city of Milwaukee offers a good opportunity to study the factors which influence the behavior of retail workers in union representation elections, and their attitudes towards union organization. The city has a large number of retail establishments; ~~and~~ a relatively large local union of the Retail Clerks International Association, the major union in the retail industry, conducts numerous organizing campaigns among workers in the Milwaukee retail industry. Its efforts have met with mixed success. ~~Although the union has made some progress in organizing within its jurisdiction, it frankly admits that it is puzzled by its lack of success in organizing retail store employees.~~ The Union ~~It~~ has indicated a willingness ~~that it is willing~~ to co-operate with the University in ~~terms of any research~~ projects designed to study the attitude of retail store employees towards unionism.

1/ Monthly Labor Review, op cit, p. 470.

Insert (2)

Research project, retail store employees (continued).

Since the union conducts numerous organizing campaigns which often involve a relatively small number of workers, an excellent opportunity exists to study the attitudes of retail workers towards union organization, and to study the relationship between such variables as age, education, sex, ~~income,~~ occupation, income and marital status and attitudes towards union membership. Initially As a pilot project, we propose to study one or more recently concluded representation elections in order to determine the relationship between the variables listed above and workers' responses to organizing campaigns in the retailing industry.

3

METHODOLOGY. It is proposed that the initial research project consist of an examination of the factors which contribute to employee rejection of unionism in the retailing industry:

1. Selection of the group to be studied. This will be done after consulting with the Retail Clerks International Association to determine what elections have been conducted in the very recent past. The group to be selected for the initial survey will be relatively small (probably under 100), and will have voted against representation by the Retail Clerks union in a representation election conducted by the National Labor Relations Board.

2. Questionnaire design. The questionnaire to be used in the survey will be designed after consultation with the union, the University of Wisconsin Research Survey Center and staff members of the School for Workers, University of Wisconsin.

It will be designed to obtain information relating to the respondents' attitude toward the union and reactions to the organizing techniques used by the union, as well as to the methods used by the company to discourage union organization among its employees. The questionnaire will also solicit information pertaining to the age, education, income and marital status of the respondents, and as to whether or not the respondent or members of his immediate family have been union members at any time.

3. Interviewing and tabulation. The actual interviewing of employees involved in a recent representation election will be conducted by members of the Research Survey Center, University of Wisconsin. Wherever possible, responses solicited by the questionnaire and interview will be key punched and tabulated.

4. Analysis of results. Following the completion of the interviews, the results will be studied and analyzed by a staff member of the School for Workers. It is hoped that the results will be of sufficient interest to warrant publication. On the basis of the results of the initial survey, a decision will be made as to whether further studies of this type are warranted, and whether comparative studies dealing with elections which have been won by the union should be undertaken.

[Note: Jagen — there is a 5th page on costs — and see for it.

Inserts

(1) p.1. For a number of years it has been the public policy of the United States to not only recognize the function of collective bargaining but to encourage it. Collective bargaining only occurs where employees have made a decision to join together to secure an organizational representative to gain economic strength and a common voice. Briefly, the forming of a union is crucial to beginning the bargaining relationship. Why and how workers decide to either join or not join a union — to become a part of the collective bargaining process — is of great inherent interest and all too poorly understood. The projects proposed here are beginning efforts towards developing reliable insights and information in this important area.

(2) p.2 One of the handicaps in pursuing the kind of research interest expressed here has been the inaccessibilty of appropriate situations. In this instance we have some assurance, through the union's cooperation , that we will have access to the essential facts surrounding the election situation and an opportunity to reach the persons who participated in the election. Such access is indispensible to the success of the project.

(3) p.3 The particular sites for other surveys have not been selected. But we are looking for other accesible situations which will provide appropriate contrasting and supportive information to the first survey. We would expect to survey at least two other situations in this first exploratory phase of the project for which funds are now requested. The other situations would likely include one in which the union had been succesful in its bid to become the bargaining representative. A third situation, if adequate access is possible, might well be a survey of white collar employees where no organizational activities had been undertaken nor anticipated. Subsequent surveys would not necessarily be limited to the Milwaukee area.

Research project, retail store employees (continued).

COST. It is expected that the cost of the initial surveys will be approximately ~~$750.~~ $3000. The major expense will be the cost of interviewing and of tabulating the results of the interviews. The Research Survey Center estimates that the cost of each interview will be $6. Thus, ~~if 100 interviews are conducted, the total cost of the interviews and the tabulation of the results will be $600.~~ ~~The remaining $150~~ Some funds will be ~~allocated~~ needed for ~~to~~ clerical costs, ~~including typing,~~ purchase of necessary materials, any necessary travel and other miscellaneous expenses.

Separate Memorandum

~~Note from Emory Via~~:

It is our hope ~~we would like~~ to keep the total cost of these surveys to a minimum; if it is not necessary to use special funds for work performed by Survey Research Laboratory, it would suit us fine. It ~~was~~ has been suggested that the Division might ~~make~~ match funds used from the School for Workers I.U.L.E.C. account. This is acceptable to us. However, since we would like to use these funds, and to a degree this project, to as ~~"seed money" to~~ stimulate further research funds, we would not want them depleted unnecessarily.

QUESTIONNAIRE

Attitude of Retail Workers Towards Union Organization

You were recently involved in a campaign conducted by the_____ Union to organize workers at_____Company. The University of Wisconsin is conducting this study in order to learn about individual reactions to organizing campaigns conducted by unions in the retailing industry.

Your fellow workers will also be interviewed during this study. All of your answers will be treated in strict confidence. They will not be made known to the union or your employer, or anyone else.

Information relating to the respondent.

1) Sex: Male ☐ Female ☐

2) Marital status: Married ☐ Single ☐ Divorced ☐ Widow(er) ☐

3) Age: ☐ Under 19 ☐ 19-25 ☐ 26-35 ☐ 36-45 ☐ 46-55 ☐ 56-65 ☐ Over 65

4) Education: Indicate below the highest grade completed:
   1 2 3 4 5 6 7 8 grade school 1 2 3 4 high school 1 2 3 4 college

5) Are you still employed by the_____Company? Yes ☐ No ☐

6) In what department do you work?_____

7) What is your job in the store?_____

8) How long have you been employed at the store?

   ☐ Under 6 months ☐ 6 months to 1 yr. ☐ 1-3 yrs ☐ 4-5 yrs ☐ 6-10 yrs. ☐ Over 10 years

9) At the time of the election, approximately how many hours per week were you working?_____

10) What are your regular hours now? From____to____

11) Does your husband (wife) work? Yes ☐ No ☐

12) What kind of work does your husband (wife) do?_____

_____

13) Is your husband (wife) a union member? Yes ☐ No ☐

If yes, which one?_____

COPY

14) Is anyone else in your family (besides husband or wife) a union member?
Yes ☐ No ☐

If yes, please indicate who_____

15) Do you have any close friends who are union members? Yes ☐ No ☐

16) Do you plan to continue working as a retail store employee on a permanent basis? Yes ☐ No ☐

17) If you are working temporarily, would you please indicate the main reason why you are working:

☐ To support myself

☐ To finance my own education

☐ To save for down payment on a house, or help with mortgage payments

☐ To pay medical bills

☐ Because I want to do something with my spare time

☐ To buy things our family could not otherwise afford (car, clothes, appliances, etc.)

☐ Other (please specify) _____

_____

_____

18) What are your present earnings?

$____ per hour)
) If you earn commissions in addition to your basic
$____ per week) hourly, weekly or monthly rate, how much more do
) you earn? $____ per_____.
$____ per month)

19) Do you have another job? Yes ☐ No ☐

20) If yes, where?_____

21) Have you ever belonged to a union? Yes ☐ No ☐

If yes, which one?_____

Response to the organizing campaign

1) Unions often use various methods to win support in representation elections. Do you recall whether the union used any of the following methods to get

COPY

your support? (If you recall that the union used a particular method, indicate whether it was very effective, effective or not very effective in terms of influencing the way you voted).

2) Were you personally contacted by the union while the organizing drive was in progress? Yes ☐ No ☐

3) Which of the following statements do you think is most nearly correct?

☐ The organizing methods used by the union were very convincing

☐ I wasn't affected one way or the other by the union's organizing campaign

☐ The union's organizing campaign was not very convincing

☐ The union's organizing methods were very poor, and did not influence me at all

4) Do you agree or disagree with the following statements?

	Agree	Disagree
a) During the organizing campaign, the union organizers showed real interest in the problems which face me and my fellow employees	____	_____
b) The union did a very poor job of convincing employees at our store to join the union	____	_____
c) The union did everything it coult to convince me and my fellow employees to join the union	____	_____

5) Do you recall whether the company used any of the following methods to influence the way you voted? (If you recall that the company used a particular method, indicate whether it was very effective, effective or not very effective in terms of influencing the way you voted).

COPY

Method	Recall	Can't recall	If you recall, Was the method very effective	effective	not very effective
Letters (or other literature)	____	____	____	____	____
Group meetings of employees	____	____	____	____	____
Meetings with individual employees	____	____	____	____	____
Promises of higher wages or other benefits if the union lost	____	____	____	____	____
Visits to your home	____	____	____	____	____
Phone calls	____	____	____	____	____
Radio/TV	____	____	____	____	____

6) Which of the following statements is most nearly correct?

- ☐ The methods used by the company were very convincing
- ☐ I wasn't influenced one way or the other by the methods used by the company
- ☐ The methods used by the company were not very convincing
- ☐ The methods used by the company were very ineffective, and did not influence me at all

7) Do you agree or disagree with the following statements:

	Agree	Disagree
a) The company showed a great deal of interest in how the election turned out	____	____
b) The company didn't seem to care whether we voted for or against the union	____	____
c) The company was fair about allowing employees to make up their own minds with regard to voting	____	____
d) The company tried to convince employees to vote against union representation	____	____

COPY

Participation in the election itself

1) Were the issues involved in the organizing campaign made clear to you?
Yes ☐ No ☐

2) (If no), what was there about the organizing campaign which you did not understand? (Please specify) _____

_____

_____

3) Did you vote in the representation election? Yes ☐ No ☐

4) (If no), why did you not vote in the election? _____

_____

_____

5) How did you get from your department to the place where the election was held?

☐ We were allowed to vote whenever we wanted to

☐ A supervisor took whole departments to the polling place at the same time

☐ We were called (or went) to the polling place alphabetically

☐ Other (please specify) _____

_____

6) Which of the following statements are correct?

☐ Nobody tried to influence the way I voted when I went to the polling place

☐ The union tried to influence the way I voted as I was going to the polling place

☐ The company tried to influence the way I voted as I was going to the polling place

General attitudes towards unions and collective bargaining

1) Indicate whether you agree or disagree with the following statements:

	Agree	Disagree
a) It didn't matter one way or the other whether the union won or lost the election	____	_____
b) Employees at our store need a union	____	_____
c) There is no need for a union in our kind of store	____	_____

COPY

2) If the union had won the election,

☐ we would have been better off.

☐ we would have been worse off.

3) Why do you think you would be better (worse) off if the union had won the election? _____

_____

_____

_____

_____

4) Please indicate whether you agree or disagree with the following statements:

	Agree	Disagree
a) Unions help workers to achieve a higher standard of living	____	____
b) Organized labor is becoming too strong	____	____
c) Unions may be okay in factories, but they can't do much to help retail store employees	____	____
d) Unions don't accomplish anything for their members	____	____
e) Unions give workers a chance to be on an equal basis with their employers	____	____
f) Unions are run by the leaders, and the average member has nothing to say about how they are run	____	____
g) Unions contribute a great deal to the community	____	____
h) Union leaders use the organization to further their own personal ends and don't care about the members	____	____
i) There are too many Communists in the unions	____	____
j) We already get top wages and benefits, the union could not get anymore for us	____	____
k) Unions help the working man	____	____
l) Unions have not done a good job of publicising their objectives and their activities	____	____

COPY

	Agree	Disagree
m) Strikes are a bad thing, and should be prohibited by law	____	____
n) Wage demands made by unions hurt business and raise prices	____	____

5) In the recent representation election, did you vote

☐ For union representation

☐ Against union representation

UNIONIZATION OF ENGINEERS; 1955-1960

Advanced Management, September 1959. pp. 18-20: "Unionization of salaried engineers." by J. F. Culley.

American Federationist, March 1957. p. 27: "Engineers are working people."

Review of objectives of Technical Engineers Federation. R. M. Stephens.

____, November 1958. pp. 21-22: "Engineers are workers." R. M. Stephens.

President of Technical Engineers Federation states his case for unionization.

AFL-CIO News, November 16, 1957. p. 3: "See U.S. science progress jolted by employers' anti-union tactics."

Opposition of employers to unionization, low wages, and government security program blamed for insecure status of engineers and scientists.

Aviation Week, February 18, 1957. pp. 28-29: U.A.W. creates unit to organize engineers.

Bibliography on Unionization of Professional Engineers, 1954. $2.00. Engineering Societies Library, 29 W. 39th St., New York 18, New York.

Business Week, May 5, 1956. pp. 176-8: "Engineers snub AFL-CIO ties."

Engineers and Scientists of America turned down offers to affiliate with AFL-CIO and also with American Federation of Technical Engineers. Members to convention agreed that ESA should be strengthened but opposed to any move that might reduce high professional standing of Union's general membership.

____, January 5, 1957. p. 121: "Engineers trend to unionize refutes idea that they're pampered.

____, February 2, 1957. pp. 117: "UAW's bid to engineers wins response from Honeywell union.

____, April 20, 1957. pp. 153-4: "UAW's quiet transformation."

Newly adopted program of UAW makes it industrial headquarters for collection of unions for engineers, scientists, skilled workers, and white collar workers. Article discusses background leading to this development, loyalty shown to W. Reuther at most recent convention.

--Not to be reproduced in any form without written permission of the compiler--

Business Week, May 18, 1957. pp. 159-60: "Engineers hand UAW a rebuff."

Engineers and skilled workers at Minneapolis-Honeywell Regulator Co. overwhelmingly defeated UAW's important bid to set up professional division. Discusses effectiveness of carefully planned company campaign, blow to UAW's organizing activities.

_____, June 29, 1957. pp. 152-3: "Stalled drives."

Office Employees International Union and Engineers and Scientists of America both frustrated in their union organizing activities. While organization of white collar workers has progressed slowly, ESA has been losing members. Both unions blame recent labor scandals for organizing failures although article indicates basic causes may go deeper.

_____, October 25, 1958. p. 139: "Engineers' stand on 'right to work' may throw monkey wrench in union plans."

Seattle Professional Engineering Employees Assn. and Engineers and Scientists of America have stated that they "are organized to make use of features of national labor laws useful to us but are not part of labor movement" indicating a basic attitude difficult for AFL-CIO to overcome in plans for unionizing them.

_____, May 30, 1959. p. 86: "Unionization draws a scowl."

Survey shows that 4 out of 5 engineers and scientists doubt that organization is their best means for improving salary and status.

Chemical and Engineering News, March 12, 1956. pp. 1196: "Unions for engineers?"

_____, January 7, 1957. p. 82: "Unionism among engineers."

_____, June 10, 1957. pp. 40-41: "Engineers want union?"

Chemical Engineering, August 1957. p. 316: "Engineers vote to banish union."

Chemical Week, July 7, 1956. pp. 82-84: "Labor lays it on the line; professional unions."

_____, July 20, 1957. p. 52: "New rift in engineering unions."

_____, March 28, 1959. pp. 78-79: "Unions for scientists (and engineers).

_____, July 4, 1959. pp. 66-67: "CPI scientists (and engineers) sound off about unions."

Collective Bargaining As Viewed By Unorganized Engineers and Scientists, by J.W. Riegel, 1959, University of Michigan.

Dissertation Abstracts, April 1957. pp. 910-911: "Office labor unionism in the U.S.: origin, present status, and future."

Results based on attitudes of white collar workers towards unions; background of office unionization prior to Wagner Act; and history of Office and Professional Workers of America, Office Employees International Union, and the Engineers and Salaried Employees Union. Submitted to New York University by F. E. Budish.

Electrical Engineering, March 1957. pp. 237-8: "Why engineers unionize analyzed by Conference Board."

Engineering, November 18, 1955. pp. 699: "Professional engineer and his employer."

Engineering News-Record, November 17, 1955. p. 104: "Engineers; high on labor's list of prospects."

_____, April 5, 1956. p. 156: NLRB examiner rules in favor of ESA (Engineers and Scientists of America).

_____, April 26, 1956. p. 28: "Engineers and Scientists of America, annual meeting in Dallas."

_____, December 20, 1956. p. 74: "UAW will bid for engineers."

_____, May 23, 1957. p. 118: "Engineers say no to union ties; Minneapolis-Honeywell group rejects ESA and UAW."

_____, June 20, 1957. p. 153: "Spin-off from ESA."

Engineering employees are forming new union; Engineers and Scientists Guild.

_____, October 17, 1957. p. 71: "Professional unity," by J. W. Barker.

_____, October 24, 1957. "Engineers map union."

_____, February 27, 1958. pp. 74-75: "Engineering unions form federations."

_____, June 19, 1958. p. 228: "Engineers; ten per cent are in unions."

_____, July 10, 1958. p. 120: "Engineers and Scientists of America."

Sixth annual convention.

_____, December 18, 1958. p. 86: "Is an engineer a supervisor?"

_____, December 25, 1958. p. 133: "Engineers' unions seek unity."

_____, March 5, 1959. p. 91: "Pre-hire fought; NSPE is against this part of Kennedy-Ervin bill."

_____, March 26, 1959. p. 100: "Engineers split on union issue."

_____, April 23, 1959. pp. 30-31: "Engineering unionism faces a time for decision; special report."

_____, May 7, 1959. p. 103: "New start proposed for ESG (Engineers and Scientists Guild).

_____, July 9, 1959. p. 126: "ESA (Engineers and Scientists Guild) start delayed."

--Not to be reproduced in any form without written permission of the compiler--

Engineering News-Record, August 20, 1959. p. 119: "Engineering unions; ESA (Engineers and Scientists of America) units move to exclude non-professional members."

_____, December 25, 1959. p. 132: "Union victory for professionals."

Supreme Court rules right of engineers to separate representation must be protected by courts.

Engineers and Scientists of America Proceedings of the Third Annual Convention, Washington, D. C. May 27-30, 1955; 125 p.

Engineers and Scientists of America Proceedings of the Fourth Annual Convention, Dallas, Texas. April 19-22, 1956, 115 p.

Industrial Relations Research Assn. Proceedings 1957. pp. 314-21: "Management's relations with engineers and scientists." L. E. Danielson.

Iowa Business Digest, November 1958. pp. 10-14: "A primer on engineering unionism." Jack F. Culley.

Iron Age, December 20, 1956. p. 40: "Engineers; twelve per cent are now union members."

_____, April 23, 1959. pp. 68-9: "Why engineers won't unionize." H. R. Neal.

Machine Design, December 27, 1956. p. 8: "Survey finds engineers don't want engineer unions."

Management Record, July 1955. pp. 279-8: "Professional status--goal of engineering unions." James J. Bambrick and Hermine Zagat.

_____, April 1958. p. 141: "New engineers' union formed." M.P. Dorbandt

Engineers and Scientists Guild formed from dissident groups in Engineers and Scientists of America. New group to stress improvement of economic status.

Management Review, February 1957. p. 47: "Engineers in industry."

They think they've got troubles; study by National Industrial Conference Board.

National Society of Professional Engineers, June 1958. pp. 3-5. $1.00.

Tabulation of unions representing engineering and technical employees.

New York Times, December 16, 1956. sec. 1., p. 72: "Engineers going into unions."

Discontent over salaries and professional status and disappearance of individual relations between engineers and their employers found to be principle cause of spread of unionization in survey conducted by National Industrial Conference Board. Further details reported.

Power, March 1957. p. 156: "Engineer discontent boosts AFL-CIO hopes."

--Not to be reproduced in any form without written permission of the compiler--

Product Engineering February 1957. pp. 206-7: "Some engineers turn to unions as answer to their discontent."

Professional Engineers and Collective Bargaining. May 1956. Princeton University, Industrial Relations Section. 20¢.

Steel, August 13, 1956. pp. 53-4: "Engineering unions grow."

_____, March 25, 1957. pp. 60-61: "Fight UAW tie-up; Minneapolis-Honeywell engineers balk.

_____, May 20, 1957. pp. 95-7: "White collar drive falters."

_____, June 22, 1959. pp. 42-3: "Most engineers oppose unions."

Wall Street Journal, December 17, 1956. p. 1: "Engineers fret over salaries and status; 60,000 join unions." C. M. Cotton.

Engineers turning to unionization as means of coping with job dissatisfaction, narrowing differential between pay of beginners and veterans.

_____, October 14, 1959. p. 1: "Union uses unusual methods in wooing Lockheed engineers." J. Spivak.

Engineers and Scientists Guild tries for image of "true professionalism" meets in luxurious setting in organizing drive at Lockheed Aircraft Corporation. Organizing techniques described.

'26' Health Plan Votes Boost in Hospital Benefit

SUFFOLK, Va.—Meeting Jan. 25, the trustees of the Local 26 Health and Welfare Plan voted to increase the plan's private room hospital benefit and tentatively agreed to raise the maternity benefit.

Because of over-crowding at Louise Obici Hospital in Suffolk, where most of the plan members are hospitalized, workers occasionally have been put in private rooms although they asked for semi-private. The welfare plan paid either for semi-private accommodations ($22, $23 and $25 a day) or $10 toward the cost of a private room ($28 and $29 a day)—leaving patients in private rooms to pay $18 or $19 a day out of their own pocket.

The change will raise the private room allowance from $10 a day to the semi-private rate, with the patient paying $7 a day at most.

The trustees also tentatively agreed to increase the maternity benefit from $100 to $150. About 50 members would gain from this change each year.

The trustees also discussed increasing surgical benefits and making benefit payments directly to workers covered by the plan but no longer employed in '26' shops.

Present at the meeting were W. D. Shaw, Ted LoCascio, Archie Boykin and R. P. Gardner, employer trustees, and Reg. Dir. Irving Lebold, Local Pres. Lock Parker, Alfred Bailey and plan administrator Etta Mae Willie, union trustees.

The plan, established in 1952, covers 2,000 workers at Planters Peanut Co., Lummis & Co., another peanut processor, and Progressive Cleaners, all in Suffolk, and Hiden Storage in Newport News.

'Best Pact' in Citrus Industry Signed by '43' and Pasco Co.

DADE CITY, Fla.—The best contract in the Florida citrus industry this year was negotiated by RWDSU Local 43 for the 825 employees of the Pasco Packing Co., the largest processor of citrus concentrates in the country.

The two-year renewal agreement—retroactive to Dec. 18 and expiring Dec. 17, 1968—calls for a wage increase of 12½ cents an hour immediately, and an increase of 17½ cents as of Dec. 18, 1967. Wage adjustments will result in pay boosts up to 25 cents an hour for some workers, and up to 59 cents an hour for truck drivers, for whom the union won recognition after a long delay.

With the signing of the new agreement, the minimum starting wage will be $1.52 an hour this year, and will go to $1.69½ next year. The top classification will range from $2.64½ an hour this year to $2.82 next year.

At Pasco, overtime rates apply after 40 hours work a week all year round though most Florida plants use a Federal citrus-industry exemption permitting them to work 50 hours a week for two ten-week periods before paying overtime.

Int'l Rep. Harry Bush said that the improvements in the agreement resulted chiefly from the increased strength of the union in the Pasco plant. The local's membership there has risen to well above 500 workers, and should hit the 600 mark in the not too distant future. The union gained a substantial number of previously unaffiliated workers through an educational campaign against "free-loading," and the campaign will continue indefinitely, Bush said.

Negotiations with the company started late in October, and a final settlement was worked out Dec. 12.

The committee was headed by Local 43's Pres. L. C. Chitty, and included Roy Stanley, John Hinson, John Hicks, T. W. Anderson, L.C. Rozier, Elton Gay, W. K. Houseman, Hubert Bullington, A. Kardee, Martha Chastin, J. S. Williams and R. L. Lewis. Bush assisted the committee throughout the negotiations, and Ass't Southern Dir. Frank Parker was present at the final session and helped to effect the settlement.

Bargainers at Pasco include Local 43 Pres. L. C. Chitty (right) and T. W. Anderson. The union won the best settlement in the citrus industry this year at Pasco, the largest processor of citrus concentrates in the country.

Big Ala. Drive Gaining at 2 Plants

LEEDS, Ala.—The RWDSU Alabama Council is making real headway in an organizing campaign among more than 600 employees of the Mira-Flex Co., manufacturers of watch bands and assemblies.

C. T. Daniel, Alabama Council organizer who is heading the drive, said that the response by the workers has been exceptionally encouraging in spite of interference by District 50 of the United Mine Workers.

The company operates another Southern plant in Gadsden, and this plant, with a work force of 350 employees, is also well on its way to being organized by the union.

Mira-Flex is a subsidiary of the I. B. Precision Co. of Jamaica, N.Y., whose plant is under contract to RWDSU Local 147.

Daniel said that one reason for the fine response from the Leeds workers is the fact that the company has one plant in the RWDSU fold and a second on the verge of joining up.

"It is natural," he said, "that all of a company's workers, doing the same type of work, become members of one international union rather than two or three different ones."

Talks Reach Impasse At Taylor Veneer Co.

DEMOPOLIS, Ala. — Negotiations between the RWDSU Alabama Council and the A. R. Taylor Veneer Co., where the union won an NLRB election Oct. 11, have stalled on the issues of holidays and vacations, it was reported by Org. C. T. Daniel.

The union and the company have reached agreement on a number of points including wages, but the company has so far refused to grant the workers any paid holidays and has set a maximum of only one week's paid vacation regardless of the length of service of any employee.

Negotiations are continuing, but the union is concerned at the company's stand.

The Alabama Council won a decisive victory, by a vote of 82 to 30, at Taylor.

"Off To The 1968 Races"

$6-$12.50 at Piggly-Wiggly

GADSDEN, Ala.—The RWDSU Alabama Council has negotiated a one-year renewal agreement covering 15 employees of the Piggly-Wiggly grocery store in town. The new contract, effective as of Feb. 10, calls for a wage increase of $6-$12.50 a week and improvements in contract language.

N. C. Paper Hits at Low-Wage Industrial Firms

ASHEVILLE, N.C.—Does a community always gain when big business decides to build a factory in its area?

Not always, says the Asheville Citizen.

Not, the paper believes, if the plant pays starvation wages, provides few jobs for men and practically none for Negroes.

If this happens, the Citizen says, the community becomes a "wasteyard" and pleads that the time to stop such practices is now.

The Asheville Citizen editorial, entitled "Low-Wage Industries Stifle State Promise," follows:

It's a thrilling thing in a small community when a big industrial firm decides to build a multi-million dollar plant on the outskirts of town.

This means new jobs, a broadened tax base, a promise of prosperity. State industry-hunters exult, area newspapers hail the development, and editors praise it as a potential for economic emergence.

But is it?

Not always. In truth, seldom.

North Carolina's average industrial wage is the lowest in the nation. A recent study by the N.C. Fund indicates it's likely to remain that way.

Between 1960 and 1965, the NCF investigators found, more than two-thirds of the new jobs created by incoming industries paid less than the already pitiful average.

New money was pumped into the community pocketbook, but it was money seeking a cut-rate bargain.

There were, of course, exceptions. A fourth of the new industrial enterprises paid as much, or more, than the prevailing wage rates. But three out of four paid less.

The majority of the new jobs went to women; few to men; practically none to Negroes.

Most of the jobs were in the wearing apparel, sewing trades industries. The better paying operations went elsewhere.

That is a question the leaders of North Carolina must examine and answer.

Have we become, as a low wage state, a dumping ground for low wage opportunists?

Do we welcome newcomers on the basis of investment, without assessing their potential worth in terms of economic improvement?

Are we courting the industrial scum?

Theoretically, the acquisition of any industry —whatever its wage scale—does enhance the economic stability of a community—at least temporarily. But a labor supply dried up by the low wage operations will hardly induce more proiftable investors.

North Carolina, and especially western North Carolina, is admirably suited to development by the smaller, more sophisticated, better paying enterprises in such fields as electronics, chemicals, technological research. It's high time state industry hunters started to concentrate on quality instead of mere quantity.

This is valuable earth in Tarheelia; it ought not to become a wasteyard for the nation's garment factories. The time to stop it is now. Or maybe yesterday.

COLLECTIVE BARGAINING AND THE RIGHT TO STRIKE IN LOCAL GOVERNMENTS, HOSPITALS AND SCHOOLS; A Selected Bibliography

1. Local Governments

Frankel, S. J. and R. C. Pratt. Municipal labour relations in Canada. Montreal. Industrial Relations Centre, McGill University. 1954. 87 pp.

Godine, Morton Robert. The labor problem in the public service: a study in political pluralism. Cambridge. Harvard University Press. 1951. Chapter VII. "Strikes and political activity in the public service." pp. 164-192.

Labor Law Journal, August 1957. "Collective bargaining in public employment." By Harry H. Rains. pp. 548-550.

_____, September 1959. "The role of the Michigan Labor Mediation Board in public employee labor disputes." By Hyman Parker. pp. 632-642.

_____, November 1961. "Labor relations in the public service." By Arvid Anderson. pp. 1069-1094.

_____, January 1964. "The public employee at the bargaining table: promise or illusion?" By Donald H. Wollett. pp. 8-15.

Northrup, Herbert R. and Gordon F. Bloom. Government and labor; the role of government in union-management relations. Homewood, Ill. Richard D. Irwin, Inc. 1963. Chapter 16. "Public policy and the public employer." pp. 455-476.

Public Administration Review, Winter 1962. "Collective bargaining in the public service." pp. 1-23.

Public Personnel Review, January 1949. "Strikes in the public service." By Leonard D. White. pp. 3-10.

Quarterly Review of Economics and Business, February 1961. "Work stoppages of government employees, 1942-59." By Joseph Krislov. pp. 87-92.

Social Forces, March 1950. "Governmental employees and the right to strike." By Richard G. Davis. pp. 322-329.

United States Department of Labor, Bureau of Labor Statistics. BLS Report No. 247. Work stoppages, government employees, 1942-61. Washington. 1963. 3 pp. (Reprinted from the January 1963 issue of the Monthly Labor Review.)

Warner, Kenneth O., ed. Management relations with organized public employees: Theory, policies, programs. Chicago. Public Personnel Association. 1963. 239 pp.

Additional Bibliography:

University of California, Bureau of Public Administration Library. Selected references on collective bargaining in the public service. Prepared by Dorothy Simpson. Berkeley. October 1960. 24 pp. Processed.

2. Hospitals

Cornell University, New York State School of Industrial and Labor Relations. Bulletin 49. Battle for the hospitals. By Estelle Hepton. Ithaca. March 1963. 63 pp.

Parker, Hyman and George Odiorne. Labor relations in hospitals. Ann Arbor. Bureau of Hospital Administration, University of Michigan. 1960. 34 pp.

Personnel Journal, November 1959. "Hospitals and collective bargaining." By James L. Centner. pp. 203-205.

_____, November 1959. "Are hospitals different?" By Samuel L. Barres. pp. 206-207, 209.

3. Schools

Association of Colleges and Universities of the State of New York. A statement urging the retention of the exemption of non-profit educational institutions from the collective bargaining provisions of the New York State Labor Relations Act. January 1963. 4 pp.

Harvard Educational Review, Winter 1956. "Teachers' strikes: an analysis of the issues." By Myron Lieberman. pp. 39-69.

John Herling's Labor Letter, May 23, 1964. "Marching teachers." pp. 1-3.

Monthly Labor Review, May 1953. "Collective bargaining and work stoppages involving teachers." pp. 475-479.

National Education Association, Research Division. Public-school teachers and collective bargaining. Washington. 1958. 20 pp.

Saturday Review, October 19, 1963. "Strikes, sanctions, and the schools." By John Scanlon. pp. 51-55.

NEWARK, May 20—Detective George Thomas Jr., paunchy and graying at his temples, pointed to the street through the second-story squad and apartment buildings seen room window of Newark's Fourth Precinct station and said: "I've been on the force 14 years and it's a bitch out there."

Detective Thomas who is the president of the Batons, a statewide organization of black law-enforcement personnel, described the task of a Negro policeman in a big city as fraught with conflict and fear.

He spoke in an interview the day after the fatal shooting here of a 17-year-old black youth by a black policeman. The shooting touched off looting in the Negro community.

"It's bad enough to be a policeman now, but to be a black policeman is twice as bad," Detective Thomas said.

"all of these people are rapping the Establishment. In all of my days I've been trying to get into the Establishment.

"Now — you wonder — am I doing the right thing?"

The 43-year-old detective said he had grown up on the city's Rutgers Street, where, he said, it was a "terrific thing" to come away from without a criminal record.

"Three of us on the force did," he said. "As a kid, I saw as much action on Rutgers Street as I later saw in World War II."

Accepted Without Diploma

Fourteen years ago Detective Thomas was in the last group of Newark policemen to be accepted without a high school diploma or an equivalency certificate.

"I'm here and I'm going to have to stay here because everybody wants trained men now," Mr. Thomas said. "But the black officers, the young ones, they are quitting as fast as they come on the force."

He added, "I don't blame them. You go out on the street —two years ago, three of us in one car—all black. Wen went into the riot area and jumped out of the car. 'Hey, brother,' we said.

"And clunk, a brick, then some shots. I said 'Damn, somebody is cold taking care of business.'

"We fired back up at the projects. What else could we do?

"Sure, we were scared. Everybody's scared on the street." He described the rapid mental process a policeman goes through in a crisis.

"I don't know what happened to [Patrolman Charles] Knox [the policeman who fatally shot the youth yesterday]. I wasn't there.

"But, what's there to say? We have a matter of moments to make a decision. I'd like to live to be 100. A guy is going after me in an alley with a bottle or a knife or anything.

"You can't be shooting him in the leg or the ankle. You have to defend yourself."

Main Trouble Source

Detective Thomas, farther of three children, said teen-agers were the principal source of trouble in the Negro community.

"You talk to these kids, I know many of them, and everything is okay," he said. "You turn your back and they'll get into something. Then you see them downstairs [at the booking desk] and they'll say, "I didn't mean to do nothing, I just got high."

The teen-agers, Mr. Thomas explained, will often just look at a policeman and tell him to "go to hell."

Te estimated that there were no more than 200 black policemen on the 1,480-man Newark force.

Practically all of the Negro policemen belong to either the Batons or the Bronze Shield. The Batons, Mr. Thomas said, is a 16-year-old organization, "mostly social and fraternal."

The Bronze Shield, younger and more militant, is composed of black policemen in the city who regard themselves as Young Turks, Mr. Thomas said.

Was Forced to Move

To stay close to the community in which he works, the detective said, he had lived "out there, about five or six blocks away."

However, he said, a series of burglaries in his apartment forced him to move. "They must have known they were going intoa policeman's house," he said, "but they didn't give a damn."

He said, however, that many black policemen did "give a damn."

"They give youths money—quarters and half dollars," he said. "Sometimes the kids come in and ask the lieutenant for carfare. What do you do? You know they ain't going nowhere."

The policeman believes, he said, that the little gifts of money may prevent someone from being hit in the head for the change.

The only satisfaction on the job, he said, comes from seeing a youth who comes in and says he is working in a "program" getting $2 an hour.

"It seldom happens," he said, "but sometimes someone will come in and say, 'I'm glad you did what you did for me.'

"My daughter is getting out of college in June. And she asked me if she should take some of the great job offers outside of Newark—in Bergen County where she would be the only black schoolteacher.

"I tell her, you have to make up your own mind, but why don't you stay here and give it a try?

"I tell her, and I feel the same way, these people need her and I think they need the black policeman."

Crouch for lunch.

You'll relish soprano Barbara Crouch and pianist Margaret Singer in their delightful recital. Tomorrow. 12:30. WNYC-TV.

Worries of the Blue-Collar Urban Voter

* * *

By MONROE W. KARMIN

WASHINGTON — "People are sick and tired of politicians and intellectuals. They want an average workingman from the community to represent them, and that's me."

Charles S. Stenvig, sworn in yesterday as mayor of Minneapolis, also happens to be a police detective on leave from the force. But, in his view, his upset victory (62% of the vote) as an independent candidate to succeed retiring Mayor Arthur Naftalin, a liberal intellectual, stems less from his 13 years of police service than from his 41 years of "average guy" living.

"People feel left out. They need somebody to identify with. They're tired of other people telling them how to feel and act instead of listening to them. I earn $11,000 a year. I live in a workingman's neighborhood. I have a wife and four kids and go to church. I know these people, and they know me."

The "people" Mr. Stenvig refers to, of course, are just like him, lower-middle-income white city-dwellers. The mayor's political analysis is especially pertinent now, when a growing number of mayors, many of them white liberals, are choosing not to run for re-election (Detroit's Jerome Cavanagh is the latest) and even voters in Los Angeles and New York have expressed "law and order" preferences.

Hoodlums Beware

Certainly, the incipient conservative trend, if it is that, reflects a surfacing of the basic human desire for safety and security when confronted with the prospect of change and the threat of violence, both from black militants and from student radicals. In the Stenvig platform the major, if not the only, plank was a promise not to "appease hoodlums," meaning the black militants who rebelled in the summers of 1966 and 1967 and the hippies who have staged protests in downtown Minneapolis.

But the deeper meaning of the Minneapolis, Los Angeles and New York votes may lie, as Mr. Stenvig's "average guy" description of himself suggests, not solely in fear but also in a sense of security—a knowing that if change is inevitable it will be directed by a hand that is familiar to the blue-collar workers who now comprise the bulk of many big cities' white populations.

Over the past decade or so, urban populations have changed dramatically. The middle-class whites have fled to the suburbs in accelerating numbers, taking away with them a substantial quotient of the cities' political and racial liberalism. Left behind are the blue-collar whites who, though they may have voted Democratic for pocketbook reasons, never have been especially liberal on racial issues, because of the direct threat posed to their well-being.

Thus, with the removal of the middle-class buffer, urban populations have polarized increasingly along racial lines, giving rise to a different political alignment.

Black power, black consciousness, black pride (they all mean the same) seek to capitalize on the widening racial division by mobilizing the black community into a more effective political force in its own behalf: In essence, to elect more blacks.

Blue-collar whites yearn to be represented by one of their own. In Minneapolis, voters rejected both a liberal Democrat in the Naftalin mold and a Harvard-educated Republican moderate who had President Nixon's endorsement, and instead they chose Detective Stenvig, an "average workingman" who knows, and is known by, his white neighbors.

Odd man out, of course, is the liberal white mayor of more recent Democratic years; increasingly he is resented by both camps. Though Detroit's Mayor Cavanagh denies that rising conservatism had anything to do with his decision to bow out, a week earlier on the "Meet the Press" television program he did say:

"There is no question about the fact that sometimes a so-called progressive or liberal white mayor is sort of caught up between the two conflicting groups within the community, and it is true that he might be a more likely candidate for political oblivion today than he was even a few years ago."

Whether for this reason, or simply the frustration of being unable to cope with mounting problems, the roster of mayors is undergoing profound transformation. At the U.S. Conference of Mayors convention in Pittsburgh recently, the outgoing president, Mayor Terry D. Schrunk of Portland, Ore., took note of the fact.

"Our association has had a tremendous casualty list in the past year," Mr. Schrunk reported to the delegates. "Some of this loss may be attributed to election defeats, but many are due to decisions to resign or not to run for re-election. When we went home from Chicago last year, we had designated 39 mayors to sit in places of leadership on our executive committee and advisory board. Today nearly half of those 39 mayors are either out of office or going out—most of them by their own decisions not to run again."

The message was especially depressing to Richard Lee, for 16 years mayor of New Haven. Mayor Lee, along with Mayor Cavanagh and Mayor Naftalin, personified the "progressive" Democratic city leader of the 1960s who, armed with Federal aid, set out to solve the nation's urban problems via a variety of innovative approaches. Now Mr. Lee, like Mr. Cavanagh and Mr. Naftalin has decided not to run for re-election.

The Lee decision, announced yesterday, was foreshadowed by his mood at the Pittsburgh gathering. "I used to know everybody at these conventions," the Mayor mused as he gazed about the convention hall. "Now I hardly know anybody. We used to have dynamic leadership, now the whole country's adrift. The President isn't leading. The governors aren't governing. And the mayors . . . well, I guess I'd better go meet him."

"Him" is Mayor Stenvig of Minneapolis, who, as Mayor Lee suggests, is worth meeting because, if current events are indicative of the future, he may be the pioneer representative of a new breed of mayor for the 1970s. Charles S. Stenvig—workingman, man of the neighborhood and cop—is proud of all three designations, and his view of life is not encumbered by any, as he puts it, "chrome-dome" theorizing.

Police Were Intimidated

Central to the Stenvig point of view is the need for "fair and impartial law enforcement for everyone." He feels his predecessor, Mayor Naftalin, was responsive to the "wrong elements of the community" and "too timid" about putting the "hoodlums" in jail. The result, says Mr. Stenvig, is that the "good" people of Minneapolis, black and white, lived in fear; "intimidated more than anyone" were the police.

The Stenvig criticism of Mayor Naftalin boils down to his handling of black militants and student radicals. In the summer of 1966, Minneapolis suffered its first racial disturbance. But instead of punishing the leaders, according to Mr. Stenvig, his predecessor arranged for two of them to be admitted to college. "They were rewarded for inciting to riot," the mayor exclaims in horror.

Because of this lenient response, Mr. Stenvig says, the city suffered an even worse disturbance the following

come white city-dwellers. The mayor's political analysis is especially pertinent now, when a growing number of mayors, many of them white liberals, are choosing not to run for re-election (Detroit's Jerome Cavanagh is the latest) and even voters in Los Angeles and New York have expressed "law and order" preferences.

Hoodlums Beware

Certainly, the incipient conservative trend, if it is that, reflects a surfacing of the basic human desire for safety and security when confronted with the prospect of change and the threat of violence, both from black militants and from student radicals. In the Stenvig platform the major, if not the only, plank was a promise not to "appease hoodlums," meaning the black militants who rebelled in the summers of 1966 and 1967 and the hippies who have staged protests in downtown Minneapolis.

But the deeper meaning of the Minneapolis, Los Angeles and New York votes may lie, as Mr. Stenvig's "average guy" description of himself suggests, not solely in fear but also in a sense of security—a knowing that if change is inevitable it will be directed by a hand that is familiar to the blue-collar workers who now comprise the bulk of many big cities' white populations.

Over the past decade or so, urban populations have changed dramatically. The middle-class whites have fled to the suburbs in

ment, and instead they chose Detective Stenvig, an "average workingman" who knows, and is known by, his white neighbors.

Odd man out, of course, is the liberal white mayor of more recent Democratic years; increasingly he is resented by both camps. Though Detroit's Mayor Cavanagh denies that rising conservatism had anything to do with his decision to bow out, a week earlier on the "Meet the Press" television program he did say:

"There is no question about the fact that sometimes a so-called progressive or liberal white mayor is sort of caught up between the two conflicting groups within the community, and it is true that he might be a more likely candidate for political oblivion today than he was even a few years ago."

Whether for this reason, or simply the frustration of being unable to cope with mounting problems, the roster of mayors is undergoing profound transformation. At the U.S. Conference of Mayors convention in Pittsburgh recently, the outgoing president, Mayor Terry D. Schrunk of Portland, Ore., took note of the fact.

"Our association has had a tremendous casualty list in the past year," Mr. Schrunk reported to the delegates. "Some of this loss may be attributed to election defeats, but many are due to decisions to resign or not to run for re-election. When we went home from Chicago last year, we had designated 39 mayors to sit in places of leadership on our execu-

mayors . . . well, I guess I'd better go meet him."

"Him" is Mayor Stenvig of Minneapolis, who, as Mayor Lee suggests, is worth meeting because, if current events are indicative of the future, he may be the pioneer representative of a new breed of mayor for the 1970s. Charles S. Stenvig—workingman, man of the neighborhood and cop—is proud of all three designations, and his view of life is not encumbered by any, as he puts it, "chrome-dome" theorizing.

Police Were Intimidated

Central to the Stenvig point of view is the need for "fair and impartial law enforcement for everyone." He feels his predecessor, Mayor Naftalin, was responsive to the "wrong elements of the community" and "too timid" about putting the "hoodlums" in jail. The result, says Mr. Stenvig, is that the "good" people of Minneapolis, black and white, lived in fear; "intimidated more than anyone" were the police.

The Stenvig criticism of Mayor Naftalin boils down to his handling of black militants and student radicals. In the summer of 1966, Minneapolis suffered its first racial disturbance. But instead of punishing the leaders, according to Mr. Stenvig, his predecessor arranged for two of them to be admitted to college. "They were rewarded for inciting to riot," the mayor exclaims in horror.

Because of this lenient response, Mr. Stenvig says, the city suffered an even worse disturbance the following summer. "The people and I, myself, feel you cannot appease hoodlums," he declares. "When they are breaking the law and you've used all deliberations and they're still doing it, they should be incarcerated."

The same thing goes for student protestors who break the law, says the new mayor. Minneapolis has an ordinance that forbids parades downtown, but Mr. Naftalin ignored the law to allow students to stage a protest. Though the demonstration was peaceable, Mr. Stenvig insists: "If the ordinance says no parades, then there shouldn't be any. If warnings are ignored, then they should be incarcerated."

None of this, Mr. Stenvig hastens to add, should be interpreted as implying a disregard for the right to dissent. "I believe in dissent," he avers. "I'm a dissenter myself. I just ran for office as an independent." Two years ago he and other policemen picketed city hall for higher wages. "But we had a parade permit," he recalls. "We did it orderly, acted like gentlemen, and didn't break any laws."

If the new mayor feels comfortable in discussing law enforcement, he seems less sure of himself on other urban subjects. Jobs for black people are a puzzlement. He does believe that black people should not be discriminated against in jobs for which they are qualified. But he does not think that an employer should be required to lower standards. The task, then, is to raise black skills to standard, but, as he sees it, the blacks "lack motivation." Even when they do come up to standard, he says, they are not entirely dependable, often jumping to other jobs. "It's a rough situation," he sighs.

Federal Aid: Yes and No

Mr. Stenvig has ambivalent feelings toward Federal aid. On the one hand, he believes there should be more, and he accuses Washington of "dragging its feet." On the other, he feels Federal aid is no panacea because "big pieces are taken out" of the taxpayer's dollar in the nation's capital. So, he concludes Minneapolis must turn to private industry for revivification, but his meaning is not absolutely clear. "I've got to look into this more," he admits. "I'm not too knowledgeable on this."

He does want more tax revenue from the state legislature, but on major reform issues, such as a new city charter to strengthen the mayor's powers, and acceleration of the movement toward metropolitan government, he's not at all certain how fast to push ahead or, for that matter, whether to push ahead at all. "People in the Midwest don't like to swallow things in big lumps," he explains. "They like things in small pieces."

So, for the next two years at least, the "average guy" mayor of Minneapolis, who dislikes politicians and intellectuals, will serve up change in small pieces—except, of course, for law enforcement, which will be offered the "hoodlums" in big lumps.

Focusing on 'Blue Collar Blues'

W-5-3 4/6/72

By ELLIOT CARLSON

The Bookshelf

Not since the Great Depression have office-seekers eyed the working-class voter with such a nervous mixture of hope and anxiety.

The complacency with which workers were viewed dissolved in 1968, when George Wallace, deriding "pointy headed" intellectuals in Washington, lured a good many away from their traditionally Democratic moorings. On one level, the success of the third-party candidate was perceived as part of a general white desire for slower integration moves. But on another, perhaps ominous level it was seen as symptomatic of the worker's growing disenchantment with his lot in American life.

Four years later, presidential hopefuls, spurred on by this more sinister image of the working man, are competing more fiercely than ever for his vote. Trying to keep their old allies, Sens. Muskie and Humphrey have stressed bread-and-butter issues as never before. And candidates Wallace, Jackson and Nixon relied heavily on the anti-busing issue, this year's equivalent of the law and order theme.

President Nixon, in fact, began searching anew for blue-collar votes shortly after taking office, when he formed a task force on "the problems of the blue-collar worker." Published in 1970, the task force's final report pictured workers as a "forgotten people" troubled and frustrated by a double bind: an "economic squeeze," in which their earnings level off just when family expenses peak, and a "social squeeze," resulting in part from pressures exerted by subsidized minorities.

Perceiving the worker as ripe for political plucking, the report proposed such remedies as job upgrading, tax relief, child care facilities, adult education and, to enhance the worker's image, portrayal of various skilled trades on postage stamps.

No doubt many of these things are worth doing. Yet until recently few of the assumptions underpinning such proposals have been closely examined by experts. Indeed, the notion of a "blue-collar crisis" has simply been accepted. No longer. One of the first explorations of the alleged crisis is "Blue-Collar Workers: A Symposium On Middle America," an anthology of essays that was little noticed when first published by McGraw-Hill Book Co. six months ago. But in light of current scrambling for the worker's vote, the book's conclusions seem particularly timely now.

Edited by Sar A. Levitan, Director of the Center for Manpower Policy Studies at George Washington University, the book offers findings that conflict sharply with some of the most familiar notions and stereotypes. The volume doesn't, however, hew to an overriding thesis. In fact, many of its authors, drawn from a wide range of disciplines, disagree strongly on the extent to which the worker is troubled. Despite differences, the book's 16 essays, taken together, provide a new perspective.

Take, for example, the worker's financial situation. He's believed to be hurting, and there's plenty of evidence to suggest he's having his share of money troubles. In one essay, Dick Netzer, a New York University economist, details just how hard the average worker in New York City was hit by rising taxes and living costs between 1965 and 1969.

For a hypothetical family of four, federal and state income taxes spurted 85% during the period, while all other taxes, such as sales and Social Security taxes, jumped 49%. Thus, higher taxes absorbed $962 of the family's $2,300 in increased earnings. Four-fifths of the remaining $1,338 was eaten up by swelling living costs, leaving an increase of less than 5% in the family's living standard.

But is this the whole story? By no means, argues Herman Miller, Director of the U.S. Census Bureau's Population Division. Using census data, Mr. Miller shows that white workmen—the blue-collar workers usually referred to as troubled—received during the 1960s the same 25% boost in median earnings received by white men in professional, managerial, clerical, sales and service occupations.

"When the pieces are put together," the census official declares, "it hardly seems appropriate to label blue-collar workers as economically 'squeezed.' . . . They had the same (relative) increases in earnings as other workers during the past decade."

Also hotly debated is whether blue-collar families get a fair return in benefits from income maintenance programs—such as workmen's compensation and Social Security—for the taxes they pay.

Quite simply, higher tax contributions, combined with rising wages, have placed more and more workers in income classes in which taxes do seem high in relation to benefits. This is amply demonstrated by Worth Bateman and Jodie Allen, two researchers at the Washington-based Urban Institute. In a jointly-written chapter, they note that for the average worker—whose monthly wage rose to about $540 in 1969 from $350 in 1958—the ratio of monthly benefits to contributions in 1969 was only 64% of what it was in 1958, while tax contributions were nearly 300% higher.

But does this mean that workers pay disproportionately for public assistance and other programs cited as accounting for anti-black feelings among workers? Not necessarily, insist the two authors. Allowing that taxes for public assistance probably have increased somewhat for each income level since 1960, they explain "the tax as a proportion of income in each income class has probably not changed very much; and the magnitude of the change—one-tenth of one percent—suggests that this change could not have caused a significant rise in blue-collar alienation."

But even granting that workers are better off than widely supposed (and, as the book also indicates, more tolerant), a parodox remains: Many are, in fact, unhappy and discontented. For example, the book cites surveys revealing workers as increasingly disillusioned with the political system. "The belief that government is run for the benefit of a few, perhaps the most damning indictment of a democratic system, runs particularly strong" among blue-collar workers, writes Howard Reiter, a doctoral candidate in political science at Harvard University.

What accounts for this malaise? One possible answer has to do with workers' perceptions; they may think they're much worse off than they really are. The census bureau's Mr. Miller suggests that fear of economic competition from black workers, whose wage gains have exceeded those of white workers in recent years, may be a factor in blue-collar attitudes toward civil rights issues.

Yet deeper forces seem to be at work. In their essay, "Yearning, Learning and Status," manpower experts Robert Schrank and Susan Stein suggest two: "First, manual work is increasingly regarded by Americans as degrading. Second, many blue-collar workers believe the educational route to upward mobility is under heavy fire from students and intellectuals. This threatens their hopes for their and their children's future."

If the Levitan volume has a weakness it's a tendency to treat workers' problems mostly in terms of charts and graphs and arithmetic calculations. Unhappily, the worker seldom emerges as a flesh-and-blood creature with his own private urges that may move him beyond what others might see as rational behavior. Still, the book's authors have unearthed a wealth of new material, correcting many exaggerations that had hardened into stereotypes.

Clearly, blue-collar workers have problems, and serious ones. But the volume seems to suggest that their troubles be kept in perspective. "Blue-collar deprivation should be examined critically in relation to the problems of the very poor, who are still the most in need of educational benefits," say writers Schrank and Stein. "The new blue-collar limelight must not be used to turn the public conscience from the most serious national inequities."

Evaluation of First Week for Indian Workers Education Team

Orientation to the School for Workers

This was a very good idea. It helps the student to know the various activities of the school. The orientation should always be a part of any program. It was a good beginning of the program.

Before arriving here I had heard a lot about the Wisconsin School for Workers. The orientation helped to confirm that what I had heard was so true. The talk by the Director made me quite at home with School, its work and objectives. The introduction strengthened the feeling of homeliness.

It was good to have started the course with orientation. The introduction with the staff members of the School helped establish "affinity" and gave it a good start.

Discusson on the total program in some details gave us a precise idea of W. E. activities in the School and as they concern us during our stay.

Orientation to the Indian Workers Education Program

This was also a very good idea. The background of the trainees and knowledge about their work help a lot to the teacher in teaching. It is a must for every program.

This is the first time each one of us was asked to speak about his own work in the Indian Workers' Education program and about his background. That each member of the staff of the School for Workers here did the same in relation to his work and background struck me for the individual attention we got from individual and staff members to us as individuals and colleagues.

The instructors for any training course ought to know what the participants do and what their expectations are. The program fulfilled that need. This should be continued.

This program was very frank and informal; it brought us to know and be nearer to the Staff which is desirable.

Workers Education Institutes for Government Employees

The lecture was quite good. It gave a general idea about the education given by the University and unions to the government employees.

In our country workers' education scheme does not cover government employees. Employees of public sector industrial undertakings are of course covered. With the growing unionization of government employees in India there is need to bring them also under the purview of our scheme.

The development of collective bargaining skills by the government employees is as important as it is for the industrial workers. The School for Workers is serving the cause of Trade Unionism for Government Employees by organizing Workers Education Institutes and has able instructors to teach.

Government employees like other sections of employees have the benefit of workers education insitutes and they do have this to their measure.

Workers Education in the United States

The lecture was very informative, educative and interesting. More such talks of such eminent Professors if possible should be arranged.

Professor Barbash was excellent. His talk took me back to the best lectures I ever heard from an academician of great eminence and competence. With the Indian bias for academic lecture method Professor Barbash's down-to-earth illustrations was a very highly rewarding experience.

The talk by Professor Barbash was very information and educative. I feel that a few more lectures from him ought to be arranged. He dealt with the subject from a broad national point of view and supplied the rationale of Workers Education in the United States.

Professor Barbash's talk was very interesting and educative. Some more of such illuminating lectures could usefully be arranged.

Visit to Amalgamated Meat Cutters Union

It gave an opportunity to see the actual working of an American local union. The visit was educative and interesting.

This is the first local union meeting I attended. The program was conducted with great efficiency and decorum. However, I felt that it was too formal and dry. As an Indian used to own ways I did not appreciate the need for the Chairman and others to sit so far away from the membership and that too on an elvated rostrum, considering that only about 25 members attended the meeting.

The visit provided us an opportunity to see how a union functions and conducts its day-to-day business. A useful visit.

This gave us a first-hand view of a business meeting (Local 538) which we had not done so before. It was good and revealing.

Teaching Government to Workers

The talk was quite good. It was very informative and gave a general idea about the political education given by the University and union to trade union workers.

To an ordinary worker his government is a distant and indirect entity. But still the government comes so much while life of a worker and his union. If anything, the emphasis that this subject gets in the workers education program in this country as ours is not adequate.

There is need for political education to workers, inasmuch as they are a part of the community. How far this education will go and whether the trade union ought to participate in politics will differ from one country to another.

The education in political information and institutions to workers is certainly useful and its utility would differ from country to country; but its place in democracy is always informative and creation of objective attitudes.

How People Learn

This was also a very good talk which gave us the information about the different method by which people learn.

This program was highly developed and delivered with great diligence and competence. The illustrations used, the methods adopted, and the attention devoted to details left nothing to be desired.

The instructor employs two way communications methods in the best sense of the team. I found the class very useful and interesting. An instructor who will hardly have the problem of lack of attendance in his class.

Quite good, informative and full of material for thought and practice in adult W. E. fields.

Lesson Planning and Teaching Steward Training

This was a very good talk. I found it to be most interesting and educative talk. The method used in teaching was exceptionally good. This method can be very useful in our country also. More talks of this lectures should be there.

This program was good. The importance of planning lessons carefully in teaching workers can never be stressed too much.

This class was also very useful. The instructor knows his subject well and has a very lucid and clear expression. The class was lively and interesting throughout.

This was a combination of teaching aid (lessonplanning) and teaching material in a judicious proportion - useful for W. E. program members.

Workers Education - International Labor Education

The lecture was quite general, giving a general idea about the various education programs, problems and setup of International Trade Federation and trade union movement. The talk was quite good.

This lecture covered more ground under Workers' Education program and trade unionism than international labor education.

I learned the role of International Trade Secretariats for different industries and realized how these secretariats are helping the workers in different countries to unite and establish a bond of solidarity between workers in the same industry in different parts of the world.

Good lecture with lot of information and utilization other union organizations and W. E.

Visit to Local Meeting of University of Wisconsin Employees Local 171

The visit was very good. It gave us a very good opportunity of attending a meeting which was specially arranged to enthuse the workers to participate in voting. More such visits should be arranged.

This was a highly satisfactory experience. One would have thought that the speakers could use the exhortation method in mass oratory to appeal to members to come out - strength on the voting day. There was nothing of the sort. I am waiting for election results.

It was interesting to know that the University Employees have a union and has a band of enthusiastic workers. It was an election meeting.

Again, on first of its type, but lot more interesting probably due to its white collar composition.

Workers Education Methods

The talk was very valuable and gave us a lot of material to think and discuss. This gave us a clear ideal of purpose of different education method and situation when each should be used.

This was a very good talk. It gave many new ideas relevant to our program in India.

While talking about the methods employed in Workers Education, the instructor seemed to say that there are more disadvantages to the Buzz group method than advantages and yet he said that if it encourages workers to participate, the method is good. He could have been a little more precise on this subject.

Very interesting, thought-provoking and well presented. This has some more advantages of the common (W.E. and adult Educ.) approach to our problem. All the programs were highly informative, useful and interesting for us.

Evaluation of Second Week for Indian Workers Education Team
September 25-30, 1967

Use of the Case Method in Teaching (2 sessions) - (Owen Tapper)

As a method which introduces variety in teaching it is a valuable aid to teaching workers. The two sessions with the instructor have been useful in the sense that the technique of conducting teaching with Case Method was demonstrated.

The content given by the lecturer were quite good. He presented them -- a nice way by two-way communication method. The method used in teaching will be of great value to us in Workers Education in India.

The classes had special reference to using the case method in preparing for the playing as a method of teaching. In India we do role playing and teach it. But when Owen and Miles develop the subject, its' concept and practice, it almost appears to be a branch of the philosophy of teaching and learning. Very helpful to get new insights into learning process and teaching techniques.

Owen has very clear and precise approach - develops case method in a dramatic way - elucidates information and pinpoints the issues and attracts participation spontaneously. Flexibility is avoided to a great measure thus leaving in mind the best use of case method. One more session could be desired.

Teaching Labor History - (Irving Brotslaw)

The best feature of the session was a film which was shown entitled the "Inheritance". There could have been discussion on the film. It was not clear how he would teach labor history to workers except when he said that he would employ discussion method. The content however was good.

The contents of the talks were quite good. It was not presented by a discussion method. The film shown was very good. The discussion method used in film can be used in India.

The most interesting part of this class was a discussion of the pros and cons of using the discussion method in teaching labor union history as opposed to the traditional classroom lecture method. The idea that modern management is as much a product of collective bargaining as collective bargaining is a product of modern industrial relations was new to me.

Teaching (formal discussion) was better, more effective and clearly informed than the film on Labor History. The film - even though very good.- fails to convey whole story as it is very very old and its sound and pronunciation were not lending proper understanding of the idea under it. The teacher has masterly grasp and expert presentation that lent appreciation on our part as a matter of learning the easy way. In content and presentation it was good and useful to us.

Use of Role Play in Teaching - (Miles Galvin)

The presentation of this instructor is very good and maintains interest throughout the class. He was also able to bring about the advantages of Role Play through discussion method. He encourages direct participation and his classes are very educative and valuable for us.

The contents given were quite good. He presented them in a very good way by two way communication method. The method can be used in India and can be very helpful.

This was the most effective class during the week. Miles asked questions and wanted us to write them down in advance and produce them one by one. When all the answers were given what was left for him was only to elucidate, correlate and explain with a few additions here and there. As a teaching method it was so natural and effective. I learned and appreciated more of this method than of the real class.

M. Galvin is every inch a teacher without making you feel he is so. Teaching in role play highly effective and demonstrative of its impact on all of us. It is very useful for our conditions as a tool of teaching without any expenditure of resources.

Conference with instructor and visit to Labor Legislation and Collective Bargaining Class - (Richard Perry)

The instructor gave some idea of the labor relation legislation and made some points and concepts clear to us. The class, however, turned out to be very thinly attended which was due to the fact that it was the first day. The visit to the class was useful as I saw a fine picture there. The film is always a most effective way of teaching and this was so in this case.

We had a good discussion with the lecturer on Taft-Hartley Act and some of the clauses of the Act were cleared. The content given were quite good. The attendance in the class was very thin so no comment can be given on presentation. The film shown on collective bargaining was very good and nicely discussed.

This was a dry session. In the briefing we almost got a forward lecture on Taft-Hartley Law when there was actually no time to do justice to this topic. The class was equally uninspiring with only four students showing up. What struck me was that this did not put out the spirit of the instructor who was not at all embarrassed and went through with the session in all earnestness. This was remarkable.

There was not much of a class - 4 trainees in all - often reminiscent of India W. E. classes. The system of teaching and developing discusson on C. B. and legislation was really interesting and certainly informative. Even while avoiding such visit - the same presentation and film could be organized by Galvin or Tibbetts no less usefully or effectively.

Lesson Planning for Teaching Collective Bargaining - (Norris Tibbetts)

The content of the talk was good and of use. The presentation, however, was listless. It was more in the nature of a talk than discussion. The reading material was good but it was more than can be finished in one talk and he had to skip over many papers.

The contents given were quite good. They were presented in a lecture way. The content can be used in India by two way communication. It is possible that Lecturer was not feeling well and he could not give his best. In his earlier talk I found him one of the best lecturers.

This class was equally devoted to the method of teaching collective bargaining as well as the content of a class on that subject. The question is often asked if one has to have the background of a lawyer to be a good teacher of labor laws and I have always taken the position that this is not essential. Tibbetts confirmed that I was about right.

The discussion of NLRB and collective bargaining was very clear and lucid. The film shown on collective bargaining was really very effective education on the Consequences of non-agreement on the part of management. Excellent instructional approach and wonderful presentation.

The University of Wisconsin Extension Program - (James Duncan)

Besides providing information about the Extension Program of the University of Wisconsin I saw no point in having this talk. It had no relevance with the program we are having. The instructor however presented it well.

The talk was quite informative and gave a general idea about the extension program which can be conduted by Indian Universities, to make the democracy a real success in India.

This was a very educative class. The varied and wide extension programs of the state universities of this country should be drawn upon by universities in India for taking knowledge to the people quite apart from the ivory tower functions of the university which are to make knowledge and teach it. Knowledge developed and taught in the universities have direct relevance to the problems of people in the field and factories.

It was a lecture-cum-discussion one found information on extension programmes of this university - the presentation not most effective and pouring out of information not very clearly done - probably the teacher had no comprehensive picture of the totality of the programmes and inter-relationships.

The Practice Teaching using role play

I feel that it provided one valuable practice in arranging role plays and brought out the purpose and technique of having it clearly. The remarks of the instructors helped me understand the true purpose and also how it ought to be conducted.

The session was very useful and gave us practicaltraining for the use of role play in Indian situation. It also gave an opportunity to us to clear our ideas about certain steps in role play while using it as a teaching method.

In India I began as an avowed skeptic of the usefulness of role playing as a teaching method and used the method because of rigid official requirements. Slowly I began to appreciate the fact that role play has something to it which merits attention and I believed that for a few subjects role play could be effectively used. Yet I strongly held the view that its emphasis was overplayed. The lessons on role playing I received in this country and this practice teaching lead me to realize that this method has a wider applicability than I was willing to concede when I came. Yet I believe that the whole thing is being played up beyond proportions, not in our training in Wisconsin, but in the workers education programs in India and perhaps in the U.S.A. also.

Practice teaching with role play as a tool was both a test and an occasion for us. Many minor points as to whether goals should be presented before the role play or after, whether full preparation and planning of roles or partial preparation, whether a fixed procedure and thorough programming or flexible approach came in for very useful discussion. It was evident that this discussion could never have become as useful without our playing the roles and practice teaching. The evaluation and discussion following the teaching were very helpful in finding our assessment of the performance and the measure of its success and effectiveness. Time taken in role play was usually more in our case in India than is expected over here. This gave a new dimension with regard to selection of topic for teaching by role-play.

unions - Civil Rights Feb 10, 1969

however, does not make their grievances any less real.

A professor at Rio's Catholic University recently described the university machinery as "rotten, old, indolent and in many cases contaminated by corruption and incompetence." Professors are paid as little as $100 a month for a full class load. In a nation of 90 million people there is room for scarcely 200,000 in the universities; thousands are turned away each year. Student disorders, a phenomenon by no means restricted to Brazil, seemed particularly justified here.

In the weeks immediately after President Costa e Silva's suppression of the opposition, Brazilians showed little inclination to protest. The beaches of Rio were crowded and conversation in bars and coffeehouses was mainly of soccer. This, though, was the holiday season, which here is accompanied traditionally by a general slowdown in all but social activities. It will continue, if custom is observed, until after the pre-Lenten carnival of mid-February.

It is much too early to judge whether a spate of Finance Ministry decrees will help to strengthen the long-ailing economy. Already, though, some segments of the business community are beginning to bridle at new regulations. There is no evidence that the Church will move to silence its more outspoken opponents of the military, and there is nothing to indicate that the students will settle down quietly behind their books.

Moreover, there is no way to measure the extent of opposition to the government within the military itself. But it is incontestable that such opposition exists, based on the conviction that the role of the army is to protect the constitution, to intervene when necessary, but to return to the barracks at the earliest possible opportunity. Officers of this persuasion, up to and including the rank of colonel, are known to have been in touch with former President Juscelino Kubitschek and Carlos Lacerda, former governor of Guanabara (Rio), prior to their arrest. The number and depth of conviction of these officers could be the factors that shape Brazil's future.

Labor - Gen

WHITE LABOR, BLACK LABOR

THE FOMENTED CONFLICT

LLOYD L. BROWN

Mr. Brown, who was a CIO organizer in the 1930s and a founding member of the Negro American Labor Council, belongs to the Typographical Union. He is writing a book on social trends in the black community.

Is America faced with another "irrepressible conflict," this time between the black community and organized labor? Many voices say yes, and many hands seem to be working to bring about the collision. As a Negro American and a trade unionist, I am alarmed by this development; it threatens not only the equal rights movement and the unions but all prospects for social progress.

There are today, as there always have been, grounds for Negro antagonism toward the labor movement. The union button has never been a charm to shield its wearer from the virus of white supremacist ideas incubated in the culture of the upper class. The American labor movement, for the most part, has never accepted the old radical insight that white labor cannot be free while black labor is chained.

Despite its sins against racial equality, however, the union movement has been more hospitable to black Americans than other institutions in our racist society. Labor has a larger interracial membership than any other group, uniting in common interest, if not in brotherhood, some 2 million black workers with 16 million other workers.

Moreover, the continuing and inexcusable failure of the AFL-CIO executive council to put its professed policies of racial justice into practice, and the snail's pace of labor's self-reform are not the main factors behind the present sharp rise of anti-union sentiment in the black community. The main cause is to be found in the propagation of a new social doctrine—that organized labor is now the main barrier to black liberation, and the propagators of this new faith belong to four distinct orders. They are the big business missionaries to the ghetto, the black separatists, the liberal friends of the deserving poor, and the left-wing white advocates of black segregation. I shall deal here only with the first and most important group, merely describing the others in passing.

The black separatists, like their white racist counterparts, are anti-union on principle, opposing all interracial association as the worst of evils. The branch of liberalism that embraces the new creed is composed of middle-class people of good will who believe that labor is now big business, that white workers are rich, and that the only deserving poor are black. The white left-wing supporters of the new doctrine, having despaired of the working-class revolution, update Marx to read: Labor in a black skin can get its rights only by taking away the rights of labor in a white skin.

The big business missionaries, to return to the group which is the main sponsor of the doctrine, are the "thousands of businessmen across the nation [who are] getting involved in the struggle to restore social cohesion," as *Fortune* magazine noted in a special issue (January, 1968) devoted to "Business and the Urban Crisis."

"The struggle to preserve property" might have been a more accurate way to put it, since it has been noted often, and correctly, that the violence of ghetto outbursts has been primarily directed against property. "The term 'Negro revolution' must be taken seriously," one of *Fortune*'s

writers warns, "because its present battleground is at the level of the city."

This writer, Max Ways, outlines for big business the trail-breaking role of advancing the Negro revolution through a "national triple alliance" of the corporation, the city and the Negro (in that order). Noting that "the more congealed liberals . . . continue to doubt that business can be the agent of the kind of social advance that is needed," Mr. Ways assures his readers that "the leaders of the government of the U.S. believe it. Negroes believe it. Business is the one important segment of society Negroes today do not regard with bitter disillusionment." (One can imagine a "Triple Alliance" demonstration marching under the slogan: "No Corporation Chairman Ever Called Me A Nigger!"

The corporate missionaries to the ghetto have been plastering whole cities with their motto: "Give a damn." They will give *that*—but no more than that. The real giving, it is made plain, must come from another source. Here's how one of these agents of social advance puts it:

"Union concepts of security and seniority were formulated in the period of struggle between company and union. Now the struggle is between the Negroes and the unions. It is our position that a basic conflict exists between labor-union concepts and civil-rights concepts. Something has to give."

This clear statement of the new "basic-conflict" doctrine, also quoted in the special issue of *Fortune*, comes from John Doar, president of the Bedford-Stuyvesant Development and Service Corporation, which aims to cure the ills of one of America's most impoverished slums by building black capitalism there. Mr. Doar is also president of the New York City Board of Education, to which he was recently appointed.

His remarks appeared in an article, "The Case Against the Unions" by Thomas O'Hanlon, which offers various recommendations to insure equal rights for Negro workers. The primary proposal is this: "The union hiring hall must be eliminated. Unions still control an estimated two million jobs through such arrangements. Employers should be free to hire any qualified worker."

Mr. Doar's notion that "the period of struggle between company and union" is a thing of the past can only amuse the two sides. But his statement that labor-union concepts and civil rights concepts cannot coexist is more than a total misstatement; it is an invitation to total disaster.

There is nothing complex about labor-union concepts, the basic elements of which can be stated in a single sentence: A union, comprising the workers in a given industry or craft, bargains with the employers and by negotiation, backed up by an implied or direct threat of strike, obtains a contract for a designated period of time that establishes wages, hours, working conditions and various fringe benefits; specifies the prerogatives of both parties, and provides grievance procedures to guarantee compliance.

All other labor-union concepts are details flowing from that basic concept. For example, none of the contract benefits would profit an individual worker if he were not protected from arbitrary dismissal—the job security rules mentioned by Mr. Doar. A seniority system is likewise indispensable; without it, arbitrary dismissal could be effected simply by reducing the work force by one man or by not rehiring a man after a seasonal layoff.

Pat Fink

"Always 'The House that Jack Built'—Jack Senior, Jack Junior, Jack III"

Since the abolition of job security and seniority would make union membership worthless, no union could continue to exist without these safeguards for its members. The protection of trade unionism, achieved by many generations of working people of all races and nationalities, is not "something" that "has to give." It is something that can be taken away by no force short of a Fascist dictatorship.

Labor-union concepts not only are not opposed to civil rights concepts, they *are* civil rights concepts applied to industry. When workers are excluded from union membership because of race or color, labor-union concepts are violated, just as the concept of democracy is violated by racist practices.

No one would destroy good housing that bars Negro tenancy or ownership. The obvious corrective action is to

remove the barriers and let the Negro family move in. More unionization, not dismantled unions, is what the black worker needs. The job security and seniority rules are even more necessary for the Negroes now in unions than they are for other members. Last to be hired and first to be fired was the established rule for Negro industrial employment under the old, open-shop system; to the extent that the rule has been weakened, credit belongs to the unions. Indeed, the very term "due process" that unions stress in cases of dismissal comes from the Fourteenth Amendment, enacted to protect the rights of former slaves.

As for the recommendation that hiring halls be abolished, it happens that there are large numbers of Negroes in those industries where the hiring hall is established—maritime, longshore, hotel and restaurant, for example. Any attempt to abolish this system, under which everyone can see who is hired and for what job and whether fair-practice rules are followed, would elicit the bitterest opposition from the Negro members.

Advocacy of so-called right to work laws that ban the union shop comes from the most reactionary sections of the society—the same sections that are the most racist. The black worker knows better than anyone else the great difference that exists between a "right to work" state like Alabama and a largely unionized state like New York when it comes to job opportunity and pay.

The big business missionaries to the ghetto need not rely on church dinners and "mission Sunday" collections to keep them going. They have access to the tax-exempt billions of the great foundations with which to promote various programs among the desperate poor of the slums. To the most affluent "haves" it must seem very canny to promote the idea that the "have nots" can get what they need only from the "have a little bit mores." But the program sponsors would do well to realize that vandalizing the House of Labor would definitely not advance social cohesion. On the contrary, a fratricidal conflict between white labor and black labor would turn the urban crisis, which now threatens only property, into an urban civil war that would destroy everything.

Does Racism Aid Whites?

Labor News - 12/4/70 unions Race Rel

Racism, charges Dr. Anthony Downs, provides economic, political and psychological benefits to whites.

In a pamphlet entitled "Racism in America and How to Combat It" published by the U.S. Civil Rights Commission, Dr. Downs lists racism's "benefits" in the hope that "many whites who are opposed to overt racism in principle will begin to see how they have been profiting unawares from either racism or institutional subordination or both."

Racism may provide economic, political and psychological crutches to many whites, but its benefits are illusory and its costs to whites highly damaging.

Dr. Downs points to the refusal of many hospital staffs to accept Negro or Mexican-American doctors as staff members as giving "economic benefits to a significant number of whites."

True: But since there is a severe shortage of doctors, even for whites, doesn't such discrimination harm many more whites by preventing them from having the adequate medical care which they need?

Or take the unions.

Although unions in the building trades are moving, under minority and government pressure, to take in more nonwhite workers, they have a long tradition whereby one ethnic group has won monopoly control over a craft and defended it against all comers.

It was used by the Irish against the Italians, and vice versa, and now it is being used far too much against blacks and other minority workers.

But while racism enters into the craft unions' attitudes, another factor is the deep-seated fear of depression, and the desire to keep their ranks small to have jobs even in times of scarcity. (In this regard it should be noted that the current unemployment rate for construction workers is 12 percent.)

If we had a full employment economy and built the houses, schools, and hospitals the nation needs, even the skilled building trades, with employment guaranteed, would in all likelihood be far more willing to bring in nonwhite workers in massive numbers.

Yet when minority workers are discriminated against, the nation loses billions upon billions of dollars in Gross National Product which would be available for housing, schools and hospitals if we eliminated bias.

So even craft union workers lose out because of racism.

Many unionists understand this — which is why the labor movement has been in the forefront of those demanding equal pay for equal work, fair employment practices laws, and access to jobs for all.

The industrial unions in the mass production industries, like steel and auto, are among the most integrated institutions in the country, with a labor force around 25 percent black.

As a result, according to Michael Harrington, "the scandalous gap between black and white wages that is so marked for the country as a whole hardly exists in Michigan, where the United Auto Workers play such an important role."

So black workers in Michigan, making the same wages as white workers, contribute the same purchasing power to the economy and pay the same taxes as do their white counterparts.

In summary, then, racism is costly to whites—particularly because it encourages whites to fight blacks for bigger shares of a small pie, instead of uniting whites and blacks to fight side by side for fair shares for all in a larger pie.

Barroom Backlash

Some Blue-Collar Workers Shun Their Favorite Beer After the Brewery Signs a Pact to Hire More Blacks

By ROY J. HARRIS JR.
Staff Reporter of THE WALL STREET JOURNAL

PITTSBURGH — Ordering an "Iron" is something of a tradition among beer drinkers in this industrial area. Iron City Beer, promoted in advertisements as a workingman's brew, has been the top selling brand here for almost 20 years.

But sales have fallen substantially since February. Only officials at Pittsburgh Brewing Co., which produces the brand, know the extent of the reversal—and they're keeping mum—but salesmen, distributors, bartenders and competing brewers say Iron City's sales are off by about 15% and have plunged by more than twice that much in some blue-collar areas.

And everyone knows the reason. They say the trouble started when Pittsburgh's black community ended an 11-month boycott against the beer.

That's right, when the boycott *ended*. Iron City, it seems, is the victim of a barroom backlash, a boycott by whites who don't like what they've heard about the agreement Pittsburgh Brewing signed with black tavern owners and the National Association for the Advancement of Colored People. "People more or less want to punish the brewery for the settlement," one Iron City salesman laments.

Milton G. Hulme, a civic leader and chairman of the brewery, is reluctant to discuss the situation. "The less comment we make the better," he says. "It's a tender topic, and anything we say may be held against us." As a result, he says he won't even discuss the boycott when the company reports to shareholders this week on results of the six months ended April 30. In the first half of fiscal 1971, Pittsburgh Brewing earned $338,520, or 30 cents a share, on sales of $11.9 million.

First Boycott Didn't Hurt

The pact signed by the brewery on Feb. 10 in the office of the city's Commission on Human Relations is mild by most standards. Pittsburgh Brewing, which at the time counted only 42 blacks among its 672 employes, agreed to hire two blacks for each white put on the payroll during the next two years and thereafter to get half of its hirees from the black community until Negroes constitute 25% of its workforce—roughly equivalent to the proportion of blacks in Pittsburgh. The company says it hires only 30 to 40 new employes each year.

In addition, the company agreed to participate more actively in the black community by advertising its products in minority-oriented media and by appointing a black marketing assistant. (The lack of such emphasis in the past probably helps explain why the NAACP's "selective buying campaign" against Iron City had only a minimal effect on sales.)

The agreement got only moderate local publicity. But, in a matter of days, as one Iron City salesman puts it: "Bang. No matter where you went, you got slapped in the face with it." Bar rumors circulated wildly, some going so far as to say Pittsburgh Brewing had fired two thirds of its workforce and replaced them with blacks. Mill workers who customarily downed several "Irons" after work refused to drink what many tipplers call "that nigger beer" and sometimes harassed those who did.

Sales sank steadily, and salesmen say some bars ordered their Iron City taps removed. Nick Vidnovic, a beer distributor in Duquesne, a largely white steel-mill town near here, says demand for Iron City has dropped 40% among his case-buying customers.

The Opposition

The biggest booster of the boycott has been Harvey F. Johnston, a McKees Rocks, Pa., real estate salesman and white supremist who heads a group called the National Association for the Advancement of White People. He has given the anti-Iron campaign top billing in the last four editions of a newspaper he publishes (claimed circulation: 75,000) and has put out 100,000 circulars in western Pennsylvania bars blasting the beer.

Iron City salesmen say support for the boycott is coming from an unlikely source—the cop on the beat. Noting that the local fraternal order of police has endorsed Alabama Gov. George Wallace for President, one salesman complains that he has seen policemen "talking down" Iron City while checking taverns. "If a cop comes in mouthing off about our beer, it's going to cause us a lot of damage," the salesman moans. It's impossible to document the extent—or the existence— of such activity.

Also difficult to determine is whether other brewers are spreading rumors to exploit Iron's situation. The same salesman who saw the cops "mouthing off" says he also overheard a sales representative for Schmidt's tell a tavern owner that "Iron City had laid off 25 whites" in order to give jobs to blacks. He says Schmidt's has gotten 80% of the brand switchers in his area. A spokesman for C. Schmidt & Sons of Philadelphia denies the company has used such tactics and says its salesmen have "strict instructions" not to play up the racial issue. In addition, the spokesman says, Schmidt's sales haven't surged that much recently in western Pennsylvania.

A Counter-Rumor?

But while Schmidt's denies spreading rumors, one Schmidt's representative accuses Iron City salesmen of brewing a rumor campaign of their own. "We've been thrown out of a lot of taverns (in the Pittsburgh area) lately since Iron City salesmen started spreading a rumor that we're pro gun control," the Schmidt's man says. Letters have been "pouring in" to the company's headquarters for the past two months asking if it's true that Schmidt's has given money to groups advocating stricter gun laws, the spokesman contends. He swears that the rumors are untrue.

Regardless of who's saying what, Mr. Hulme and others at Pittsburgh Brewing continue to say little—at least publicly. The only active defense of the beer seems to be coming from—of all places—local labor groups. The three Brewery Workers Union locals here, fearful that any loss in sales could result in a loss of jobs for both blacks and whites, persuaded the Allegheny County Labor Council in March to send letters to its 150-local membership in support of the settlement.

Pittsburgh Brewing isn't the first brewery to face a racial boycott, but trade sources says this is the industry's nastiest case of backlash. In 1970, after a boycott by the Congress of Racial Equality, Anheuser-Busch Inc. of St. Louis, the brewers of Budweiser, avoided such backlash problems by signing an "affirmative action program" directly with the federal government rather than with CORE. The result—improved minority employment opportunities—was the same, but the company could save face by saying it cooperated with the government rather than caved in to black demands.

In any event, some beer distributors and bartenders believe that Iron's downward spiral has been halted and that the beer may be starting to turn around now. A major factor in its favor: people here like the taste of Iron.

Ed. - Labor

1973

trades. This was not a tactical error because these unions wield an influence far beyond their actual numbers and because it was necessary to fight against what Lucy calls the "Building Trades Syndrome." However, the struggle for minority and black jobs must be broadened as we shift to a "service economy." The Coalition will try to explain this in the community. The link between the unions and the future of the inner city has never been clearer.

When questioned about the role of the A. Philip Randolph Institute and its leader, Bayard Rustin, Mr. Lucy expressed regret that the Institute's reaction to the Coalition had been negative and apparently in accord with the viewpoint of the top AFL–CIO leadership, which considers this movement unnecessary and perhaps even disruptive. He felt that the Institute had an important educational function to perform—registering union voters, conducting workshops in union policies, training courses, etc.—but that it was in danger of becoming counterproductive because of its unqualified defense of the status quo in the unions.

At this stage, the Coalition of Black Unionists is a highly promising development; it might turn out to be one of the few constructive results of the dismal election we have just been through. □

The First Amendment and the Nixon Court

The United States Supreme Court, pushed to the Right by the four appointments of President Nixon, ended its 1971–72 term last June with a flurry of opinions that did not bode well for the freedom of speech and press clause of our Bill of Rights. Further retreat from the expansive interpretations of the First Amendment that have prevailed since the 1930s appear almost inevitable by the end of the Court's current term.

The decisions and opinions on which these forebodings are based were but straws in the wind. Almost none of them, by themselves, were unqualifiedly regressive. For each, some plausible justification was invoked. Indeed, to be completely fair, there were even two or three decisions handed down by the 1972 Nixon Court that could be said to have followed the liberal tendencies of the past. The new justices are cautious men and not likely to move sharply in new directions. Rather, the likelihood is that they will slowly gnaw away at past gains while trying to make it appear that precedent is being respected.

The best example was a decision handed down on June 22, 1972, in which the four Nixon appointees, Chief Justice Warren Burger and Justices Harry Blackmun, Lewis Powell, and William Rehnquist—joined, as they generally are, by Justice Byron White—reversed a ruling of the lower courts that had permitted the distribution of antiwar leaflets in the malls of a Portland, Oregon, shopping center (*Lloyd Corporation* v. *Tanner*). Just four years earlier, in the first shopping center case to reach the Supreme Court (*Amalgamated Food Employees* v. *Logan Valley Plaza*), it seemed that the justices had put an end to prohibitions against the exercise of free speech in the open areas of privately owned shopping centers. The 1968 Court had reasoned that the size and function of shopping centers, even though

Dissent Win '73

beyond 1976. The grave problems that beset our society will persist; they will not be dissolved by Nixon's meeching rhetoric or by sophisticated intellectual apologia. The hopes, the energies, the needs of this country still point toward large-scale social change, social innovation, social reform.

And we propose to contribute whatever little we can toward that end. □

Stanley Plastrik

Coalition of Black Trade Unionists

Known for the time being as the "Coalition of Black Trade Unionists," a new organization has been launched of black trade union leaders and members. It may turn out to be of major significance both in the American labor movement and the black struggle for social and economic equality.

This movement had its origin in the McGovern campaign, but its plans go beyond it. According to William Lucy, secretary-treasurer of the American Federation of State, County, and Municipal Employees, AFL-CIO (AFSCME), who is a spokesman for the new group, the McGovern campaign served merely as its "catalyst." A call for its organization arose out of a meeting attended by 1,200 black trade unionists in Chicago last September. Hundreds of delegates from UAW locals, building trades unions, the AFSCME, and dozens of other national unions decided to set up a continuing movement.

In our interview, Mr. Lucy stressed that the group does not see itself as another "protest" or black nationalist movement. Nor does it have the least interest in setting up anything at all rival or "dual" to the unions. It considers itself an organic part of the union movement, and it plans to operate fully within that framework; it conceives of labor as a major force for social change in America.

The Coalition of Black Trade Unionists aims:
to conduct campaigns to organize nonunion black workers (it is estimated there are some 8 million in the country);
to help in the organization of the poor in black communities;
to support actions in opposition to the Vietnam war;
to back legislation favorable to federal revenue-sharing programs that will bolster social services in black communities;
to provide a forum for blacks concerning their special problems within unions;
and perhaps most impressive, to act as a bridge between the organized labor movement and the black communities where hostility to unions is often high.

WILLIAM LUCY, a tall and slender man with a good deal of poise, was especially insistent about the fraternal attitude of the Coalition toward the trade union movement. He pointed out that the people the Coalition will mobilize are at the bottom of the social ladder, among those treated with particular callousness by the present Administration; hence, it is natural that black unionists are anti-Nixon. The AFL-CIO "neutrality" on the elections contradicted the needs of black workers and therefore had to be opposed.

A five-man steering committee, selected at the Chicago gathering, is at work preparing a constitution to formalize the new Coalition and to issue a statement of intent. Lucy hopes the Coalition will bring together the experienced organizers of the labor movement with the inexperienced but enthusiastic volunteers of the communities, thus achieving a unity hitherto unknown among blacks.

The goals sought by this united movement will be jobs on the union level plus a further opening up of the construction trades to black and minority membership, and improved services on the community level. So far, the movement for jobs has concentrated on the building

CHILDREN'S READERS

Life Is Fun in a Smiling, Fair-Skinned World

The literary merit of the "readers" used by children in the elementary grades has been widely discussed and their value as teaching instruments has been debated. But the effect of these books on a child's view of the world has rarely been analyzed.

Otto Klineberg is a distinguished social psychologist who has examined 15 widely used readers and here raises some disturbing questions about their contents. The books examined are listed on page 76.

By OTTO KLINEBERG

"READERS" are presumably prepared for the purpose of teaching children to read, adding to their vocabulary, developing the capacity to see the interrelationship of ideas; children are helped to understand the structure of sentences and of grammatical forms, to follow the sequence of events, and to become aware of the manner in which they are united and integrated. One reader speaks of the "steady growth of interpretative powers" which is insured through the content of the stories, and describes the situations and plots as containing a "meaningful interplay of the personality, mood, emotion, and purpose of the characters" (5). (This and the following numbers refer to the books listed in the accompanying box). The present writer expresses no opinion as to the contribution of these readers to the ability to *read*, but this analysis of their content raises in his mind, however, some very real questions regarding their contribution to the children's *picture of American society*, the *attitudes* and modes of thinking which are presumably developed, and the desire to *read further*.

First, and perhaps most important, is the picture of American society which is presented. Margaret Mead and Rhoda Metraux have written about "The Study of Culture at a Distance" (University of Chicago Press, 1953), describing the attempts to understand another culture on the basis of its plays or motion pictures, its books, its manuals of child care, etc. Suppose the visitor from Mars or even from Thailand tried to reconstruct American life from the content of these readers, without any other data to guide him. The resultant picture would be approximately as follows:

The American people are almost exclusively white or Caucasian. The only exception discovered in the fifteen readers refers to a visit to a Western ranch, near which lived an American Indian family, who spent most of their time "making beautiful things . . . to sell to the white people who came to the Indian country" (12). The story told is in general friendly and sympathetic to the Indians, except that they are treated as exotic and "different," not really part of the American scene. Their names—"Big Horn," "Shining Star", etc.—strike Jack, the white American boy, as "funny" (12). This incipient ethnocentrism might have been countered by reminding Jack that many proper names may be considered "funny," depending on one's experiences. What about Longfellow or Bacon? Even "old American" names may refer to occupations (Baker, Tinker), or colors (Brown, Green), or places (Hill, Field); some of the most distinguished names in American history, like Roosevelt, Eisenhower, or more recently Shepherd (or its variant Shepard) also refer, as do most American Indian names, to places or occupations. There are other stories of Indians, but mostly of Indian children of a bygone day (14).

The Americans in these readers are almost exclusively North European in origin and appearance. When any mention of ethnic origin appears, which is rarely, it is English, French (Brittany), or Norwegian (13). Other peoples and places are visited, including Lapland, Spain, and North Africa, but this is part of travel to foreign lands, and not part of the picture of America. In this particular case, one traveler, on the apparent basis of experience with the North African desert, delivers himself of the following judgment: "A mighty interesting country, Africa" (13), as if nothing existed south of the Sahara, and as if Africa were one (Arab) country instead of a great many different ones.

To return to the ethnic picture in the United States, the exceptions to the usual North European appearance and origin are themselves significant. An organ grinder is given an appearance which is stereotypically Italian or Greek, with a red scarf instead of a necktie; he appears in the illustration on the cover, as well as several times in the text (1). A slightly different version of the same, or similar, organ grinder appears in another Reader (9). There is also an Italian- or Greek-looking peddler who carries a big bag on his back (14). Finally, there is a story of a discontented horse that works for Mr. Polaski, who "sold fruits and vegetables," and who also "looks" very South- or Central-European in the accompanying illustrations (14). The treatment of these characters is by no means unsympathetic, and the last example occurs in a story which is charmingly written, but one cannot help wondering about the extent to which the stereotype—South Europeans

—Gregor (Monkmeyer).

—Max Tharpe (Monkmeyer).

"The earliest impressions develop attitudes that persist."

are organ grinders, peddlers, and fruit and vegetable vendors—may be strengthened by such a presentation.

Americans in these readers are predominantly, almost exclusively, blondes. A check on the illustrations used in three of the readers, found in two of them (3, 4) almost 100 per cent blondes, and another (2) with 75 or 80 per cent. There are occasional references to dark skin, but these usually relate to people far away. Pandas, for example, are found in a distant land (India?) with dark-skinned people (7); in Lapland there are "small dark men" (13); and of course the illustrations for the stories about China, India, North Africa, etc., do show dark people. Not in the United States, however, apart from the exceptions noted above. Negroes are nonexistent. One reader has a story called "A Summer in the South," in which a boy and his father go "away down South to see Grandmother." But there are apparently no Negroes even in the South. It is true that Grandmother had a cook whom Paddy liked "almost as well as he liked Grandmother" (12), but even in the case of the cook, there is no indication of what Charlie May looked like. Either there are no Negroes, or they must not be mentioned. Some years ago, H. E. Wilson ("Intergroup Relations in Teaching Materials," Washington, American Council on Education, 1949) pointed out that in American textbooks foreign nationalities, as well as American minority groups, are either placed in an unfavorable light or are treated inadequately. In the readers under review, to speak of "inadequate treatment" of the Negro is an extreme understatement.

Religion, as was to be expected, is rarely mentioned. Only in one reader is there a reference to religious observance, when on Sunday "everyone was going to church" because "this is Sunday, you know" (9). Paddy says, "I always go to church on Sunday, I

Widely Used Elementary Readers

Dr. Klineberg says of the following books, "These are without exception presented in an attractive format, with hard covers, excellent print, and colorful, attractive illustrations. Although the exact publication figures are not available to the writer, they have been described as representing popular and successful books, adopted for general use by many school boards throughout the country."

—*Max Tharpe (Monkmeyer).*

always do". On a Sunday morning Mr. Carl rolled over in bed until the church bell called, "Come to church! Come to church!" These are the words with which this particular reader closes. No one could argue that in these readers religious (Christian) observance is overemphasized, but again the opportunity might have been taken to give some idea of the range and variety of observance found among the different religious groups that constitute the American people. There is no hint of this in any of the readers examined.

Americans in these readers are all quite well-to-do; not exactly wealthy, perhaps, but certainly quite comfortable, to say the least. The illustrations show, for example, (1) a pleasant home with good furniture, all the children dressed in clean, attractive clothes, with talk about buying new dresses; there are all kinds of toys in the house; the children go out (presumably with their own pocket money) to buy balloons. Again (2), they live in pretty suburban houses, and the children have money in their pockets with which to go buy toys themselves (2). The farmer has his own tractor, and Father brings home a new car, "long and blue and beautiful" (2). In another Reader (3) the family has an attractive home with a car, a television set, toys, and bicycles. In still another, the mother buys her girls new coats (5); or they already have beautiful clothes and the house a modern, built-in kitchen (6); or the family takes a trip on a big and very luxurious ship (7); or the boy goes riding on his own pony (8); or the family lives in "a pretty white house" (9); or father takes the children to the circus and his boys to the ball game (11); or they take a train out West (12). Poverty exists, but usually only in fairy tales or those set in a foreign environment, and even in those cases everything turns out right before the end. Occasionally a boy will do some work in order to earn money, but he then puts away his twenty pennies in his own "bird bank" (9). Not only is there no poverty, but work seems to be readily available to everybody, and is on the whole not only easy, but "fun."

In fact, life in general is fun, filled almost exclusively with friendly, smiling people, including gentle and understanding parents, doting grandparents, generous and cooperative neighbors, even warm-hearted strangers. There is an occasional display of anger, but it is usually very transitory. In general, all is peaceful and happy.

In summary, then, life in the United States as it is portrayed in these children's readers is in a general way easy and comfortable, frustrations are rare and usually overcome quiet easily, people (all white, mostly blonde, and "North European" in origin) are almost invariably kind and generous. There are other kinds of people in the world, but they live in far-off countries or in days gone by; they evidently have no place on the American scene.

WHEN we turn to the *attitudes* which the content of the readers will develop in the children, we are on less certain ground, since we must depend on inference rather than on direct observation. Certain conclusions can be drawn, however, with a fair degree of probability. There is a great deal of published work which demonstrates that ethnocentric attitudes develop very early in children, and that they are already present at the ages for which these readers are destined. (See for example "Prejudice and Ethnic Relations," by John Harding *et al.*, Chapter 27 in G. Lindzey, editor, "Handbook of Social Psychology," 2 volumes, Addison Wesley, Cambridge, 1954, and K. B. Clark, "Prejudice and Your Child," Beacon Press, Boston, 1955). Obviously, the responsibility for this cannot all be laid at the door of school experience, since so many other influences make their contribution. Nevertheless, some of that responsibility must be borne by readers which, by what they omit as well as by what they contain, give the impression that the "true" American is of the fair-skinned "North European" variety. Although this was certainly not the aim of the writers concerned, the net effect would almost certainly be to strengthen the ethnocentric attitudes of those children who share these characteristics, and make all others—of Negro, Puerto Rican, South European, possibly also of Jewish origin—feel that they do not quite belong. Since these and other ethnic groups constitute a substantial proportion of the American school population, it would not be surprising if the readers had an alien quality for a great many of the children who come into contact with them. (The writer is reminded of a Brazilian first reader which starts out telling the children that Brazil has three "mothers," one European, white, one Indian, red, and one African, black, and goes on from there to describe how the present Brazilian population has developed.)

In addition to ethnocentrism, the readers also display what might rather clumsily be called a socioeconomic-centrism, a concentration on those who are relatively well-to-do. Here the problem is rather more complicated, because Americans are in general well-to-do, and the amenities described are within the reach of a substantial proportion of the population. For the remaining "one-fourth of a nation" it is part of the American dream that a more comfortable life is attainable. Until it is attained, however, the life portrayed in these readers must represent a very frustrating experience for them. Are *no* other families as poor as ours? Does everybody else live in a pretty white house? Are there no crowded tenements except where we live? Are we the only ones who can't go out and buy the toys we want? On the other side, is it desirable for the well-to-do children to be unaware that there may be poor people living on the other side of the tracks? Surely a more balanced presentation of American life, both from the ethnic and socioeconomic standpoints, would better prepare the children for what they will later encounter and help to correct what would otherwise be a one-sided picture. It may be argued that this will come in time, and that these children are still too young to face that kind of reality. The fact remains that the earliest impressions frequently develop attitudes that persist; it follows that it is never too early to tell children the truth.

THERE is another striking feature of these readers related to the question of "truth." In addition to the (conceivably factual) accounts of the activities and experiences of children and their families, most of the readers contain a number of stories, which, though fictional in character, deal with animals or with objects such as trains or airplanes which the children have in all probability encountered. These stories are predominantly characterized by *anthropomorphism* (ascribing human qualities to animals) and *animism* (ascribing life and thought to inanimate objects). Thus a snowman laughs (1), animals talk to one another (1,2,8,9, 10,11,14,15) and cooperate in joint enterprises (1); trains converse (10), and so do airplanes and helicopters (10, 11), cars and taxis (15), and there is even a little red lighthouse, round and fat and "very proud," which carries on a conversation with a new bridge (15).

There can be no doubt that animistic thinking is widespread among young children, at least in Western society. (J. Piaget, "The Child's Conception of the World," New York, 1929). It has been suggested, however, that this tendency would not be nearly so marked nor so common if it were not for the influence of language (as when we refer to a ship as "she"), the actions of parents and other adults (like spanking the chair that "hurt" the little child), and the stories told as in these particular readers, for example. In any case, animism is a stage *through which* children pass, through which children *must* pass if they are to reach a realistic appraisal of the outside world. The

present writer feels that the proliferation of anthropomorphism and animism creates an unnecessary barrier to the intellectual development of children, who should rather be encouraged to make, as early as possible, a distinction which is in harmony with the truth. He finds it hard to believe that animistic distortion is necessary in order to attract the attention of even young children. In fact, he has met children of six who would show a pitying smile at such an insult to their intelligence.

As far as *moral* attitudes are concerned, the readers appear to be on relatively safe ground. They illustrate, without any overt preaching, the virtues of honesty, fair play, cooperation, family solidarity, work and thrift, friendship, independence, cleanliness, courage and forgiveness. There is even, as has already been indicated, an awareness and acceptance of differences in culture and background, but usually for people far removed in space and time. One could certainly wish for more of this in the case of those nearer home; for these, there are no negative or unfriendly references; they simply do not exist.

In regard to the desire to read further, the editors of these readers, some of whom are personally and favorably known to the present writer, presumably have based their choice of materials on a knowledge of the tastes and interests of children. It is hard to believe, however, that enough is being done to stimulate the *curiosity* of the children, to make them feel that they would like to know more. The readers do contain a number of well-written stories and some delightful poems, but almost no information. Surely, together with the reading of good prose or verse, a reader could do more to instruct the child.

This report concludes with two specific proposals. The first is that the analysis made of American readers be supplemented by a comparison with readers of other countries (France, the Soviet Union, Brazil, and Sweden, for example) to determine what can be discovered from their experience, and also to see what other children, no brighter than our own, can absorb at an early age. The second is the preparation of sample readers designed to give children a more complete and more adequate picture of American life, and capable at the same time of making *important* things *interesting*.

Collective Bargaining

CENTER FOR LABOR AND MANAGEMENT
COLLEGE OF BUSINESS ADMINISTRATION
THE UNIVERSITY OF IOWA
IOWA CITY, IOWA

Can GE's unions exorcise Boulwarism?

Coll. Bargaining 54-69

It is a mistake to think of the current electrical industry negotiations as collective bargaining; they are really an attempt at exorcism. The unions that bargain with General Electric have united to exorcise the formidable ghost of Lemuel Boulware, the now-retired father of GE's policy of taking and holding the bargaining initiative. The odds may be against their succeeding—or at least succeeding definitively enough to banish the ghost once and for all. But a few years ago a bookmaker would not even have bothered to figure the odds.

The unions arrayed against GE (and, almost as an afterthought, against Westinghouse) include groups that bear little love for each other: the International Union of Electrical Workers, formed as a rival union when the old CIO expelled the United Electrical Workers for Communist taint; UE, which hung on grimly to become the No. 2 union in the industry; the craft-oriented International Brotherhood of Electrical Workers, chronically suspicious of both IUE and UE; the International Brotherhood of Teamsters and the United Auto Workers, the country's strongest unions despite their separation from AFL-CIO, but representing only small fractions of the electrical industry work force; the International Assn. of Machinists, as orthodox as it is militant; and a handful of smaller fry.

IUE's Paul Jennings

To anyone familiar with the short tempers and long memories of the labor movement, there is high drama in the occasion. In more Shakespearean times, the sheeted dead would have squealed and gibbered in the streets the day that IUE's Paul Jennings (finest flower of the Assn. of Catholic Trade Unionists, former habitué of labor-management luncheons at New York's intellectual New School) and UE's Albert J. Fitzgerald (veteran infighter for his outcast union) issued identical rejections of GE's contract offer.

Two definitions. Only a matter of compelling principle could have brought those two together—and genuine principle is at stake on both sides of the bargaining table. That in itself is enough to distinguish the negotiations. The word "principle" is common in bargaining talk and usually it means 7½¢. It doesn't mean that here.

As GE sees it, principle involves the company's right to retain control of its employees' wages and working conditions, to determine fairly but independently the terms of a contract offer and to stick basically to those terms. The unions' desires are to be considered, but the company remains the final judge of what its employees really want and what the company is prepared to give.

As the unions see it, principle involves their right to bargain as partners, to affect substantively the course of negotiations, as they do when UAW bargains with General Motors, the United Steelworkers with Big Steel, or most unionized companies with their unions.

That's the point. GE is the one big, successful, articulate holdout among unionized U. S. companies, a conscious exponent of non-egalitarianism in bargaining. As such, it serves as a model for many smaller, conservative-minded companies and some not so small. Few manage to duplicate its success, but, in the words of an AFL-CIO official, "We spend a lot of time and money convincing them they can't." Cut the model down to size, the unions reason, and they save the time and money. Moreover, the unions fear that altered economic conditions may improve the prospects for Boulwarism sometime in the future if they do not exorcise it now.

New components. Realistically, Boulwarism itself has changed although it still remains too close to the original for union comfort. Factors that favored its development have changed with time.

Formerly, the personal instability of James Carey, IUE's ex-president, made him maneuverable by GE strategists. The left-wing pasts of many UE officials limited their scope at the same time that their leadership qualities kept UE a useful counterpoise to IUE. For historical reasons, a multitude of unions represented GE workers in place of a single strong union as in autos or steel, an ideal arrangement from GE's viewpoint.

Today, a new man heads IUE. UE's political vulnerability has declined as its past receded. And a seemingly firm front of unions faces GE across the bargaining table.

Other factors favor the company. Many of its workers belong to no union. GE's policy of year-round communication with its employees (another component of Boulwarism) gives it more influence with its work force than most companies have. The union alliance is still untested, and 1969 could be its last chance for many years. Rising unemployment figures could dim members' militancy by the time the next contract reopening rolls around.

Clues. So what are the prospects for the exorcism of Boulwarism? Probably no one will know for sure even after the contracts have been signed.

The contracts themselves will provide some clues. The unions can claim an important measure of success if the agreements are substantially better than, rather than merely different from, GE's original offer; the company's traditional willingness to "rearrange" the parts of a contract package but not to improve the whole has long rankled the unions as both symbol of its policy and practical proof of its dominance. The unions can claim success if they win changes long sought in working conditions. But comparing specific clauses with clauses on similar topics in General Motors' contract or U. S. Steel's contract will not prove anything; the most optimistic electrical unionist does not expect to achieve in one negotiation what the auto and steel unions have achieved in a generation. Nor will a strike prove much; labor history is studded with strikes that settled nothing. And it goes without saying that official declarations by company and union bargainers, after the event, will be meaningless. Who ever heard of contract negotiations that weren't described as victories by both sides—or, alternatively as fair resolutions of mutual problems, acceptable to all?

UE's Albert Fitzgerald

The real proof that the ghost is gone—or still walks—will come with the next negotiations. If union and management representatives sit down at the bargaining table as psychological equals, prepared for active give and take, the ghost will be gone. If not, the exorcism will have failed.

That's the difference between collective bargaining and magic. One wins or loses a negotiation—or achieves a standoff. One never knows whether an exorcism has worked till long afterward.

To / Bay.

THE ELEMENTS OF THE BARGAIN

1. The thing which workers have which they can offer an employer is their labor - their skills as producers of the employer's product.

   Workers can also offer (or withhold) their cooperation, interest and imagination in relation to their work for the employer.

2. The thing which an employer has which he can offer to workers is jobs.

   An employer can also offer (or withhold) an interest in and understanding of the problems of the workers and their union.

   Collective bargaining takes place between the representatives of the workers who want jobs and the employer who needs workers on the wages, hours, and other terms and conditions under which a bargain can be reached.

3. In order to support its proposals, the union has the power of its members to collectively withhold their labor.

   The logic and moral rightness of the union's proposals will be factors which affect this power.

4. In order to resist union proposals or to support proposals of his own, the employer has the power to withhold job opportunities, to stop his operation and to replace workers.

   The logic and moral rigtness of the employer's position will be factors which affect this power.

DEFINITION OF COLLECTIVE BARGAINING

- a method of determining the wages, hours and working conditions of labor, and a process of interaction between representatives of the union and representatives of management.

Contract negotiations and re-openers: the periodic determination of wages, hours and other terms and conditions of employment.

Day-to-day bargaining: in the grievance procedure within the framework of the contract, and in relation to matters not covered by the contract.

ALTERNATIVES TO COLLECTIVE BARGAINING

1. The operation of market forces.
2. Individual bargaining.
3. Employer determination
4. Determination by private arbitration.
5. Government determination.

COLLECTIVE BARGAINING GOALS - from the standpoint of the union:

1. To attempt to equalize bargaining power between workers and management.

2. To improve wages, hours and working conditions.

3. To attain a degree of job security.

4. To achieve a degree of industrial democracy.

5. To attain and maintain a high level of purchasing power so that workers can buy back the things which they and other workers have produced (including the products of industry, farm, construction, the professions, and service trades).

6. To reduce or eliminate wage competition and wage differentials in one industry between different plants and geographical areas (and to some extent, between different industries in the same area).

These goals are inter-related. For example, the elimination of the "southern differential" will contribute to the bargaining position of northern locals.

These goals sometimes come into conflict with each other. For example, a balance must be struck between wages paid and the capacity of an employer to absorb the added costs and maintain the same level of employment (job security).

FACTORS WHICH AFFECT COLLECTIVE BARGAINING - some of the things which help determine what the union will get in negotiations

1. The strength and attitude of the union, locally and nationally:

   - Is it a new local or a well-established local?

   - Does the local or international cover more than one plant of the employer?

   - If other plants are involved, what are the nature of contract terms and the status of bargaining in these other plants?

   - What has been the nature of the relationship with the employer in previous negotiations?

   - How did things work out under the current contract?

   - How effective has been the day-to-day operation of the union - local meetings, stewards' meetings, grievance procedure, education program, legislative and political activities, social and recreational activities, quantity and quality of service from the international (as needed)?

   - How will the local be affected by "the consequences of non-agreement"?

2. The strength and attitude of the employer:

   - Does the employer really accept the union as a continuing part of his operation?

   - Is it a single plant, or part of a chain?

   - If a chain, what is the extent of organization among the various plants, is there a variety of unions involved, what is the nature of the various contract terms, and what is the status of contract negotiations in the other plants?

   - To what associations, formal or informal, does the employer belong?

   - What is the economic position of the employer relative to:
     - -nature of the product
     - -demand for the product
     - -labor supply
     - -profit situation
     - -competitive position
     - -plant efficiency
     - -plans for expansion
     - -"ability to pay"

   - How will the employer be affected by the "consequences of non-agreement"?

3. Industry differences in contract terms, particularly wages and fringes:

   - What is the impact of "coercive comparison" on the parties?

4. Regional differences

   - What is the extent of union organization in the area as compared with other areas?

   - What is the nature of the predominant industries in the area?

   - What are the regional differences in terms of workloads, plant and equipment, methods and processes?

   - Is the area known as a "high" or "low" wage area?

5. The general economic situation:

   - Are times good or bad, and what is the general trend in this respect?

   - How strong are the pressures of the cost of living?

6. What is happening in the major bargaining situations throughout the country:

   - What settlements are being made which will serve as goals or as limitations on a particular situation?

7. Government policies and laws:

   - Wage and price control programs, if any.

   - Current administration position relative to wage and fringe issues, as well as union security issues.

   - The Taft-Hartley law: (plus NLRB and Court interpretations)

     - the duty to bargain
     - union security
     - check-off
     - featherbedding
     - jurisdictional strikes
     - secondary boycotts
     - hot cargo clauses
     - exclusive bargaining versus individual bargain
     - nature of the bargaining unit
     - employer free speech
     - suits in Federal Court for contract violation (wild cat strike)
     - restrictions on administration of health and welfare programs
     - national emergency provisions

- State laws:

    - union security
    - regulation of strikes and picketing
    - regulations re: public employees, public utility workers
    - provisions re: labor relations in intrastate commerce

- The Fair Labor Standards Act, Walsh-Healy, Social Security

8. The attitude of the community:

    - Are there other unions in the area and what is their relationship with your union?

    - Is the community generally pro- or anti-union?

    - What will be the attitude of business and professional groups in the event of a showdown?

    - What will be the attitude of city and county government, police and other agencies in the event of a showdown?

    - What is the attitude of church and agency leaders?

THE PARTIES TO THE COLLECTIVE BARGAINING PROCESS

1. A common view:

Three parties: the union, the company, and the employees:

This view often reflects a lack of understanding on the part of the employees that they ARE the union. It may indicate an unwillingness on the part of the company to accept the union as a regular part of the operation. It may reflect a desire to split the union leadership from the union membership. It is in line with the "labor boss" theory.

2. A more realistic view:

Two parties: the union (which is the members and has no existence apart from them), and the company.

Under law, the union is certified as exclusive bargaining agent for all occupants of occupations noted in the certification order. However, the law frequently makes a distinction between employees and the bargaining agent.

RESPONSIBILITIES AND PROBLEMS OF UNION LEADERSHIP IN THE COLLECTIVE BARGAINING PROCESS

I. IN RELATION TO THE EMPLOYER

A. Assembling facts for negotiations - a year-round process:

1. Resources:

   - settlements and patterns in labor-management relations generally
   - settlements and patterns in your industry
   - settlements and patterns in different industries in your own community
   - what's been happening in the shop under your current contract

2. A suggestion:

   - involve stewards and as many other members as possible in an examination of the existing contract for possible changes; participation by the members in these decisions will tend to improve the quality of their support for the final proposals.

B. Anticipation

1. Of company proposals and the stated and actual reasons for them.

2. Of the company attitude, expressed and unexpressed, toward union proposals.

   Opportunities for estimating company positions exist in the day-to-day relationship of the parties. The process of anticipation will improve the quality of the union's performance in conference with the company; prepare the other side's case as well as your own. Sharing what is anticipated with the membership will increase confidence in the leadership.

C. Preparing the actual proposals

1. The "language" approach:

   Working up classes in exact contract language. This offers a solution without a statement of the problem. It is possible that devotion to language or an exact solution may hinder agreement. However, the language approach is common and often necessary; be alert to the problems which it presents.

2. The "problem" approach:

   Presenting the problem with a generalized suggestion for its solution - a clearcut invitation to management to acknowledge the problem and participate in a joint solution, with language secondary. This allows more freedom for bargaining with less initial bickering about language.

3. Support for proposals:

   Be ready to document requests for change; the company is bound to ask the union why it wants a change (or a new proposal). Grievance procedure and arbitration records are important in this respect - as well as stewards' notes on problems for which the contract or past practice offered no solution.

4. Estimating minimum requirements:

   Make a conscious effort to analyze what the minimum requirements are in relation to each proposal - what the union must have. This estimate of what is minimum may change as negotiations develop.

5. The broad, union-wide proposals:

   Be able to relate any such international programs to the local situation to lessen the affect of management's claim that this is strictly a national office adventure. This is also important in relation to the membership.

6. Membership action on proposals before they are submitted to the company:

   This involves the "principle of participation" and helps the members to appreciate their role in the collective bargaining process.

   A mimeographed summary of the proposals in the hands of the membership at the meeting will contribute to an orderly meeting and intelligent discussion and action.

D. <u>In conference with the company</u>

1. Bargaining committee procedure:

   - planning prior to each session with management
   - evaluating each session with management
   - the size and nature of the committee
   - the "spokesman" theory
   - recesses and other tactical shennanigans

2. Getting to the heart of an issue:

   - precisely what are we (the union) after?

   - precisely what is the company after?

     Timing plays a role here; that is, the determination of the time when precision is desirable. In the early phases of negotiations, there may be tactical reasons for a certain amount of obscurity.

3. Maintaining the union's bargaining strength:

   - as far as the members are concerned, certain issues have more appeal than others; therefore, the timing of tentative agreements on such issues may have a bearing on the union's ability to make progress on some less popular but equally important matters

   - the "GE" formula

4. The "art" of settlement:

   - have we gone as far as we can on a particular issue?

   - if we continue to press, may the company back off?

5. The tentative agreement with management prior to membership ratification:

   - must the union, under pressure from management, commit itself as to whether or not it will "sell" the tentative agreement to the membership?

   - avoiding embarrassment in the event of unanticipated action by the membership.

6. Other considerations:

   a. Educational proposals

      Those submitted and discussed without expectation of immediate attainment for the purpose of warming up management to a later, serious push.

   b. Educating the company about the union

      Take advantage of such opportunities, or create them. Particularly in a new bargaining relationship, management may be plenty worried about the union. How does the union look at bargaining? What is the role of the members? Of the leaders? How are leaders selected? the role of the International? The union view of the stewards' role and of the grievance procedure in general. Etc.

c. Learning about company problems

Resist the temptation to give short answers when the company attempts to air its problems and grievances. The more you know about the company, the product and the industry, the better representation you can give. And if you won't listen, the company may search for understanding through direct mailings to the membership. Or in full page ads in the local papers.

d. Be alert for injudicious company proposals

The company may submit proposals which cry for an instant "No!" Consider, however, the use which such proposals may be put to in gaining membership support for the hard road ahead. Courtesy requires that such use of such proposals precede any detailed explanation by the company of the problem they are designed to solve.

e. Be cautious with apparently unrealistic union proposals.

Just as in "d" above, the company may use these to your disadvantage in its contacts with stockholders, the public and even the union membership. In presenting something of a dubious nature, time it in such fashion that a full explanation of why it is needed is forced on the company. Should the company, aware of the good, sound reasons for the proposal, then run off half cocked to its various publics, the union is in a position to be righteously indignant.

f. Giving consideration to the other's point of view

This is sound on principle. It is also good tactics since you can then expect similar consideration from the company. "Giving consideration", of course, does not mean that any type of agreement must be reached on an issue.

g. Dealing with management publicity during negotations

If management goes to the papers, radio and/or TV with its case, the union may feel compelled to answer. You cannot compete financially, so the timing and nature of your response are important. Care should be exercised in relation to charges of bad faith, name calling and such things; management will become indignant and bargaining will slow down. The position of labor in our society suggests that the union may have to take more abuse than it can afford to give. Another caution: once the issues have hit the press, bargaining tends to take place in public, with the substitution of speechmaking for true negotiations.

h. Avoid backing management into a corner from which there is no honorable exit.

If there must be a showdown, let it be on the basis of valid issues rather than on the need of one party or the other to save face.

II. IN RELATION TO THE MEMBERSHIP

A. The membership is the source of the union's bargaining power.

While the bargaining committee may be concerned about its relationship with the employer during negotiations, it must be even more concerned about its relationship to the members whose interests it is representing - or had better be representing.

The union's year-round program of meetings, stewards' meetings, grievance handling, union education, community services and other activities must all be viewed in their relationship to the development of bargaining strength. Membership understanding and activity are the goals, and these cannot be developed on 60 days' notice.

B. Preliminary activities (before meeting with the employer)

1. Creating the proper climate for negotiations:

   - do not assume that support for the committee will come about automatically simply because the contract is expiring

   - use every means and opportunity to remind the members of their key role in the collective bargaining process

     as at union meetings, stewards' meetings, department meetings, talk in the shop, talk in car pools, phone contacts, home visits, the union paper, letters

     some members will shy away from any responsibilities in order at a later date to be in a good position to offer criticism

2. Include the membership in the preparation of proposals:

   - many good ideas can be obtained in this way

   - the principle of participation; people tend to support better something about which they have had a chance to make decisions

   - problems: the queer proposal, the unobtainable proposal:

     leadership must give reassurance to these people that their help was appreciated

- membership participation may be obtained at local meetings, department meetings, and through a continuing program of written membership suggestions on some appropriate form. Some locals make use of a questionnaire.

3. Focus membership attention on the major contract problems and their suggested solutions as reflected in the union proposals:

   - the list of proposals is often too long and detailed to be on the lips of every member

   - attempt to gain good understanding of the major proposals of an order which will bring an intelligent response if members are questioned in the shop by management, or by members of the general public

   - all union resources for communicating with the membership should be used in this process

4. Prepare members for the probable company approach to negotiations:

   - what will be the major company proposals and how will they be defended?

   - what will be the probable attitude of the company toward various union proposals?

   - intelligent predictions in this area will help soften the impact of company activities in behalf of its own proposals and will help build confidence in the committee

C. <u>While negotiations are in progress</u>.

1. Keep in touch with the memberhip:

   - the principle of participation: people will tend to accept propositions about which they have helped make decisions

   - use all union resources for communicating with the membership to keep them informed: the union wants a positive response from its people under questionning by management or the public

     but there may be sound tactical reasons for temporarily withholding certain information

2. Lack of progress, as well as progress, should be reported:

   - the absence of progress may be based on the company's evaluation of membership interest; the company has an ear for the bargaining table and an ear for the shop.

D. When negotiations are completed:

1. The ratification meeting

- the report should be frank and honest (on principle, and to avoid future trouble)

- decide in advance of the meeting as to the nature of the report

- generally speaking, the report should include a recommendation for acceptance or rejection; members should be clearly and repeatedly informed of their rights concerning any recommendation

- a mimeographed summary of the report in the hands of the membership may be helpful in guiding discussion and action

- take time to review factors contributing to success or failure with regard to certain proposals; use the report to educate the membership

- stress the importance of making the new agreement work

2. Start the membership thinking and planning ahead to the next re-opener or contract expiration.

III. IN RELATION TO THE COMMUNITY

A. The public relations aspect of collective bargaining:

1. What the union does will have an economic and social impact on the community.

2. The union's friends will want to be able to justify their support for the union; they may have an influence on management which the union itself does not possess.

3. A good case for the union will help neutralize anti-union elements in the community (particularly if the union has developed a good public "image" over the long run).

4. Unless bargaining tactics require it, it may be well to attempt to avoid a surprise showdown (particularly in a small community).

B. The public support aspect:

1. The attitude which non-labor people take toward the union's position will have an affect on the morale of the membership.

2. General approval of the union's position as expressed by the community may have some affect on management's position in negotiations.

3. However, attention given to the community cannot be given at the expense of attention to the membership; they are the people who constitute the power of the union.

IV. IN RELATION TO OTHER GROUPS

The union wants the support of other labor groups in the community. What the union achieves or fails to achieve will have an affect on these locals. Therefore, be prepared to consider their problems even though the union may finally decide on a course of action unpopular with other locals. Keep other locals informed of your situation (trades council, letters, visits to meetings). The attitude which other union people take toward your members will affect the morale of your people.

JOB EVALUATION PLANS

The rapid increase of formal job evaluation plans in the last two decades has brought a variety of special problems to unions.

A major danger is that these plans, which use technical and often inflexible methods to decide how much each job is "worth" as compared to other jobs, may supplant or unduly cramp or limit collective bargaining on wage rates for individual jobs.

The difficulties in working with job evaluation plans are compounded by the fact that there are no generally accepted uniform practices. There are wide variations in types of plans and in their administration.

Also, since the plans tend to be plant wide, rather than industry or even company wide, the problems normally have to be met on a local basis. Bargaining on job evaluation is primarily carried on at the local union level, although in one major exception, in the steel industry, the United Steelworkers have negotiated a plan extending through the basic steel industry.

The following article discusses briefly several of the types of questions and problems involved in job evaluation plans.

Union Attitudes

Union experience with job evaluation plans has varied widely. As a result, there is no single or overall union attitude or policy toward job evaluation.

Some unions have resisted its introduction. Others have joined in or even requested the installation of job evaluation plans.

For unions which already have such plans in effect, the immediate question is not whether to accept or reject job evaluation, but rather "How can we represent our members most effectively under the plan now in effect? Should we participate in it and if so, how?"

The degree to which union *desire* to participate varies considerably. In some cases unions have decided on a job evaluation plan jointly with management; they have analyzed jobs and written job descriptions, evaluated jobs, determined labor grades and rate ranges, all on a joint basis. Other unions have allowed management to perform these functions, but have reserved the right to question the results of each step through the grievance procedure.

In still other cases unions have simply stated that all they are interested in are the wages paid to their members and that management may use whatever means it desires to arrive at what it thinks wages should be. The union simply reserves the right to bargain on the results of any management wage determination, regardless of how the determination is made.

Whether unions are for or against job evaluation on principle, all agree that where a plan exists it is necessary to provide protection against any arbitrary and abusive application by management. This protection must be gained primarily through collective bargaining

BARGAINING IN 1958 AND 1959

How does the 1959 bargaining picture shape up?

As always, bargaining results will vary considerably between and within industries, but sizeable wage increases should be the general rule. The widespread pick-up in production, rising productivity and rising profit margins appear to provide a favorable climate for wage-increase negotiations.

Presented on the following pages are (1) a broad summary of the results of bargaining last year, 1958, and (2) a brief review of some of the basic factors which will influence bargaining in 1959.

Bargaining Results in 1958

Despite unfavorable economic conditions, workers under union agreements received wage increases in 1958, increases generally large enough both (a) to make up for the rises in the cost of living and (b) to provide an additional amount for some "real" wage gain.

Serious economic recession and business uncertainty marked much of the year. This did limit increases in some of the industries most seriously affected, but by and large unions were not stampeded into passing up wage increases or into accepting merely token raises.

The increases received by the largest numbers of workers over the year were between 11 and 15 cents an hour. This takes into account all three types of wage increases under collective bargaining: (1) those negotiated during the year, plus (2) cost-of-living adjustments provided automatically under agreement escalator provisions, and (3) so-called "deferred" fixed increases provided automatically under long-term agreements negotiated in an earlier year.

In addition, the great majority of bargaining settlements provided also for some liberalization of various fringe benefits.

A more detailed summary of 1958 wage and benefit increases starts on page 3.

Economic Factors in 1959

Bargaining in 1959 will take place against a more favorable business background than in 1958.

In contrast to the sharp slump in many business activities early last year, 1959 has opened on an economic upturn. Although views differ on how rapidly this upturn will proceed, there is wide agreement that some continuing improvement will be taking place throughout the year.

Also in progress as 1959 opens is a sharp increase in productivity. Output is rising with relatively little increase in employment.

The rising productivity (more output per man hour of work) means lower production costs and larger profit

Labor's ECONOMIC REVIEW

Vol. 5, No. 1 January, 1960

IN BRIEF

For 25 years the promotion of collective bargaining has been official government policy. Yet today collective bargaining institutions are under sharp attack.

What are the basic ingredients of collective bargaining? What values does it bring to labor-management relations and to the economy as a whole? What alternative methods have been proposed as a substitute? These are the questions with which this issue of Labor's Economic Review is concerned.

A Vital Force For Progress

Collective Bargaining in America

It is now almost 25 years since Congress first set forth its approval of collective bargaining as the preferred method for determining wages, hours, and work conditions of American workers. The National Labor Relations Act, signed by President Franklin D. Roosevelt in June 1935, sets forth government policy in these words:

> "It is hereby declared to be the policy of the United States to eliminate the causes of certain substantial obstructions to the free flow of commerce and to mitigate and eliminate these obstructions when they have occurred by encouraging the practice and procedure of collective bargaining". . .

The history of collective bargaining, of course, dates from a much earlier era, although it has not always been the accepted practice in employer-worker relations. In fact, many of the earlier labor unions spurned any systematic method for dealing with employers. They much preferred a more direct action approach through the use of such weapons as the strike or boycott, and objected to any formal agreement by which wages and working conditions would be fixed for a specific period of time. Many of the early unions concentrated their energies on attaining legislative or political goals, minimizing their activities at the work-place.

Although collective bargaining in the U.S. is now a well-accepted institution, its origin is a concept which in time past has been considered quite radical: namely, that the worker is entitled to have a voice equal to his employer in determining his conditions of employment. It was many, many years before American employers were willing to accept this notion and even today many sections of the business community are not convinced of the validity of this principle.

Gradually, however, collective bargaining has become a widely accepted means of determining

"EMPLOYER RIGHTS AND THEIR LIMITATIONS
DURING UNION ORGANIZATIONAL CAMPAIGNS:"
AN ADDRESS BY HOWARD W. KLEEB

(Note: The following address was prepared for delivery January 29, 1964, at the NLRB Conference Workshop at Washington University, St. Louis, Mo., by Howard W. Kleeb, NLRB Associate Executive Secretary.)

Your co-chairman, Mr. Ray Breckenridge, asked that I discuss the subject of employer rights and their limitations during union organizational campaigns. This, of course, brings into play the first amendment of the Constitution, Section 7, Section 8(a) (1) and Section 8(c) of the National Labor Relations Act. I shall therefore limit my comments to this subject, and ask that you bear in mind that the Board also deals with union rights and their limitations during organizational campaigns as well as with the rights of employees.

I. Manner or Method of Communication with Employees

First let's talk about the manner or method of communication between an employer and his employees. The uninformed employer often asks "Can't I even talk to my employees about the union?"; the answer, of course, is an unequivocal "yes." An employer is free to communicate with his employees singly or in groups at any time. The Board imposes restrictions on this right only when it has determined that such talk, because of its nature, tends to interfere with, restrain, or coerce employees in the exercise of their Section 7 rights, or because its timing, even though non-coercive, occurs during the 24-hour Peerless Plywood rule. This rule, established by the Board in 1953 1/, which is still in effect, states: "Employers and unions alike will be prohibited from making election speeches on company time to massed employees of an employer within 24 hours of the scheduled time for conducting an election. Violation of this rule will cause the election to be set aside whenever valid objections are filed."

Likewise, an employer may communicate with his employees by letters, handbills, posters, the introduction of plant rules, and he may attach messages to pay envelopes. Here again the Board will restrict these rights only if such communications interfere with, restrain or coerce, or tend to unfairly influence employees' freedom of choice in an election. However, unlike speeches, there is no comparable Peerless Plywood 1/24-hour election rule with respect to written communications. They may be distributed right up to the eleetion, assuming it is not done in the electioneering area. The Board will, however, in an objections case, look to the contents of such last-minute communications to determine whether there has been a misrepresentation, or that similar campaign trickery, which involves a substantial departure from the truth at a time which prevents the other party or parties from making an effective reply 2/.

Picture posters, cartoons, slides and movies having to do with unions may also be shown to employees up to the date of an election, with the above limitations with respect to contents and timing.

II. Substance and Content of Communication

What about the substance and contents of these communications?

There is, perhaps, no more difficult task confronting the Board today than that of evaluating the contents and substance of statements made orally or in writing, as well as certain motion pictures that are being shown throughout the country. Here again, the Board has to decide whether, in the light of all the surrounding circumstances, such matters tend to interfere with, restrain, or coerce employees in the exercise of their Section 7 rights, or whether they tend to interfere with the employees' free and untrammelled choice in a representation election.

When an employer learns that an organizational campaign is going on among his employees, human nature being what it is, he's just bursting with curiosity to know whether any of his employees have joined, if there have been union meetings, who has attended them, and what was said? How better can he find out than to ask his employees? There would be no problem for the employer or the Board if it could be established that such interrogation was purely motivated. Unfortunately for this point of view, experience has shown that in many cases such questioning is followed by reprisals against union adherents. Employers tend to react angrily to a union drive. Employees they had considered "loyal" before a union drive they now consider "disloyal" because of interest in the union; outside, union representatives are depicted as interlopers with horns, and what was once a nice quiet family affair assumes the proportions of a major struggle for the "loyalty" of the employees. How has the Board dealt with this problem?

In 1954 the Board decided a case known as Blue Flash Express 3/ which set forth principles which are still being followed. The principles are that the Board will find interrogation a violation of Section 8(a) (1) unless the employer can show (1) his intent was only to determine whether the union actually represented a majority; (2) employees interrogated are assured against reprisals; and (3) there is no background of hostility to unions by the employer.

In a recent case 4/, in affirming a Trial Examiner's Decision on interrogation, in which he cites Blue Flash Express 3/, the Board said, inter alia: "We affirm the Trial Examiner's dismissal of the interrogation allegation because we are satisfied that the record supports Respondent's contention that these interrogations were conducted only for the purpose of determining whether Respondent's valid, no-solicitation rule. . . had been violated, and this purpose was indicated to the employees questioned."

Nor will the Board find interrogation illegal where the information is needed to prepare a case before the Board. In such instances the questions must be relevant to the issues and the data sought should be of sufficient probative value to justify the risk of intimidation involved 5/.

However, in July, 1963, the U.S. Fifth Court of Appeals upheld the Board in finding an 8(a) (1) violation where counsel for an employer on one occasion interrogated employees under oath with a court reporter taking statements, and asked questions which were coercive in result and may have tended to interfere with the employees' rights, and, on another occasion, a team of lawyers over a 5-day period interrogated every employee of the company. Although the court recognized the right of the company to attempt to find out certain facts in this case, it found the conduct in total went beyond the pale of privilege 6/.

An interesting sidelight to this case is that the company attorney was named as a co-respondent and the Board found against the attorney as well as against the company. However, the court refused to enforce that part of the Board order running against the attorney, holding that the attorney in question was not "purposely aiding the employer in contravening the statute," but had directed his activity "to matters within the scope of and relevant to rights of the employer by way of proceedings pending or imminent."

Before leaving interrogation, I would like to mention a case decided by the Board in 1962 7/, which was set aside by the Ninth Court of Appeals in 1963. Here the Board found an 8(a) (1) violation where the company, after a representation petition had been filed, systematically interrogated their employees, after several employees had voluntarily informed the employer of their doubts as to the adequacy of the petitioning union's showing of interest in support of the petition.

The Board distinguished this factually from the Blue Flash Express 3/case because the showing of interest is an administrative requirement to assist the Board in determining if a question concerning representation exists. The Board concluded that such interrogations serve no permissible function, and interfere with the employees' rights to privacy in their union affairs.

In reversing the Board the court said that since the employer assured each employee questioned that his job was not in danger and he could refuse to answer the questions; there was no evidence of employer hostility in the background; nor was there evidence that the employees disbelieved the employer's assurances; there was no justification for the Board's conclusion that such interrogation coerced or interfered with employee rights. While the Board has not conceded that such interrogation is permissible, it has decided on the facts in this case not to seek certiorari in the Supreme Court.

Aside from interrogation, what can an employer say to his employees that will not be grounds for finding he violated Section 8(a) (1) of the Act, or unfairly interfered with his employees' free choice in a representation election? An employer may say anything which is truthful, assuming, of course, that the truth so stated is not itself coercive. For example, it may be true that an employer honestly intends to discharge anyone who joins the union, but to say this to his employees would be found to be an unfair labor practice.

On the other hand misrepresentations, or campaign trickery which involves a substantial departure from the truth at a time which prevents the other party or parties from making an effective reply before an election, are grounds for setting aside an election. This is so even though the misrepresentation is not deliberate 8/.

Statement of Legal Position

One rather familiar pattern of employer conduct is to convey to employees predictions of what might happen if a union comes in. This includes such statements as:

A vote for the union will result in a loss of business an/or customers 9/;

If the union is voted in, it will make demands the employer cannot meet; there will be a strike; the employer has a right to hire permanent replacements; and the union employees will be out of a job.

Variations of this approach are to point out that the union supporters would be ineligible for unemployment benefits during a strike; no other company would hire them; their group insurance would be lost; their savings would be depleted; and they would not be able to get a loan; the employer in the event of a strike would subcontract its work 10/.

In such cases the Board has generally found such statements tend to engender fear of economic loss or fear of reprisal, and make it impossible for the employees to make a rational, uncoerced decision in an election. However, I think it is important to stress at this point that the situations cited should not be relied upon blindly. Each case before the Board consists of a combination of facts and circumstances which is rarely found in any other case. The presence or absence of one fact or circumstance in a particular case may very well influence the Board's final decision. A good illustration of how the Board's decisions may be misread lies in the fact that in at least three instances the Board has reversed regional directors in their application of Board decisions in the area of offers of benefits and fear of reprisals 11/.

The Board has also set aside elections where an employer had made pre-election statements, including a statement that if the union won an election the employer would refuse to bargain unless and until the courts made them bargain 12/. An interesting sidelight with reference to this point is that in one case where the Board set aside an election for this reason, among others, the union lost the subsequent election, and upon objections being filed, the regional director recommended that it, too, be set aside, because in his view the employer engaged in the same type of conduct as before the first election. The Board disagreed, finding, among other things, that the employer did not contest the appropriateness of the unit, nor did it indicate to its employees that it would not bargain because the company thought the unit inappropriate, as it had indicated before the first election 13/.

Appeals to Racial Prejudice

Cases involving appeals to racial prejudice seem to have come to the fore in the past several years. The leading cases in the area of election campaigns were handed down by the Board in 1962. In Sewell Mfg. Co. 14/ the Board set aside an election held in two small southern towns. The Board found that the employer, by various propaganda means, resorted to appeals to racial prejudice to prevent a free election. For four months prior to the election the employer circulated an anti-union, segregation, monthly newspaper and distributed other literature and newspaper reproductions including a picture of a white union leader dancing with a Negro woman, all of which the Board concluded were irrelevant to campaign issues and were intended to exacerbate racial prejudice and create an atmosphere of racial hostility to the petitioning union.

In this case the Board announced that in the future a party to an election making use of a racial message will bear the burden of establishing that such message was truthful and germane, and if doubt exists as to whether totality of conduct is truthful, the doubt will be resolved against the party using such a message. The second election was set aside for the same reasons as the first.

In another decision issued on the same date as the first Sewell 14/ case, the Board over-ruled objections that alleged the employer had injected the extraneous issue of race hatred, finding that the employer's letter containing reference to the racial issue was temperate in tone and was essentially factual and true 15/.

The Board has pending before it several objections cases involving racial issues introduced by labor organizations.

Exhibition of Movies

Some employers have exhibited a movie entitled "And Women Must Weep" which was purportedly a true story of a strike involving a different employer and union that resulted in violence, fear, hatred and murder during an unnecessary strike for no justifiable reason 16/.

Others have shown a film titled "A Question of Law and Order 17/." This sound film shows various scenes of mass picketing and attending violence, including physical beating of various persons attempting to enter a plant being picketed, stoning and overturning of cars, and other damage. The Board, in setting aside the election in these cases, stressed the fact that a motion picture is a much more powerful instrument than the written or spoken word in arousing emotions and influencing attitudes. They found the pictures to be in the nature of misrepresentation.

No-Solicitation Rules

In another very important area of organizational communication the Board held that a department store, the May Co., 18/, in refusing to grant a union's request for equal opportunity and time to reply to the employer's non-coercive pre-election speeches to massed assemblies of employees, on company working time, interfered with the conduct of the election. In this case the company maintained and enforced a broad rule denying solicitation during both working and non-working time 18/.

The Sixth U.S. Court of Appeals, refusing to enforce the Board's finding in a subsequent unfair labor practice proceeding, held that the Board could not compel the employer to make its store available to union organizers in the absence of findings that alternative channels of communication were not open to the union. The Board did not seek certiorari in this case before the Supreme Court. However, the Board has not abandoned the theory of this case. Since the reversal by the Sixth Court of Appeals, the Board has cited the May 18/ case in the Montgomery Ward case 4/ decided this month.

In finding the Montgomery Ward 4/no-solicitation rule unlawful, the Board said "Respondent seriously imparied lawful solicitation activities at the natural site where employees are accessible for organizational efforts. Quite clearly, here more than in May 18/, Respondent's broad and unlawful no-solicitation rule, coupled with its own use of company time and property to impress its anit-union propaganda on employees, created a glaring imbalance in organizational communication that justified the union's request to address employees under the same circumstances as had Respondent."

The Montgomery Ward 4/ no-solicitation rule prohibited union solicitation and distribution of union literature on company time, but expressly provided that such activity by employees on company property was permissible if (a) both the soliciting and solicited employees were on their own time, and (b) the solicitation was conducted in an orderly manner and did not interfere with the business of the store. The written rule also proscribed all meetings and speeches. This written rule was supplemented by an oral rule announced at the meeting of the employees, at which the rule was read. At this meeting the employees were told that they were not to discuss the union from 8:30 in the morning until 5:30 in the afternoon, including lunch and coffee break time, and that if they were to do so they "would be fired."

The Board noted that the company made anti-union speeches to assembled employees on paid time, on the company premises, on three occasions. When the union requested permission to address the employees during company's working hours the company refused. As indicated, the Board found under these circumstances that the employer violated the Act.

In another case involving a no-solicitation rule the Second Court of Appeals, in November 1963, enforced a Board finding that an employer violated Section 8(a)(1) by promulgating and enforcing its rule prohibiting employees, when on non-working time and in non-working areas of the plant, from distributing any leaflets, handbills, circulars or other literature on behalf of the union 19/.

In the above case the company urged that the Board had failed to consider whether the employees had alternative means of communication. However, it appears clear that the court rejected this argument since employees alone were involved in contradistinction to non-employees.

In the area of employer rights during the pre-election period, the Supreme Court, on January 13 of this year, sustained the Board's finding that the Exchange Parts Co. 20/ had interfered with its employees prior to an election.

Here, after a petition was filed and before an election, in a letter to its employees, prefaced by the statement that the employees did not need a union to obtain additional improvements in the future, and asking the employees to vote against the union, the employer announced certain benefits concerning holiday, overtime pay, and vacation period, which the Board found was intended to influence the outcome of the election and was also a violation of Section 8(a)(1). The Fifth Court of Appeals, which denied enforcement while accepting the Board's finding, stated: "the critical fact in this case is that the benefits carried no coercive elements; they are not conditioned upon the employee's relinquishment of any rights. The employees had, as the Act intended the employees to have, an unfettered right of self-organization, a free choice. It is impressive logomachy (a dispute in, or concerning, words) to turn "allurements" into "coercion" by divining a secret purpose. It is good, homey, country-lawyer advocacy to argue that a carrot on a stick may have the same effect on a donkey as a club. This is beguiling bewording. But a carrot is not a club, labor is not a donkey. Persuasion is not coercion."

The Fifth Court of Appeals' opinion seemed to turn on the very narrow ground that the company benefits were put into effect unconditionally on a permanent basis and that there was no implication that they would be withdrawn if the employees voted for the union.

A different approach to this problem, in keeping with the Supreme Court's decision, is indicated by the Seventh Court of Appeals in enforcing a Board order in which the Board found promise of benefits by an employer. The court said it was immaterial that "no strings were attached to the offers and no threats [were made] to withdraw benefits if the employees persisted in supporting the union 21/.

In Exchange Parts 20/ the Supreme Court made some observations which thoroughly support what the Board has been saying for years. The Court says "we think the Court of Appeals was mistaken in concluding that the conferral of employee benefits while a representation is pending, for the purpose of inducing employees to vote against the union, does not 'interfere with' the protected right to organize."

The Court also said: ". . . we have no doubt that [Section 8(a)(1)] prohibits not only intrusive threats andpromises but also conduct immediately favorable to employees which is undertaken with the express purpose of impinging upon their freedom of choice for or against unionization and is reasonably calculated to have that effect."

Of particular significance is the Court's statement that: "The danger inherent in well-timed increases in benefits is the suggestion of a fist inside the velvet glove."

Time and Place of Communication

In communicating with his employees, to what extent must the employer be concerned as to the time and place of communication? Aside from the Peerless Plywood 1/ rule which already has been mentioned, the Board has issued a number of decisions dealing with the time and place of non-coercive communication, with particular reference to the numbers of employees present in relation to the total employment figure.

For example, the Board has set aside elections where an employer:

interviewed employees and discussed the union at their homes as well as in the employer's office 22/,

interviewed about 8 of 37 employees at their homes 23/,

interviewed employees individually in a storeroom where the manager's desk was located 24/,

interviewed 5 employees individually out of 119 eligible employees in the basements of 4 stores in a 16-food-store unit 25/.

The above-mentioned cases suggest that if an employer wishes to convey non-coercive statements orally he should do so in "large" groups, or a single group of all employees, and at a place that cannot be construed to be a locus of managerial authority.

Other Employer Activities

Sometimes, particularly in small towns, the Board is confronted with objections revolving around alleged third-party interference during a pre-election campaign. In such cases the local newspaper, public officials, members of the clergy, civic organizations, and others, have engaged in conduct alleged as interference with the election either for or against the participating labor organization. In 1961 the Board decided, in one such case 26/, that an election should be set aside where numerous statements and conduct by various responsible groups and individuals in the community reasonably conveyed the view to the employees that in the event of unionization the employer would shut down its plant and other employers would not locate in the community. The Board found that such conduct created a general atmosphere of fear and confusion which precluded the holding of a free election. The Board adopted the regional director's Report

on Objections with respect to this objection, which stated that it was immaterial whether or not the employer was responsible for the generation of the fear which was created by the third parties, and also noted that there was no evidence that the employer did anything to disavow the threats contained in the newspaper articles and ads that the plant would close if the union were successful. This decision still stands. Assuming that the present Board follows this line of reasoning, it would appear that an employer that does not wish to risk having an election set aside should take steps to disavow any statement or activities by third parties concerning the employer's continuation in business, or other conditions over which the employer has control.

Support for Board's Decisions

As indicated in the beginning of my comments, when we talk of an employer's rights and limitations, we are concerned with the application of the First Amendment to the Constitution, Section 7, Section 8(a)(1), and Section 8(c) of the National Labor Relations Act. How has the Board's approach to the Constitution and the statute fared in the courts?

Going back to 1941 and 1943 we find that the U.S. Supreme Court ruled on two cases involving constitutional rights in the Virginia Electric and Power Co. 27/

The employer had pointed out that strikes and unrest might follow unionization and pointed to the employer's past record on an unorganized basis. The court upheld the employer's right to speak up against unionization. Further support was given to this employer right in the American Tube Bending case 28/. In this case the Court found no intimidation or reprisal in a speech against unionism accompanied by a statement that the employer would abide by the election results if a union were selected.

In 1947 the Taft-Hartley Act incorporated Section 8(c) into the statute. This is sometimes referred to as the free-speech amendment to the Act. The effect of this Section was to preclude the Board from consideration of protected statements by employers or unions as evidence in support of any unfair labor practice charges whatsoever. The Supreme Court, in speaking of Section 8(c) stated: "The remedial function of Section 8(c) is to protect non-coercive speeches by an employer and labor organization alike in favor of a lawful object. It serves that purpose adequately without extending its protection to speech or picketing in furtherance of unfair labor practices . . .29/"

Thus it is clear that neither the First Amendment nor Section 8(c) protects the statements of an employer or a union, if such statements are properly evaluated by the Board to be violative of the Act.

A harder question is posed where the conduct being evaluated by the Board is contained in objections to an election, and is not alleged as an unfair labor practice. The Board has taken the position that Section 8(c) is applicable to unfair labor practices only, and has no application to representation cases; it has been supported in this position by the courts 30/ .

In the Dal-Tex 12/case, decided in 1962, the Board revived the General Shoe 30/doctrine established in 1948, and reversed intervening decisions which held that certain employer's statements in representation cases were privileged because of the introduction of Section 8(c) into the statute.

The Board found in the Dal-Tex case that the entire content of the employer's speeches generated fear of economic loss and hostility toward unions, which destroyed the "laboratory conditions" under which the Board must hold elections.

In the Oak Manufacturing Co. 10/ case the Board stated that it recognized that the employer involved had a constitutionally-protected right of free speech, but that its rights are not derived from Section 8(c) -- which is applicable to unfair labor practice cases but not to representation cases.

In a case that combined 8 (c) statements in an unfair labor practice case with a representation case 31/, the Tenth Court of Appeals, in 1963, reversed a Board finding that pre-election protected anti-union statements to assembled employees was background evidence for an 8 (a)(1). The court said statements protected by 8 (c) cannot serve as the "determinative" foundation for unfair labor practice findings. The Board decided not to seek certiorari in the Supreme Court in this case.

As one who has lived with the National Labor Relations Act for 26 years, both in the field, where the cases are made, and in Washington, where final decisions are made, I feel qualified to tell you that a Board Member's job is not easy. If you think it is, I suggest you try putting yourself in the position of a Board Member in almost any one of these close cases. Bear in mind that you have taken an oath to administer a statute that encourages collective bargaining as a matter of policy, that states the employee has the right to join a labor organization, or refuse to join one without being interfered with, restrained, or coerced, or discriminated against by his employer, or by a labor organization. Add to this the sobering thought that the decision you make may deprive a fellow citizen of his means of livelihood, or seriously affect his industrial way of life, either as an employee or as an employer, and I think you will be forced to agree with me that it is not an easy task.

The cases to which I have referred in my comments are by no means unanimous decisions. Many of them are split decisions. Some of them have different majorities, which illustrates more than anything I can say the difficulty of this field of labor relations. The Board Members are men of ability and integrity as well as knowledgeable in this field. They are aware of your problems and spend long hours in trying to come to the right decision.

In your forthcoming discussion your reactions and criticisms to the Board's approach to "free speech" will be welcomed by the Board as well as by the rest of us in the agency who are deeply interested in this field.

During my three years in St. Louis with the Board, I developed a real fondness and affection for the City of St. Louis and the people in it. I honestly believe it is one of the most sophisticated "labor relations" cities in the United States.

I am sure your criticisms and comments will be thoughtful and meaningful. Thank you for making it possible for me to return, if only for a visit.

The New Consumer Price Index

Every month the U. S. Department of Labor publishes a Consumer Price Index which many people view as a cost-of-living yardstick. Actually this index does not measure living costs; it records changes in the prices of goods and services bought by urban workers.

The index indicates price changes for the things that families and individual workers normally buy, but it does not indicate how much families actually need for living expenses.

The Consumer Price Index, or the CPI as it is commonly called, surveys changes in the prices of things people buy—such as food, clothing, automobiles, homes, house furnishings, household supplies, fuel, drugs, recreation, fees to doctors and lawyers, beauty shops, rent, repair costs, transportation fares and public utility rates. The index deals with prices actually charged to consumers, including sales and excise taxes on homes, but does not include income taxes, social security taxes or personal property taxes paid by consumers.

The Consumer Price Index was revised in January 1964 to reflect changes in the things people buy. This was the latest of the periodic revisions the Labor Department makes in the index to keep it up-to-date.

The following major changes were made in the 1964 revision of the index:

- The importance of specific items in the index has been changed to reflect present spending habits of families and individuals.
- A new comprehensive index has been developed which reflects price changes experienced by both urban families and single workers living alone, in addition to an index based on price changes for things bought only by families of urban workers. These are national indexes for the country as a whole.
- Separate city indexes are being prepared for metropolitan areas with a population of a million or more.
- Changes have been made in the statistical procedures used in computing the indexes.
- Additional and different items are included among the things priced by the Labor Department.
- Changes have occurred in the sample of areas and stores surveyed by the Labor Department for price changes.

The 1964 revision affects all unions since labor is one of the major users of the Consumer Price Index. Some unions may have to change the wording in their cost-of-living escalator clauses to take account of the new revised index.

History of the CPI Changes

The Consumer Price Index has been revised periodically throughout its history, which dates back to 1913. The changes were necessary to reflect the changing way of life. Obviously television sets could not have been included in the early indexes. And today, few buy ice for refrigeration purposes.

Previous studies of buying habits were made as far back as 1917 and 1918 to improve the quality of the index. In the mid-1930s, a new study was made which indicated changes in buying habits during the Depression. Following World War II, another survey of consumer expenditures was made and the index was revised in 1953 to take account of postwar buying habits.

Now the index has undergone another comprehensive revision, based on the Bureau of Labor Statistics survey of consumer expenditures during the period 1960-1961. The Labor Department selected a representative sample of individual and family groups to determine what goods and services are actually bought by wage earners and clerical workers and their families. The Department's representatives visited and interviewed families and single workers to obtain a complete record of the kinds, qualities and amounts of goods, clothing, furniture and all other goods and services bought in 1960 or 1961 and how much was spent for each item. Then the family records were averaged together.

The new indexes are based on buying patterns of

COLLECTIVE BARGAINING *Report*

Prepared by Department of Research
Reprinted from May 1964
AFL-CIO AMERICAN FEDERATIONIST

city families and single workers in 1960 and 1961.

The Make-up of the Index

The CPI is based on a statistical formula which puts together all the items commonly bought by city workers and their families, as determined from the survey of family and individual spending.

Different items have varying degrees of importance in how a family spends its money. Each item is given an importance in the index calculation equal to its average importance in family or individual spending. If families spend ten times as much on item A as they do on item B, then a change in the price of item A will have ten times as great an effect on total family spending as an equal change in the price of item B. The importance given each item is its index "weight."

Expenditures for housing in the new index represent about a third of the total index weight; apparel, on the other hand, accounts for about 10 percent of total expenditures. Apparel is therefore given a weight of 10 percent. The average price change of housing now has about three times as much influence in the index as the average price change of apparel.

On the basis of the new consumer expenditure survey, new index weights have been assigned to various items of the family budget. Thus housing, health, recreation and transportation are now of greater importance in the average family's spending than these items were a decade earlier. On the other hand, the average family and single worker spends a smaller portion of his money on food than he did 10 years ago. The proportion of expenditures spent for clothing and clothing upkeep showed no change in the past decade.

Today, food accounts for about 22 percent of family spending versus 28 percent 10 years ago; housing, 33 percent versus 31 percent in the old index; transportation, 14 percent as against 12 percent before. An accompanying table shows the precise weights assigned to the particular budget categories in the old and new indexes.

Information was gathered on all the items for which families and individuals spend their money. However, to get information on price changes, every single item does not need to be checked. The new index is based on prices of 400 items, compared with 325 in the old index. The price changes for these selected items (the CPI family market basket) are assumed to represent price movements for all the thousands of goods and services purchased by wage earners and clerical workers for family or individual consumption.

For example, some of the items representing food prices are flour, cornflakes, hamburger, round steak, frying chickens, milk, etc. In housing, the cost of rent or home ownership is priced, as well as maintenance, utility costs and the prices of furniture and appliances. The prices of new and used cars, as well as taxi fares and airline fares, enter into computation of the index.

Composition of the list, both the old and new, is based on the selection of items which best represent the general movement of all consumer prices.

BUDGET CATEGORIES OF CONSUMER PRICE INDEX

Source: Bureau of Labor Statistics, U.S. Dept. of Labor

Suburban stores, discount houses and a whole new group of stores are now having their items priced under the new revision. This sampling of stores reflects the growth of suburban shopping centers and the rising number of discount stores in the last 10 years. The stores are those typically used by city worker families.

Prices are obtained by personal visits of Labor Department agents to 16,500 chain stores, independent grocery stores, department and specialty stores, restaurants, professional people and service establishments. Rental rates are obtained from about 34,000 tenants. Certain price information, such as the cost of utility rates or auto license tags, is collected by mail questionnaire or from other governmental or private organizations.

Items are priced monthly or every three months; foods whose prices fluctuate are checked monthly. Other goods and services are priced only every three months, except in the five largest metropolitan areas, where they are priced monthly.

To represent the nation, prices are now surveyed in

50 metropolitan areas and cities (by 1966, 56 cities will be surveyed). These cities are a statistical sample representing all urban places in the United States with a population of 2,500 or more. These areas also are weighted according to the proportion of wage earner and clerical worker groups they represent, as determined by the 1960 population census. Alaska and Hawaii are included for the first time in the current sample for the indexes.

All of this data on price changes of hundreds of items in thousands of stores throughout the country is collected and tabulated each month. The information is put together into a single figure which represents the average change in price experienced by a city worker's family or by an individual worker each month. This is the monthly "All Items" figure published by the Labor Department.

Information on the price movements of special subgroupings of the index also are available. Thus it is possible to see what major items in the index have increased in price and which have decreased. For general purposes, however, the "All Items" index is the most important.

City Indexes

A separate Consumer Price Index is compiled and published on a monthly basis for five cities and on a quarterly basis for 18 cities whose metropolitan areas had over 1 million in population in 1960. Published monthly are indexes for Chicago, Detroit, Los Angeles, New York and Philadelphia.

Quarterly indexes are available for Atlanta, Baltimore, Boston, Cleveland, Pittsburgh, St. Louis, San Francisco, Seattle and Washington, D. C. New cities included in the quarterly series for the first time are: Buffalo, Dallas and Honolulu. The series for Cincinnati, Houston, Kansas City, Milwaukee and Minneapolis-St. Paul will not be revised until the middle of 1965 and the new San Diego index also will not be available until the latter part of 1965. Special reports will be available for four Alaskan cities: Anchorage, Fairbanks, Juneau and Ketchikan. The quarterly reports for Portland, Ore. and Scranton, Pa., have been discontinued.

Statistical Changes

The Labor Department sought not only to modernize the index but also to improve its statistical quality. The government agency is attempting to minimize sampling errors and is seeking methods to measure any such error. In the collection of information, the Department has adopted statistical techniques to reduce possible errors.

Provision also was made for introducing new items into the CPI. Such changes always have been necessary through the years as significant changes occur in family buying patterns.

Index Includes Single Workers

The new CPI measures the price changes experienced by city families as well as by typical single workers living alone. The old index revealed only the buying habits of families of two or more persons. It failed to take into account price changes which affected single workers.

Single workers living alone account for about 10 percent of the total wage earner and clerical worker consumer units. Since workers' incomes and consumption expenditures are generally smaller than those of families, their weight in the new index is only 6 percent of the new comprehensive index.

A second index, relating only to city families, is also published on a national basis but not for separate cities.

The Consumer Price Index represents the average movement of prices for wage earners and clerical workers as a broad group. It does not represent the change in prices paid by any one individual or family or small group of families. The index is not directly applicable to other occupational groups such as farmers or corporation presidents, whose buying patterns differ from city workers.

Some families may find their outlays changing because of changes in factors other than prices. For example, an increasing number of children in a family increases expenses but not prices. Or changes in the quality of goods will change expenses, while prices may remain the same. The index measures only the change in prices.

No Change in Base Period

The base period—the years from which changes are measured—continues on a 1957-59=100 base. In 1962, the index was given the new starting or base period of 1957-59=100 for measuring the changes in prices from the average cost of these goods and services for the 1957-1959 period. The prior base was 1947-49=100. However, the CPI, along with all other

IMPORTANCE OF VARIOUS ITEMS IN THE CONSUMER PRICE INDEX

U.S. Department of Labor

governmental statistical programs, adopted the new base period of 1957-59=100.

The February 1964 index of 107.6 means consumer prices have increased 7.6 percent from the average prices which prevailed in the 1957 to 1959 period for those goods typically purchased by workers and their families. This means the market basket of goods and services which cost $10 in the 1957-59 base period cost $10.76 in February.

Union Use of the CPI

Unions use the Consumer Price Index in two ways:

1. Price changes reflected in the monthly CPI are used as one of the grounds to justify a wage adjustment;

2. The CPI is the basis for escalator clauses in many longterm contracts.

When prices rise, the effect is a cut in buying power, since existing wages cannot buy as much as before. To restore the lost buying power, it is necessary to raise wages by an amount equal to the rise in consumer prices. Thus when prices increase, say 5 percent, each $1 in wages has to be increased 5 percent to $1.05 so the worker's wages can buy as much as before the price rise.

While a wage increase to make up for increased prices is important, it must be recognized that it only restores lost buying power and does not provide any improvement. Additional wage increases are necessary to provide a real increase—one which enables a worker to buy more than he could before.

The new index creates no problems when it is used for negotiations as an indicator of price changes. Actually the revised index is a more up-to-date yardstick for measuring price changes and thus is a better indicator of the amount needed to regain buying power lost through price changes.

Escalator Clauses

When agreements are negotiated for more than a year, many unions have insisted on including a cost-of-living escalator clause to protect the buying power of wages against price rises during the life of the agreement. These escalator clauses provide for the automatic adjustment of wages during the life of the agreement, on the basis of changes in the Consumer Price Index. In addition, such long-term contracts also usually contain provisions for deferred wage increases to provide real gains during the life of the contract.

Some 2.5 million workers are under escalator clauses.

These clauses normally are based on the national Consumer Price Index, though a number of contracts refer to the index of a particular city.

The contract clauses normally provide that wages are to be adjusted for each 0.4 or 0.5 point change in the Consumer Price Index. The aircraft agreements generally call for a one-cent adjustment for each 0.4 point change. The auto agreement formula (negotiated in 1961) is one cent for each 0.5 point change.

Some agreements call for percentage wage adjustments to match the percentage change in the index.

Most contract provisions provide for quarterly or semi-annual adjustments during the contract life.

Some contracts provide for a wage reopener, if the price index exceeds a specified amount.

The revision of the CPI last January has two effects on escalator clauses:

1. A date must be set for shifting the escalator clauses to the new index;

2. A choice must be made of which of two new indexes to use for the escalator clause—the comprehensive index based on the items bought by both city families and single workers or the index limited to the buying patterns only of urban families.

Changes in the wording of existing contracts may not be necessary, depending upon the existing wording of the contract or its expiration date. If the escalator clause is in a contract that terminates in June 1964 or earlier, no changes are required as the old index will be continued through June. But contracts that run beyond June may require changes in their escalator provision.

If the escalator clause is written in sufficiently general terms, presumably the only action necessary is for the parties to agree on the month to shift to the new index and to agree that the new comprehensive index, including families and single workers, shall succeed the old index.

It is desirable to shift from the old index to the new one as soon as possible. Otherwise, if a difference between the two indexes develops, it will be more difficult to make the adjustment. In February, there was no difference between the new and old indexes.

Since the old index will be reported by the Labor Department only through June and then discontinued, it is absolutely necessary to shift to the new index.

There should be no problem in making the shift while both indexes are published, since the new index

CONSUMER PRICE INDEXES FOR INDIVIDUAL CITIES

MONTHLY	CHICAGO	NEW YORK
	DETROIT	PHILADELPHIA

remains the measure of changes in consumer prices and it has been revised to make it a better measuring device. The revision does not affect the principle involved in escalation clauses, namely, that workers should not bear the brunt of changes in living costs during the period of longterm contracts.

Figuring the Price Change

The index can be used to compute changes in prices for any given period either in percentage terms or in points of the index. For example, the change in the Consumer Price Index from January 1963 to January 1964 is from 106.0 to 107.7. This is a 1.7 point change but a 1.6 percentage change. This is the calculation:

Period	*(1957-59 base)*	*(1947-49 base)*
January 1964	107.7	132.1
January 1963	106.0	130.1
Point Change:	1.7	2.0
Percent change:	1.7÷106.0x100=1.6%	
	2.0÷130.1x100=1.6%	

- To figure the point change, just subtract the old index number from the new.
- To figure the percentage change, divide the point change by the old index number, and multiply by 100.

The above table shows that the point change varies, depending upon whether the 1947-49 base or the 1957-59 base is used. The percentage change is the same no matter which base is used.

Two new indexes are now available. One is a comprehensive index, including family buying patterns and those of single workers, while the other includes only families. Each index is as "official" as the other. The negotiator has to decide which index to use. The Labor Department considers the comprehensive index that includes families and single workers the successor to the old index. Generally, most unions have been interested in the broader, comprehensive index as more representative of the buying patterns of the working force. The "family only" index is compiled only at the national level and is not available in the city series.

The revision of the CPI has no effect upon the base period. Both the old index and the new indexes are presented with a base of 1957-59=100. The index also will continue to be reported on the 1947-49=100 base, if this is still used in the contract. The February 1964 index was 107.6 on the 1957-59 base and 132.0 on the 1947-49 base.

Pensions tied to cost-of-living changes also should be reviewed. Similar considerations apply to pension clauses as apply to wage escalator clauses. Changes in wording may be necessary for the sections to be readily applicable.

COLLECTIVE BARGAINING FOR MANAGEMENT

The following pointers were excerpted from a publication titled When Management Negotiates, published by the National Association of Manufacturers in 1967. Local Union negotiators will find them of interest.

DOs AND DON'Ts IN NEGOTIATING THE CONTRACT

The various elements making up successful negotiations have been discussed in detail in the preceding sections, where we have considered: The gathering of information prior to negotiations, evaluation of past experience, selection of the negotiating team, techniques of negotiating, the need for examination of every detail in the formulation of the contract, and the procedures required should negotiations not be successful. It is obvious that there is no pat formula to follow. However, in summary here are some dos and don'ts that could determine the success or failure of bargaining.

DO see that your labor contract permits you to remain competitive.
DO analyze every proposal to determine what it will cost now and in the future, and avoid hidden cost items.
DO ask for revisions or modifications of your contract to give you greater efficiency.
DO remember that collective bargaining is a two-way street -- that the union will often "trade" to get what it wants.
DO make effective use of the counter-proposal.
DO state at the beginning that the terms of the contract become effective on the date the agreement is signed, not retroactive to the date bargaining begins.
DO stick by your position with courage when you know you are fair and right.
DO make sure you have not relinquished important company rights.
DO analyze, digest, review and scrutinize suggested contract lanugage before agreeing, to avoid "give-away" clauses and "sleepers."
DO remember that you have a duty to bargain, but that you are free to disagree and reject any proposal.
DO understand that unions are political organizations and take into account their neck and/or face-saving devices.
DO make sure the final contract has been checked by a competent attorney, to make certain its provisions will hold up and that you are on sound legal ground.
DO try to negotiate from your old labor agreement and your own proposals.
DO avoid permitting the union to take the ball away from you by constant referral to its own proposals.

DON'T relinquish control of the meeting.
DON'T interrupt the union presentation of a proposal, no matter what you think of it personally.
DON'T bargain solely on union demands.

DON'T be misled on mutual consent clauses. (Remember that ability to operate effectively is your most important consideration and that frequently mutual consent clauses give to the union authority not originally intended, and a veto over management actions.)

DON'T make commitments without deliberation.

DON'T offer to make major concessions unless the offer is contingent upon the reaching of a complete agreement.

DON'T give away in one clause of the agreement what you have carefully obtained or preserved in another.

DON'T overlook the need to keep abreast of what employees themselves are thinking and how they are reacting.

DON'T neglect to consider what your agreement will mean to other businesses in your community.

THE CITY WORKER'S BUDGET $9,200 A YEAR

by Rudolph Oswald

It takes over $9,191 a year for a four-person city worker's family to maintain a "moderate standard of living." This budget estimate of the U.S. Department of Labor for late 1966 would be somewhat greater today as a result of steadily rising living costs.

This family budget figure represents neither a "minimum" nor "poverty" level nor a level of "luxury" but rather a "modest but adequate standard of living." While $9,191 a year is considerably higher than the average family's income, some of the detailed items in the budget will seem meager and inadequate to many people.

The $9,191 family budget cost is a national average for a four-person city worker's family, based on detailed cost estimates for 39 large metropolitan areas and several small cities. The cost varies, depending on such factors as whether the famiy rents or owns its home, the age of the children, the climate in the area and local taxes. The budget cost varies from city to city and between large metropolitan areas and smaller cities; it is somewhat higher for homeowner families than renters and in large urban areas than in small cities.

This city worker's family budget, published by the government towards the end of 1967, is a continuation of the Labor Department's series of such budgets. The Department calculated such a budget for various cities in the late 1940s and early 1950s, again in 1959 and now in 1966. The budget cost for a four-person family increased from $4,200 in 1951 to $6,100 in 1959 and to $8,700 in 1966 (for renter families in the 18 major cities included in each of the three studies) and nearly $9,200 for both renter and homeowner families in 39 metropolitan areas and several small cities.

Most of these increases in budget costs reflect rises in the standard of living — such as upgrading food standards, an increase in restaurant meals, a rise in auto ownership and an increase in home ownership.

RUDOLPH OSWALD is an economist in the AFL-CIO Department of Research.

The increases in budget costs also reflect increased prices and increases in federal, state and local income taxes and social security taxes.

In addition to the moderate standard-of-living budget, the Labor Department will issue later in 1968 two additional budgets for a four-person family: A lower standard-of-living budget representing minimum adequacy and a higher standard of living budget reflecting a more comfortable level and manner of living. A retired couple's budget, at a moderate standard of living, also is being developed. The Labor Department expects to estimate the costs of these family budgets annually.

Comparison With Family Income

Only about a third of all American families—regardless of ther size, composition or age of the head of the family—had money incomes of $9,000 or more in 1966, according to the U.S. Bureau of the Census.

The age of the family head influences the family's income. Half of all families, with the head of the family between the ages of 35 and 54, had an income of $8,700 a year or more in 1966.

Another important factor is whether the head of the family has a year-round full-time job. Half of all families headed by a full-time employed person between 35 and 54 years of age had an income of $9,475 or more.

Some of these families are headed by business executives, self-employed doctors, lawyers, dentists and businessmen. A large percentage of families achieve such incomes as a result of working wives. Some families are able to achieve the moderate standard of living through the moonlighting of the family head.

As a result, the Labor Department's family budget for 1966 represents the general living standards of many city worker families and the aspirations of others.

However, the budget also points up the fact that many workers are not now paid enough to maintain moderate family living standards. The wages of a great many workers today clearly fall short of the

WPPA COLLECTIVE BARGAINING INSTITUTE

WRITING CONTRACT CLAUSES

I. Several considerations go into constructing a contract clause

A. What is the clause supposed to do?

1. This can change over time.

a. overtime was originally a penalty imposed on the employer for failing to schedule efficiently.

(1) now, of course, it is highly sought after and sometimes allocated by seniority.

b. seniority was originally meant to protect employees from arbitrary management decisions.

(1) it has evolved as a convenient way to allocate benefits, determine levels of benefits, protect senior employees from layoff. It has taken a number of forms including plant-wide, departmental, and occupational seniority. Ironicly, it has even taken the form known as juniority.

B. What is the best possible clause we could write?

1. Class Discussion -- A vacation Clause

C. <u>What does management see as the challenge to its jurisidction and prerogative in this issue</u>?

1. Class discussion -- A sick leave clause

II. As an exercise, develop a contract clause which would allocate among the members of the department all the requests from private persons for the presence of a uniformed (and perhaps armed) officer who would be on his own time rather than city time and who would be compensated by the private party rather than by the city.

AGREEMENT

ARTICLE I - Prupose of Agreement

1. It is the intent and purpose of the parties hereto that this Agreement shall promote and improve working conditions between the City and the Appleton Professional Policemen's Association hereinafter referred to as the ASSOCIATION and to set forth herein rates of pay, hours of work and other terms and conditions of employment to be observed by the parties hereto.

2. The CITY agrees that there shall be no discrimination by the CITY against any employee covered by this agreement because of his membership or activities in the ASSOCIATION, nor will the CITY interfere with the right of such employees to become members of the ASSOCIATION.

ARTICLE II - Recognition

This agreement made and entered into at Appleton, Wisconsin, pursuant to the provisions of Chapter 111.70, Sections 66:90 and 62:13, of the Wisconsin Statutes by and between the CITY of Appleton, a municipal corporation, as municipal employer with the Police Chief as it's agent, hereinafter referred to as the CITY and the Appleton Professional Policemen's Association, as sole bargaining agent for the policemen of the Appleton Police Department, municipal employees hereinafter referred to as the ASSOCIATION.

ARTICLE III - Hours

A normal work day shall consist of an eight (8) hour shift.

The normal work week shall average forty (40) hours based on a fifty-two (52) week year.

ARTICLE IV - Overtime

1. Employees will be compensated at the rate of time and one half based on their normal rate of pay for all hours worked in excess of the scheduled work day or work week, Overtime and normal work day compensation may be either by pay or time, the choice to be determined by the employee.

2. An officer recalled for an emergency shall receive two (2) hours pay at his regular rate plus pay for the actual hours worked, at time and one half, with a minimum equivalent to three (3) hours straight time.

3. An officer required to appear in court on regular off duty time shall be paid two (2) hours at his regular rate plus pay for the actual hours worked, at time and one half, with a minimum equivalent to three (3) hours straight time. Call in pay for court appearances shall not apply when such appearances are immediately prior to or immediately following the officer's scheduled shift.

ARTICLE V - Pay Period

All salaried personnel payroll vouchers shall be prepared by the Director of Finance and shall be paid bi-weekly, every other Friday. If Friday is a legal holiday, so designated by the City, then pay day shall be on the day preceding.

ARTICLE VI - Salaries (See Exhibit A, attached)

ARTICLE VII - Workmen's Compensation

Full time employees receiving Workmen's Compensation shall be paid the difference between their pay at the disability date and Workmen's Compensation benefits. This differential shall be paid for a period up to but not to exceed thirty (30) weeks commencing from the disability date.

ARTICLE VIII - Vacations

1. The vacation policy for the Police Dept. to be on a work week basis as follows:

   a) One (1) work week vacation after one (1) year of service.
   b) Two (2) work weeks vacation after two (2) years of service.
   c) Three (3) work weeks vacation after ten (10) years of service.
   d) Four (4) work weeks vacation after twenty (20) years of service.

2. Vacation benefits shall be accrued at a rate of one twelfth (1/12) of the employee's authorized vacation for each full month of employment.

3. New employees will not be eligible for vacation benefits until they have completed one (1) full year of employment.

4. Vacation allowances shall not be cumulative and after the qualifications have been met for additional vacation, it must be taken between January 1 and December 31.

5. In case of termination, for reasons other than discharge for cause, an employee will be paid his accrued and unused vacation, calculated from his anniversary date to his termination date.

The Police Chief shall have a vacation schedule available for members on or before January 1, preceding the year vacations are to run, so that picking of vacations can be completed by March 1. The order of picking vacations shall be by seniority and subject to present procedure and practice as per Exhibit B, attached hereto and made a part hereof by reference thereto.

ARTICLE IX - Longevity

The present City plan of paying longevity of one hundred and twenty dollars ($120) after five (5) years of service and two hundred dollars ($200) after ten (10) years of service is hereby ratified and made a part of this agreement.

All Patrolmen and Cruiser Drivers with fifteen (15) years of service shall receive twenty dollars ($20) per month starting with the pay period immediately following their fifteenth anniversary in addition to the longevity pay provided herein.

ARTICLE X - Paid Holidays

Paid holidays included in this agreement are:

New Year's Day	Thanksgiving Day
Memorial Day	Christmas Eve
Independence Day	Christmas Day
Labor Day	

1. The Police Department continue to schedule all shift Police Officers with one hundred and four (104) days off annually.

2. All shift Police Officers will be paid two (2) times their base pay for the six and one half (6½) legal holidays not worked.

3. All shift Police Officers who work on any of the six and one half (6½) legal holidays, will be paid three (3) times their base pay for the holidays worked.

ARTICLE XI - Leaves

1. Sick Leave

a) All members of the Association shall be granted sick leave with pay at the rate of one working day for each full month of service beginning after the first six (6) months of service.

b) Sick leave shall accumulate but not to exceed ninety (90) working days.

c) All sick leave shall be subject to administration by the Police Chief.

d. A member of the Association may use accumulated sick leave with pay for absences necessitated by his injury or illness or that of a member of his immediate family, required dental care, death or serious illness of his immediate family.

e) In order to be granted sick leave with pay, an employee must:

1) Report promptly to the Desk Sergeant the reason for his absence.

2) Keep the Desk Sergeant informed of his condition if absence is of more than three (3) working days duration.

3) Permit the City to make medical examination or nursing visit as it deems desirable.

4) Submit a medical certificate for any absence of more than three (3) consecutive working days if required by the City.

f) Any Police Officer who reaches the retirement age of sixty-five (65) years of age (or legal statutory retirement age, if approved by the Council Committee

having jurisdiction and ratified by Council), may have year-to-year recertification until the age of seventy (70). At that time the Police Officer must retire from the Police force. At such retirement, the retired officer shall receive payment for his unused accumulated sick leave as compensatory time or cash payment as the officer may choose, as a bonus for service given to the City.

2. Leave of Absence without Pay

Requests for leave of absence without pay for justifiable reasons shall be made by written application on a form provided by the Personnel office and be submitted at least two (2) days prior to the anticipated leave.

a) For a leave not to exceed three (3) consecutive days, his request shall be made to and approved by the Police Chief.

b) For a leave in excess of three (3) consecutive days, he shall make his request to the Director of Personnel after securing the approval of the Chief.

Failure to comply with the requirements of this article shall result in disciplinary action.

ARTICLE XII - Hospital Plan

The employer agrees to pay eighty-five percent (85%) of the cost of present hospital/surgical insurance for all single and married employees.

ARTICLE XIII - Retirement Contribution

The City shall pay two and three quarters percent (2 3/4%) of the employee's wages as a portion of their contribution to the Wisconsin Retirement Fund.

ARTICLE XIV - Life Insurance

1. Employees will be entitled to subscribe to or continue to participate in the life insurance program provided by the City and in accordance with the present City policy. Upon emforcement of a new increased life insurance program all provisions of the present plan will become null and void.

2. Increased Life Insurance: Upon selection and ratification of an increased life insurance plan, each member of the Association will be furnished a copy of the terms and provisions thereof and by mutual agreement of both the City and the Association will be attached to and made a part of this agreement.

ARTICLE XV - Clothing Allowance

The clothing allowance for members of the Association shall be as follows:

Maximum initial allowance $235.00
Annual maintenance 100.00

Initial clothing allowance shall be for the first twelve (12) months of service. Officers shall not be eligible for semi-annual maintenance allowances until completion of twelve months of service.

Initial clothing allowance for uniforms and/or clothing shall be purchased through reguisition and all such requisitions must be approved by the Police Chief or the Inspector.

Fifty percent (50%) of the annual maintenance clothing allowances shall be paid semi-annually on April 1 and October 1 to officers on the roster as of that date.

ARTICLE XVI - Compensation for Attending Training Programs

1. All Police Officers ordered to attend training schools or programs by the Police Chief or Inspector shall attend such schools or programs at City expense.

2. All Police Officers not ordered to attend training schools or programs by the Police Chief or Inspector may attend such schools or programs at the individual officer's expense.

3. The monthly required target firing of the service weapons shall be done during normal working hours.

4. The special field firing target practice shall be performed as part of the in-service training of the Police Department.

ARTICLE XVII - Rules and Regulations

The rules and regulations of the Appleton Police Department as established by the Police and Fire Commission of the City of Appleton in accordance with the provisions of and pursuant to Chapter 111.70, Section 62:13, of the Wisconsin Statutes, shall be made a part of this agreement by reference.

ARTICLE XVIII - Grievance Procedure

Both the Association and the City recognize that grievances and complaints should be settled promptly and at the earliest possibble stage and that the grievance process must be initiated within five (5) days of the incident. Any grievance not reported or filed within five (5) days shall be invalid.

Any difference of opinion or misunderstanding which may arise between the City and the Association shall be handled in the following manner:

1. The aggrieved employee shall present the grievance orally to his Captain either alone or accompanied by an Association representative.

2. If the grievance is not settled at the first step, it shall be reduced to writing and presented to the Inspector. Within three (3) days, (Saturdays, Sundays and holidays excluded), the Inspector shall furnish the employee and the Association with a written answer to the grievance.

3. If the grievance is not settled at the second step, the grievance shall be presented in writing to the Police Chief. The Chief shall within five (5) days, (Saturdays, Sundays, and holidys excluded), hold an informal meeting with the agrrieved employee, the Inspector and/or Captain and Association representatives. If the grievance is not resolved to the satisfaction of all parties within three (3) days (Saturdays, Sundays and holidays excluded), either party may proceed to the next step.

4. The grievance shall be presented in writing to the Personnel Director or the Police and Fire Commission, which ever authority has jurisdiction on any particular grievance.

   a) If the grievance shall be deemed under the jurisdiction of the Police and Fire Commission, the grievance shall

thereby be governed by Section 62:13 of the Wisconsin State Statutes.

The Police and Fire Commission shall within five (5) days set up an informal meeting with all parties involved up to this point. Within seven (7) days (Saturdays, Sundays, and holidays excluded), after this meeting a determination shall be made and reduced to writing and copies submitted to all parties involved.

b) All other grievances relating to wages, hours and working conditions or any other matter under jurisdiction of the Personnel Director be directed to that office. The Personnel Director shall within five (5) days set up an informal meeting with all parties involved up to this point. Within seven (7) days (Saturdays, Sundays and holidays excluded),after this meeting a determination shall be made and reduced to writing and copies submitted to all parties involved.

5. The Association may appoint representatives of the Association and shall inform the City of the names of the individuals so appointed, and of any changes thereafter made in such appointments. The City shall allow the representatives the necessary time to process grievances during the course of the duty day.

ARTICLE XIX - Military Leave

Police Officers having permanent status and who are duly enrolled members of the National Guard, the State Guard, the Officers Reserve Corps, the Enlisted Reserve Corps, the Naval Reserve Corps, the Naval Reserve, the Marine Corps Reserve or any other reserve component of the military or naval forces of the United States or the State of Wisconsin now or hereafter organized or constituted under Federal Law, are entitled to leaves of absence without loss of time to enable them to attend military or naval schools, field camps of instruction and naval exercises which have been duly ordered held, but not to exceed fifteen (15) days, excluding Sundays and holidays in the calendar year in which so ordered and held.

The difference in pay between the military pay during time of attendance and the employee's regular pay during the same period shall be paid by the City.

The leave granted is in addition to all other leaves.

ARTICLE XX - Suspension, Dismissal and Reduction in Rank

Suspension, dismissal and reduction in rank of employees from the Police Department shall be governed by Section 62:13 of the Wisconsin Statutes.

All newly hired permanent employees shall be considered probationary for the first year of their employment with the Appleton Police Department. Probationary employees may be discharged without recourse to the grievance procedure.

Continued employment beyond the probationary period above noted is hereby defined as evidence of satisfactory completion of probation.

A permanent employee is hereby defined as a person hired to fill a full-time position in the Table of Organization.

The seniority of a permanent employee who has satisfactorily completed probation shall date from his date of employment. Proper records indicating status of the employee shall be maintained.

Seniority shall be established for each employee, and shall consist of the total calendar time elapsed since the date of his employment. Seniority rights terminate upon discharge or quitting.

ARTICLE XXI - Defense of Officers by the City Attorney

The City shall authorize the City Attorney to defend actions brought against any officer growing out of any acts done in the course of his employment or out of any alleged breach of his duty as such officer.

Any judgment obtained against such officer shall be paid by the City provided the officer did not act in bad faith.

ARTICLE XXII - Amendment Provision

This agreement is subject to amendment, alteration or addition only by a subsequent written agreement between and executed by the City and the Association where mutually agreeable. The waiver of any breach, term or condition of this agreement by either party shall not constitute a precedent in the future enforcement of all it's terms and conditions.

ARTICLE XXIII - Savings Clause

If any article or section of this agreement or any addendums thereto should be held invalid by operation of law or by any tribunal of competent jurisdiction, or if compliance with or enforcement of any article or Section should be restrained by such tribunal, the remaider of this agreement and addendums shall not be affected thereby, and the parties shall enter into immediate collective bargaining negotiations for the purpose of arriving at a mutually satisfactory replacement for such Article or Section.

ARTICLE XXIV - No Other Agreement

The employer agrees not to enter into any other agreement written or verbal with the members of the Police Department individually or collectively which in any way conflicts with the provisions of this agreement.

ARTICLE XXV - Changes in the Terms of this Agreement

If either party desires to negotiate any changes in this agreement to become effective after the end of the term of this agreement or any extension thereof, they shall notify the other party in writing of it's desire to enter into such negotiating one hundred and fifty (150) days prior to the end of the contract period.

ARTICLE XXVI - Term of Agreement

This agreement shall become effective as of January 1, 1968, and remain in full force and effect to and including December 31, 1968, and shall renew itself for additional one year periods thereafter unless either party pursuant to Article XXV has notified the other party in writing that it desires to alter or amend this Agreement at the end of the contract period.

In witness whereof, the parties hereto, have executed this Agreement, in this the year of 1968.

ARTICLE VI - 1968 Pay Schedule

EXHIBIT A

CLASS TITLE	A	B	C	D	E
Police Captain	$720	$755	-	-	-
Police Lieutenant	670	705	-	-	-
Police Sargeant	635	660	-	-	-
Police Detective	600	620	640	-	-
Patrol Cruiser Driver	515	535	555	575	595
Police Patrolman	500	520	540	560	580

Progression through the above schedule shall be as follows:

1. Trainee Police Patrolmen will start in Step A of the pay schedule.

2. Patrol cruiser drivers and patrolmen will move to:

   a) Step B after six (6) months of service.

   b) Step C after two (2) full years of service.

   c) Step D after three (3) full years of service.

   d) Step E after four (4) full years of service.

3. In the event of promotions, the person will advance to the step in the pay plan that is above the salary he is presently receiving.

4. Promotional increses to the next higher step shall be granted one year from the date of promotion.

EXHIBIT B

Rules for Vacations

1. The Chief of Police will reserve the right to determine the number of personnel to be on vacation at any one time. The Captains will work in close cooperation with each other and the Inspector in the selection of vacations in all departments.

2. No more than one Captain or Sergeant from the same shift may be on vacation at the same time.

3. No more than one Cruiser Driver from the same shift may be on vacation at the same time.

4. No more than one Detective will be on vacation at any one time.

5. No more than one traffic officer will be on vacation at any one time.

6. No more than one foot Patrolman on the night or day shift will be on vacation at the same time.

7. Seniority will prevail in all the various groups within the department.

8. The same method will prevail as in the past regarding splitting vacations.

9. If you are entitled to four (4) work weeks vacation, you may take four separate vacations during four different months, with ten (10) full years you may take three (3) separate vacations, with two (2) full years, you may take two (2) separate vacations. Members eligible for only one (1) work week vacation may not split their time.

10. When you have picked your first vacation, all others in your group may then pick their first week before you pick your second week. In the event you pick two weeks of your vacation, those following will have a choice of two weeks in separate months before you pick your third week.

11. Once your name is on the list, there will be no changing without the permission of the Inspector.

Insert this in your 68 contract

MEMORANDUM OF UNDERSTANDING

This Memorandum of Understanding entered into this 20th day of December, 1967, by and between the City of Appleton and the Appleton Professional Policemen's Association.

WHERAS, an employment contract between the parties hereto dated the 20th day of December, 1967, setting forth the rates of pay, hours of work and other terms and conditions of employment has been agreed by and between the parties hereto.

AND WHEREAS certain provisions of the aforesaid agreement require clarification.

NOW THEREFORE, it is agreed by and between the parties hereto as follows:

1. That Article XV setting forth the provisions for the "Clothing Allowance" shall be interpreted to provide for the payment of an amount equivalent to fifty (50%) per cent of the annual maintenance allowance upon the completion of twelve (12) months of service with the payment of a like amount occurring on the 1st day of April and the 1st day of October of each year. The Intention of this paragraph is to provide for a payment upon the completion of twelve (12) months of service in addition to the semi-annual payments as set forth in Article XV as above described.

2. That Article XVI entitled "Compensation for Attending Training Programs" shall be interpreted to provide for compensation calculated at the officer's regular rate of pay except for such situations falling within subparagraphs 2 and 3 of Article IV entitled "Overtime" in which case the appropriate paragraphs will govern the officer's compensation for attending training programs.

The University of Wisconsin
University Extension
School for Workers

THE ELEMENTS OF THE BARGAIN

1. The thing which workers have which they can offer an employer is their labor - their skills as producers of the employer's product.

   Workers can also offer (or withhold) their cooperation, interest and imagination in relation to their work for the employer.

2. The thing which an employer has which he can offer to workers is jobs.

   An employer can also offer (or withhold) an interest in and understanding of the problems of the workers and their union.

   Collective bargaining takes place between the representatives of the workers who want jobs and the employer who needs workers on the wages, hours, and other terms and conditions under which a bargain can be reached.

3. In order to support its proposals, the union has the power of its members to collectively withhold their labor.

   The logic and moral rightness of the union's proposals will be factors which affect this power.

4. In order to resist union proposals or to support proposals of his own, the employer has the power to withhold job opportunities, to stop his operation and to replace workers.

   The logic and moral rigtness of the employer's position will be factors which affect this power.

DEFINITION OF COLLECTIVE BARGAINING

- a method of determining the wages, hours and working conditions of labor, and a process of interaction between representatives of the union and representatives of management.

Contract negotiations and re-openers: the periodic determination of wages, hours and other terms and conditions of employment.

Day-to-day bargaining: in the grievance procedure within the framework of the contract, and in relation to matters not covered by the contract.

ALTERNATIVES TO COLLECTIVE BARGAINING

1. The operation of market forces.
2. Individual bargaining.
3. Employer determination
4. Determination by private arbitration.
5. Government determination.

COLLECTIVE BARGAINING GOALS - from the standpoint of the union:

1. To attempt to equalize bargaining power between workers and management.

2. To improve wages, hours and working conditions.

3. To attain a degree of job security.

4. To achieve a degree of industrial democracy.

5. To attain and maintain a high level of purchasing power so that workers can buy back the things which they and other workers have produced (including the products of industry, farm, construction, the professions, and service trades).

6. To reduce or eliminate wage competition and wage differentials in one industry between different plants and geographical areas (and to some extent, between different industries in the same area).

These goals are inter-related. For example, the elimination of the "southern differential" will contribute to the bargaining position of northern locals.

These goals sometimes come into conflict with each other. For example, a balance must be struck between wages paid and the capacity of an employer to absorb the added costs and maintain the same level of employment (job security).

FACTORS WHICH AFFECT COLLECTIVE BARGAINING - some of the things which help determine what the union will get in negotiations

1. The strength and attitude of the union, locally and nationally:

   - Is it a new local or a well-established local?

   - Does the local or international cover more than one plant of the employer?

   - If other plants are involved, what are the nature of contract terms and the status of bargaining in these other plants?

   - What has been the nature of the relationship with the employer in previous negotiations?

   - How did things work out under the current contract?

   - How effective has been the day-to-day operation of the union - local meetings, stewards' meetings, grievance procedure, education program, legislative and political activities, social and recreational activities, quantity and quality of service from the international (as needed)?

   - How will the local be affected by "the consequences of non-agreement"?

2. The strength and attitude of the employer:

   - Does the employer really accept the union as a continuing part of his operation?

   - Is it a single plant, or part of a chain?

   - If a chain, what is the extent of organization among the various plants, is there a variety of unions involved, what is the nature of the various contract terms, and what is the status of contract negotiations in the other plants?

   - To what associations, formal or informal, does the employer belong?

   - What is the economic position of the employer relative to:
     - -nature of the product
     - -demand for the product
     - -labor supply
     - -profit situation
     - -competitive position
     - -plant efficiency
     - -plans for expansion
     - -"ability to pay"

   - How will the employer be affected by the "consequences of non-agreement"?

3. Industry differences in contract terms, particularly wages and fringes:

   - What is the impact of "coercive comparison" on the parties?

4. Regional differences

   - What is the extent of union organization in the area as compared with other areas?

   - What is the nature of the predominant industries in the area?

   - What are the regional differences in terms of workloads, plant and equipment, methods and processes?

   - Is the area known as a "high" or "low" wage area?

5. The general economic situation:

   - Are times good or bad, and what is the general trend in this respect?

   - How strong are the pressures of the cost of living?

6. What is happening in the major bargaining situations throughout the country:

   - What settlements are being made which will serve as goals or as limitations on a particular situation?

7. Government policies and laws:

   - Wage and price control programs, if any.

   - Current administration position relative to wage and fringe issues, as well as union security issues.

   - The Taft-Hartley law: (plus NLRB and Court interpretations)

     - the duty to bargain
     - union security
     - check-off
     - featherbedding
     - jurisdictional strikes
     - secondary boycotts
     - hot cargo clauses
     - exclusive bargaining versus individual bargain
     - nature of the bargaining unit
     - employer free speech
     - suits in Federal Court for contract violation (wild cat strike)
     - restrictions on administration of health and welfare programs
     - national emergency provisions

- State laws:

    - union security
    - regulation of strikes and picketing
    - regulations re: public employees, public utility workers
    - provisions re: labor relations in intrastate commerce

- The Fair Labor Standards Act, Walsh-Healy, Social Security

8. The attitude of the community:

    - Are there other unions in the area and what is their relationship with your union?

    - Is the community generally pro- or anti-union?

    - What will be the attitude of business and professional groups in the event of a showdown?

    - What will be the attitude of city and county government, police and other agencies in the event of a showdown?

    - What is the attitude of church and agency leaders?

THE PARTIES TO THE COLLECTIVE BARGAINING PROCESS

1. A common view:

Three parties: the union, the company, and the employees:

This view often reflects a lack of understanding on the part of the employees that they ARE the union. It may indicate an unwillingness on the part of the company to accept the union as a regular part of the operation. It may reflect a desire to split the union leadership from the union membership. It is in line with the "labor boss" theory.

2. A more realistic view:

Two parties: the union (which is the members and has no existence apart from them), and the company.

Under law, the union is certified as exclusive bargaining agent for all occupants of occupations noted in the certification order. However, the law frequently makes a distinction between employees and the bargaining agent.

RESPONSIBILITIES AND PROBLEMS OF UNION LEADERSHIP IN THE COLLECTIVE BARGAINING PROCESS

I. IN RELATION TO THE EMPLOYER

A. Assembling facts for negotiations - a year-round process:

1. Resources:

   - settlements and patterns in labor-management relations generally
   - settlements and patterns in your industry
   - settlements and patterns in different industries in your own community
   - what's been happening in the shop under your current contract

2. A suggestion:

   - involve stewards and as many other members as possible in an examination of the existing contract for possible changes; participation by the members in these decisions will tend to improve the quality of their support for the final proposals.

B. Anticipation

1. Of company proposals and the stated and actual reasons for them.

2. Of the company attitude, expressed and unexpressed, toward union proposals.

   Opportunities for estimating company positions exist in the day-to-day relationship of the parties. The process of anticipation will improve the quality of the union's performance in conference with the company; prepare the other side's case as well as your own. Sharing what is anticipated with the membership will increase confidence in the leadership.

C. Preparing the actual proposals

1. The "language" approach:

   Working up classes in exact contract language. This offers a solution without a statement of the problem. It is possible that devotion to language or an exact solution may hinder agreement. However, the language approach is common and often necessary; be alert to the problems which it presents.

2. The "problem" approach:

   Presenting the problem with a generalized suggestion for its solution - a clearcut invitation to management to acknowledge the problem and participate in a joint solution, with language secondary. This allows more freedom for bargaining with less initial bickering about language.

3. Support for proposals:

   Be ready to document requests for change; the company is bound to ask the union why it wants a change (or a new proposal). Grievance procedure and arbitration records are important in this respect - as well as stewards' notes on problems for which the contract or past practice offered no solution.

4. Estimating minimum requirements:

   Make a conscious effort to analyze what the minimum requirements are in relation to each proposal - what the union must have. This estimate of what is minimum may change as negotiations develop.

5. The broad, union-wide proposals:

   Be able to relate any such international programs to the local situation to lessen the affect of management's claim that this is strictly a national office adventure. This is also important in relation to the membership.

6. Membership action on proposals before they are submitted to the company:

   This involves the "principle of participation" and helps the members to appreciate their role in the collective bargaining process.

   A mimeographed summary of the proposals in the hands of the membership at the meeting will contribute to an orderly meeting and intelligent discussion and action.

D. <u>In conference with the company</u>

1. Bargaining committee procedure:

   - planning prior to each session with management
   - evaluating each session with management
   - the size and nature of the committee
   - the "spokesman" theory
   - recesses and other tactical shennanigans

2. Getting to the heart of an issue:

   - precisely what are we (the union) after?

   - precisely what is the company after?

     Timing plays a role here; that is, the determination of the time when precision is desirable. In the early phases of negotiations, there may be tactical reasons for a certain amount of obscurity.

3. Maintaining the union's bargaining strength:

   - as far as the members are concerned, certain issues have more appeal than others; therefore, the timing of tentative agreements on such issues may have a bearing on the union's ability to make progress on some less popular but equally important matters

   - the "GE" formula

4. The "art" of settlement:

   - have we gone as far as we can on a particular issue?

   - if we continue to press, may the company back off?

5. The tentative agreement with management prior to membership ratification:

   - must the union, under pressure from management, commit itself as to whether or not it will "sell" the tentative agreement to the membership?

   - avoiding embarrassment in the event of unanticipated action by the membership.

6. Other considerations:

   a. Educational proposals

      Those submitted and discussed without expectation of immediate attainment for the purpose of warming up management to a later, serious push.

   b. Educating the company about the union

      Take advantage of such opportunities, or create them. Particularly in a new bargaining relationship, management may be plenty worried about the union. How does the union look at bargaining? What is the role of the members? Of the leaders? How are leaders selected? the role of the International? The union view of the stewards' role and of the grievance procedure in general. Etc.

c. Learning about company problems

Resist the temptation to give short answers when the company attempts to air its problems and grievances. The more you know about the company, the product and the industry, the better representation you can give. And if you won't listen, the company may search for understanding through direct mailings to the membership. Or in full page ads in the local papers.

d. Be alert for injudicious company proposals

The company may submit proposals which cry for an instant "No!" Consider, however, the use which such proposals may be put to in gaining membership support for the hard road ahead. Courtesy requires that such use of such proposals precede any detailed explanation by the company of the problem they are designed to solve.

e. Be cautious with apparently unrealistic union proposals.

Just as in "d" above, the company may use these to your disadvantage in its contacts with stockholders, the public and even the union membership. In presenting something of a dubious nature, time it in such fashion that a full explanation of why it is needed is forced on the company. Should the company, aware of the good, sound reasons for the proposal, then run off half cocked to its various publics, the union is in a position to be righteously indignant.

f. Giving consideration to the other's point of view

This is sound on principle. It is also good tactics since you can then expect similar consideration from the company. "Giving consideration", of course, does not mean that any type of agreement must be reached on an issue.

g. Dealing with management publicity during negotations

If management goes to the papers, radio and/or TV with its case, the union may feel compelled to answer. You cannot compete financially, so the timing and nature of your response are important. Care should be exercised in relation to charges of bad faith, name calling and such things; management will become indignant and bargaining will slow down. The position of labor in our society suggests that the union may have to take more abuse than it can afford to give. Another caution: once the issues have hit the press, bargaining tends to take place in public, with the substitution of speechmaking for true negotiations.

h. Avoid backing management into a corner from which there is no honorable exit.

If there must be a showdown, let it be on the basis of valid issues rather than on the need of one party or the other to save face.

II. IN RELATION TO THE MEMBERSHIP

A. The membership is the source of the union's bargaining power.

While the bargaining committee may be concerned about its relationship with the employer during negotiations, it must be even more concerned about its relationship to the members whose interests it is representing - or had better be representing.

The union's year-round program of meetings, stewards' meetings, grievance handling, union education, community services and other activities must all be viewed in their relationship to the development of bargaining strength. Membership understanding and activity are the goals, and these cannot be developed on 60 days' notice.

B. Preliminary activities (before meeting with the employer)

1. Creating the proper climate for negotiations:

   - do not assume that support for the committee will come about automatically simply because the contract is expiring

   - use every means and opportunity to remind the members of their key role in the collective bargaining process

     as at union meetings, stewards' meetings, department meetings, talk in the shop, talk in car pools, phone contacts, home visits, the union paper, letters

     some members will shy away from any responsibilities in order at a later date to be in a good position to offer criticism

2. Include the membership in the preparation of proposals:

   - many good ideas can be obtained in this way

   - the principle of participation; people tend to support better something about which they have had a chance to make decisions

   - problems: the queer proposal, the unobtainable proposal:

     leadership must give reassurance to these people that their help was appreciated

- membership participation may be obtained at local meetings, department meetings, and through a continuing program of written membership suggestions on some appropriate form. Some locals make use of a questionnaire.

3. Focus membership attention on the major contract problems and their suggested solutions as reflected in the union proposals:

   - the list of proposals is often too long and detailed to be on the lips of every member

   - attempt to gain good understanding of the major proposals of an order which will bring an intelligent response if members are questioned in the shop by management, or by members of the general public

   - all union resources for communicating with the membership should be used in this process

4. Prepare members for the probable company approach to negotiations:

   - what will be the major company proposals and how will they be defended?

   - what will be the probable attitude of the company toward various union proposals?

   - intelligent predictions in this area will help soften the impact of company activities in behalf of its own proposals and will help build confidence in the committee

C. <u>While negotiations are in progress</u>.

1. Keep in touch with the memberhip:

   - the principle of participation: people will tend to accept propositions about which they have helped make decisions

   - use all union resources for communicating with the membership to keep them informed: the union wants a positive response from its people under questionning by management or the public

     but there may be sound tactical reasons for temporarily withholding certain information

2. Lack of progress, as well as progress, should be reported:

   - the absence of progress may be based on the company's evaluation of membership interest; the company has an ear for the bargaining table and an ear for the shop.

D. When negotiations are completed:

1. The ratification meeting

- the report should be frank and honest (on principle, and to avoid future trouble)

- decide in advance of the meeting as to the nature of the report

- generally speaking, the report should include a recommendation for acceptance or rejection; members should be clearly and repeatedly informed of their rights concerning any recommendation

- a mimeographed summary of the report in the hands of the membership may be helpful in guiding discussion and action

- take time to review factors contributing to success or failure with regard to certain proposals; use the report to educate the membership

- stress the importance of making the new agreement work

2. Start the membership thinking and planning ahead to the next re-opener or contract expiration.

III. IN RELATION TO THE COMMUNITY

A. The public relations aspect of collective bargaining:

1. What the union does will have an economic and social impact on the community.

2. The union's friends will want to be able to justify their support for the union; they may have an influence on management which the union itself does not possess.

3. A good case for the union will help neutralize anti-union elements in the community (particularly if the union has developed a good public "image" over the long run).

4. Unless bargaining tactics require it, it may be well to attempt to avoid a surprise showdown (particularly in a small community).

B. The public support aspect:

1. The attitude which non-labor people take toward the union's position will have an affect on the morale of the membership.

2. General approval of the union's position as expressed by the community may have some affect on management's position in negotiations.

3. However, attention given to the community cannot be given at the expense of attention to the membership; they are the people who constitute the power of the union.

IV. IN RELATION TO OTHER GROUPS

The union wants the support of other labor groups in the community. What the union achieves or fails to achieve will have an affect on these locals. Therefore, be prepared to consider their problems even though the union may finally decide on a course of action unpopular with other locals. Keep other locals informed of your situation (trades council, letters, visits to meetings). The attitude which other union people take toward your members will affect the morale of your people.

LEGAL BACKGROUND OF COLLECTIVE BARGAINING

1. The "Conspiracy" Doctrine:

Unions viewed by courts as conspiracies under the common law, designed to benefit the members and injure those who did not join. Courts said that what may be legal for one individual (to quit to attempt to force a wage increase, to refuse to work with a non-member) is not necessarily lawful when done as a concerted activity. Prevalent until the mid 1800's.

2. The "Means" Approach:

General recognition by the courts of the right to organize and bargain, but taking exception to the means used, particularly in relation to the closed shop, strikes, picketing and boycotts. Extensive use of injunctions in labor disputes. "Yellow Dog Contract" held to be valid by the Supreme Court. Prevalent until World War I period.

3. Clayton Act, 1914:

Designed to exempt unions from the anti-trust and anti-monopoly provisions of the Sherman Anti-Trust Act (1890) - labor is not a commodity. Also provided (rather ineffectively) for restrictions on the use of injunctions issued by federal courts in labor disputes.

4. World War I Period:

War Labor Board established to assure continued high production by reducing the number and duration of labor disputes. Tentative employer acceptance of the right to organize and bargain collectively dissipated at end of war with transition into era of the "American Plan" and company unionism.

5. Transportation Act of 1920:

Recognition of the right of railroad workers to organize and bargain collectively. Urged settlement of disputes by direct conference and set up Railroad Labor Board to settle outstanding disputes. Compliance voluntary.

6. Railway Labor Act of 1926:

Repealed the 1920 Act. Established the right of railroad workers and management to choose collective bargaining representatives free from interference, coercion or influence by the other party. Required exercise of every reasonable effort to reach agreement on pay, rules and working conditions. Provided for settlement of disputes between the parties through a Board of Mediation.

1934 Amendments: Passed in the face of continued employer opposition to unions and efforts to dominate established unions. Employer prohibited from interfering with unions in any way. Majority rule determines bargaining agent. Mediation Board empowered to investigate and determine questions of representation and certify the results. Employers required to "treat with" the certified union.

7. The Norris-LaGuardia Act, 1932:

Declared it to be the policy of the United States that the individual worker, while free to decline to associate with his fellows, should have "full freedom of association, self-organization and designation of representatives of his own choosing, to negotiate the terms and conditions of his employment, and that he shall be free from the interference, restraint or coercion of employers of labor, or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection." Prohibited issuance of injunctions by federal courts in labor disputes unless evidence of fraud or violence and unless employer could show that unlawful acts have been threatened and will be committed unless restrained, that substantial and irreparable injury to the employer's property will follow, that greater injury will be inflicted on the employer by denial of relief than upon the union by granting relief, that the employer has no remedy at law, and that law enforcement officers are unable or unwilling to furnish adequate protection of the employer's property. Outlawed the "yellow dog" contract.

8. The National Industrial Recovery Act, 1933:

Established freedom of workers to organize and bargain collectively through representatives of their own choosing, free from interference, restraint or coercion in the designation of representatives and in other concerted activities for the purpose of collective bargaining or other mutual aid or protection. Workers could not be compelled to join a company union. Administered by National Labor Board which had no enforcement powers.

9. Public Resolution 44, 1934:

Wave of strikes followed union discovery that National Labor Board was unable to enforce public policy. Resolution set up a National Labor Relations Board of 3 members to hold elections, investigate disputes and hold hearings on alleged violations of 7a of NIRA. No way to force compliance but there was much voluntary compliance. Developed a body of informed and experienced personnel and clarified the issues of government protection of the right to organize and bargain collectively.

10. The National Labor Relations (Wagner) Act, 1935:

Enabling legislation, concerned with permitting unionism to work in the face of anti-union economic power of employer; establish relationship, compel bargaining, and step aside. Reaffirmed right of workers to form, join or assist unions, to bargain collectively, to engage in other concerted activities for their mutual aid or protection. Prohibited certain unfair labor practicies by employers (no restraint, coercion or interference with workers' rights, no interference in union affairs, no company unions, no discrimination for union activity or for giving testimony at Board hearings, no refusal to bargain - but no compulsion to agree). National Labor Relations Board to establish bargaining units, conduct elections, certify results, investigate unfair labor practices, issue cease and desist orders, issue restitutionary orders. Board orders subject to review and enforcement in federal courts. Challenged before Supreme Court, declared constitutional in 1938.

11. The Taft-Hartley Act, 1947 (plus 1959 Landrum-Griffin Ameadments)

Regulatory legislation, consisting of a series of amendments to the Wagner Act passed in the turmoil of the post-WWII years, with later amendments in 1959 as a result of McClellen investigations. Enabling features still present but government does not step aside after relationship has been established. Emphasis on public interest. Proscribes certain union unfair labor practices including coercion of workers in right to refrain from union activity, secondary boycotts, jurisdictional disputes, "featherbedding", picketing under certain conditions. Reintroduction of injunctions in federal court. "Hot cargo" clauses outlawed. Changed approach to determination of bargaining unit. Provides for election petitions from employers under certain circumstances; provides for decertification petitions. Employer "free speech". Detailed statement of "duty to bargain", spelling out the obligations of the parties. Restrictions on union security agreements. 14b and its impact on state "right to work" laws. Restrictions on the checkoff. Restrictions on administration of health and welfare plans. Company may sue in federal court for contract violation or damages resulting from secondary boycott. No union dues money in federal elections. National emergency provisions, including injunction.

Course Outline
INDUSTRY, ECONOMICS, PROBLEMS FACING CWA
AND COLLECTIVE BARGAINING

CWA Education Department
Jules Pagano, Director

INTRODUCTION

Instructor In your own words, explain as follows the objective of this session. In other classes you are reviewing the structure of CWA and here we shall briefly discuss some of the pertinent facts related to our industry and how it fits into the general ecnomic picture so that we may better appreciate, by examining the facts, what our union, CWA, deals with and the industries that AFL-CIO deals with. We will do this so that we may better understand -

1. The kind of employer that CWA must deal with;
2. The kind of problems with which our Union's leadership is faced, and
3. The role that CWA and the AFL-CIO play within the American economy.

First of all, however, we will be discussing the structure of our own industry.

Instructor Continue with -

Let's begin by asking the question:

Write on the blackboard -

"Who do you work for?"

NOTE If there are members in the group who work for an independent telephone company, place their company's name on the blackboard and then remind them that you will cover the independents later on in the course.

Instructor List on the blackboard the answers you receive until you either receive from the group or must offer yourself -

A. T. & T.

Then simply explain the nature of A. T. & T.

Instructor Continue with -

A. T. & T. Holding Company

1. Owns controlling stock in 20 associated Bell Companies, plus Western Electric Company, in the United States, and Bell Laboratories.
2. Influences policies of 2 additional U. S. Companies, for which it does not control the majority of stock.

   Cincinnati and Suburban Bell Telephone Company

   Southern New England Telephone Company
3. Owns minority stock in Canadian Bell and Northern Electric of Canada and influences policies.

HANDOUT Distribute the handout "Corporate Structure".

On March 14, 1957, Bell of Canada increased its ownership in Northern Electric Company from 56.4% to about 90%. To accomplish this, it purchased 272,000 shares of Northern Electric stock from the Western Electric Company, which still retains about 10% interest in Northern Electric. This shift in ownership took place, we think, due to a Canadian Royal Commission which recommended that Canadian corporations sell more stock to Canadians to reduce foreign control; the Commission recommended corporations limit foreign control to 25% of stock. It is anticipated that despite change in ownership, Northern Electric will continue to follow "Bell System Policies."

Instructor Review with the group stock ownership of the Bell System. With the group referring to the inside page of the corporate structure handout, explain in detail, the 4 phases of the Bell System and the percentage and manner by which the company controls the various subsidiary companies through common stock ownership. Point out that to own the majority of common stock means to control that company. That this ownership makes possible the singleness of control by the A. T. & T. Company. Examples to prove this are as follows:

Instructor (Use any examples), utilizing blackboard -

1. 1946 Settlement - Craig-Beirne Agreement
2. Attempts to withdraw recognition at the time of CIO affiliation
3. Bell System's November 1949 and 1952 pension changes
4. 1950 Senate Subcommittee Report, substantiating control of A. T. & T. over the collective bargaining policies of the Bell System
5. 1954 uniform negative response to CWA Health Insurance demand
6. 1956 uniform Life Insurance proposal and subsequent uniform settlements - S.W. Bell pilot negotiations
7. 1959 uniform pension and vacation improvements

Instructor Place on blackboard -

CWA represents 3/5 of the Bell System

Explain that this fact establishes CWA as the voice of the majority for the total Bell System.

Instructor Explain to the group that we will now take a look at the size and scope of the telephone industry and compare the Bell System with the independent telephone companies to get a realistic picture of the size and scope of the Bell System - A. T. & T. These figures are as of December 31, 1959.

Instructor Place on blackboard the following type chart:

	Bell System (Operating Cos. Only)	Independents U.S. Only	Total
No. of Companies	1	3,560	3,561
No. of Telephones	60,110,000	10,785,000	70,895,000
%	85%	15%	100%
Gross Revenues	$7,571,536,000	$881,832,200	$8,453,368,200
%	88%	12%	100%
No. of Employees	597,100	100,000	697,100
%	86%	14%	100%

Explain the chart with the following facts:

1. That the Bell System size can be revealed in relationship to the 3,560 independent telephone companies by the following facts:

   A. Bell System's gross revenue represents 88% of all money spent on telephone calls in the U.S.

   B. The Bell System owns 85% of all telephones in the U.S.A.

   C. There are 597,100 operating company employees in the Bell System, while there are only 100,000 workers in the independent telephone field.

Instructor We just compared the independents with the Bell System, now let us take a look at the value of the Bell System.

Ask:

Does anyone here know the value of the Bell System?

Instructor After asking this question, then place on the blackboard the value of A. T. & T. as of December 1959.

> It is $20,807,001,000
>
> Point out that this figure is the NET ASSETS.
>
> However, if they were to take the GROSS ASSETS of the A.T. & T. Company, the figure would be over $25 BILLION.

Point out to the group the fact that this is the largest single company in the world and has greater assets than some foreign powers, for example: Greece

Instructor Continue with -

After impressing the group with the mammoth size of the Bell System, spend a little time on showing that the pattern of "Bigness" is found even in the independent field, in which we find:

Instructor Place on the blackboard -

> "Little Bell Systems"
>
> Of the non-Bell independent holding companies, the largest one is the General Telephone Corporation. The General Telephone Corporation and the Sylvania Electric Products Co. combined in March 1959 to form a $1.8 Billion Corporation called the General Telephone and Electronic Corporation. The next largest independent is the United Utilities. General Tel. and Electronics has about 36% of all non-Bell telephones, over 42% of all non-Bell telephone revenue, and employs over 50% of all non-Bell employees.

Conclude discussion of "independents" by pointing out that much of what we have said and will say about Bell System applies almost identically to the "little Bell Systems", especially General Telephone and Electronics Corp. (General Tel. has about 86,000 employees -- almost 39,000 in operating companies and over 47,000 in Manufacturing & Sales.)

Instructor Continue with -

We have now seen the size and the scope of our industry and its nature. Let us take a look at the second page of our handout.

Instructor Place on blackboard -

Bell System Financial Connections

Have the group follow with you and mark, if they please, the various corporations that are interlocked with the Bell System in our total economic picture on Page 2 of handout.

Instructor Discuss fully the A. T. & T. control and influence over major corporations in American industry.

Make the following points:

Point out that a number of great corporations, such as United States Steel and General Electric, etc. are corporations whose employees are represented by other AFL-CIO unions.

That the wage patterns established by other AFL-CIO unions affect telephone workers and vice versa.

That the same people on Boards of Directors of these corporations are making collective bargaining decisions.

Instructor As an example of this, the Steel Pension Strike in 1949, and its effect on our pension plan:

In that strike $100 per month minimum pension.

Thirty days later the Bell System unilaterally instituted in our industry $100 minimum pension, including social security. You may recall that at the time the Bell System pension was $50 minimum per month. This is a striking example of the effect of collective bargaining decisions that one industry has on another where the interlocking Boards of Directors are usually the same individuals.

Instructor Recommend that students who are interested in following and doing more, read Senate Subcommittee Report #139, that can be obtained from the Education Department for 15 cents per copy. Display your copy.

Instructor Summarize this portion of this section of discussion by pinpointing the fact that this chart of the "Bell System Financial Connections" demonstrates the need and value of our affiliation with the AFL-CIO, how we play our part in helping the workers in the various industries shown on the chart, and how they in turn help us; how what affects them will affect us and vice versa, and only by working together can we achieve our just rewards.

Instructor Introduce this section of discussion by making the following points:

1. We have reviewed the development of CWA and the industry in which we work.
2. The next logical step is to discuss some of the immediate as well as long-range problems facing us as union members, as well as citizens of the world's leading democracy.

3. We will consider how we can prepare to meet some of these problems.

4. We will be exchanging ideas regarding the role that we think each of us as individuals, and CWA organizationally, can play in meeting current problems.

AUTOMATION

Instructor State that first broad subject we will be talking about is AUTOMATION. Ask class if anyone would care to define automation.

Try to develop following definitions:

"The integration of machines with each other into fully automatic, and, in some cases, self-regulating systems."

John Diebold, "The Challenge of Automation"

Public Affairs Press, Wash., D. C. 1955 - p. 15

"Automation brings in a new element which marks the beginning of the second phase of the industrial revolution. In addition to substituting mechanical power for human power, it substitutes mechanical judgment for human judgment except that the mechanical judgment can be made infallible and the human judgment which it replaces, is not infallible."

Walter P. Reuther

Ibid - p. 45

EXAMPLE: In your home a thermostat is automatic and self-correcting.

Instructor Ask the group the following two questions:

1. Who in the class has had 25 or more years service in the same job? After recognizing two or three volunteers, ask the second question. (If no one has that amount of service, recognize

the longest service person.)

2. Has your job changed much during that time?

1. Try to establish that during our current lifetime, there have already been significant changes in the basic job content in the industry because of introduction of machines and changes in procedures.
2. Point out that these changes may be relatively minor compared to what we can expect in the next 25 years for the following reasons:
   a. Automation is a more intensified and accelerated type of mechanization. One person has described it as "the automatic control of automatic machinery."
   b. Two world wars slowed down the introduction of automation, and production changes in many consumer goods industries. For example, in the telephone industry, very little mechanization, i.e. dial conversion, took place during World War II.

Instructor Ask the group for their opinions on automation. Ask them to cover the following points:

1. From a worker's standpoint, is automation good or bad?
2. How has automation affected you personally during the past 15 or 20 years, for example?
3. What do you think CWA's position should be regarding the introduction of labor-saving machines?

Instructor After getting three or four opinions, try to sum up the points which have been made. If any of the following points have not been made, the instructor should introduce them.

1. We must admit after centuries of industrial revolution, technological advancement and now automation, this country is more prosperous than ever and is providing employment for approximately 65 million workers.
2. Realistically, we know from experience that we need not necessarily fear machine operations; in the past, they have resulted in mass production, cheaper unit costs and a wider distribution of this country's abundance.
3. The telephone industy follows this general pattern. In 1920 there was only 2% local dial phones and no toll dial. Now in 1960 96% of all Bell System and about 80% of independent telephones are dial operated and over 80% of toll calls are operator-dial. Despite this increase in mechanization employment in Bell System Operating Companies alone increased from 229,000 in 1920 to over 597,000 in 1959. Wages, working conditions, profits, telephone service, etc. are better than ever.

Instructor Ask the group why they think it was possible for this country to have simultaneous expansion in automation, employment profits and living standards as well.

Try to get from the group the following points:

1. Increased production was accompanied by tremendous increase in consumption and living standards. In other words, increases in the use of old products and new ones more than made up for the loss of job resulting from the use of machines.

2. The American trade union movement, and other liberal forces, pressured for and were successful in introducing work-spreading programs such as:

   a. forty-hour work week;
   b. holidays and vacations
   c. lower retirement age;
   d. elimination of child labor
   e. compulsory education; and

   income producing programs such as:

   a. Unemployment compensation and Social Security;
   b. minimum wage and overtime legislation;
   c. termination pay, the guaranteed annual wage, etc.

IMPORTANT CONCLUSION

The American labor movement in other words, built into the economy income-producing and job-spreading procedures which helped offset job displacement.

The current fight for better pensions, lower voluntary retirement age, disability pensions, 35-hour work week, etc. are a continuation of these pressures.

Instructor Point out that CWA's position, expressed by President Beirne in publications, Congressional testimony, etc., is as follows:

"We should like to state quite clearly and emphatically that we have never resisted mechanization for the sole purpose of maintaining jobs for workers we represent. Our basic attitude has been twofold:

"First, that any employer, particularly one as large and as far-flung as the Bell System, has a responsibility to introduce conversion to machinery in such a way and at times that such changes will have the least possible detrimental effects upon the economy of the industry and the country.

"Second, it has been our position that benefits derived from mechanization should be shared by owners of the industry, employees in the industry, and the public at large.

"We feel these two basic attitudes have special merit in a government-regulated, guaranteed 'fair profit', monopoly industry."

Source: Statement, J. A. Beirne - October 25, 1955
84th Congress, First Session
Joint Committee on the Economic Report

Instructor Display CWA pamphlet "We Welcome Automation". Indicate copies are available to interested people. Have stack of them on your desk or table to be picked up by students at end of session or class.

CHANGES IN JOB CONTENT

Instructor Recap for the group some of the examples already brought out of changes in telephone job content in the past 20 years. If no one has mentioned station installers being required to "sell" extensions or colored sets, you introduce this. In addition, try to get from the group examples of how some jobs have become more

complicated and others less complicated. If you don't get from the group the example of the use of polyethylene cable, and key pulsing of toll calls, you introduce them.

The purpose of this recap is to start a discussion of how new procedures, new materials, new techniques, etc., independent of machine changes, help alter the basic content of old and familiar jobs.

Ask the group the following question:

> "What do you think the Union's attitude should be toward these changes in job content among people represented by the Union?"

During the discussion, try to have the following points made:

1. No union wants to be considered as standing in the way of progress or to be identified with a negative, obstructionist attitude.
2. Whether we like it or not, times and jobs change and people have to be flexible enough to make the most of these changes. Actually, the workers themselves frequently share the benefits of these changes.
3. Change in itself can be an advantage to a worker, rather than a disadvantage. For example, adding functions like merchandising to a job's content can be the basis for getting a higher rate of pay for a particular job.
4. It is very difficult to generalize on how to best meet changing job structures and changing job content. The job steward, local officers, as well as the members have to meet each situation as it arises and try to use each situation to improve wages and working conditions for the individual workers.

Instructor Get from the group the actual way in which some of them have met these problems. Try to get from the group situations in which the union has been able to negotiate informal or formal company agreement that when new functions are added to a job, more time will be allowed for the job to be performed. For example, those station installers required to do "selling" will not be required to install as many stations per day.

Where a company attempts to down-grade a job, such as the cable splicer's job, by the use of allegedly simplified cable, it is up to the union to prove, if it can, that the job functions are not less skilled and should command the same rate of pay.

Basically, what we are saying is that these seemingly new problems must be met in the same straight-forward trade union fashion as older and more familiar problems.

Tell group about recent arbitration awards in New Jersey Bell and New York Tel. Polyethylene Cases - Point out

1. The New Jersey Plant Union (IBEW Local 827) alleged that the company had violated the contract by unilaterally assigning Splicers' duties to Lineman, Installers and Repairmen (lower rated jobs).

   The arbitrator held that duties assigned to lower rated crafts were different from what they were previously - due to technological changes. The new duties entail work well within skills and capacities of lower crafts.

   The arbitrator implied that a case might have been made for payment of top craft rate to lower rated craftsmen while they are performing cable work, but IBEW did not ask for this.

2. The New York Plant - Downstate independent union initiated a case in which they claimed that the company violated the contract by paying Linemen their regular rate when they performed work on PIC cable and 49-A terminals which the union claimed was Splicer's work.

The arbitrator agreed with the union that this was a contract violation. This means that Linemen could be assigned this work but that they would receive a Splicer's rate while performing work on PIC cable.

The arbitrator relied heavily on two previous arbitration awards in the same company in which the arbitrators ruled that the company violated the contract in dispute involving the assignment of work.

A few months later, the union agreed to a full flexibility clause which largely voided the arbitrator's decision.

Instructor should read J.A. Beirne letter to all full-time staff dated May 16, 1958 - Subject: "Polyethylene Cable Arbitration Award - New Jersey Bell" in preparation for this discussion.

CHANGES IN JOB CONCENTRATION - "JOB MIX"

Instructor Put the following figures on the blackboard:

	Class A Telephones Percent of Total Employment	
Job Group	1945	1958
Officials	.9	.9
Professionals	4.3	7.0
Business and Sales	4.6	6.7
Clerical	16.3	21.0

Switchboard Operating	52.2	32.3
Construction, Installation and Maintenance	17.2	27.6
Other - (Building Supplies)	4.5	4.5
Total	100.0	100.0

Make the following points from the above figures:

1. Not only is individual job content changing in our industry but shift is taking place away from such jobs as switchboard operating jobs to clerical, professional, sales and craft jobs.
2. This shift away from so-called production workers is also found in outside industries.
3. In the past 13 years in the telephone industry alone, the number of professional employees increased 159%, construction, installation and maintenance workers increased 156%, business and sales employees 136%, clerical workers 106%, but switchboard operating employees <u>declined</u> 1%.
4. Ask the group how we can best take advantage of this situation, particularly in any area where layoffs may be necessary because of dial cut-overs.

   You should try to get the following suggestions:

   a. Arrange for transfers between departments.

   b. Get the company to offer re-training programs so that telephone operators are taught clerical or other jobs.

   c. Press for inter-company or geographical transfers wherever possible, and where employees are willing.

   d. Lower voluntary retirement age.

Instructor Emphasize that union representatives can be very helpful in convincing older workers that they can do other jobs than those which they have been performing for 20 or 30 years. A good union steward can help break down resistance to learning new skills and thus facilitate transfers between departments. Many workers accept termination payments; early retirement or just being fired for fear of learning new skills. We should not be reluctant to press for job re-training opportunities for mature workers.

SHORTER WORK WEEK

Instructor A special discussion should take place on the need for a reduced work week in the telephone industry. Point out that New York City Traffic Union -- an independent -- now has 7½-hour work day. They had to agree to lengthen certain 6 and 5½-hour evening tours to get this. This may indicate that a shorter work day for Traffic, at least, is not too far distant.

This discussion should further demonstrate that until such time as we are able to obtain a shorter work week to help offset possible large scale job displacement in the telephone industry, we can successfully accomplish other day-to-day things, such as department and inter-company transfers, policing changes in job content, etc. which are readily accessible to us immediately than some of of the longer term goals.

SENIORITY

Instructor Also initiate discussion on seriority.

Should application of seniority be broad or narrow?

Get the thinking of the group concerning the idea that CWA bargaining units be encouraged to faciliatate transfers from force surplus areas to areas where there are jobs open through

the broadest possible application of seniority.

Should the company pay for transfers and re-training?

COLLECTIVE BARGAINING

Instructor — In this session we will be discussing collective bargaining and going into detail about our bargaining program -- how the program is developed; what are the items; some of the problems in determining those items; and some of the problems in bargaining with our employers and making those items a reality in the contract.

Instructor — Place on blackboard the STEPS IN COLLECTIVE BARGAINING

In your own words -

STEPS IN COLLECTIVE BARGAINING

Step I. Explain — The Communications Workers of America has the responsibility to act as the collective bargaining agent of employees represented by the Union. Collective bargaining is conducted under the direction of the Executive Board.

In the past, Convention delegates had authority to formulate the Union's bargaining policy or program. Now, however, this authority is in the hands of the Collective Bargaining Policy Committee members. The President is authorized to act for the Executive Board in devising bargaining strategy, planning the Union's bargaining program, and making decisions required to implement that program.

As a result of our desire to enhance the possibility for more realistic bargaining goals, and to realize a greater degree of efficiency and coordination in our bargaining efforts, the vitally important matter of establishment of a bargaining program was removed from the Convention floor by

appropriate amendment to our Constitution. Article XVII was amended in 1957 so as to prescribe the establishment, composition and function of a Collective Bargaining Policy Committee. Section 2 (f) thereof provides.

Step II.
Explain

> "The Collective Bargaining Policy Committee shall formulate a bargaining program or policy to apply to one employer, associated employers or a number of employers, and may designate items or matters to be negotiated or bargained for by any bargaining unit or units represented by the International Union."

Thus, the responsibility or the Collective Bargaining Policy Committee is very similar to the prior responsibility of the Convention. The authority vested in this Committee does not alter the authority and responsibility of the Executive Board, the President, the District and National Directors, the Special Representatives in Canada or their staff assistants with regard to matters pertaining to collective bargaining. The several Locals, their officers and members are charged with the duty and obligation of supporting the policy or program formulated by the Collective Bargaining Policy Committee and the Executive Board.

It is believed that each Union member will benefit from the desirable changes in the Union's collective bargaining procedures made possible by the 1957 constitutional amendment. We foresee improved labor-management relations in the industry

and are confident that we will realize increased effectiveness of our collective bargaining efforts. The general public will better understand the conditions in the industry, the role of the Union, and our collective bargaining goals. We feel certain that the change will result in wider acceptance and understanding among Union members themselves of their own collective bargaining program.

Step III. Explain — Research Department at International Headquarters then go over the Collective Bargaining Policy Committee's resolution, detail arguments, strategy, statistical report.

Executive Board receives the program after details have been filled in, supporting data included.

Step IV. Explain — Bargaining briefing conferences are the next step after Executive Board approval of the final program.

Step V. Explain — Bargaining unit caucuses are held well before actual negotiations get under way with a company. Delegates to such meetings list important local demands, learn about "National" portion of program.

Step VI. Explain — BARGAINING COMMITTEE MESHES NATIONAL AND LOCAL PORTIONS OF THE PROGRAM, TAILORS THE FINAL INDIVIDUAL PROPOSAL FOR THAT PARTICULAR BARGAINING UNIT TO THE SPECIAL NEEDS OF THE GROUP.

Step VII. — DEMANDS ARE SERVED ON THE COMPANY, NEGOTIATIONS GET UNDER WAY.

Instructor — After you have fully discussed our preparation, then go into each bargaining objective

Place on blackboard

BASIC WAGES

An equitable general wage increase.

Point out our position for a basic wage increase.

Also, discuss our support for a basic minimum wage through federal legislation of $1.25 and remind the group that the law of the land now is $1 minimum.

The summary on the BASIC WAGE increase should be that, to keep our nation prosperous, we need to have a constant increase in basic wages so that the majority of Americans are in a position to purchase the ever-increasing production of our economy.

Review a number of the arguments, such as we find our position as compared to other industries in 1959, was 45th and, in the same grouping in 1939 our position was 9th.

CWA, like other unions, generally withholds exact details of its wage demands, preferring to bargain these details out across the conference table rather than in the newspapers.

There is ample justification for a substantial wage increase this year. Industry profits can support one. CWA members need additional increases to restore their relationship to other workers.

Meanwhile, the telephone company continues to maintain that it follows its discredited community-wage theory. They preach about it more than they follow it since if they really followed a true community wage theory, the loss of place in relation to other workers would not have happened.

Productivity in the communications industry has advanced as much or more than in most other industries.

Higher wages to support an ever-improving standard of living are sought by all unions. CWA is no exception to this.

Instructor Place on blackboard -

VACATIONS

Two weeks' vacation after one year of service, three weeks' vacation after 10 years' service and four weeks' vacation after 15 years' service.

The Bell System at one time led the field in good working conditions. In 1938, the Bell System improved their vacation plan by providing three weeks' vacation after 15 years of service. This change was made at a time when a large number of employees in other industries were not even covered by paid vacation plans. While the Bell System has remained almost static in its vacation practices for the past 20 years, most industries have substantially liberalized their vacation plans. The 1959 change of 4 weeks after 30 years is but a small step in the right direction.

It is a common understanding that paid vacations for employees helps to:

1. Combat fatigue
2. Improve employee morale
3. Maintain good health
4. Reduces absenteeism
5. Provides as an effective aid in securing maximum individual and plant production
6. Reduces labor turnover

The report of the President's Emergency Board in the 1941 Railroad Case stated that "The right to a vacation with pay is a mark of social status and a recognition of the worth and dignity of the ordinary laboring man."

In discussing our proposal of four weeks' vacation after 15 years of service with the companies, we cannot successfully obtain our objective by only using recent statistics which are based exclusively on an industry or area practice. Studies by BLS and independent research organizations clearly indicate that more union agreements provide for four weeks' vacation after 15 years of service than ever before. Therefore, our best approach is to first review the tremendous progress which has been made in paid vacations for workers during the past 10 to 15 years. According to BLS, paid vacation provisions appeared in only 25% of the contracts surveyed in 1940. By 1959, this figure had increased to over 99%.

PENSIONS

Instructor Let us now take a look at our Pension Program in the Bell System. The language that the 1960 Policy Committee spelled out is as follows:

> "Elimination of all Social Security deductions from pension calculations; increase all minimum pensions to $125 a month; and the introduction of survivor's rights under pension plans. Where these items are inconsistent with the basic structure of existing plans, or impractical in terms of present benefit levels, the President and the Executive Board are directed to establish appropriate items for improvement. Also

the establishment of pension plans in those areas where none presently exist."

How do you compute the Bell System Pension Plan?

Instructor If unable to get this information from the group, then place the following examples on the blackboard:

EXAMPLES OF BELL SYSTEM PENSION PLAN INEQUITIES

	If Retired On or Before Aug. 31, 1952	If Retired After Aug. 31, 1952 but Before 1954 Soc. Sec. Amendments	After 1954 Soc. Sec. Amendments but Before Jan. '59 S.S. Amend.	
If calculated pension is above $115, such as:			(54-58)	(59+)
Average monthly base pay	$300.00	$300.00	$300.00	$300.00
1% (highest 5 years)	x .01	x .01	x .01	x .01
	$ 3.00	$ 3.00	$ 3.00	$ 3.00
Years of service	40	40	40	40
Calculated Company Pension	$120.00	$120.00	$120.00	$120.00
Subtract ½ Social Security Primary Insurance Benefit	- 40.00	- 42.50	- 49.25	- 52.50
Actual Company Pension	$ 80.00	$ 77.50	$ 70.75	$ 67.50
Total P.I.B. in this case is measured by benefits in effect after 1950 Social Security Amendments - hence $80.		Total P.I.B. in these cases is measured by level of benefits in effect at time of retirement; hence $85 for worker who retired after Aug. 31, 1952 but before 1954 Amendments, $98.50 for worker who retired after 1954 but before 1959 Amendments, and $105 for worker who retired after Jan. 1, '59		

Currently, the Bell System Pension Plan provides for at leat 4 different - basic levels of pension payments depending on the amount of Social Security deductions made from the employee's computed Bell System pension. People retired on or before Aug. 31, 1952, have deducted from their Bell System pension ½ Social

Security payments due them, frozen at the 1950 level. People retiring before September 1954 Social Security change, but after Aug. 31, 1952 have deducted from the Bell System pension ½ Social Security frozen at the level in effect at the time of their retirement. People retiring after Sept. 1954 but before Jan. 1959 have deducted from their pensions ½ Social Security amounts effective September 1, 1954. 1959 Social Security amounts are deducted from people retiring currently. As new Social Security levels are effective in the future, each one will result in still another level of Bell System Pension payments.

Effective November 1956, the Social Security Act was amended to permit women workers to retire on an optional basis at age 62, with reduced benefits. They can elect to wait until age 65 to retire and receive a full Social Security pension. However, if women choose to retire at age 62 or later, but before 65, their Social Security pension is calculated in the following manner: Monthly benefits are reduced depending on the number of months the woman will be getting benefits between age 62 and 65. If her benefits start at age 62, each month's benefit is 80% of what she would get if she were 65. If she waits until age 63 to apply, her Social Security payments are 86-2/3% of what she would receive at 65; taking Social Security at age 64, the amount would be 93-1/3. Social Security Pension is reduced by 5/9 of 1% for each month under age 65.

<u>Note</u>: Bell System pensions for women telephone workers will be reduced by one-half of any Social Security benefits to which they would be entitled at age 62, whether or not they elect to take their Social Security pension at that time. In other words, if a woman goes on Bell System pension at age 60 but waits until age

65 to apply for Social Security, her Bell System pension will be reduced, at age 62, by one-half of the Social Security amount to which she would be entitled. She need not actually be getting Social Security payments when this reduction takes place. This is a terrible inequity in the Bell System pension plan which CWA tried very hard to prevent, through negotiations, but has so far been unsuccessful.

NOTE: Any questions on Social Security P.I.B. - See Booklet.

Instructor To group -

Now that we have seen how the Bell System Plan is calculated for each individual employee, let us talk a little bit about the Pension Fund itself.

Does anyone have an idea of just how much the total Bell System Pension Fund is?

Instructor Present the following figures on the blackboard -

As of December 31, 1959, the total was:	$3,100,909,911
Interest on the Pension Fund, 1959	97,297,114
Payments from the Fund to Pensioners for 1959 were	78,155,893
Here we find that interest on the Fund exceeded payments to pensioners by:	19,141,221

Investment of the Pension Fund

The monies in the Pension Fund are invested in the following manner:

Comprised of:	% of Total
Bonds of Tel. Cos.	19.7%
U. S. Government obligations	3.9
Public Utility, Railroad & Industrial Bonds	57.8
Other Investments	13.2

Common Stock	4.0
Cash and accrued interest not due	1.4
	100.0%

Instructor Emphasize that -

Over 77% of the Pension Fund is invested in the Bell System itself and other telephone, utility and industrial enterprises. The nature of these investments has changed over the years. For example: In 1948, 42% of Fund was in Government Bonds, and only 39% in public utility and industrial bonds.

Instructor Let us discuss some facts about who are the pensioners.

Ask the question:

How many employees are now on pension? Give the class the fact that there are 729,000 employees in the Bell System.

Instructor Place on the blackboard whatever guesses are given by the group and then present the correct one.

(AS OF DECEMBER 1958)			
Total	53,339	Male	25,623
		Female	27,716

Of all the people who work for the Bell System, less than 10% ever go out on pension.

Instructor Make the following general conclusions:

1. The proportion of women on pension has been increasing steadily over the years; used to be 30-40% of total, now 52% of those on pension are women.

2. Less than 10 people out of every 100 who work for the telephone company will probably ever get a Bell System pension.

Instructor Continue with -

CWA's Position

The Bell System until 1959 consistently acted unilaterally on changes in pensions, disregarding the Union's position.

However, each of its unilateral actions were a direct result of

Union action.

EXAMPLE: CWA's unfair labor practice charges - 1949; Steel Board decision 1952; CWA's fight for pension improvement, Social Security changes.

1959 Pension Negotiations

1959 marked the first year of actual pension negotiations in Bell System:

1. CWA negotiated pattern settlement in Wisconsin Bell on January 27, 1959.
2. Within one month same improvements were extended to all CWA (and incidentally all non-CWA) units.
3. CWA won 2 out of 4 Policy Committee goals on Pensions
   a) Increased minimum from $75 to $85 and from $100 to $115 including ½ Social Security
   b) Reduced from highest 10 years to 5 years' earnings calculation in pension formula

Instructor Place on blackboard

TWO GOALS YET TO BE REALIZED

1. Elination of all Social Security deductions.
2. Survivor's benefits on death of pensioner.

Instructor Express in your own words the following summary:

CWA insists upon the Pension Plan being a matter of contract for many reasons. One of our first considerations is the welfare of the pensioners themselves. These are not nameless and faceless figures from the past; neither are they dry, lifeless units for an actuary to consider. These are human beings.

CWA believes the industry owes them a continuing return upon the only real investment they have ever had to make - their lifetime.

We do not believe this should be a return which provides bare subsistance.

These people have pride, they have dignity, and their transferral from the active list to the pension rolls does not alter in the slightest degree their sense of contribution and their desire to meet on something like even footing with their friends and neighbors who may still remain active.

For these reasons, we believe all pension matters should be negotiated as was the case for the first time this year.

Instructor Continue on blackboard with -

HEALTH INSURANCE

A company-paid-for plan providing for a comprehensive health insurance program for each communications worker, pensioner, his or her spouse, and other dependents. This plan shall include hospitalization, surgical and major medical coverage.

CWA has been trying to get such a plan as this agreed to by the companies since 1953 but has been unable to convince them, although the Union was successful in obtaining such agreements from about 30 independent companies. Meanwhile, a trend toward company-paid-for health insurance, started several years ago, has accelerated even more.

We did make one important gain, however, directly as a result of our bargaining pressure for company-paid-for health insurance. During 1956, we negotiated amendments to the Bell Benefit Plan providing some sickness absence payments to people with less than 2 years but more than 6 months' service. Heretofore, they received absolutely no extended sickness absence pay under the Benefit Plan.

Bell companies' basic argument against paying for health insurance can be summarized as follows:

Their plan of paying sickness benefits under certain conditions is better than a company-paid-for health insurance program.

It is true that wage payments continue for a limited period under sickness disability provisions of the Benefit Plan. However, these wages must be used to continue to pay the individual's living costs - rent, food, etc. Wage payments are not a substitute for adequate insurance. Even under the best of circumstances, costs go up during an illness or an accident. We are trying to insure against these additional expenses and not the kind of bills which are met by basic wages.

Under CWA's proposal, the telephone company would pay for hospitalization and surgical benefits for each worker, his or her spouse and unmarried children under 19 years of age. Complete "comprehensive" coverage is being sought.

Only a short time ago, fewer than 5 million people in industry groups were covered by health insurance plans. In the last 3 or 4 years, the number has increased to more than 20 million and is still going up. The telephone industry is far behind industry, particularly other public utilities in this worthwhile field.

The complete type of health insurance CWA seeks can be had for about 5 cents an hour under the plan proposed. It would cover all employees in a bargaining unit, pensioners, employees on leaves of absence and dependents.

CRITICAL BARGAINING UNIT DEMANDS

A. Any such demands are to be limited to only those items that represent the crucial needs of the members of the unit.

B. When bargaining unit meetings or Districts and National Directors consider any of the following to be of critical importance to the bargaining unit, such items shall be included in the bargaining program for such unit: progression schedule improvements, tour differential improvements, improved transfer provisions, wage structure improvements, and improved arbitration provisions.

(1) Demands of these items shall be according to standards developed by the office of the President.

C. Other demands shall be held to a reasonable minimum so long as the critical needs of CWA members are adequately represented in the Union's bargaining program.

Instructor Continue on blackboard -

NO LOWERING OF CONTRACT STANDARDS

A. The achievement of reasonable and satisfactory collective bargaining agreements without weakening the benefits presently afforded under existing contracts.

LIFE INSURANCE

If timely and feasible, in the opinion of the President and Executive Board, the Union shall include as a bargaining demand payment by the employer of the total cost of the life insurance program, where such programs exist and the introduction of such programs where none exist.

Instructor After this discussion on these items, raise the following questions:

WHAT CAN WE DO TO HELP SECURE THESE BENEFITS FOR OURSELVES?

Discuss this fully, making the following points, either from suggestions offered by the group, or present them questions for discussion and comment.

1. The bargaining committee must be given our full support, both by voice and action.
2. We should help our bargaining program by expressing our approval.
3. Let management know, through the lines of organization, that the Unions' bargaining program has our approval and that we are determined.
   A. Buzz sessions.
   B. Discussions during coffee breaks and rest periods.
   C. Chit-chat on the job concerning the demands and expressions of approval where management can overhear.
4. Concerted drive to sign up the nonmembers.
5. Increase all Union activity.

Instructor Summarize this section by emphasizing the need to build a solid Union spirit behind the bargaining program. The best way to do this is to make bargaining the No. 1 topic of conversation with unquestionable approval of the program emphasized.

FINAL SUMMARY

Instructor Summarize this section of the Course by stating:

1. The basic philosophy of CWA is to establish dignity for communications workers - by giving them a voice through

their Union, by which they can determine their own wages and working conditions.

2. That while gains and achievements have been outstanding, CWA realized the process of collective bargaining is a never-ending struggle to make Union progress, and we must continuously strive to translate each gain into building and strengthening our Union - to educating our members to understand their

rights

opportunities, and

their responsibilities

so that we may prepare ourselves to move forward to greater achievements.

WPPA COLLECTIVE BARGAINING INSTITUTE

STEWARD TRAINING: PREPARING THE CASE

I. Questioning the aggrieved

- The member's name, shift, badge number, rank, hiring date, address, phone number.
- Are there other members involved? Names?
- Name of supervisor, plus names of other supervisors who may be involved.
- What are the circumstances: what happened or failed to happen?
  - a. What did management do? Are there witnesses if needed?
  - b. What did management fail to do? Witnesses?
  - c. What did management say, and who said it? Witnesses?
- When did it happen (date and hour if needed)?
- What does the member say about his previous record?
  - a. Previous discipline record (similar or different cases)?
  - b. Attitude (has management made this an issue in past?)
  - c. Union activity (could this be a pretext to get rid of a union active?)
  - d. Other grievances filed in past?

II. Information from other Sources

- What section(s) of the contract applies?
- What section(s) of ordinances or rules apply?
- Do union records show similar cases in the past?
- Should you check with other union officers on how to proceed in this case?
- Should you check with other members?
- Should you ask the member to keep records (of particular instances)?
- Should you ask Management for records or statements?

Pointers for Contract Negotiations

WHEN PREPARING FOR A STRIKE

1. Make sure that strike is timely - check to see whether federal and state agencies have been properly notified, and that contract expiration date is observed.

2. Notify Federal Mediation and Conciliation Service or Wisconsin Employment Relations Board that strike is imminent.

3. Take a strike ballot among membership (observe union constitution and bylaws).

4. Notify international union that strike is imminent (according to union constitution). Get international approval if necessary.

5. Arrange for strike benefits for membership - determine amount and who is eligible for same - notify membership.

6. Make arrangements with local merchants for credit to cover necessary food, fuel, essentials in case strike is prolonged.

7. Determine who is to handle strike and bargaining publicity (see Strike Publicity Guide for Local Unions). Set publicity policy.

8. Hold meetings with membership to inform about preparations taken for strike as well as to outline the union and company's last position in negotiations. Again, communicate to membership major areas of disagreement between union and employer. Stress importance of solidarity and concerted action.

9. Check with union attorney concerning procedure to be followed during picketing and behavior likely to get union strikers in trouble with the law.

10. Meet with local police chief and/or County Sheriff to determine whether problems in communication exist, or whether law enforcement agencies have special fears or problems that need to be considered.

11. Set up relations with other unions in area to get necessary cooperative efforts underway and to clear way for possible requests for financial support if the strike should be prolonged.

12. Talk to leaders of other unions in plant to clear up problems of crossing picket lines, performing maintenance work, jurisdictional work, subcontracting, constructions, etc.

13. Take financial membership rejection report back to management for last-ditch bargaining session.

14. Prepare picket signs, hand-lettered or printed, or both, informing public and workers that a strike is in progress.

15. Appoint picket captains. Assign striking workers to picket or related duty. Set up strike headquarters. Arrange for coffee, donuts, food for coverage. Set up tents or arrange for trailers, resting, toilet facilities near picket sites.

16. Brief pickets on legal rights and prohibitions on picketing. Where pickets may or may not stand, walk, cross or block. Inform pickets as to degree of legal and financial support they may expect from the local and international union. Explain prohibitions on numbers of pickets allowable at any one entrance or point.

17. Set up ladies' auxiliary to assist with work related to picketing and strike. Tie women into union efforts as much as possible. Explain financial assistance available to striking workers and families, including strike benefits, food, rent or payment assistance, or whatever has been decided upon.

18. Think about setting up entertainment programs if the strike becomes prolonged.

19. Meet with WERB or FMCS to arrange meetings with management, with or without presence of mediator or commissioner.

20. Issue press releases to local papers/news media as decided upon in advance.

21. Arrange for periodic meetings with membership/families to report on progress, strategy/lack of progress during strike. Place of meetings, time, agenda, changes to proposals, etc.

22. Review, with local officers and membership, likely tactics of employer during strike (lockout, strikebreakers, Pinkerton Detectives, photographers or TV cameras, deals with other employers, letters to strikers' wives, families, etc.)

Pointers to Remember During Contract Negotiations

DURING ACTUAL NEGOTIATING SESSIONS

1. Let the Chairman of your committee handle the basic communication and negotiating role during meetings with the Company.

2. Arrive at meetings on time and observe scheduling agreements.

3. Set up an agenda for discussing items and stick to it - don't discuss proposals out of turn unless mutual agreement is reached to do so.

4. Take careful notes on management replies to union proposals, including their reasons for taking positions.

5. Determine who is taking what role on the management committee - who is the "table thumper," who "spreads oil on the troubled waters," or whatever bargaining types emerge on the other side. Make sure each union committee man understands the purpose of each individual to the negotiating process.

6. Each Union committee man should know prior to each meeting what his or her general contribution is to be in the session. To supply information on a specific point, to provide a "hard" or "soft" image to the other side, or whatever.

7. For each union proposal, the committee should be prepared to furnish reasoning or supporting facts related to the proposal. At the same time, however, it is not essential that the union carry the burden of proof as to the need for a specific contract change.

8. The Union should maintain the initiative in negotiations. The meeting is generally set up to discuss union proposals, not company or employer counter-proposals.

9. Recognize that management will, if possible, put the union in the position of giving up something in return for each concession made. The purpose of this strategy is again to put the union on the defensive as well as to secure management objectives.

10. Management will take advantage of individual committee members' backgrounds, weaknesses, and immediate interests to get them to go along with counter-proposals. The tactic serves to split up the union committee and make them more agreeable to management counter-proposals.

11. Keep calm. Maintain your poise. If something is to be gained by becoming emotional, wait until the proper psychological moment to show

12. Be aware that management prefers to maintain flexibility of operations by working to solve problem underlying union proposals without reducing solution to writing.

13. Know the strengths and weaknesses of the union. If you lack bargaining strength or the union is divided on some proposal, and management is aware of the weakness, keep this fact in mind when bargaining.

14. If management is making a sincere effort to arrive at a settlement, try to recognize this effort and return with a sincere effort on your side.

15. Make every effort to communicate with the other side. Recognize how conflicting interests easily lead to misunderstandings about what is proposed or has been said.

16. Remember that management will attempt to capitalize on pooor preparation or small mistakes in fact to get the union to drop important proposals. Act accordingly.

17. If a mediator or conciliator becomes involved, remember that he serves to help the parties to reach agreement by making suggestions regarding compromises and by acting as a go-between. Neither side is obligated to accept the mediator's suggestions.

18. Remember that both management and union have an obligation to bargain collectively with the other side at reasonable intervals. There is no obligation to arrive at agreement on particular issues, however.

19. Watch carefully for little "hints" regarding changes in management's position on union proposals. They are not always advertised loudly, since both sides are interested in saving face when a change in position is in order. Recognize that no one likes to be made a fool of, so respect the feelings of the bargainer on the other side.

20. If it becomes clear that it may be necessary to strike to enforce Union proposals, check the union's strength in this regard (back orders, assets of union, strike vote of membership, etc.).

March 12, 1968

PARLIAMENTARY LAW QUIZ

1. The chairman decides whether a motion can be put before the meeting and whether discussion is in order. Yes_____ No_____

2. In some cases the chairman can decide that a motion or the minutes can be adopted without a formal vote. Yes_____ No_____

3. The main points of discussion on a motion should be in the minutes. Yes_____ No_____

4. A member can interrupt a speaker discussing a motion to:
   a. Introduce a motion. Yes_____ No_____
   b. Make a point of order. Yes_____ No_____
   c. Make an amendment. Yes_____ No_____
   d. Make a motion to lay on the table. Yes_____ No_____
   e. Ask a point of information Yes_____ No_____
   f. Move to adjourn. Yes_____ No_____

5. The chairman has the duty of rephrasing motions if the original wording isn't clear. Yes_____ No_____

6. The chairman may ask a speaker whether he is going to speak for or against a motion. Yes_____ No_____

7. A motion is made to have a picnic. An amendment -- not to have a picnic -- is in order. Yes_____ No_____

8. Debate on a main motion is in order while an amendment is before the body. Yes_____ No_____

9. Most motions are voted on by Ayes and Noes. Any member can rightfully demand a show of hands or a vote by ballot. Yes_____ No_____

10. An appeal from the decision of the chair must have 2/3 majority to be sustained. Yes_____ No_____

11. A motion -- to have a picnic on Saturday -- is made. An amendment is offered -- to have the picnic on Sunday.

    a. The amendment is passed, therefore the motion is automatically passed.
    Yes_____ No_____

    b. The amendment is defeated, therefore no vote is necessary.
    Yes_____ No_____

12. A committee reports to the meeting. The report includes suggestions to send three delegates to a convention and two students to Wellesley. If the report is adopted the sending of the delegates must still be voted on. Yes _____ No _____

13. A committee member who disagrees with a committee report has the right to make his own report to the meeting with the consent of the body. Yes _____ No _____

14. If a member, speaking on a motion, doesn't stick to the truth, you can interrupt with a point of order. Yes _____ No _____

15. The chairman decides whether a point of order is right. Yes _____ No _____

16. The maker of a motion and his seconder can withdraw a motion after it is placed before the body, but before a vote is taken. Yes _____ No _____

17. On a question of privilege a member may interrupt a speaker but must be recognized by the chair. Yes _____ No _____

18. Passing motion to call the previous question ends all debate and forces an immediate vote on the motion. Yes _____ No _____

19. Nominations must be seconded in order to be O.K. Yes _____ No _____

20. A motion to adjourn can't be made until the agenda has been finished. Yes _____ No _____

Parl. Proc.

PARLIAMENTARY LAW WORKSHOP

OUTLINE

FIRST SECTION

1. Why we have parliamentary procedure.

   A. Need for standard "rules" for running meetings.

   B. If we follow the rules we get things done efficiently and democratically.

2. Some basic general principles.

   A. One subject at a time.

   B. Free debate on each proposal.

   C. Equal rights for all members at meetings.

   D. Will of majority prevails but minority has right to present its case.

3. Explanation of following basic points.

   A. Recognition (raising of hand, standing up).

   B. Addressing the chair.

   C. Making motions (only one main motion on floor at a time).

   D. Seconding of motions (every motion must be seconded).

   E. Discussion of motion.

   F. Vote on motion.

4. Practice on points listed in Number 3.

SECOND SECTION

1. How amendments are made -- where they fit it.

   A. Motions can be amended after the "second" and before the vote.

   B. The maker of the motion and the second can accept the amendment as part of the original motion if nobody else objects.

   C. Amendment must be discussed and voted on before motion is taken up. If amendment passes, motion as amended is voted on.

   D. An amendment to the amendment is permissible. However, never more than two amendments are allowed.

   E. Use of "substitute motion."

2. Examples and practice on making motions and amendments.

THIRD SECTION

1. Discussion and explanation of the following points:

   A. Point of order.

   B. Appeal from the decision of the Chair.

   C. Point of information.

   D. Parliamentary inquiry.

   E. Question of privilege.

FOURTH SECTION

1. Discussion and explanation of the following points:

   A. Previous question.

   B. To table -- to postpone.

   C. Reconsider -- rescind.

D. Withdrawing a motion.

E. Suspend the rules.

F. Move to adjourn.

FIFTH SECTION

1. How to conduct and plan union meetings (emphasis on planning).

A. Order of business.

B. Drawing up the agenda.

C. How to handle correspondence.

D. How to handle committee reports and reports of delegates.

E. Tips for a successful meeting:

1. Short business meetings planned in advance.

2. Starting and finishing on time.

3. Not getting bogged down in detailed discussion.

4. Encouraging participation by all members.

5. Closing debate when necessary.

F. How to use unanimous consent.

READING COMPANY FINANCIAL STATEMENTS

While financial statement interpretation is usually left to a union specialist, it is nonetheless important that everyone on the negotiating team should know how to look at the company's operating results and understand what he sees.

EXAMPLE

THE INCOME STATEMENT

	SALES	$100.00
(Minus)	COST OF GOODS SOLD	- 90.00
	OPERATING PROFIT	10.00
(Plus)	OTHER INCOME	+ 20.00
	GROSS INCOME	30.00
(Minus)	INTEREST AND OTHER EXPENSES	- 15.00
	PROFITS BEFORE TAXES	15.00
(Minus)	TAXES	- 7.50
	NET PROFIT	7.50
(Minus)	DIVIDENDS	- 5.00
	EARNED SURPLUS	2.50

THE INCOME STATEMENT

The company is in the business of making a product or providing a service which it sells to customers. The money it gets from these sales is called /SALES/ or /REVENUES/ by the accountant. The company has had to pay for labor, raw materials, overhead expenses, etc. in order to produce these goods or services. The accountant adds these all together and calls them /COST OF GOODS SOLD/. If you subtract "cost of goods sold" from "sales", you get a figure called /OPERATING PROFIT/ which is the amount of money the company made by producing and selling its product or service. Sometimes the company makes money from other sources too (it can collect rent on property it owns, or interest on bonds it holds, etc.) and the accountant calls this /OTHER INCOME/. When he adds "operating profits" and "other income" he arrives at what he calls the company's /GROSS INCOME/ which is everything they earned.

Companies usually have to borrow money to build buildings or acquire property or machines so they must pay interest on this money. The accountant subtracts /INTEREST AND OTHER EXPENSES/ ("other expenses" can be one-time special losses like fire) from "gross profits" and gets /PROFITS BEFORE TAXES/. Companies have to pay taxes so we subtract /TAXES/ from our "earnings before taxes" and get the company's /NET PROFIT/. This is the amount of money the company has earned for the year and will go a long way in determining just how large a wage increase you can ask for.

As you know, companies sell stock to get money to go into business and the people who own this stock bought it because they expected to receive some of the "net profits" every year so the company pays them /DIVIDENDS/ which is subtracted from "net profits" leaving a figure called /EARNED SURPLUS/ which is the money left for the company to put back into the business or into higher wages and better working conditions.

THE BALANCE SHEET

ASSETS		LIABILITIES & NET WORTH	
Cash, Inventories)		CURRENT LIABILITIES	$117.50
Accounts Receivable)	$100.00	LONG TERM LIABILITIES	200.00
Etc.)			
		TOTAL LIABILITIES	317.50
CURRENT ASSETS	$100.00		
Property, Plant,)		STOCKHOLDERS EQUITY	
and Equipment)	500.00	Common Stock	180.00
		Preferred Stock	100.00
		Retained Earnings	2.50
TOTAL ASSETS	$600.00		$600.00

The other financial statement you should be interested in is the balance sheet. This has two sections. The first is the /ASSETS/ section and tells you what the company has. The other is the /LIABILITIES AND NET WORTH/ section which tells you where they got the money to buy the things they have.

In the "assets" section there are /CURRENT ASSETS/ which are things like cash, money owed to them, inventories and investments which could be turned into cash in a short period of time if necessary. A second section are the things the company has which cannot be quickly turned into cash and these are generally its properties, its plants, and its equipment. When all these are added together, you get everything the company has and this is labelled /TOTAL ASSETS/. The "how they got it" section is broken into "liabilities" which means money they have borrowed and have to pay back. The borrowed money is shown as /CURRENT LIABILITIES/ which is what they have to pay pretty soon and /LONG TERM LIABILITIES/ which is money they won't have to pay for a while. The other two ways of getting money are selling stock and that is listed as /STOCKHOLDERS EQUITY/. Under "stockholders equity" is /CAPITAL STOCK/ which is how much money they got from selling stock, and /RETAINED EARNINGS/ which is where all the "earned surpluses" from the end of the income statement are put.

NOTE

It is important to be aware of the trend of earnings and assets, that is, the change over time. If the firm's earnings, assets and stockholders equity are increasing fairly steadily, it may indicate the company is in good financial health and a wage increase may be justifiably asked for. On the other hand, some firms may show little or no increase in earnings for many years, or earnings may be erratic, fluctuating with the ups and downs of the economy. There is a better case for asking for a wage increase when earnings are growing steadily than when they are erratic or fluctuating.

Other Important Measures

The Income Statement. There are two important tests to be made on the Income Statement that will help determine the soundness of the company's earnings.

1. Gross Margin. By dividing total sales into gross income - e. g. $\frac{30.00}{100.00} = 30.00\%$ we get the gross margin, or return on sales before taxes.

2. Net Margin. By dividing total sales into net profit, e.g. $\frac{7.50}{100.00} = 7.50\%$ we get the net margin, or return on sales after taxes.

   If margins are increasing over time, it shows that the basic profitability of the company is increasing. This is because the firm is able to retain a larger percentage of revenues as net income.

3. Margins vary between industries. For example, in the drug industry margins are usually very wide. In manufacturing, margins are generally narrower.

4. Sources. There are several good sources of financial material. The basic source must always be the Annual Report of the Company or government organization bargained with. It is useful, for comparative purposes, to

see the results of other firms in the same industry. To do this, check the July issue of Fortune magazine. This issue summarizes the financial results of the 500 largest manufacturing firms in the U. S. In addition, it summarizes results by industry so comparisons are easily made. In January of each year Forbes magazine issues an industry review for the U. S. which discusses financial data for the preceding 1-year and 5-year periods for the leading companies in each industry. The Forbes and Fortune surveys are handy yardsticks for measuring the performance of your firm.

Washington 6, D. C.

TO: All CWA Staff Instructors June 6, 1960

FROM: Jules Pagano, Education Director File: 1.13

SUBJECT: Course Outline - INDUSTRY ECONOMICS, PROBLEMS FACING CWA AND COLLECTIVE BARGAINING

Fraternal Greetings:

For those bargaining units where agreement has been reached with Bell System Companies in 1960 negotiations, you should make the following insertions and changes in your collective bargaining outline:

1. - Page 22 - At the end of BASIC WAGES and before VACATIONS
2. - Page 22 - Under VACATIONS, line 11
3. - Page 24 - Pension Table
4. - Page 27 - Box in middle of page showing number of people on pension should be as of December 1959.
5. - Page 28 - Before "TWO GOALS YET TO BE REALIZED"
6. - Page 30 - End of page.
7. - Page 31 - End of page.

Sincerely and fraternally,

Jules Pagano

Jules Pagano, Assistant to
Vice President and Director of
Education

NE-541 Rev.

Insert 1.
Page 22 - At the end of BASIC WAGES and before VACATIONS

1960 WAGE INCREASES

The pattern-making settlement took place in Northwestern Bell in 1960. Here wage increases ranging from $1.50 to $4.50 in Plant and from $1.50 to $2.50 in Traffic and Clerical were won. All other Bell System settlements that followed were in line with the Northwestern agreement. Over-all wage increases are averaging between 7¢ and 8¢ per hour. This appears to be about the same wage increase that other major unions have been negotiating this year.

Insert 2.
Page 22 - Under Vacations, Line 11

The 1959 change of 4 weeks after 30 years was but a small step in the right direction. The 1960 improvement of 4 weeks after 25 years, effective in January 1961, is another step toward our goal. CWA has now negotiated vacation improvements two years consecutively. It is a common understanding that paid vacations for employees helps to: (Continue with Outline)

Insert 3.
Page 24 - Pension Table

EXAMPLES OF BELL SYSTEM PENSION PLAN INEQUITIES

	If Retired On Or Before Aug. 31, 1952	If Retired After Aug. 31, 1952 but Before 1954 Soc. Sec. Amendments	If Retired After Aug. 31, 1952 but After 1954 Soc. Sec. Amendments But Before Jan. '59 S.S. Amend.	If Retired After Aug. 31, 1952 but After 1959 Soc. Sec. Amendment
If calculated pension is above $115, such as:			('54-'58)	('59+)
Average monthly base pay	$300.00	$300.00	$300.00	$300.00
1% (highest 5 years)	x .01	x .01	x .01	x .01
	$ 3.00	$ 3.00	$ 3.00	$ 3.00
Years of service	40	40	40	40
Calculated Company Pension	$120.00	$120.00	$120.00	$120.00
Adjustment to meet minimum				+5.00*
Subtract ½ Social Security				$125.00
Primary Insurance Benefit	-40.00	-42.50	-49.50	-52.50
Actual Company Pension	$ 80.00	$ 77.50	$ 70.75	$ 72.50

Total P.I.B. in this case is measured by benefits in effect after 1950 Social Security Amendments - hence $80.

Total P.I.B. in these cases is measured by level of benefits in effect at time of retirement; hence $85 for worker who retired after Aug. 31, 1952 but before 1954 Amendments, $98.50 for worker who retired after 1954 but before 1959 Amendments and $105 for worker who retired after Jan.1,'59.

*Assuming employee is age 65 and has 40 years of service.

Insert 5.
Page 28 - Before "TWO GOALS YET TO BE REALIZED"

1960 PENSION IMPROVEMENTS

For the second year in succession, CWA negotiated pension improvements in the Bell System. Our pattern-setting settlement with Northwestern Bell on April 30, 1960 established minimum pensions for regular full-time employees attaining 65 years of age that will vary in accordance with the employee's length of service, as follows:

Term of Employment	Monthly Minimum Pension
40 years or more	$125.00
30 years but less than 40	120.00
Less than 30 years	115.00

1960 MAJOR MEDICAL HEALTH INSURANCE PLAN

The Northwestern pattern also established a company paid for major medical insurance plan. While the Union was not successful in negotiating a comprehensive basic health insurance plan, we did get our foot in the door by negotiating a company paid for plan. By fall 1960, September 1, 1960 in Northwestern, the companies will establish and make effective and pay the costs of an Extraordinary Medical Expense Plan. After the deduction of specific amounts determined by certain hospital and surgical insurance coverage and 4% of an employee's annual salary (limited to a minimum of $100 and a maximum of $500), the Plan will pay 80% of the remaining medical and hospital expense up to the maximum amounts listed as follows:

The Plan will cover expenses of this type up to a maximum of $15,000 for regular employees and will apply to all dependent members of an employee's household under 65 years of age.

The Plan will cover expenses of this type up to a maximum of $2,500 for any dependent relatives, 65 years of age and over, who reside in the household of regular employees.

The Plan will also cover expenses of this type to a maximum of $2,500 for retired employees and their dependent relatives.

The Plan works this way:

Employee's Annual Wage		$ 4,000
Hospital and Medical Bill		$10,000
Deduct from Bill:		
1. Amount covered by basic insurance such as Blue Cross, Telephone Workers H-M Plan, etc.	$400	
2. 4% of annual wage	160	
Total	$560	
Subtract $560 from $10,000 bill		$ 560
		$ 9,440
Extraordinary Medical Expense Plan Pays 80% of $9,440 or		$ 7,552
Employee's Basic Insurance Pays		$ 400
Employee pays 4% of annual wage or $160 plus 20% of remainder after basic insurance or $1,888 for a total of $2,048		$ 2,048
Total Bill		$10,000

Insert 7.
Page 31 - End of page

1960 LIFE INSURANCE IMPROVEMENTS

Bell System companies with whom the Union has concluded 1960 negotiations have agreed to pay for the first $2,000 of Group Life Insurance that the employee has in force, instead of the first $1,000. The minimum amount of Group Life Insurance will be raised to $3,000 (formerly $2,000) and the cost to employees for the first $3,000 of Group Life Insurance is reduced to 50¢ (formerly 50¢ for the first $2,000).

Wisconsin Brick Corporation 238-2636

THIS AGREEMENT, made and entered into this 5th day of April, 19 65, by and between WISCONSIN BRICK CORPORATION, hereinafter referred to as the "EMPLOYER", and the DRIVERS, SALESMEN, WAREHOUSEMEN, MILK PROCESSORS, CANNERY, DAIRY EMPLOYEES AND HELPERS UNION, LOCAL NO. 695, Madison, Watertown, Waukesha, Wisconsin, affiliated with the International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America, hereinafter designated as the "UNION".

ARTICLE I. - INTENT - RECOGNITION - UNION SECURITY

Section 1. It is the intent and purpose of this Agreement to create a Collective Bargaining Agreement between the Employer and the Union relative to rates of pay, hours of work and conditions of employment to be observed by the Employer and the Union, and to provide a proceedure for the prompt and equitable adjustment of grievances and disputes which may arise from time to time between the Employer and employees.

Section 2. The Employer recognizes and acknowledges that Drivers, Salesman, Warehousemen, Milk Processors, Cannery, Dairy Employees, and Helpers Union Local No. 695 of the I. B. of T. C. W. and H. of A. is the exclusive representative of all truck drivers, warehousemen, yardmen, and helpers employed by the employer.

Section 3. All present employees who are members of the Local Union on the effective date of this Agreement shall remain members of the Local Union in good standing as a condition of employment. All present employees who are not members of the Local Union and all employees who are hired hereafter shall become and remain members in good standing of the Local Union as a condition of employment on and after the thirty-first (31st) day following the beginning of their employment or on and after the thirty-first (31st) day following the effective date of this sub-section, whichever is the later. This provision shall be made and become effective as of such time as it may be made and become effective under the provisions of the Wisconsin Employment Relations Act, but not retroactively.

ARTICLE II. - STRIKE - PICKETING - UNAUTHORIZED ACTIVITY

Section 1. PICKET LINE - It shall not be a violation of this Agreement, and it shall not be cause for discharge of disciplinary action in the event an employee refuses to enter upon any property involved in a primary labor dispute, or refuses to go through or work behind any primary picket line, including the primary picket

ANTIGO, WISCONSIN

AGREEMENT

PREAMBLE

This Agreement, made and entered into this 1st day of November, 1965, by and between KRAFT FOODS, ANTIGO, WISCONSIN, its successors and assigns, hereinafter referred to as the "EMPLOYER", and the Chauffeurs, Teamsters, Warehousemen, and Helpers, LOCAL NO. 446, Wausau, Wis., affiliated with the I. B. of T. C. W. & H. of A., hereinafter referred to as the "UNION".

RECOGNITION

ARTICLE 1: Section 1: This Agreement relates and is limited to all plant employees of the Employer working at Antigo, Wisconsin, who are within the jurisdiction of the Union, working on jobs listed and classified in the attached wage schedule.

Section 2: The Employer recognizes the Union as the exclusive bargaining agency for all employees covered by this Agreement.

CONDITIONS OF EMPLOYMENT

ARTICLE 2: Section 1: Each employee shall, on his thirty-first (31st) day of employment or on the thirty-first (31st) day after the effective date of this Agreement, whichever is later, become and remain a member of the Union as a condition of employment.

Section 2: Should any member of the Union be suspended or expelled from the Union for the non-payment of initiation fee or dues, the Employer agrees to discharge such person within seven (7) days after receiving written notice from the officials of the Union.

A G R E E M E N T

THIS AGREEMENT, made and entered into this _____day of _____1967, by and between the DRIVERS, SALESMEN, WAREHOUSEMEN, MILK PROCESSORS, CANNERY, DAIRY EMPLOYEES AND HELPERS UNION LOCAL NO. 695, affiliated with the International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America, Madison, Wisconsin, hereinafter referred to as the "UNION", and the HAWTHORN-MELLODY FARMS DAIRY OF WISCONSIN, INC., Whitewater, Wisconsin, its successors, and assigns, hereinafter referred to as the "EMPLOYER".

ARTICLE I.

RECOGNITION

Section 1. The Employer recognizes the Union as the sole and exclusive bargaining agent for all plant employees at the Employer's Whitewater, Wisconsin plants, excluding plant managers, office clerical employees, guards, fieldmen, quality control men, and supervisors as defined in the Labor Management Relations Act as amended.

Section 2. All new employees shall serve a probationary period of sixty (60) days during which time they shall not be considered regular employees, but during which time all the provisions, except the article titled Discharge in this Agreement shall apply to them.

ARTICLE II.

UNION SECURITY

Section 1. As a condition of continued employment all persons who are hereafter employed by the Employer in the units subject to this Agreement shall become members of the Union not later than the thirty first (31st) day following the beginning of their employment or the effective date of this Agreement, whichever is the later. The continued employment by the Employer in said units of employees who are already members of the Union shall be conditioned upon those persons maintaining their membership in the Union; and the continued employment of persons who were in the employ of the Employer prior to the date of this Agreement and who are not now members of the Union shall be conditioned upon those persons becoming members of the Union not later than the thirty-first (31st) day following the execution of this Agreement. Section 1. It is hereby agreed by and between the Certified Grocers Co-op, Inc., of Madison, Wisconsin, and the International Brotherhood of Teamsters, Chauffeurs,Warehousemen, and Helpers of America, Local Union No. 695, that the following rules and regulations are agreed to and shall govern the relations between the Certified Grocers Co-op, Inc. of Madison, Wisconsin, and their successors and Local Union No. 695.

Section 2. Whereas, both parties desire to prevent strikes and lockouts and to maintain a uniform minimum scale of wages, working hours and conditions among the members of the Union and to facilitate a peaceful adjustment of all grievances and disputes which may arise from time to time under the terms of this Agreement, between the employees and the Employer in the occupations described herein, the following conditions are set forth:

Introduction

BARGAINING AT RIVERVIEW

The village of Riverview, Wisconsin is a typical suburb in the Milwaukee area; a population of 16,000, a normal distribution of shops and supermarkets, middle income families with a high percentage of home ownership and a good school system. On the village payroll are 35 firefighters, 33 policemen and approximately 90 other municipal employees. The school board employs 125 teachers and 20 other employees.

The material which is included in this booklet covers village budget data, property values in Riverview, pay scales of village employees, teachers salaries and other information which might be used in the bargaining situation. (Additional bargaining data is available to each member of the two negotiating teams.) Negotiations will be between a three-man team from the village managers' office and a three-man team from the union which has been certified as the bargaining agent for the ~~municipal employees--~~ ~~exclu[illegible] and~~ police. The two teams will be negotiating on the terms of a new contract for 1968.

RIVERSIDE ORDINANCE RELATING TO

EMPLOYEE COMPLAINTS AND GRIEVANCES

Employee with complaints or grievances should follow the procedure as outlined below:

Step 1

(a) The employee and/or his representative will explain, orally, the situation to employee's immediate supervisor.

(b) The supervisor will, either alone or in collaboration with his superiors, reach a decision and communicate it orally to the employee and/or his representative within two working days of his being told of the situation causing the grievance.

Step 2

(a) If the grievance is not settled at the first step, the employee and/or his representative will write up the grievance on the Grievance Initiation Form, and will present the form to his supervisor.

(b) The Supervisor will write up within two working days, his decision on the Grievance Disposition Form, and give it to the employee.

Step 3

(a) If the grievance is not settled at the second step, the employee and/or his representative will send the Grievance Appeal Form to the Department Head.

(b) The Department Head will obtain from the department file the case up to that point and will hold hearings if he thinks it necessary.

(c) The Department Head will notify the employee of his decision on the Grievance Disposition Form within two working days of his receipt of Appeal Form.

Step 4

(a) If the grievance is not settled at the third step, the employee and/or his representative will send the Grievance Appeal Form to the Village Manager.

(b) The Village Manager will obtain from the department file the record of the case up to that point, and will hold hearings if he thinks it necessary.

(c) The Village Manager will notify the employee within two working days of his receipt of the Grievance Appeal Form, of his decision on the Grievance Disposition Form.

Step 5

(a) If the grievance is not settled at the fourth step, the employee and/or his representative will send the Grievance Appeal Form to the Civil Service Commission.

(b) The Commission will study the record, from the Village Manager's files, of the case, and shall hold a public hearing.

(c) Any case, or any part of a case, involving the expenditure of funds for supplies, services and/or equipment shall be referred by the Commission directly to the Village Manager for the necessary analysis and recommendation, and for any budget policy action prior to Civil Service Commission action.

(d) The Commission will notify, in writing, all interested parties of its decision as soon as possible. The notice will be made up in triplicate, and distributed the same as other forms in this procedure. The decision of the Civil Service Commission shall be final, except insofar as it may require the action of the Village Board or the Finance and Administration Committee for its effectuation.

General Provisions and Exceptions to this Procedure

Note: Any requests of individuals and groups regarding changes in:

1. Salaries and wages
2. Fringe benefits
3. Overtime and overtime allowances
4. Position classification
5. Employment status (discharge, suspension, reduction) shall not be handled by this procedure.

TO: ALL LOCAL UNIONS IN THE UNITED STATES

RE: FOURTH AMENDED MODEL BYLAWS -
CHANGES CAUSED BY LANDRUM-GRIFFIN ACT

Dear Members:

The Labor Management Reporting and Disclosure Act of 1959 does not require that any specific provisions be included in the Bylaws of labor organizations. Instead, the Act makes null and void any provisions which are inconsistent with it, such as a bylaws clause which prohibits candidates for office from campaigning by means of cards or letters, and such provisions should be deleted. There are, however, certain things which unions can do under the Act, where they have established rules or regulations governing such provisions. Therefore, our Legal Department advises, it is important to spell out in the bylaws some of these "reasonable rules" in order to give the Union freedom to carry on its normal operations without running into legal complications. In addition, certain other provisions of the Act should be included in the bylaws so that the Local Union and its members will be aware of the requirements.

Enclosed please find 3 copies of Fourth Amended Model Bylaws which have been prepared by the Legal Department and approved by the International President. They include all of the provisions which we and the Legal Department believe necessary in order to protect the rights of the unions and the members under the requirements of the Labor Reform Act and to conform to the International Constitution. We have underscored those sections which constitute changes from our last publication of Model Bylaws, in October, 1959. (Locals using earlier editions of Model Bylaws will find that a few additional changes have been made). Local Unions are urged to conform with these changes in order that their rights under Landrum-Griffin will be protected to the fullest extent possible. All of the changes discussed below, except Sec. 3.5 (d), are related to the Landrum-Griffin Act and should be studied closely by all Local Unions.

Local Unions which have already adopted Model Bylaws are urged to compare their Bylaws with this new issue. In view of the extent of these changes, it is recommended that all Locals adopt the Model Bylaws, with whatever changes are required in order to conform with their local practices. We emphasize, however, that Local Unions will not be required to adopt the Model Bylaws.

Local Unions which have not adopted the Model Bylaws and which do not intend to adopt the Model Bylaws may incorporate the Landrum-Griffin sections into their existing bylaws and advise the International of the Article and Section number which each of the Landrum-Griffin changes will be given in its own bylaws. The reasons for the inclusion of many of the sections is explained below:

p. 2 of Model Bylaws

p. 2 – our

1.2 Purposes.

Section 501 of the Act provides that the funds of a labor union shall be expended "in accordance with its constitution and bylaws, and any resolutions of its governing bodies adopted thereunder". In order to permit the Local Union to expend funds for the purposes for which expenditures are customarily made by unions, it is desirable to enumerate, in general terms, all purposes for which Local Union funds may be spent.

2.1

The 1959 Convention amended the Constitution by barring discrimination against applicants or members because of race, creed, color or national origin (Article III, Sec. 4 (c)). Sec. 101 (a)(1) of the Act bars discrimination among members with respect to their participation in the affairs of the union and provides that all members shall have equal rights and privileges within the organization.

2.2 (d) and 8.2

Sec. 101(a)(1) of the Act provides that every member in good standing shall have equal rights to vote at union elections or referenda, to attend membership meetings and to participate in deliberations and voting upon the business of such meetings. Sec. 101 (a)(2) states that every member shall have the right to express his views at all times including union meetings, subject to reasonable rules governing the member's responsibility to be loyal to the Union, upon any business properly before the meetings; both of these rights are also subject to reasonable rules and regulations in the union's constitution pertaining to the conduct of meetings; hence, Section 8.2 of the Bylaws incorporates Robert's Rules of Order and spells out the order of business as provided for in Article IV, Section 43 of the International Constitution. Other reasonable rules of order may be substituted by a Local Union.

3.3 and 8.6

Section 101 (a)(3) of the Act provides that a Local Union may levy assessments or increase its initiation fees or dues only by a majority vote of the members by secret ballot, either (1) at a general or special membership meeting, after reasonable notice of the intention to vote upon the question, or (2) by membership referendum. The Model adopts the less cumbersome provision of permitting such action to be taken at a membership meeting. Note that under 8.6 dues and initiation fees may be increased without going through the normal procedure of repeated readings.

In view of the fact that Taft-Hartley permits discharge for failure to pay dues but does not permit discharge for failure to pay assessments, it is recommended that local unions adopt a policy of increasing dues for a temporary period of time instead of levying an assessment. In such case, Section 3.3 should be deleted.

3.5 (d)

Other reward systems for attending meetings are valid. The Local Union may change the amount of the reward and the conditions under which it is to be given. For example, a Local Union may provide for a reward of $_____ for attending 6 or 8, etc., meetings per year. Whichever system is used to accomplish this reward system, the Local Union may find it necessary to raise dues in an appropriate amount.

4.1

Section 3 (n) of the Act defines an officer of the Local Union as including the Local Executive Board.

4.2

We have made no provision in the Model Bylaws for the election of board members to represent separate departments or separate plants, where the Local Union represents more than one company. Section 101 (a) (1) provides that every member shall have equal rights to vote in an election subject to reasonable rules and regulations in the union's constitution and bylaws. A provision that Executive Board members shall be elected by only the members of a department or particular plant which they represent would not violate this Section, provided this procedure was clearly spelled out in the bylaws. Therefore, Local Unions which follow this procedure must check their bylaws to make sure that such procedure is clearly spelled out.

4.3

Section 401 (b) of the Act permits a maximum term for Local Union officers of 3 years. Article IV, Section 33 (b) of the International Constitution provides for a similar maximum but also provides that the minimum shall be 2 years. The Model Bylaws have adopted the 2-year term.

4.4

Section 401 (d) of the Act permits delegates to elect officers of a Joint Board, State Council or International Union, provided the delegates have been elected by secret ballot. If the delegates have not been elected by secret ballot, officers of Joint Board, State Councils and the International Union must be elected by referendum. Article X, Section 15 of the International Constitution provides for the election of delegates to the International Convention by secret ballot and the Constitution also provides for the delegates to elect the officers.

Since it is the practice of Joint Boards and State Councils to have the delegates elect the officers, it will be necessary that delegates to those bodies be elected by secret ballot. Article X, Section 15 of the International Constitution also permits but does not require the Local Union to provide that the President shall be a delegate to the International Convention *ex officio*. Local Unions which desire to do so could also provide that certain additional officers shall be delegates to the Joint Board or State Council *ex officio*. Since such officers are elected by secret ballot the requirements of the Landrum-Griffin Act would be met.

4.6

In order to conform with Section 101 (a) (1) of the Act, which requires that all members are entitled to vote in elections subject to reasonable rules in the Constitution, Local Unions which provide that Shop Stewards shall be elected by departments or shifts or plants must clearly spell out in the bylaws the group which shall be entitled to elect them.

4.7 (c) through (g)

Section 401 of the Act contains, among others, the following provisions, all of which are incorporated in these sections:

1. Reasonable opportunity shall be given for the nomination of candidates. (Sec. 101 (a) (1) provides that every member

in good standing shall have an equal right to nominate candidates).

2. Candidates shall be permitted to have an observer present at the polls and at the counting of ballots.

3. Adequate safeguards to insure a fair election shall be provided - this requires the spelling out of a fair procedure for conducting the election and a fair procedure for handling objections to the election.

4. Members must be given notice not only of the fact that nominations are taking place but of the specific offices which are to be filled.

5. At least 15 days prior to the election each member in good standing must be given notice by mail, either through a direct mailing or by publication prominently displayed in a labor newspaper which is mailed to him.

6. The vote must be by secret ballot, including those offices for which there is no contest.

7. The ballots must be preserved for 1 year.

8. The candidate has the right to campaign by use of written material distributed or mailed. He also has the right to have the literature distributed or mailed by the union, but at his own expense, provided he makes a reasonable request to have this done. A candidate has the right to inspect the membership list of members covered by union shop contracts once within 30 days prior to the election. No local union funds may be spent for any candidate nor may the local union discriminate with respect to the distribution of literature between candidates. The expense of all distribution must be paid for by the individual candidates out of their own personal funds.

4.9 and 7.1

Section 401 (h) and (i) of the Act provide that the Secretary of Labor may promulgate rules and regulations prescribing minimum standards and procedures for the removal of officers where the local union bylaws do not do so. It therefore is important, in order to avoid having the Secretary of Labor prescribe the procedures, that the bylaws make such provision. Article III, Section 9 and 10 of the International Constitution contain similar requirements.

4.11

The Act does not appear to require that the regular election procedure apply to the filling of vacancies which occur by resignation, death or other reasons. However, local unions which wish to do so may conduct special elections for vacant offices by means of the standard election procedure.

6.1 (c)

Section 101 (a) (1) of the Act in effect provides that if separate shop meetings are to be held a provision for that must be made in the Union Constitution.

7.1, 7.4 and 7.6

Article III, Section 9 and 10 provide that no disciplinary action, including fines, may be taken by a Local Union unless the accused has

been (1) served with specific charges, (2) given a reasonable time to prepare his defense, and (3) given a full and fair hearing. Section 101 (a) (5) of the Act contains a similar requirement.

8.1

Section 502 of the Act requires that officers and other persons handling local union funds, where the union's property (not including physical property such as buildings, furniture, etc.) and annual receipts exceed $5,000, and shall be bonded. The amount of the bond under the Act is at least 10% of the funds or property handled during the preceding year. Article IV, Section 30 of the International Constitution provides that officers and other persons handling finances of all local unions, regardless of their annual income, must be bonded in an amount sufficient to protect the local union, with the premium for said bond being paid for by the Local. Except where the General Executive Board gives specific approval, the minimum bond required by the International Union shall be $1,000 or 10% of the liquid assets plus annual receipts, whichever is the greater.

8.4

Section 104 of the Act requires the Union to furnish a copy of the collective bargaining agreement to any employee - - members and non-members - - who requests it. The Act does not require the furnishing of bylaws to members but this is recommended by the International Union.

PROCEDURE FOR SUBMISSION OF BYLAWS CHANGES

The International Constitution provides that bylaws of local unions shall not become effective until they have been approved by the International Union. This means that even if a Local Union adopts some of the provisions contained herein, the International must be advised and must approve them before they may be placed into effect. Local unions which adopt the Model Bylaws are requested not to retype the Bylaws prior to sending them to us - instead, you are requested to write stating that you have adopted the Fourth Amended Model Bylaws, with certain changes, for which you seek the approval of the International Union. The following is an example of the type letter to the International which will expedite our review of your Bylaws:

"TO: Karl F. Feller, President

"Our Local Union has adopted the Fourth Amended Model Bylaws, with the following changes, for which we request approval by the International Union:

"3.5 - Delete and substitute:

'In order to encourage attendance at meetings and participation by members in the affairs of the Union members shall receive a reward of $12.00 if they attended 6 regular or special meetings in the preceding calendar year. Said reward shall be paid to the members by the Financial Secretary, etc.'

"3.6 - Change 2 months to 1 month in first line. Rest of section same.

"3.3 - Delete. Our Local Union would prefer to take your suggestion and increase dues on a temporary basis rather than impose any assessments.

"5.3 and 5.4 - Our Local Union combines the office of Financial Secretary and Corresponding-Recording Secretary into the position of Secretary-Treasurer. Therefore, 5.3 will be headed 'Duties of the Secretary-Treasurer'. Section 5.4 will then be changed to Section 5.3 (e) and all remaining sections will then be renumbered. The title of this officer will be changed in all other sections which refer to him.

"8.1 - Add new section, reading: (set out new section). Renumber remaining sections of Section 8".

The above should give you an outline as to the proper method for submitting changes.

Inquiries concerning the need for or interpretations of any other provision in the Model should be directed to General Counsel Paradise.

After the Local Unions have revised their bylaws and such revisions have been approved, we shall honor requests to print or mimeograph bylaws for each Local, and bill the Local Union at our cost. If more copies of the Fourth Amended Model Bylaws are needed, they will be sent upon request.

Sincerely and fraternally,

Karl F. Feller

Karl F. Feller,
International President

Arthur P. Gildea

SECTION 1
GENERAL PROVISIONS

1.1 Name and Affiliation.

The name of this organization shall be _____ _____, hereinafter called the Local Union. It shall be affiliated with the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America, hereinafter called the International

1.2 Purposes.

The purposes and objectives of this local union include:

(a) To improve the wages, hours and working conditions of its members, to increase their job security, advance their economic, social and cultural interests and to defend and extend their civil rights and liberties.

(b) To disseminate information regarding economic, social, political and other matters affecting the lives and welfare of workers.

(c) To advance the interests of workers by advocating and endeavoring to secure the enactment of laws beneficial to them and advocating and endeavoring to obtain the defeat or repeal of laws detrimental to them.

(d) To give assistance and encouragement to other labor organizations, to engage in such other activities as may be necessary or proper to strengthen the labor movement and to extend the process of collective bargaining throughout all trades and industries.

(e) To aid charitable, educational and political organizations and institutions.

(f) To promote the objects and principles set forth in the Constitution of the International Union and the AFL-CIO.

(g) To organize corporate or other instrumentalities.

(h) To use all appropriate means for the accomplishment of any of the foregoing objects.

1.3 Supremacy of International Constitution.

The International Constitution shall at all times be controlling upon the Local Union and its provisions shall prevail in all matters not specifically provided for herein and in all cases of conflict between the International Constitution and these bylaws.

1.4 Continued Existence of Local Union.

The Local Union shall continue to exist as a Local of the International unless its charter is revoked or suspended, as long as seven or more members who are willing to comply with the International Constitution desire to remain members of the Local Union.

1.5 Jurisdiction of Local Union.

The jurisdiction of the Local Union shall be that specified in its charter from the International or as otherwise defined, modified, and interpreted from time to time by the General Executive Board of the International.

SECTION 2

MEMBERSHIP, ELIGIBILITY AND OBLIGATIONS

2.1 Eligibility for Membership.

All persons employed in industries within the jurisdiction of the Local Union shall be eligible for membership, and there shall be no discrimination against applicants or members because of race, creed, color or national origin.

2.2 Obligation and Rights of Members.

(a) Members shall comply with the requirements of the International Constitution, the Local Union bylaws and its collective agreements.

(b) Upon his being accepted into membership, a member shall take the obligation set forth in the

International Constitution and shall thereafter honor said obligation.

(c) Members shall report promptly all contract violations to their respective stewards or other union representatives; they shall not try to settle grievances in the absence of the steward or other union representative except where permission to do so has been granted or in an emergency. Members shall be bound by the action taken by authorized union representatives in the settlement or other disposition of grievances.

(d) Subject to the provisions of this Constitution, each member of the local union in good standing shall have equal rights to vote in union elections or referenda, to attend membership meetings, and to participate in the deliberations and voting upon the business of the meetings; however, no member shall engage in any speech or activity disloyal to the Local or International Union or to the AFL-CIO as an institution.

SECTION 3

INITIATION FEES AND DUES

3.1 Initiation Fees.

(a) The initiation fee of new members shall be $_____, of which five dollars ($5.00) shall be paid by the Local Union to the International. One half of this fee shall be paid on the date of initiation and the remainder within the next thirty (30) days.

(b) Members who have previously been expelled, or whose membership in the Local has been terminated for any reason, shall be required to pay a new initiation fee in the amount of $_____ plus any dues

which they owed at the time of the termination of their previous membership. Five dollars ($5.00) of said initiation fee shall be paid by the Local Union to the International. One half of said initiation fee and dues arrearage shall be paid on the date of intitation and the remainder within the next thirty (30) days.

3.2 Dues - when payable, allocation of.

(a) The monthly dues shall be $_____ per month and shall be payable during the calendar month to which they are applicable.

(b) Members shall be obligated to pay monthly dues except in those months in which they apply for and are entitled to receive out-of-work credits in accordance with Section 3.4 hereof, or for which they have been issued a valid withdrawal card.

3.3 Assessments.

A general assessment may be levied at a regular or special meeting after at least 7 days notice to all members, posted on plant bulletin boards or mailed to all members. A general assessment shall be added to and become part of the regular dues obligation of all members for the period of time for which it is imposed.

3.4 Out-of-Work Credits.

(a) Members who do not earn wages for 5 or more days or the equivalent number of hours in a given calendar month and who apply at the Local Union office for out-of-work credits during the last 4 working days of such given month or the first 5 working days of the succeeding month are exonerated from the payment of dues and are entitled to receive out-of-work credits for such given month. Members who fail to apply for out-of-work credits within the period specified shall not be entitled to out-of-work credit for that month and shall be obligated to pay the regular monthly dues.

(b) Members who have received out-of-work credits for 6 consecutive months and who do not earn wages for 5 days or the equivalent number of hours in the seventh month shall apply for a withdrawal card and tender the dues therefor during the last 4 working days of such seventh month, or the first 5 working days of the succeeding month. Upon their failure to tender such dues they shall be automatically expelled for non-payment of dues.

3.5 Monthly Dues - How Payable.

(a) Members employed under collective agreements providing for the check-off of Local Union dues are obligated to authorize such check-off. Any such member who fails to do so must pay his dues on or before the 1st day of the month directly to the Financial Secretary of the Local Union at the Local Union office, no one else being authorized to receive or accept such dues payments.

(b) Members employed in plants where Local Union dues are not checked off shall pay their dues to the Financial Secretary of the Local Union on or before the 1st day of the month in which they are due.

(c) For each payment of dues or for payments of any other character, members shall be given such proper receipt or evidence of payment as the International shall approve.

(d) In order to encourage attendance at meetings and participation by members in the affairs of the Union, members shall receive a reward of $1.00 for each regular or special meeting attended by them during the calendar year, not to exceed $12.00 for any calendar year. Said reward shall be paid to the members by the Financial Secretary during the month of January for meetings

attended during the preceding calendar year; wherever possible, the reward shall be paid to each member at the January meeting.

3.6 Loss of Good Standing and Expulsion.

Members 2 months in arrears in the payment of dues or other financial obligations to the Local Union shall cease to be in good standing as of the end of the second month. Such members shall have no voice or vote at Local Union meetings and shall be ineligible for nomination, election, or appointment to any position or office in the Local Union. Members 3 months in arrears in the payment of dues shall be automatically expelled from membership as of the end of the third month.

3.7 Withdrawal Cards.

(a) Members who are advanced to supervisory or other positions identified with management and members whose employment in industries within the jurisdiction of the Local Union has terminated shall apply for withdrawal cards within 30 days thereafter, failing which they shall be automatically expelled.

(b) Members who occupy other positions which are outside the coverage of the Union contract may apply for withdrawal cards or may continue as active members at their option, provided, however, that if such members continue as active members they shall not have voice or vote at Local Union meetings nor shall they be eligible to hold any elective or appointive position in the Local Union.

(c) Members holding withdrawal cards shall not attend meetings of the Local Union or participate in elections or any other business functions of the Local Union.

SECTION 4

OFFICERS, EXECUTIVE BOARD MEMBERS, DELEGATES, ETC., NOMINATIONS AND ELECTIONS

4.1 Local Union Officers.

The officers of the Local Union shall be President, Vice President, Financial Secretary, Corresponding-Recording Secretary, three Trustees, Sergeant-at-Arms, and members of Local Executive Board.

4.2 Local Executive Board.

The Local Executive Board shall consist of ____ members including the President, Financial Secretary and Corresponding-Recording Secretary, who shall serve as members of the Local Executive Board, ex officio.

4.3 Term of Office of Officers and Executive Board Members.

The term of office for officers and Local Executive Board members shall be 2 years, or until their successors have been elected and installed, whichever is later.

4.4 Delegates.

Delegates to the Joint Local Executive Board, State Councils, and to local and state central bodies shall be elected at large by secret ballot for 2 year terms. Delegates to the International Convention shall be elected by secret ballot vote in accordance with the International Constitution, provided that whenever delegates are sent to the International Convention, the President shall be a delegate, ex officio.

4.5 Negotiating Committee.

The Negotiating Committee shall be designated by the Local Executive Board subject to the approval of the membership, and, so far as practicable, all departments shall be represented on the Committee.

4.6 Shop Stewards

Shop Stewards shall be elected for 2 year terms by the

members in their respective departments on each shift. Such elections shall be arranged and conducted by the President within 30 days after the officers have been elected.

4.7 Nominations and Elections.

(a) To be eligible to be nominated or elected as an officer, member of the Local Executive Board or Joint Local Executive Board, a member must have been in continuous good standing for 2 years prior to the date of nominations, must not have been on a withdrawal card during said period, and must have attended at least 6 meetings in the year preceding the meeting at which nominations took place.

(b) The nomination of officers, Executive Board members, delegates to the Joint Local Executive Board, state and local central bodies shall take place at the regular November meeting every 2 years. All nominees must either be present to accept the nomination at the meeting or must have submitted a written letter of acceptance to the President not later than the call for nominations.

(c) Every member in good standing shall have the right to nominate candidates. The Secretary shall give notice of the offices to be filled and of the time and place of said meeting by posting on plant bulletin boards at least 7 days in advance of the nominating meeting.

(d) Upon the completion of the nominations and prior to the elections, the membership shall elect an Election Committee of three members, one of whom shall be designated as Chairman by the President but none of whom shall be a candidate for office. The Election Committee shall be charged with the responsibility of arranging and supervising the voting, distributing and counting the ballots, and announcing the results.

All candidates shall be permitted to have an observer present at the polls and at the counting of ballots.

(e) Elections shall take place at the regular December meeting. Notice of the election shall be mailed by the Secretary or shall be prominently published in a newspaper which is mailed to each member in good standing not less than 15 days prior to the date of the election. Such notice shall specify the time and place of the election and the offices to be filled, including those for which there is no contest.

(f) Voting shall be by secret ballot. Every member in good standing shall be entitled to one vote in all union elections. There shall be no absentee voting and no voting by proxy.

(g) Candidates for office shall have the right to distribute campaign literature by mail or otherwise at the candidate's expense. Every bona fide candidate shall be permitted once within 30 days prior to the election, upon request, to inspect the list of members of the local union who are covered by union shop contracts, but he shall not be permitted to copy the list. The Local Unions shall not discriminate among candidates with respect to the distribution of campaign literature or the charge therefor, or with respect to the use of membership lists. Local Union funds shall not be used to promote any candidacy for union office, but with prior authorization of the membership the Election Committee may use union funds for notices or other expenses necessary for the holding of an election.

(h) The candidates for each office or position who receive the largest number of valid votes cast shall be declared elected. In the event of a tie vote, a run-off election shall be held between the two tied candidates either at the same meeting, if practicable, or at the next regular or special meeting.

(i) The Election Committee shall promptly announce the results of the election and post the same at the Union office and on the plant bulletin boards customarily used by the Local Union.

(j) Charges of irregularities in the manner of conducting the election must be submitted in writing to the Chairman of the Election Committee within 48 hours after the close of the balloting. The Election Committee shall investigate such charges promptly and shall make a report to the Local Executive Board. The Local Executive Board shall act upon such report with all reasonable speed at a special meeting called for that purpose by the President. Any candidate aggrieved by the action of the Local Executive Board may file an appeal with the General Executive Board of the International. Such appeal must be deposited in the mail within 5 days following the date of the decision of the Local Executive Board. The ballots and tally sheets and all other records pertaining to the election shall be preserved until the charges of irregularities have been finally acted upon, or for one year, whichever is later. The installation of any candidate whose election has been challenged pursuant to this section shall be deferred until the charges have been disposed of by the Executive Board.

4.8 Installation of Officers. Newly elected officers and Local Executive Board members shall be obligated at the December meeting, at which time they shall take the obligation as prescribed in the International Constitution. They shall assume the duties of their respective offices on January 1.

4.9 Removal of Officers and Others for Failure to Attend Meetings.

Except in case of illness or other excuse which is accepted by the Local Executive Board, any officer or member of the Local Executive Board who is absent from either 3 Local Executive Board or 3 Local Union meetings during any 12 month period, and any delegate to the Joint Local Executive Board or to a local or state central body who fails to attend 3 meetings of such body during a 12 month period shall be automatically removed from office as of the first day of the month following such third meeting.

4.10 Removal of Shop Stewards; Filling Vacancies.

Shop stewards may be removed by a majority vote of the members in their respective departments at special departmental meetings called for that purpose by the President or Local Executive Board and vacancies in the position of Shop Steward shall be filled in the same manner.

4.11 Vacancies in Position of Officers, Local Executive Board, etc.

Vacancies occurring between regular elections in any of the elected positions provided for herein, other than shop steward, due to resignation, death, incapacitation, or removal from office, shall be filled for the remainder of the unexpired term by appointment by the Local Executive Board provided, however, that the Vice President shall automatically complete the unexpired term of the President if a vacancy occurs in that office.

4.12 Delivering Property to Successors.

All officers shall, at the expiration of their term of office or upon their resignation or removal from office, deliver to their successors all documents, funds and other property belonging to the Union which may be in their possession at such time, and shall be given a receipt therefor.

4.13 Compensation of Officers, etc.

The compensation of officers or other persons holding elective positions shall be fixed prior to the holding of nominations.

SECTION 5

DUTIES OF OFFICERS, LOCAL EXECUTIVE BOARD MEMBERS AND STEWARDS

The Officers, Local Executive Board members and Stewards shall perform the duties prescribed for them herein and such other duties as may be incidental thereto.

5.1 Duties of the President.

(a) The President shall be the chief executive officer of the Local Union. He shall preside at all regular and special meetings of the Local Union and of the Local Executive Board. He shall enforce the provisions of the bylaws and the International Constitution and of the collective agreements of the Local Union. He shall co-sign all checks properly issued by the Financial Secretary. He shall be a member, ex officio, of all committees and shall appoint all committees except as otherwise provided herein. He shall promptly investigate and attempt to settle all grievances referred to him by a Steward or the Chief Steward or a member, and all complaints of the employers. He shall give a complete report of his official activities at each regular meeting of the Local Executive Board and same shall be reported at the next regular meeting of the Local Union.

(b) The President may call special meetings of the Local Union and the Local Executive Board and he shall call such meetings when requested to do so pursuant to Section 6.1 and 6.3. He may, with the consent of a majority of the Local Executive Board, change the time and place of a regular Local Union or Local Executive Board meeting, provided, however, that he may not cancel the regular monthly meeting of the Local Union or the Local Executive Board.

5.2 Duties of the Vice President.

He shall assist the President in the discharge of his duties and shall carry out such other assignments as the President and Local Executive Board may deem necessary. When the President is absent or unable to perform his duties due to death, illness, resignation, or removal, or any other cause, he shall perform the duties of President.

5.3 Duties of the Financial Secretary.

(a) The Financial Secretary shall receive and give proper receipt, as provided in the International Constitution, for all dues, initiation fees, assessments, fines and other income of the Local Union. He shall issue and co-sign all checks drawn on the Local Union funds, shall maintain proper permanent records of all income and expenditures and report at the regular monthly meeting of the Local Union the sources and amount of all receipts and the amounts and purposes of all disbursements during the previous calendar month. He shall deposit to the account of the Local Union all funds received by him as soon as practicable following the receipt thereof. He shall keep a complete and up-to-date record of all members, including those initiated, suspended, expelled, deceased, transferred, reinstated, out-of-work, or on withdrawal card and shall notify the International Secretary-Treasurer of the same.

(b) He shall keep a permanent proper record of all property of the Local Union including the date of purchase, the name of the seller, and the amount paid. He shall make available his books and records to the Trustees or to the proper representative of the International, upon their request, for the purpose of inspection or audit and shall cooperate with them in such audits. He shall make such reports to the International Union as may be required by the International Constitution and such other reports

and shall remit to the International the full amount of per capita tax and other payments required by the International Constitution and such other reports and information as the International may require. He shall have custody of all financial records of the Local Union.

(c) All payments out of Local Union funds shall be subject to the prior approval of the membership and shall be made by check excepting minor incidental disbursements normally made out of petty cash. The funds of the Local Union shall be used solely for the payment of the legitimate and authorized expenses incidental to the operation of the Local Union.

(d) He shall retain for a period of not less than five years all books, accounts and records of the Local Union's financial transactions.

5.4 Duties of the Corresponding-Recording Secretary.

He shall read all communications addressed to or sent by the Local Union at the next regular meeting following their receipt or issuance. He shall keep a permanent minute book containing an accurate account of the procedings of all meetings of the Local Union and the Local Executive Board. He shall have custody of the correspondence, contracts and seal of the Local Union. He shall affix the Local Union seal to all official letters and documents which require it.

5.5 Duties of Trustees.

The Trustees shall audit the records of the Financial Secretary quarterly and shall either prepare an annual audit for the year ending December 31, or cause such annual audit to be made by a Certified Public Accountant or other independent auditor selected by the Local Executive Board. The results of such audits shall be reported at the next meeting of the Local Executive Board and of the Local Union. The annual audit shall also be made available to all members and a copy shall be filed with the Secretary-Treasurer of the International Union.

5.6 Duties of the Sergeant-at-Arms.

The Sergeant-at-Arms shall be responsible for admitting to Local Union meetings only members in good standing, representatives of the International and other authorized persons. He shall assist the President in preserving order at meetings when called upon to do so.

5.7 Local Executive Board.

The Local Executive Board shall be the governing body of the Local Union between membership meetings. It shall carry out the instructions of the membership and shall act on all matters which are referred to it by the Local Union. Except as otherwise provided herein, its actions shall be reported to the next membership meeting for approval or disapproval. It shall at each Local Executive Board meeting receive and act upon the report of the actions of the officers and committee chairmen. It shall determine the manner of the investment of the funds of the Local Union but shall not cause or permit such funds to be invested in any business property or securities of any Employer with whom the Local Union or the International has a contract, or in which any officer or Local Executive Board member is directly or indirectly interested.

5.8 Shop Stewards.

(a) Shop Stewards, acting under the supervision of the President shall promptly investigate all grievances of employees working in their departments and shall otherwise enforce the provisions of the contract where it applies to their departments; they shall refer to the President any grievance or complaint which concerns more than one department; they shall advise members of their rights under the contract and of contract violations which may affect them. Wherever necessary, they shall seek advice from the President in the settlement of grievances and shall promptly report the status of all grievances to the President, including those which have been settled and those which they are referring to the President for further action.

(b) They shall call and conduct meetings of the members of their department when instructed to do so by the President or the Local Executive Board and shall attend meetings of Shop Stewards as required.

(c) They shall post authorized meeting notices in their departments; they shall report at least weekly to the Financial Secretary the names of all employees terminated, laid off or hired; and upon request by the President or the Local Executive Board, shall report on their activities to the Local Union meeting and the Local Executive Board.

SECTION 6

MEETINGS OF THE LOCAL UNION AND THE LOCAL EXECUTIVE BOARD

6.1 Regular and Special Meetings.

(a) Regular Local Union meetings shall take place on the 1st Sunday of each month, except as otherwise provided in Section 5.1 (b).

(b) Special Local Union meetings may be called by the President, and shall be called by him when requested by a majority of the Local Executive Board or by petition signed by 25 per cent of the members in good standing. Reasonable written notice of the time, place and purpose of special meetings must be given at all times. No business not coming within the scope of the announced purpose shall be transacted at special meetings.

(c) Upon authorization of the Local Executive Board, separate meetings of the members employed in a particular plant or department shall be called by the President for the purpose of considering or acting upon such matters as the Local Executive Board shall certify, provided that all actions taken at such meetings shall be in accordance with

the policies and constitution of the Local and International Unions.

6.2 Quorum.

A quorum of the Local Union shall consist of 10 per cent of the membership, excluding the officers. A quorum of the Local Executive Board shall be a majority of its members. Questions coming before the Local Union and the Local Executive Board shall be decided by a majority of its members present, except as otherwise provided herein.

6.3 Local Executive Board Meetings.

The Local Executive Board shall regularly meet at least once each month and at such other times as the President or a majority of its members deem advisable.

SECTION 7

CHARGES, TRIALS AND APPEALS

7.1 Charges, Trials and Appeals.

(a) Charges. Any member in good standing shall have the right to prefer charges of violation of the oath of office, these bylaws or the International Constitution, financial malpractice, corruption, misappropriation of union funds, conduct unbecoming an officer or member of the union, or any activity or course of conduct which is detrimental to the best interests of the Local or International. Such charges must be filed in writing with the Corresponding-Recording Secretary of the Local Union, unless he is the subject of the charges in which case they shall be filed with the President.

7.2 Notice and Hearing.

(a) The officer with whom the charges are filed shall cause a copy of the charges to be served upon the accused member or officer in person or by Registered

Mail, together with reasonable notice of the time and place of the trial. The accused shall be accorded a fair trial before the Local Executive Board or a Trial Committee designated by it. The charging party and the accused shall be allowed to be represented by another member in good standing as counsel and shall have the right to cross-examine and produce relevant testimony and witnesses.

(b) No member who is a party to the charge or who is a witness at a trial may participate in the trial or disposition of the charges by the Trial Committee or the Local Executive Board.

(c) The hearing may proceed in the absence of the accused, if he fails to appear.

7.3 Decision on Charges.

The Local Executive Board, or its designated Trial Committee, shall report its findings, together with its recommendations to the next meeting of the Local Union for final action, which shall require a majority vote of those present and voting at the Local Union meeting.

7.4 Penalties.

A member or officer who has been found guilty of violating the Bylaws of the Local Union or the Constitution of the International Union may be punished by reprimand, fine, suspension, removal from office, expulsion, loss of good standing or any other penalty short of expulsion, according to the severity of the offense. If such punishment includes loss of good standing it may, in the discretion of the Local Executive Board, or its Trial Committee, include disqualification from attending and/or participating or voting in Union meetings and/or holding office in the Union for a specified period. Members who lose their good standing but are not expelled shall be obligated to continue to maintain their membership by the payment of regular and periodic dues.

7.5 Loss of Good Standing.

Members who fail to pay fines within 30 days after they are imposed or assessments in the month in which they are levied shall be in bad standing and shall not be entitled to participate in meetings of the Local.

7.6 Appeals following Trials.

The accused member or officer may appeal the decision of the Local Union to the Joint Local Executive Board and the General Executive Board as provided in the International Constitution. Appeals, if any, to the International Convention shall be governed by the International Constitution.

7.7 Other Appeals.

Any member who claims that his rights as a member or as an employee have been denied or abridged shall have the right to appeal to the General Executive Board, as provided in the International Constitution.

SECTION 8

MISCELLANEOUS

8.1 Bonding.

The President, Financial Secretary and any other persons who handle funds or other property of the Local Union shall be bonded in such amount as may be fixed by the Local Executive Board but not less than an amount equal to ten percentum of the funds handled by them and/or their predecessors during the preceding year. Such bonds shall be in conformity with applicable federal statutes. Premiums shall be paid by the Local Union. Officers or members shall immediately report to the Local Executive Board any irregularity or deficiency in the accounts or financial transactions of the Local.

8.2 Parliamentary Procedure and Order of Business.

Proceedings at Local Union meetings, where not specifically provided for in these Bylaws or in the International Constitution, shall be governed by Roberts Rules of Order. The order of business of the Local Union shall be that set forth below:

1. Calling meeting to order.

2. Roll call of officers.

3. Reading minutes of previous meeting.

4. Proposals for membership.

5. Initiation of new members.

6. Election of officers.

7. Reading of correspondence and bills.

8. Reports of delegates, stewards, committees, and officers.

9. Unfinished business.

10. New business.

11. For the welfare of the organization.

12. Reading of receipts and expenditures.

13. Adjournment.

8.3 Exhaustion of Remedies.

Subject to the requirements of applicable Federal laws, members and officers must exhaust all remedies provided for under these Bylaws and the International Constitution before resorting to any other agency or tribunal.

8.4 Bylaws and Collective Bargaining Agreements to be Furnished.

A copy of the collective bargaining agreement which affects each employee and a copy of the Local Union Bylaws shall be furnished to each member or made available to him upon his request.

8.5 Safety Deposit Box.

If a safety deposit box is used by the Local Union, it shall be in the name of the Local Union and its securities and other valuable documents shall be deposited therein. Access to such box shall require the signature of the President and the Financial Secretary.

8.6 Amendments.

Amendments to these Bylaws must be proposed at a regular or special meeting of the Local Union. Such proposed amendments shall be voted on at the next regular meeting or at a special meeting called for that purpose, and shall require a two-thirds vote of those present and voting in

order to be adopted; provided, however, that Section 3.1 and 3.2 may be amended at a regular or special meeting after at least seven days' notice to all members, by a majority of those present and voting by secret ballot. Amendments shall not become effective until after they have been endorsed by the General Executive Board of the International.

Labor - Gen

A NATIONAL DISGRACE:

WHAT UNIONS DO TO BLACKS

For nearly a century, most unions have forced Negroes into Jim Crow locals, given them dirty jobs or refused to admit them at all. New laws and repeated union promises are not stopping prejudice. By Jack Star LOOK Senior Editor

IN 1866, THE NEWLY FORMED National Labor Union faced the question of how to treat Negro members. Its answer at the 1869 convention was to ask black delegates to form their own all-Negro organization.

In 1890, the American Federation of Labor came out against discrimination, but in 1895, it admitted to membership the Machinists; in 1896, the Boiler Makers; and in 1897, the Blacksmiths—three unions that absolutely barred Negroes.

In 1902, a union official named Grant induced the AFL Stationary Engineers to amend its constitution and exclude blacks, saying, "the Negro belongs in Africa."

In 1943, the four railroad brotherhoods defied the President's Committee on Fair Employment Practices and refused to remove "Caucasian only" clauses from their constitutions. Four years ago, the Locomotive Firemen finally took the clause out, but there still aren't any Negro firemen. Negroes, by the way, had traditionally been firemen in the coal-burning days, but the unions forced them out when diesel locomotives were introduced.

It would be inaccurate to say that since 1869, the Negro's lot in American labor unions has not improved—but it is disgraceful to have to list, in 1968, examples of how much prejudice remains:

- Negroes continue to be excluded from many unions solely because of color.
- There are still several hundred all-Negro union locals in existence.
- Union contracts often perpetuate racially separate seniority lines, with the dirtier, dead-end and lesser paid jobs relegated to the Negro members.
- Union-controlled apprenticeship programs admit far less than token numbers of Negroes (only 2.7 percent—an increase of one percent in ten years).
- Unions (especially in the booming building trades) continue to turn away qualified Negro journeymen or give them bottom jobs. In San Francisco, for example, Negroes make up 25 percent of the work force on the $1.2 billion Bay Area Rapid Transit System, but they are mostly in the so-called "mud trades." Of 169 ironworkers, only two are Negroes; of 96 electricians, just three are Negroes; of 27 plumbers, one is a Negro.
- Since union hiring halls control job assignments, nonunion Negro craftsmen often work for one-third the money that whites make.

Unions are doggedly battling civil rights complaints that are before the courts and Government agencies. Despite landmark court decisions in 1967-68, the unions seem determined to fight a rear-guard holding action reminiscent of the one fought by Southern school districts after the Supreme Court's 1954 school-desegregation decision.

Herbert Hill, labor director of the National Association for the Advancement of Colored People, who for 21 years has been in the forefront of the struggle, told me: "Many American labor unions have become narrow, restrictive, protective associations, and the white American working class is predominantly racist. This is a time of unparalleled high employment. There should be a job for everyone—in many cities, there is a labor shortage. But Negroes are still excluded because of the white worker's obsession with race and job status."

Hill hastens to add that not all unions are bad. He cites the United Packinghouse Workers of America, which revoked charters of locals in the South rather than compromise on discrimination, and the United Auto Workers, which continues its fight for racial justice. And there are good locals, such as New York City's Local 1199 of the Hospital Workers and District 65 of the Distributive Workers, which welcome the unskilled and members of minorities.

But the NAACP's list of discriminatory unions is far longer. Executive Director Roy Wilkins angrily told the last AFL-CIO convention how unions have rendered protests and legal actions futile:

"In the summer of 1963, the NAACP and other civil rights organizations picketed the construction site of Barringer High School in Newark, N.J., protesting the exclusion of Negro workers there. A year later, they picketed also the Rutgers University Law School Extension construction site in Newark. Finally, the State University of New Jersey on February 9, 1965, filed formal complaints against the five locals of the International Association of Bridge, Structural and Ornamental Iron Workers. The local unions eventually entered into a [legal] stipulation with the [state] Civil Rights Commission . . . in December of 1966 and agreed to admit Negroes for the first time into the union-controlled apprenticeship training programs.

"But four years after the initial demonstrations, three years after the filing of complaints . . .

continued

In Brooklyn, a union lather from Florida cannot transfer to a job under the same union

Vincent V. Whylie, *30, of Brooklyn, father of five young daughters, belonged to an integrated local of the Wood, Wire and Metal Lathers,* AFL-CIO, *in Daytona Beach, Fla. A Federal suit charges that when he moved up north two years ago, New York Local 46 (with only a single, inactive Negro among its 6,000 members) refused to accept his transfer card.* NAACP *pressure got him a job working on a post office project, but he was fired on grounds that a layoff was necessary and was immediately replaced by a white union member. Because of the resulting furor, says* NAACP, *"the union has accepted 12 Negroes as members—less than tokenism—but they still won't admit Whylie and many other Negroes."*

PHOTOGRAPHS BY JAMES HANSEN

and a year after stipulation that the locals would admit Negroes, *not a single Negro* has been admitted into any of the five locals. Nor is there a single Negro employed within this union's jurisdiction in the extensive public and private construction in northern New Jersey."

Wilkins told the hushed delegates that the Brotherhood of Railway and Steamship Clerks has been doing away with black segregated locals:

"But they did this by reclassifying the traditional Negro job classifications and declaring them to be within the jurisdiction of the white locals. In practice, this meant, for example, that Negro freight handlers were replaced by less senior white workers who had been in the all-white baggage clerks seniority line. In other words, we will abolish the segregated local, but now everybody's seniority will count, and the whites who had seniority over here in their separate local have more than the seniority of Negroes that have just been taken in. The Negroes have no seniority in the white local, and therefore their jobs are out." A Wilkins aide adds: "It is no accident that no American ever bought a railroad ticket from a Negro clerk. The ticket seller's job is in the white seniority line."

Union control of apprenticeship programs remains a major bar to black progress—today, there are fewer union Negro plumbers or electricians than Negro Ph.D.'s. In testimony before the U.S. Commission on Civil Rights, Joseph Mazzola, business manager of Plumbers Local 38 in San Francisco, explained why 50 percent of his journeymen were the sons of men in the union: "It is just that the 50 percent had a better privilege . . . every father wants his son to be pretty much what he was."

In Chicago, where there are a million Negroes, the taxpayers pay for the Washburne Trade School, but the unions decide what students can enter this public school as part of their apprentice training. For years, Negroes made up less than one percent of the student body because the unions denied them entry. Today, after court contests, civil rights protests, newspaper exposés and herculean efforts by the school board, there are 167 Negro students among the 2,958 pupils, but 37 were brought in under so-called "open enrollment"—they are not part of the union apprenticeship program and get a diploma instead of a union job.

The situation in Massachusetts is typical of what such exclusionary practices achieve: of 137 structural-iron-worker apprentices in the Bay State, none is black; of 661 electrician apprentices, eight are black; of 300 plumber apprentices, seven are black; of 353 sheet-metal-worker apprentices, none is black; of 265 pipe fitters, one is black; of 167 newspaper-compositor apprentices, one is black.

Can it be, as some whites allege, that blacks are "too lazy to work"? While it is true that many Negroes are crippled by long years of discrimination, the majority want to work and are denied the chance. There are 1.2 million Negro members among the 18 million unionists in America, but the Massachusetts figures testify that blacks are kept out of the better paying jobs. Society keeps Negroes out of ordinary jobs too: last year, unemployment reached 34 percent in Watts—higher than America's general rate of unemployment in the Great Depression of the 1930's.

Even the "most egalitarian" unions may discriminate. The International Ladies' Garment Workers, long-considered a leader in the fight for social

justice, stands accused by the Harlem chapter of the Congress of Racial Equality:

"For years, [the ILGWU] permitted conditions to exist which keep the vast majority of black workers in the lowest paying jobs and has denied black workers a policy-making voice in the union through restrictive constitutional provisions."

The NAACP's Herbert Hill says the ILGWU negotiates generous pay raises for cutters and pressers, most of whom are white, while it obtains hourly wages just a few cents above the Federal minimum wage for its nonwhite members, who constitute some 150,000 of the 450,000 members.

In New York, for example, the pressers are in Local 60, which has an appendage called 60A that Hill says was never chartered by the International and contains mostly Negroes and Puerto Ricans who are shipping clerks, "push boys" and deliverymen. Hill says that the manager of Local 60 also runs 60A, although the latter has twice as many members.

More laws than ever prohibit job discrimination, but even the vast power of the Federal Government seems ineffectual. The Labor Department has a stiff regulation that authorizes its Bureau of Apprenticeship to penalize discriminatory apprentice programs. Over 700 such programs have been cited for violations by other public agencies, but none has been decertified by the Bureau in the more than five years since the regulation went into effect.

Title VII of the Civil Rights Act of 1964 prohibits racial discrimination in employment. The Equal Employment Opportunity Commission, set up under the law, has in three years of operation heard some 4,200 complaints against unions and "found cause" in over 60 percent of those probed. But the Commission is powerless, except for the threat that its found-cause cases might end up in Federal court. So far, the Justice Department has taken ten unions to court, while over 150 U.S. suits have been filed privately, mostly by the NAACP Legal Defense Fund. The results have been skimpy.

In two landmark decisions, Federal courts ruled emphatically that race must not be a factor in promotions, assignments, seniority or other job matters. But the decisions have not moved other offending unions. In Bogalusa, La., two unions that lost their cases—the Pulp, Sulphite and Paper Mill Workers and the United Paper Makers and Paper Workers—angrily threatened to strike after an employer agreed to end discrimination. The Paper Makers then sought an injunction to prevent enforcement of the signed agreement. Hill says the Asbestos Workers, the Steelworkers and the Aluminum Workers are all busily raising scores of procedural legal questions, dragging out the cases.

"In reality, the AFL-CIO has a public position on civil rights and a private position," he charges. "The public position is one of ostensible support for equality; the private position—and the more important one as revealed by court challenges and threatened strikes—is that of bitter resistance."

The odd thing about the unions' resistance is their public posture of consistently promising reforms. Last February, the New York *Times* headlined on Page 1: "18 Unions Pledge to Seek Negroes for Building Jobs—Assure Labor Department They Will Try to Prevent Discrimination by Locals." Hill says that nine months later, there are few signs the promises are being kept. He recalls that in 1963, an agreement using virtually the same words was signed by the 18 presidents of the Building and

In Cincinnati, a college-educated electrician can't join the electricians union

Anderson L. Dobbins, *37, of Cincinnati, has a B.S. degree in trade education from Hampton Institute, with college courses in electricity, but nets only $4,500 a year as a nonunion electrician. Dobbins has been unsuccessful for years in attempts to join the International Brotherhood of Electrical Workers,* AFL-CIO, *whose 800 all-white journeymen in Cincinnati earn three times as much as Negro electricians. The union is the sole avenue for a man seeking a job with any of the larger contractors, 75 percent of whose work is publicly financed. "I don't want to move next door to a white man," says Dobbins. "I don't want to marry anybody's daughter. All I want is to be allowed to work at my trade."*

continued

In Birmingham, there are jobs for white men and other jobs for black men

Robert J. Hubbard, *42, who started as a hooker with the U.S. Steel Corp. nearly 25 years ago, charges he will always be a hooker in a steel mill outside Birmingham because of discriminatory provisions in his union contract. A hooker is the man who directs the movements of a giant crane from the ground; the craneman earns more money. In a Federal suit against both U.S. Steel and the* AFL-CIO *United Steel Workers Union, Hubbard says that the hooker's job classification is reserved for black men, while cranemen are usually white. Hubbard adds: "There are jobs for white men and other jobs for black men." Many more cases now pending in Federal courts charge union bias in job assignments.*

Construction Unions. He also recalls that in 1962, the heads of 120 AFL-CIO unions signed an anti-bias pledge at the White House.

White prejudice causes black unionists to pull together. In Chicago, 80 percent of the city's bus drivers, who belong to the AFL-CIO Amalgamated Transit Workers, are Negroes; they have formed their own black caucus, the Concerned Transit Workers. The black drivers twice went out on strike in recent months because, although they constitute a majority of the union's active membership, they are outvoted by pensioned-off drivers who are white.

Other black caucuses are operating in the ILGWU and the United Steelworkers. Negroes are also forming all-black unions such as the Maryland Freedom Labor Union and the Independent Alliance of Skilled Crafts. The latter, an Ohio group, is flourishing because of a Federal-court decision that millions of dollars worth of public construction projects in the state be opened to black workers; since the construction unions won't supply them, the Alliance is happy to do so.

Donald Slaiman, who is the AFL-CIO's civil rights department director, told me vehemently that most unions are trying to improve the black man's lot. He says: "Equality can't be attained overnight. The movement of the unskilled and the poorly educated to our cities in the last decade is greater than the whole Irish migration to the U.S. in the 1800's. This country in the last decade has made more progress in eliminating racial discrimination than any other country in the world."

Slaiman believes top AFL-CIO leaders have been fearless in speaking out against prejudice even though "backlash *is* a problem. Throughout the country, there are blue-collar workers who feel civil rights—fair employment and open housing—threaten them. The AFL-CIO has to justify its cooperating with the law . . . in places where many members are pro-Wallace [or, he adds, sometimes even Klansmen]."

The building trades are still slow to admit Negro journeymen, Slaiman says, but the apprenticeship situation is showing marked improvement. "It's an oversimplification," he insists, "to say that prejudice alone is what keeps Negroes out of apprenticeships. You have to work hard to get Negroes. . . . The Negro kids are out there, but they don't come forward by themselves; they need to be found, motivated and helped to pass exams. We're doing this in every major city." As proof, Slaiman points to Outreach Apprenticeship Programs, which, he says, seek and train minority youngsters in 35 cities.

As for all-black union locals, Slaiman claims: ". . . It's the Negro local that doesn't want to merge; [Negroes] would be a minority in a merged local." As for separate seniority lines: "It's not a simple yes or no." In some cases, he believes, eliminating separate seniority lines might give Negroes an advantage over whites, "and Negroes shouldn't get different standards than whites."

Herbert Hill thinks that this is just an alibi that blames the victim for the crime. He says: "Thirteen years after the merger between the AFL and CIO, it is clear that unions are unwilling or unable to eliminate broad national patterns of racial discrimination. At best, there is conspicuous tokenism, but the Jim Crow patterns remain intact."

In Hill's harsh judgment, the tragedy is that labor "could have been a force helping to liberate the American Negro—instead, most unions have become instruments of racial oppression."

In Los Angeles, Negroes charge that their union sends black waiters out to segregated jobs

***James F. Smith,** 46, complains that in Los Angeles, black waiters are dispatched solely to regular jobs for ~~which only~~ Negroes are employed; the dispatcher is Local 17 of the Hotel & Restaurant Employees and Bartenders. As a result, he says, black waiters earn far less money than whites—mostly serving an occasional banquet.*

***Willie W. Simpson,** 54, wonders why there are two locals of the United Paper Makers and Paper Workers Union, AFL-CIO, in the plant where he works in Richmond. One of the locals is for whites; the other, for blacks. "Maybe it's just to keep us Negroes down," Simpson suggests. "I can't see any other reason in this day and age."*

In Birmingham, there are also unions for black men and unions for white men

***James C. Dent,** 47, has worked for the St. Louis-San Francisco Railway Co. for 26 years, mostly as a laborer. Last March, after filing a Federal suit and much agitation, he was finally promoted to car inspector. "If I had been a white man," Dent says, "I would have been an inspector after just four years on the job." But the Birmingham railroad yard where Dent works has two locals of the Brotherhood of Railway Carmen—No. 750, which is all-black, and No. 60, which is all-white. And separating the races kept black men in the lower jobs. Now that he has been promoted, Dent has lost over 25 years' seniority—at his union's insistence—and could be among the first laid off in event of a recession.*

Labor - General

December 6, 1968

Mr. William B. Arthur, Editor
Look Magazine
488 Madison Avenue
New York, New York 10022

Dear Mr. Arthur:

LOOK's November 12th article, "A National Disgrace: What Unions Do to Blacks", is itself a disgrace, full of distortions, misinformation, and just plain sloppy reporting.

Your headline falsely charges that most unions have excluded Negroes, forced them into Jim Crow locals when admitted and given them "dirty jobs."

The facts are: Most unions never had any Jim Crow locals; most have always admitted Negroes; almost none hire any workers--black or white--for any jobs, dirty or otherwise.

LOOK in its zeal to back up its rediculous headline published six untrue, sweeping allegations. The truth about each allegation is:

1. There are more than 1.5 million Negroes in unions affiliated with the AFL-CIO.

2. Of the more than 60,000 local unions in the AFL-CIO, less than 150 are now all-Negro and the campaign to merge all-Negro and all-white unions continues, even where some black locals are reluctant to change.

3. Negroes now constitute 3.6% of the apprenticeship force today, which is an increase of more than 100% in ten years. Labor Department figures, before your article was published, showed that Negro participation in apprenticeship has nearly doubled in the past 18 months. In addition to using an outdated figure (an increase from 1.7 to 2.7%), you also used deceptive arithmetic. Such an increase, as any high school math student would tell you, is not a 1% but a 60% increase. And speaking of "tokenism," do you dare tell your readers the percentage of senior editors--or just plain reporters--on LOOK who are black?

4. Unions, including building trades, not only have an open-door policy for apprentices but are engaged in programs to recruit Negro journeymen, among them the International Brotherhood of Electrical Workers and the Plumbers.

5. Non-union craftsmen, black and white, make considerably less money than organized workers do. That is why unions exist. That is why, according to BUSINESS WEEK, unorganized workers--black and white--are flocking to trade unions.

6. Long before the 1964 Civil Rights Act--for which organized labor fought as far back as World War II--unions had sought to eliminate segregated seniority and they continue to do so. Remember, seniority is a contract item and it takes two parties to write a contract. Also, management often balks at union attempts to improve seniority systems.

These six items cover only about one-third of the distortions in the LOOK article. It would take the same amount of space allotted to Mr. Star to answer them all.

I refer to such statements as "Not a single Negro has been admitted into any of the five (construction) locals in Newark, N.J." and the charge that there are no Negro locomotive firemen. Both are absolutely untrue, were untrue when Mr. Star wrote them, and could have been easily checked by an editor interested in honest reporting.

Further, the article also deceives by what it omits. No mention is made of the successful program to seek out and recruit minority group youngsters for building trades apprenticeship now being conducted in 44 major cities. In Cleveland, for instance, 150 Negro apprentices are now in training, of these 15 are Iron Workers and more than 25 are in the Plumbers program. In Washington, 160 Negro youths are training for highly paid construction jobs.

Mr. Star apparently used his research time to find six cases of alleged discrimination. By using six photographs with cleverly written captions, LOOK implies that these experiences are typical. In some cases the caption is untrue. (For instance, the two Richmond locals of the United Paper Makers Union had voted to merge before your issue was published--a fact any cub reporter could have discovered.) He also could have learned that the union here wiped out wage differentials between blacks and whites (common to non-union plants) at the bargaining table more than 15 years ago.

Or take the case of Mr. Dobbins, who incidentally is now a union electrician. The implication is that the IBEW has a policy of discrimination. The fact is that the vast majority of IBEW locals are now implementing the policy of involvement in a cooperative recruiting program to interest black workers in becoming union electricians.

We make no claim to perfection and would welcome a constructive critique of our progress in civil rights. For there has been progress and we intend that it continue despite attempts such as Mr. Star's to discourage young Negroes from looking for work. Labor is not and has not been the foe of the quest for a better life. Indeed, it has often been the only group fighting for this goal. And invariably, it has succeeeded despite the hostility of that segment of the press, which cares neither for the truth nor the cause--and would sacrifice both for sensational headlines.

Yours truly,

William F. Schnitzler
Secretary-Treasurer
Chairman
AFL-CIO Civil Rights Committee

DENNIS ASKS RETRACTION

'Look' Accused of Falsehoods In Article on Unions and Blacks

"Libelous misstatements" were charged to Look Magazine last week by President C. L. Dennis of the Railway and Airline Clerks—and he strongly demanded a retraction.

Dennis blasted a highly sensationalized article carried in the Nov. 12 issue of Look entitled "A National Disgrace: What Unions Do to Blacks." The magazine appeared on the newsstands Oct. 29.

The Clerks' leader declared that the article "completely misstates the facts as they relate" to alleged discrimination in his Brotherhood; also, its publication just before the election constituted "a dishonest attempt to influence voters."

Dennis called upon Look to publish a "complete retraction" of the article, correcting the record as it relates to the Railway Clerks. He provided facts for such a correction.

For example, the article said that in the Brotherhood "Negro freight handlers were replaced by less senior white workers who had been in the all-white baggage clerks seniority line."

Answered Dennis: "There is not one known instance under any of our more than 200 rules and working conditions agreements where one Negro freight handler was displaced by a white employe with less seniority."

"In no instance," he continued, "can an individual covered by our agreements displace a senior employee—and race, creed, color or sex has absolutely nothing to do with seniority under our agreements."

Another claim in the article that "Negroes have no seniority" in a white local and "therefore their jobs are out" was blasted by Dennis as "patently untrue and pure fantasy."

Further, the article says there are no Negro ticket clerks, and this was branded by Dennis as "completely untrue."

"I personally know of quite a few Negro ticket sellers working in several major passenger terminals in the United States," Dennis declared. He went to list names of some of them and the place where they work.

"It is always disturbing," the Clerks' leader went on, "that a magazine of the stature and circulation of Look constantly and consistently reports on the negative aspects of a story.

"Once in a while, it would be nice to read about the good work that is being done to solve some of the social ills of this nation instead of reading outright lies designed to weaken the labor movement.

"Our Brotherhood has participated in many joint ventures establishing on-the-job training programs designed to upgrade the arts, talents and skills of its membership. These agreements are open to all members regardless of race, creed, color or sex."

Dennis closed by saying he hoped that "an appropriate retraction" to the article would be published in an "early issue" of Look.

'Labor'

'Labor' is the weekly paper of 18 unions representing railroad, airline and other workers in the U.S.

CLEVELAND, OHIO 44107

Rough draft

October 25, 1968

Mr. Jack Star
Senior Editor
LOOK MAGAZINE
New York, New York

Dear Sir:

I have just read the first four paragraphs of your feature--A National Disgrace--WHAT UNIONS DO TO BLACKS and I am compelled already to charge you not only with outright bias, but with outright lies.

Mr. Star, at such a crucial period in our history, when lack of understanding, lack of objectivity, is causing unprecedented chaos in our land, such distorted reporting as you presented in the November 12 issue of LOOK is outright criminal. One can only conclude that it has for its motive the aim of driving away black voters from the political party which has worked so long and arduously to bring about needed changes in our society.

You wrote, "Four years ago, the Locomotive Firemen finally took the clause out, but there still aren't any Negro Firemen. Negroes, by the way, had traditionally been firemen in the coal-burning days, but the unions forced them out when diesel locomotives were introduced."

Mr. Star, although the Brotherhood of Locomotive Firemen and Enginemen has yet to hire the first railroad fireman, I want you to know that railroads all over this country have hired and are hiring railroad firemen, in the North, East, West and, yes, in the South.

Furthermore, when these men are hired they have the privilege of joining this organization, which most of them do immediately. Only recently I met negro firemen, members of the BLF&E, at a function in Little Rock, Arkansas. Before that several joined in meetings in Buffalo, New York, where I was

Mr. Jack Star October 25, 1968

privileged to speak to them and other members of the BLF&E. In these two specific instances the railroads on which these negro firemen are employed are the Missouri Pacific and Penn Central Railroads.

You state categorically that "unions forced them (black firemen) out when diesel locomotives were introduced."

There is not a shred of truth in this statement.

Mr. Star, I am sure you do not care to know the truth, otherwise you would have researched your subject before sitting down to your typewriter, but here is the truth of the matter, anyway.

If any negro firemen were forced out, as you say, as a result of the diesel revolution in our industry, I am unaware of it. But, if you mean that they lost out as a result of the infamous arbitration award which took firemen--black and white--from their posts in locomotives, I suggest to you that this is still another story. More than 20,000 lost out--black and white.

And while we are on this subject, let me tell you that we have fought as no other organization has ever fought big business to bring back those needed firemen--black or white--with publications such as yours often joining to block our efforts.

Mr. Star, the need for understanding, the need for racial peace, the need for objectivity has never been greater than it is right now. Such warped reasoning and unfounded statements as appear in this article should be suspect at any time. But, coming at a time like this proves beyond any question that your interests lie not in informing for the sake of informing, but rather writing for the sake of sensationalism.

You have done your readers and our country a great disservice by publishing such unfounded statements that appear at the beginning of your article. But, what is worse, you may have sown the seeds of yet another disorder, yet another riot.

This to me seems to be a terrible price for sensationalism.

Sincerely,

Alex Rey

Mr. Leonard Rubin
Look Magazine
488 Madison Avenue
New York, N. Y. 10022

Dear Mr. Rubin:

I find it regrettable that you did not bother to check with us about references made to United Papermakers and Paperworkers in the November 12 issue of Look, which will be on the stands, as you state, tomorrow.

The picture of Brother Willie W. Simpson on Page 37 is a member of Local 528, which was merged with Local 548 by voluntary vote of the membership sometime ago.

Further, I can advise you that the issues which concern the Crown Zellerbach case at Bogalusa have been almost totally resolved by stipulation and agreement among the parties, but endless reference to these difficult circumstances in a national magazine do not make our task easier, unless the intent is to discredit unions generally.

Finally, I can advise you that through collective bargaining over fifteen years ago this Union wiped out the racial wage differential in the paper industry, which today remains common in unorganized plants. The fact is the negro members of UPP working in the southern paper industry are probably the highest paid industrial manufacturing workers, with the possible exception of Birmingham steel workers and Atlanta auto workers. We are rather proud of these achievements, and are more than somewhat weary of being included in the general stoning by people like Herbert Hill.

Black militants protesting at Mahwah, N. J., against Ford and UAW reflect unrest in labor.

Unions — Black Dissent

LABOR

'A plague on both your houses!'

That seems to be the message of black militants directing their fury over alleged race bias at companies and unions alike. Both fear that radicals pose an explosive problem

Slogans on leaflets handed out by militant black unionists at auto plant gates in recent weeks have been impartial. "Behead the Redhead," said one directed at Walter P. Reuther, president of the United Auto Workers; "Get Rid of Townsend and Put In a Black Cat," said another aimed at Lynn A. Townsend, chairman of Chrysler Corp.

The literature varies from plant to plant. But the basic message, usually expressed in harsh and obscene language, is that industry and organized labor are totally controlled by "the white establishment." To the black militants, labor's traditional rallying song, Solidarity Forever, means "labor heads and plant owners solidly together against the black worker," as a Detroit militant explains it.

The black militants say they can't be bought off by civil rights speeches by a corporation executive or the televised picture of a white union leader marching with blacks—a reference to Reuther in Charleston, S. C., in support of hospital workers on strike. Nothing like that can alter the hard facts of "the yoke of oppression that holds all of us in the chains of slavery to this country's exploitative system," says the Dodge Revolutionary Union Movement (DRUM), one of the most radical of the black militant organizations inside labor.

DRUM calls for "revolutionary struggles" by blacks and "ruthless and vicious tactics, where necessary." And it calls for blacks to "support everything the enemy opposes and oppose everything the honky supports."

Future problem? Black militancy isn't a major problem for most employers yet, but many fear that it could be disruptive and potentially explosive for years to come.

From what has already happened, such worries appear justified. For instance, black militants have disrupted production for short periods in plant demonstrations in several industries. There also has been sabotage. While Chrysler won't comment on reports that DRUM members and sympathizers engaging in guerrilla warfare have scratched paint on new cars and have left nuts and bolts untightened, the company admits that production machinery has been sabotaged. And UAW recently warned auto unionists, "Sabotage can be deadly." The warning was aimed primarily at DRUM sympathizers who may find sabotage preferable to open advocacy as a means of venting wrath.

Finally, demands are beginning to be heard for multi-million-dollar "reparations" from industry for "exploited blacks." Among the suggestions is one that corporations turn over up to 10% of their common stock to be used to improve the blacks' lot.

Ferment. At the Ford Motor Co.'s plant in Mahwah, N. J., a small but militant group—the United Black Brothers of Ford-Mahwah (UBB)—walked out and began mass picketing two weeks ago in a vain attempt to halt Ford's production. They charged that "white racists" in the supervisory force had committed "repeated acts of discrimination and abuse of black workers." The UBB also criticized the UAW for "not truly representing the black man."

The UBB action shut down production on a night shift and caused a few disruptions of work during the next several days. But most white workers and an estimated half or more of all blacks heeded Ford and UAW urgings to ignore picketing.

Black militancy is obvious in many other places and in many ways. It is at the heart of the campaign for union representation and a contract in Charleston hospitals. It is apparent, too, in growing pressures by Negro caucuses for more power in UAW, the United Steelworkers, and other major unions with large black memberships. And it is reflected in so far unsuccessful separatist proposals for Negro unions.

The stand ?

But the type of black militancy that worries industry and labor the most is the kind that manifested itself at Ford's Mahwah plant, at General Electric's Hotpoint Div. in Chicago in 1968, in incidents in steel mill centers, and in the big auto plants around Detroit.

This militancy is concentrated equally

against the major companies and UAW—the employers and union that perhaps more than any others have been in the front ranks in civil rights and anti-poverty crusades.

Why it happened. Many UAW leaders profess to find auto black militancy hard to understand. However, the size of auto plants and the close relationship of men on assembly lines make organization easier than in many other settings. And for a quarter-century the auto union has had a background of ideological and ad hoc groups that rise to fight for a cause—and then fade away.

Additionally, Northern members of UAW include large numbers of Southern whites and Southern blacks, with still-unreconciled antagonisms; in the last Presidential election, George Wallace had considerable support in UAW's rank and file—notably in the New Jersey area of the most recent black conflict.

Marcellius Ivory, a Negro member of UAW's executive board, has acknowledged "a polarization of extremist black and white positions" in the auto union. He said bluntly, "I'm scared of it. I don't know where the hell this will lead us."

Ivory had in mind DRUM, which, though small, has been a troublemaker in Dodge plants. It has since spawned a number of other loosely associated groups: Ford has a FRUM, a so-far nebulous organization in the Detroit area; General Motors has a GRUM, and there's an ELDRUM formed by black militants at Chrysler's Eldon Avenue plant in Detroit.

What it is. DRUM's constitution is generally copied by other groups. Its preamble says: " . . . We do here proclaim our solemn duty to take this the first step on the road to final victory over the great common enemy of humanity: i.e. the monstrous U. S. A. and the . . . system of exploitation and degradation."

Its purpose and objective, it says, is "to break the bonds of white racist control over the lives and destiny of black workers," as a step toward eventual "relief" for "people all over the world oppressed by our common enemy." In this connection, it says it will be necessary to "get rid of the racist, tyrannical, and unrepresentative UAW as representation for black workers, so that . . . we can deal directly with our main adversary, the white racists, owners of the means of production," and "bring down this exploitative system."

It bars from membership "all honkies . . . the historic enemy, betrayer, and exploiter of black people." But it will allow "coalition over issues" with whites. And it calls for action "to help organize DRUM-type organizations wherever there are black workers, be it in Lynn Townsend's kitchen, the White House, White Castle, Ford Rouge, the Mississippi delta, the plains of Wyoming, the mines of Bolivia, the rubber plantations of Indonesia, the oilfields of Biafra, or the Chrysler plant in South Africa."

Generally, DRUM-type groups echo this ideology if not the actual words. Although there is no demonstrated connection between DRUM and the United Black Brothers of Ford-Mahwah, there was clear-cut similarity in the attack on UAW. And the Afro-American Employees at Hotpoint Electric used similar language against GE and the AFL-CIO Sheet Metal Workers.

Demands. In common with many protest groups today, the black militants' demands in industry and labor are hard to define.

At a recent DRUM meeting, for instance, a member complained that whenever a black worker is promoted, his former white superior moves up a notch before him. "No matter how high I get, that same rotten racist . . . is still picking on me at every opportunity and making me feel like a damn fool," he said, voicing a common demand that blacks should get opportunities to leapfrog over white superiors.

Ken Bannon, UAW's Ford head, accuses black militants of intimidation.

At the same DRUM conference, another black said it was time to get away from a system under which "everywhere I look there sits some honky, looking down on me, even when I go to church there hangs a white cat from a cross telling me to pray for my problems."

The extremists don't want black foremen and supervisors ("What good is a black foreman who thinks he's white and takes orders from a white cat?"), but top-to-bottom control by blacks (in the case of Chrysler this would include replacing Townsend with "a black cat").

Exaggerated as the demands are, what worries businessmen so much is that even a small radical hard-core of activists can make big trouble—as they have on just as far-fetched issues in ghettos and on university campuses across the country.

Warning. UAW says that DRUM's membership may be only 100 or so and that some of these are "outsiders," including "troublemakers" and "young black intellectuals, from the colleges." Memberships in similar groups at "a few other plants" of the Big Three are small, too, says UAW.

But UAW is well aware that relatively few activists can be utilized to get mass action by picking issues and grievances or capitalizing on disputes: Unions have done it in organizing and to apply economic pressure on employers, and UAW has now seen the strategy turned against the union by black militants.

Recently, the auto union sent letters to its 350,000 members in the Detroit area, citing knifings and physical assaults at two Chrysler plants, arson, and intimidation of local union leaders—the majority Negroes. The union warned that it would not protect workers "who resort to violence and intimidation with the conscious purpose of dividing our union along racial lines." This was a direct attack on DRUM—and a warning against support for the self-styled revolutionary group.

UAW is seriously worried by the willingness of DRUM, UBB, and other black militant groups to turn against blacks or the union as quickly as against whites and employers. A black industrial relations man was stabbed in a Chrysler plant for "Tomism" when he notified a black militant that he was suspended. And DRUM boasts of a contingent of 200 "storming a union hall and taking over the executive board meeting" and of "a sit-down protest by 50 black workers at Solidarity House, headquarters of the UAW." Ken Bannon, director of the union's Ford Dept., charges that at Mahwah the militants "threatened to beat up wives and children of Negro workers, including union leaders, if they refused to cooperate."

Nelson Jack Edwards, another Negro on UAW's executive board, blames young black followers of Rap Brown and Stokely Carmichael for some of the troubles.

"They've got the idea of using violence for gains," he says. A white staff man adds that troubles are partly invited by the reaction of whites "who've pretty much had it, because of all of the rioting everywhere."

Search for cures. For auto managements, the black militants bring back uneasy memories of sit-down strikes in plants staged by UAW radicals in the 1930's. They deny that there is blatant discrimination and maintain that supervisory personnel are handling race questions "better all the time."

Henry Ford II recently told a Yale audience that the actual problem is "a variety of practices and procedures which have the effect of discriminating [against Negroes] even though their purpose is pure"—for example, the seniority system that can take jobs away from workers recruited in the ghetto. **End**

EU — Unions — Criticism & Dissent

WALL STREET JOURNAL, TUESDAY, JUNE 3, 1969

The Labor Movement: Sinew Turned Fat

By JAMES P. GANNON

WASHINGTON—The view from the paneled executive dining room was a picture-book scene: The light-bathed dome of the U.S. Capitol gleaming against a black sky while, below, the sparkling water danced in the giant fountain of the Capitol's north lawn.

Inside, at the linen-draped table bedecked with fragrant floral displays, the tuxedo-clad waiters decanted four varieties of fine French wines into exquisite crystal, served five gourmet's-delight courses, poured coffee into elegant china demitasse cups and offered the best of brandies and cigars. The two dozen dinner guests, who earlier had enjoyed cocktails and canapes in the airy penthouse one floor above, sank into that euphoric after-dinner fog that seems the particular luxury of the overfed upper class.

Yet the setting was not some corporate hideaway nor exclusive executives' club. It was the marble temple of America's truck drivers—the Teamsters Union national headquarters here. The occasion: A get-acquainted evening presided over by teamster chief Frank E. Fitzsimmons, who apparently is bent on repairing his union's relations with the press, which have ranged from poor to awful in recent years.

Disturbing Hospitality

Perhaps a freeloading reporter is an ingrate and a boor to belittle the hospitality of his hosts. But this type of hospitality is somehow disturbing, at least to one reporter trying, as he winds up a three-year stint covering labor affairs, to sort out some parting thoughts on the state of the American labor movement.

Organized labor, probably more than any other group, has the potential for significantly advancing the welfare of working people—and that's nearly everyone. But today's labor leaders seem less interested in fulfilling that potential than entrenching themselves in positions of power and enjoying those positions to the fullest.

What did the lavish dinner cost those dues-paying truck drivers, warehouse hands, shipping clerks and others who call themselves Teamsters? Whatever the sum, it was a pittance for an organization that last year took in $8.2 million more than it managed to spend—despite its freewheeling spending style.

The evening was reminiscent of others at those deliberately drawn-out meetings of the AFL-CIO in garish Miami Beach hotels, where the rooms in February retail at $40 and $50 a night and more (but the AFL-CIO gets them wholesale). Those are the meetings where the labor chieftains put out stern statements blasting rich folks' tax loopholes and sometimes send a check for $10,000 (the cost of one big Miami Beach cocktail party?) to some struggling group of striking garbage haulers or hospital workers who are doing what the union presidents used to do so long, long ago.

The penthouse parties and the Miami Beach junkets are significant in their symbol-

labor, it will be the healthy effect of competition between the AFL-CIO and the Alliance for Labor Action, the UAW-Teamster joint venture. To the extent that the rival groups try to outdo each other in organizing, bargaining, social action and other constructive projects, the labor movement will be re-invigorated; but to the extent they waste time and energy issuing press release blasts, raiding each other's members and competing for political influence, the labor movement will be further disgraced.

Sweeping changes are occurring in the composition of organized labor that the unions' structure and hierarchy have failed to reflect. The new generation of workers has little or no recollection of that profound shaper of the labor movement, the Great Depression; by best estimates, nearly half of all union members are under 40, and one-fourth under 30. Furthermore, these younger members are predominantly suburbanites, property-owners and taxpayers with a political and psychological orientation quite unlike that of their aged leaders. The new union members are much more interested in air-pollution control and property-tax relief than in such old-line legislative goals as repealing right-to-work laws or broadening construction unions' picketing rights. Yet labor's lobbying aims, while beginning to show some updating, still concentrate overmuch on those worn-out symbols dear to the hearts of the traditionalist leaders.

Perhaps more serious, the younger ranks wield scant influence in making policy. At the typical union convention, few delegates look like representatives of the new youthful constituency. Among officialdom, the senior citizenry is in overwhelming dominance. In some unions, such as the Amalgamated Clothing Workers, a whole generation of middle-echelon officials has grown old and bitter waiting for leaders now in their 70s and 80s to step down.

Business management has long known that talented, ambitious young men cannot be expected to idle away their best years waiting for death's hand to clear a path of advancement. Corporations have imposed mandatory retirement on even the highest officials, and have accelerated the delegation of responsibility to young men. Such thinking would prove a boon to labor.

The labor movement, through success at the bargaining table, shrewdness in political action and lobbying, and the past work of its current crop of leaders, has become an entrenched pillar of the American establishment. This is no criticism; indeed, it is more of a tribute, in light of labor's humble, blood-soaked beginning. But other establishment pillars are shaking. Churches, universities, political machines and government institutions are under social siege. If the bishops, deans, bosses and bureaucrats are in danger, so are labor's luminaries.

Evidence of internal discontent is obvious. The turnover among elected union officers is accelerating. More and more tentative contract settlements, billed by the leadership as "the best ever," are voted down by the rank and file. A Gallup Poll funds that only 56% of union members voted "right," by their leaders' evaluation, in last fall's Presidential election. A little-known staff attorney challenges one of the AFL-CIO's big names—Steelworkers Union chief I. W. Abel—and captures an amazing 41% of the membership vote.

Are these isolated, unconnected events that can be brushed off as passing phenomena? Or are they scattered yet complexly interwoven strains within the labor establishment that demand a response? To criticism, the predictable reaction from labor's hierarchy is: "We've been written off as dead before, yet we're stronger than ever." Just possibly that is correct. But if the Pope and Charles de Gaulle can be made targets of today's anti-institution upheaval, should George Meany presume to be immune?

It's far-fetched to envision radical rank-and-filers seizing their union halls, laying siege to the AFL-CIO headquarters or rioting at labor conventions. But a less-spectacular deterioration of union structure and solidarity may be under way, unrecognized by a leadership too insulated from its constituents.

Potential Is Immense

Organized labor's potential for doing good is immense; its historic achievements in collective bargaining, lobbying for social legislation and political action are testament to that. But as long as its aging leaders indulge in senseless feuding, clutch the reins of power until death and disdain to bring their younger constituency into more active involvement, labor's potential will be unfulfilled.

A warning to all organized labor is evident in the current plight of the once-proud United Mine Workers of America. The union made great by John L. Lewis has fallen into decline —in membership, in spirit, in structure. Its leaders now tour the coal fields attempting to bank the fires of discontent among the rank and file.

At a Pittsburgh miners' rally not long ago, John Owens, the 78-year-old secretary-treasurer who has been a UMW official since the 1920s, defended the hierarchy and pleaded for unity in the membership. Summing up the incumbents' achievement, he told the miners how poor the union was when he became secretary-treasurer in 1948, and proudly added: "Now we are a $100-million-dollar institution."

When labor leaders begin measuring themselves and their unions in dollars, then the ideals and aspirations of the labor movement lose their meaning.

selves Teamsters? Whatever the sum, it was a pittance for an organization that last year took in $8.2 million more than it managed to spend—despite its freewheeling spending style.

The evening was reminiscent of others at those deliberately drawn-out meetings of the AFL-CIO in garish Miami Beach hotels, where the rooms in February retail at $40 and $50 a night and more (but the AFL-CIO gets them wholesale). Those are the meetings where the labor chieftains put out stern statements blasting rich folks' tax loopholes and sometimes send a check for $10,000 (the cost of one big Miami Beach cocktail party?) to some struggling group of striking garbage haulers or hospital workers who are doing what the union presidents used to do so long, long ago.

The penthouse parties and the Miami Beach junkets are significant in their symbolism. They testify to the vast distance that separates the working union member and the highly paid hierarchy. Is there any reason for a $9,000-a-year factory worker to believe that his problems are keenly felt by his $50,000-a-year union president cutting an expense-account swath through the shakedown jungle of Florida's Gold Coast?

The trappings of affluence also symbolize a transformation of organized labor's position in American society. The labor movement today is much less a movement than an institution. It bears little resemblance to the industrial union organizing crusade of th 1930s, the civil rights campaign of the late '50s and early '60s, the student protest movement of today. Organized labor's focus is increasingly inward, toward improving and conserving its institutional position, rather than outward, toward extending its sway, as a "movement" must do.

So meager has the union leaders' commitment to organizing been in recent years that the labor movement has practically stopped growing. In 1956, total union membership stood at 18.5 million workers; in 1966, when the Labor Department last counted, membership was up only 3%, to 19.1 million. Meantime, the entire labor force grew so much that union membership accounted for only 28% of the nonfarm workforce, down from 33% a decade earlier.

True, there are some dynamic, growing unions that could give the now-static labor movement a new thrust—if the hierarchy were determined to commit the resources to the job. Teachers, local government servants and a few other groups are practically begging to get in, but the unions' response has been insufficient. Indeed, an official of a major public-employe union concedes that his outfit is so strapped for money that it is actually turning down requests from government workers to help them organize. Yet there seems to be no shortage of labor spenders in Florida at midwinter, nor a scarcity of cash for them to spend there.

Vital Work Left Undone

While the vital work of organizing goes largely undone, a tremendous amount of the labor leaders' attention and energy is devoted to the non-productive, self-serving task of publicly flogging each other. For three years the George Meany wing and the Walter Reuther crowd have been preoccupied with their internal squabble. United Auto Workers chief Reuther, blasting the status quo mentality of the AFL-CIO and boss Meany, demands sweeping reforms in the labor federation—and then refuses to show up for meetings where his proposals might be aired. He quits the AFL-CIO because he claims it lacks social conscience and true democracy—and then turns around and forms an alliance with the Teamsters, a union thrown out of the AFL-CIO for corruption, a union whose last two presidents wound up in Federal prison.

For a while Mr. Meany seemed to be getting the better of the battle by pretending he really didn't care what Mr. Reuther did. But lately the pretense has become transparent. In February, Mr. Meany yanked the AFL-CIO out of the "united nations" of the free world labor movement, the International Confederation of Free Trade Unions, because the ICFTU wouldn't let him blackball the UAW's bid for separate confederation membership. In April, the AFL-CIO fired off a book-length, 40,000-word blast at Mr. Reuther, a project Mr. Meany carefully supervised. What the book said seems less important than the staggering amount of staff time and leadership attention the AFL-CIO expended on it.

It is no longer possible to converse rationally with either side about their fundamental differences. Both Meany partisans and Reuther advocates tend to launch into emotional tirades. Meantime, the adversaries of organized labor gleefully watch the union brethren dissipate their energies in reciprocal flagellation.

If any good can come from the split in have accelerated the delegation of responsibility to young men. Such thinking would prove a boon to labor.

The labor movement, through success at the bargaining table, shrewdness in political action and lobbying, and the past work of its current crop of leaders, has become an entrenched pillar of the American establishment. This is no criticism; indeed, it is more of a tribute, in light of labor's humble, bloodsoaked beginning. But other establishment pillars are shaking. Churches, universities, political machines and government institutions are under social siege. If the bishops, deans,

At a Pittsburgh miners' rally not long ago, John Owens, the 78-year-old secretary-treasurer who has been a UMW official since the 1920s, defended the hierarchy and pleaded for unity in the membership. Summing up the incumbents' achievement, he told the miners how poor the union was when he became secretary-treasurer in 1948, and proudly added: "Now we are a $100-million-dollar institution."

When labor leaders begin measuring themselves and their unions in dollars, then the ideals and aspirations of the labor movement lose their meaning.

Unions — Social Change

THE NEW UNIONISM / In Hawaii In the Nation

Getting The Move Back Into The Movement

This special background paper on new developments in labor is designed to show that the labor movement is far from being as dead as its critics assert.

Every institution is subjected to iron laws of bureaucracy and labor is no exception. And while there is a tired quality and an unwillingness to change with the times in some quarters the fact remains that no other major American institution so well serves the underdog of the nation.

Instead of carping on what labor has not done in the past it is far more fruitful to look and see what labor is doing today and what it can and should do in the future. We need new visions to meet new needs in new times. Where there is no vision, says the Bible, the people perish.

The union member and his needs have changed over the years. He is no longer starving and oppressed because unions won't let this happen to him. But he is also not affluent and his struggle is a hard one to make ends meet so that he can do things undreamed of by his father.

The most dramatic change is the heavy influx of public workers into unions. The 1960s have been likened to the 1930s when the industrial work-

Negotiation Of Social Action Funds Part Of Unionism's Dynamic Future

Unions of the future will probably be negotiating funds to build low income homes, to create liberal arts and vocational education programs, provide for full time union counsellors and community actionists, and make resorts and recreation centers for workers of modest means. Hawaii carpenters and electricians by negotiating apprenticeship training programs are in the forefront of what should become a national trend if unions are to recapture their historic role as agents of social change.

If all the unions affiliated to the Hawaii State Federation of Labor negotiated just 1¢ per hour per member in the state to be put in a joint labor-management social action fund to which companies contributed a matching 1¢ there would be a yearly sum of $800,000 to do the things that needed to be done here in the islands. If we took 5¢ out of a future wage increase and equalled it with a 5¢ management contribution, we would have $4,000,000 to build a better Hawaii.

If the entire Hawaiian labor movement negotiated such funds at a 5¢-5¢ ratio there would be a whopping $16,000,000 a year to make things happen. The figures are arrived at by taking 10¢ an hour and multiplying it by 2,000 hours a year worked by the average worker. This sum is then multiplyed by 80,000 union members.

This theory comes from an idea by University of Hawaii Labor-Management Education Program Director Guy Nunn, who argues that a union member would not at all mind giving up a small part of a future wage increase if he could see some tangible good works resulting from his sacrifice. Management could write off its contributions in taxes and could take credit for doing the right thing by Hawaii.

Since the union would be making the proposals it would have the say as to how the money was spent. Most employers could never by themselves undertake social action programs for they function in a conservative environment. Also, stockholders want to see as much profit as possible on their investment dollar and engaging in non-profit programs would lift many an eye brow. But the new style business managers are themselves employees who often can see beyond the dollar bill to projects which would help people lead more live-

(Continued on Page 4A)

critics assert.

Every institution is subjected to iron laws of bureaucracy and labor is no exception. And while there is a tired quality and an unwillingness to change with the times in some quarters the fact remains that no other major American institution so well serves the underdog of the nation.

Instead of carping on what labor has not done in the past it is far more fruitful to look and see what labor is doing today and what it can and should do in the future. We need new visions to meet new needs in new times. Where there is no vision, says the Bible, the people perish.

The union member and his needs have changed over the years. He is no longer starving and oppressed because unions won't let this happen to him. But he is also not affluent and his struggle is a hard one to make ends meet so that he can do things undreamed of by his father.

The most dramatic change is the heavy influx of public workers into unions. The 1960s have been likened to the 1930s when the industrial worker revolted against the factory system. The strident militancy of teachers, social workers, policemen, firemen, sanitation and transport workers show there is movement and plenty of it within the ranks of labor. The new revolt is against Big Government which has become so impersonal and computorized that human beings either as employees or clients are counting for less and less in the system.

The local union is fast changing. More time is consumed by officers of an increasing number of locals helping to solve the problems of members off the job than problem-solving on the job. The new labor leader must know about resources in the community and how to get these resources and the member in need of help together. Members expect the union to satisfy their health, welfare, social and recreation needs. While the local union is not yet the working man's home as was the case of the Medieval guild and is the case today in Scandinavian countries, it is becoming a social recreation and education center and an important place for self-expression.

Critics have announced the end of the historic liberal-labor coalition. But the grape strike showed the coalition was marching together on picket lines in communities throughout the nation. The strain between liberals and certain national union leaders on approaches to foreign affairs cannot be denied, but on domestic policies the positions of the two groups are nearly identical. Neither labor nor the liberals have any other place to go; they have only each other. Credit the grape strike-boycott for bettering the eye sight of both parties.

We are witnessing a great institution undergoing some profound changes. What is important is not the pain of child birth – which is what labor's critics focus on – but the nature of the new born child.

low income homes, to create liberal arts and vocational education programs, provide for full time union counsellors and community actionists, and make resorts and recreation centers for workers of modest means. Firefighters to the rescue. Fires are not the only problems Hawaii firefighters mus tackle as this fire shows. Firefighters are typical of new government employee unions who take on an ever widening area of work in the service of society.

New Directions Seen For Government Workers

In 1960, a small AFL-CIO teachers union took New York's Mayor Wagner at his word after he said he favored collective bargaining for city employees. The union told the Mayor it represented all of New York's 40,000 teachers and it was ready to sign a contract.

The City sputtered and stalled. A strike proded it into action. But, said government officials, what about the giant National Education Association which outnumbered the union 30,000 to 5,200? The NEA said it did not believe in collective bargaining for teachers. The City held an election to decide the matter. To the shocked amazement of nearly everybody the tiny union David routed the massive NEA Goliath. It won the issue of whether teachers wanted collective bargaining and again the union won on who teachers wanted to represent them.

Whereas the old unionism had been content to let management worry about the product it was producing, the new unionism is concerned about the people government workers serve. The Baltimore teachers union asked the public to a series of meetings to help it make up bargaining demands. Teachers unions are asking for smaller size classrooms, better schools, special programs for the disadvantaged, and more teachers to give more pupils personal attention.

This incident triggered an explosion which rattled school systems across the nation. The American Federation of Teachers marched through many major American cities with relative ease winning election after election. In areas like Hawaii where there was no procedure for collective bargaining, the Hawaii Federation of Teachers, kept attracting more members on the basis of its outstanding performance in bringing a greater measure of justice and better working conditions to the classroom teacher.

The AFT, AFL-CIO, went from a modest 50,000 members in 1957 to a robust 175,000 in 1969. Union militancy caused teacher salaries to rise 16 percent, although incomes in the field still average less than those of many industrial and construction workers who have been unionized for a longer time.

Social workers who struck Mayor Dayley's Chicago governmental complex listed among their collective bargaining demands humane and dignified treatment of welfare recipients. They wanted to reform the welfare system. (cont. on P. 3A)

Cope's Hawaii Record: One Of The Best In The Nation

The Hawaii State Federation of Labor was founded in 1966 and it immediately had a job on its hands in trying to elect the men and women it had endorsed to public office. Under the Coordinator for AFL-CIO's Committee on Political Education, Betty Lunceford, the fledgling labor federation amazed the political pros by scoring way high in the election of its endorsees.

Under COPE Coordinator Mrs. Fumi Ige, the AFL-CIO in 1968 elected an impressive 81.4 percent of its endorsed candidates. It just about topped the nation in union political muscle.

While the nation was turning conservative, thanks to labor's involvement in politics Hawaii kept going liberal.

The doubling of AFL-CIO's membership in the 1960s made the infant State Federation of Labor an up-and-coming political power. Unionists went door to door to persuade citizens to vote for their candidates. Volunteers manned telephone brigades and they spent long, weary hours stuffing and addressing envelopes. Volunteers still work keeping lists of union members up to date to see whether or not they are registered to vote.

Labor is in politics to get things done. It has programs to build low income homes, schools, hospitals, highways, to raise income levels of the poor, to fight for equal rights and private rights against such things as employer snooping, to preserve our natural resources, to replace regressive taxes with fair, progressive taxes, to help the aged with more adequate Social Security benefits and to help us all get a national health insurance program. It goes to bat for the consumer by getting legislation passed to make loan sharks and packagers more honest, and it is working hard to clear our air and streams of pollution.

Labor is the only mass based non-partisan organization in the country which consistently fights for the underdog, those people of low and moderate incomes.

COPE looks at the voting records of candidates before it makes up its mind to endorse them. If they have anti-public interest votes on measures of interest to the nation and the state they are not endorsed. A "labor issue" is any issue which affects people as workers, consumers, or simply as citizens.

Delegates attend a special COPE convention for it is the people representing the local unions that make the final decision as to who is and who is not endorsed. It is done by a democratic vote.

The Taft-Hartley Act prohibits giving money from union treasuries to candidates for federal office. COPE therefore conducts yearly voluntary dollar drives to permit union members to contribute to labor-backed candidates.

Extreme right-wing legislators have at times tried to ban labor from conducting political activities but before anybody joins them it might be well to consider this point: if we keep labor out of politics just what have we left to effectively battle the big monied interests and to speak for the man-in-the-street?

Community Services Unite All Isle Unions

In 1969 something totally new happend on Oahu. All of the islands' unions, AFL-CIO and independent, agreed to form a joint Community Services Program. Heading up the program is Revocato Medina from Laborers' Local #368. He is the labor representative on the Aloha United Fund.

The national program was the brainchild of Leo Perlis who sold the CIO on it right after World War II. The concept of "Citizen CIO" which affirmed that what was good for the community was good for labor was adopted as an integral part of the merged AFL-CIO in 1955.

Community Services democratized the health and welfare scene. Before World War II there were less than 100 labor representatives serving on agency boards throughout the nation; today there are over 75,000 such people.

About 200 full time labor leaders are on the payroll of local social agency councils and the answer to why the community would hire them is obvious when you realize that union members are among the largest contributors to our Red Feather drives. Also, these unionists have certain skills in dealing with working people which make them extremely effective in helping to solve personal problems.

The program trains union counselors who can handle the problems of their fellow union members and refer them to the service that can give them the most help.

The modern local union is becoming more involved in personal services to members by the day. Some local union officers say they spend more time handling members' off the job problems than their job problems.

1934 Elections: Before Labor Got Into Politics

Mamoru Yamane, Kauai. He said company cars delivered voters who were directly escorted to the ballot box by company supervisors.

Louis Nobriga, Hawaii: He said his relatives didn't dare recognize him on the street because he was a Democrat.

James Koyanagi, Hawaii: Worked in a garage and was told by his employer to stop his Democratic Party activities or quit his job.

Tom Cunningham, Hawaii: Campaigned by visiting homes around eleven p.m., "after the lunas were asleep."

W. Kawamoto, Hawaii: He said the Democrats had to stop

ple as workers, consumers, or simply as citizens.

Delegates attend a special COPE convention for it is the people representing the local unions that make the final decision as to who is and who is not endorsed. It is done by a democratic vote.

The Taft-Hartley Act prohibits giving money from union treasuries to candidates for federal office. COPE therefore conducts yearly voluntary dollar drives to permit union members to contribute to labor-backed candidates.

A Sharing Of Power Is What Unions Really Want

If a word could sum up the ultimate goal of the typical union member that word would be "power." But this is a power quite different from the kind of power that we know corrupts. The corrupting kind is the power of a few over the many, even the power of one person over another.

The power sought by those men and women throughout history who have had the gumption to revolt against the people lording over them is self-power, the power to be able to determine how to live their own life without others bossing them around or trying to manipulate them like a puppet on a string.

The union contract takes power away from the employer and gives some of it to his employees. Collective bargaining is the process of the transfer of power from the powerful to the powerless. It is the equalizer.

Nobody willingly gives up the power he has and so the powerless must use the strike weapon if necessary to force men of power to surrender some of their right, to absolute power over other people. In a democracy power must be spread around and shared by all.

The union Utopia is therefore a society where every man is his own boss. He can't, however, reach paradise alone. To get there he has to march forward with his fellows – as equals – and together as brothers.

A noted French historian, Prosper Boisonnade, credits the workers' guilds of the Middle Ages with spawning our modern democracy. Here the idea that one man was just as good as another took root. Here workers and peasants revolted against the nobility and before armies smashed them they smelled the sweet air of self-government. In Florence, the wool union ruled for a period of years extending the vote and giving the common people representation in government. The guilds took on forms at times much like our modern labor unions and here workers learned to run meetings, and to conduct activities where the majority of members participated. The guilds usually became conservative and business-minded and then a new revolt was needed to protect the workers they were now exploiting.

Although the common man has been ruthlessly beaten down by the powerful whenever he tried to assert himself, the marvelous thing about the human spirit is that it perseveres. It never gives up.

The healthy spirit wants freedom. And freedom to a workingman is a very specific thing. He wants to, in the words of an old I.W.W. song, dump the bosses off his back. He wants to be free to do as he sees fit to do, to grow in mind and spirit, to develop his potentialities to the fullest. He wants to be his own man and the union has been the only vehicle he has ever found to set him off in the freedom direction.

For the first time in history we may be able to attain genuine human freedom if the new technology doesn't enchain us first. Automation and cybernation where machines not only regulate themselves but give orders to each other means that we will have to reorient ourselves toward the concept of work and prepare for the day when few of us will be working in the sense we know work today. The machine can either be our slave or we will be its slave. So far it is dominating us and even killing us with its pollutants, but if man is intelligent enough to invent a machine he ought to have the brains to control it.

The worker wants freedom to be able to live the good life. Unions are preparing him for an ever better life by winning the 13 week vacation in the steel industry, the 6 week vacation in the rubber industry, the 35 and 30 hour week as a goal in the building trades. Together with the long vacations and shorter hours must come recreation and education centers and unions are beginning to form their own programs or work with universities and other institutions in helping union members to meaningfully fill their leisure time. To win the Good Life, unions still have to fight hard every step of the way.

"Power" is a dirty word if we are talking about the power of some people over others. This kind of power is obscene because it degrades and enslaves people. It is an insult to the human race.

But power to determine the course of our own life is the most beautiful dream a man can have for his inner power builds self-confidence, self respect and healthy equality relationships with other people. It takes the chains off the human personality and lets him breathe the air of freedom where he can become the kind of man he always wanted to be.

Men have never gained this inner power, however, except in concert with their fellow man. You have to respect your fellow man before you can respect yourself. You have to liberate your fellow man before you can liberate yourself. This, in essence, is what unionism is all about.

How universally accepted is this philosophy? The most popular of all labor songs which has become the anthem of the American labor movement is "Solidarity Forever," written by Ralph Chaplin after he participated in a coal strike in 1915. It speaks of nothing but power and like the song "John Brown's Body" from which it borrowed the tune it's truth goes marching on.

Solidarity Forever

When the union's inspiration through the workers' blood shall run
There can be no power greater anywhere beneath the sun.
Yet what force on earth is weaker than the feeble strength of one?
But the union makes us strong.

CHORUS Solidarity Forever!
Solidarity Forever!
Solidarity Forever!
For the union makes us strong.

They have taken untold millions that they never toiled to earn,
But without our brain and muscle not a single wheel could turn.
We can break their haughty power, gain our freedom when we learn
That the union makes us strong.

In our hands is placed a power greater than their hoarded gold,
Greater than the might of armies magnified a thousand fold,
We can bring to birth a new world from the ashes of the old,
For the Union makes us strong.

Into Politics

Mamoru Yamane, Kauai. He said company cars delivered voters who were directly escorted to the ballot box by company supervisors.

Louis Nobriga, Hawaii: He said his relatives didn't dare recognize him on the street because he was a Democrat.

James Koyanagi, Hawaii: Worked in a garage and was told by his employer to stop his Democratic Party activities or quit his job.

Tom Cunningham, Hawaii: Campaigned by visiting homes around eleven p.m., "after the lunas were asleep."

W. Kawamoto, Hawaii: He said the Democrats had to stop holding meetings at Papaikou because "there are suckers going around with a piece of paper writing down all the names of the boys and taking it to the boss."

Henry A. Rudin, former Plantation Personnel Director, Oahu: "No man dares on any plantation to exercise his constitutional right of stating publicly that he is a Democrat . . . Intimidation, coercion, and interference drill into the minds of all employees that the prosperity of the sugar industry depends upon a Republican administration in Washington."

Jackson A. Ah Chin, United Public Workers, Hawaii: A worker told him, "You go inside mark the ballot. When you come outside, the boss give you hell, say you no need come back to work . . . Pencil she hang from ceiling . . . boss watch the string." So workers marked the ballot upside down. Their employer thought they were voting for his candidate when they were actually voting for his opponent.

"The saddest object in civilization and to my mind the greatest confession of its failure, is the man who can work, and wants to work, and is not allowed to work." – Robert Louis Stevenson.

Union Members Not Affluent . . . Yet!

Unions have transformed the face of America, turning our class structure around from the point where nearly everybody was poor to where today only about 20 percent of the population is very poor.

This does not mean, however, that the American union member is today a rich man. He still has some distance to go.

In 1890, the average American family made $380 a year. This was low income even for those days. There were eleven million poor families, one million three hundred thousand middle class families, and 200,000 wealthy families. In Hawaii, after deductions the average Japanese worker netted about $100 a year.

We have changed all that.

University of Hawaii political analyst Tom Dinell, credits unions for bringing about profound social change in the islands. He said they brought the immigrant groups "wealth, power, respect and enlightenment."

Nationally as well, unions have scored a great impact on American society. The union member profile of today shows that 32 percent of union families make between $5,000 and $7,500 a year. 46 percent make between $7,500 and $15,000

moonlighting. That modest but adequate budget the U.S. Department of Labor has figured out for a family of four goes way up to $11,190 a year here in the islands. If you make anything less than that, and most people do, you are having to struggle to make ends meet.

What about that plumber who is supposed to cost so much? Is he rolling in dollar bills? The median earnings of skilled craftsmen in 1966 were only $6,981. No affluence for the trades. Many of us forget that while a roofer may make $5.00 an hour he doesn't work and get paid when it rains. While his hourly rate is high his annual income is relatively low. He would be near destitution if his hourly rate wasn't a good one and here the union contract makes all the difference in the world to him.

The workingman also gets hit hardest by regressive sales and other taxes. 33 percent of the income of those earning $3,000 to $5,000 a year goes for taxes whereas 28 percent of the income of those making $15,000 or more is taken away in taxation.

He is also at the mercy of being unemployed through no fault of his own. On Oahu, about one out of every three jobs depend upon military

(Continued from Page 1A)

The State, County and Municipal Employees Union has grown from 150,000 members to nearly 400,000 today. Milwaukee's former Mayor, Frank P. Zeilder, sees the possibility of this union forcing long overdue reform on America's 80,000 units of government. If the union considers the Chicago metropolitan area as one unit instead of as 1,000 separate units of government this could well help bring about a more efficient and responsive regional government united by one union contract.

The union has a great potential. State and local governments employing 4.5 million people in 1953 employed over 8 million in 1965 and the figure is expected to go over 11 million in the not too distant future.

While the union has progressive leadership the very conditions municipal workers must face would force the leadership to a new height in public responsibility. For the cities are going broke. New York faces a huge deficit. Its expenses have gone from $2 billion to $6 billion. Philadelphia was hard put to just keep functioning. Newark closed its library and museum for lack of funds and Youngstown, Ohio

lity to those it hires even after it lays them off. It has a responsibility to find them jobs After all, there is a Full Employment Act still on the books; full employment is supposed to be our national policy.

Firefighters play a significant role in Hawaii not only because they keep down the fire rate but because they perform vital life saving functions along our coastline.

The grandfathers of government employee unions are those dealing with our mail service. The National Association of Letter Carriers and the National Association of Post Office Clerks were organized in 1890. Despite attempts by government to silence them, they persevered and many of the techniques they pioneered are used by all government employee unions today.

Union-State Cooperation. Carpenter's Local 745 is conducting a unique apprenticeship training program in the depressed Waimanalo area. With the use of state funds the union is training disadvantaged young men in carpentry. Here apprentices present a Sherwood Forest shirt to Governor John Burns (left) for his cooperation in making the program a success.—Star-Bulletin Photo.

What The Guaranteed Annual Income Is All About

Time magazine estimates it costs taxpayers $140,000 to support a man on welfare from the age 17 until he reaches the age of 57. Our welfare rolls are growing and so are our

With automation knocking out jobs or making jobs meaningless to individual workers and with an economy that cannot create full employment, Theobald says the goal of

adequate" living level. Giving money for children is a fact of life in 62 different nations. In Canada, a Gallup poll said 90 percent of all Canadians felt children allowances were a

three hundred thousand middle class families, and 200,000 wealthy families. In Hawaii, after deductions the average Japanese worker netted about $100 a year.

We have changed all that.

University of Hawaii political analyst Tom Dinell, credits unions for bringing about profound social change in the islands. He said they brought the immigrant groups "wealth, power, respect and enlightenment."

Nationally as well, unions have scored a great impact on American society. The union member profile of today shows that 32 percent of union families make between $5,000 and $7,500 a year. 46 percent make between $7,500 and $15,000.

But you are not considered "affluent" today unless you make more than $15,000 a year. Only 22 percent of all union members are therefore in the affluent category. Yes, there are millionaire union members in the entertainment unions.

Nearly eighty percent of all unionists are somewhere in between being dirt poor and well off. The U.S. Department of Labor feels it takes over $9,000 for a family of four to live moderately. A family with a $7,500 income is below what the experts say is needed to live with any degree of well being.

In Hawaii, with our 22 percent higher cost of living the worker is even more hard pressed. This accounts for the high percentage of working wives and get that while a roofer may make $5.00 an hour he doesn't work and get paid when it rains. While his hourly rate is high his annual income is relatively low. He would be near destitution if his hourly rate wasn't a good one and here the union contract makes all the difference in the world to him.

The workingman also gets hit hardest by regressive sales and other taxes. 33 percent of the income of those earning $3,000 to $5,000 a year goes for taxes whereas 28 percent of the income of those making $15,000 or more is taken away in taxation.

He is also at the mercy of being unemployed through no fault of his own. On Oahu, about one out of every three jobs depend upon military spending. If we have defense spending cutbacks hundreds, even thousands, could be thrown out of work. And no plans are being made by Congress to escalate spending for roads, homes, hospitals and schools, as war spending is de-escalated.

Here a "Freedom Budget" could be of great help. Labor Leader A. Philip Randolph proposes that we budget one thirteenth of future increased revenues to provide jobs for the jobless. He feels that in ten years' time this sum will accumulate to $185 billion. This is a portion of future growth in revenues, not what we have today. As the economy expands government revenues will likewise expand. Earmark a percentage of this money now to meet our social needs and provide jobs, Randolph urges.

ernment united by one union contract.

The union has a great potential. State and local governments employing 4.5 million people in 1953 employed over 8 million in 1965 and the figure is expected to go over 11 million in the not too distant future.

While the union has progressive leadership the very conditions municipal workers must face would force the leadership to a new height in public responsibility. For the cities are going broke. New York faces a huge deficit. Its expenses have gone from $2 billion to $6 billion. Philadelphia was hard put to just keep functioning. Newark closed its library and museum for lack of funds and Youngstown, Ohio, closed down the schools for the same reason. In any future bargaining the union must consider where is the city going to get the money?

The American Federation of Government Employees went from a membership of 64,000 in 1957 to more than 260,000 today. Because of the large number of federal workers in Hawaii this union assumes a key importance here. It has come up with the belief that the government has a responsibi-

unions are those dealing with our mail service. The National Association of Letter Carriers and the National Association of Post Office Clerks were organized in 1890. Despite attempts by government to silence them, they persevered and many of the techniques they pioneered are used by all government employee unions today.

Union-State Cooperation. Carpenter's Local 745 is conducting a unique apprenticeship training program in the depressed Waimanalo area. With the use of state funds the union is training disadvantaged young men in carpentry. Here apprentices present a Sherwood Forest shirt to Governor John Burns (left) for his cooperation in making the program a success.—Star-Bulletin Photo.

What The Guaranteed Annual Income Is All About

Time magazine estimates it costs taxpayers $140,000 to support a man on welfare from the age 17 until he reaches the age of 57. Our welfare rolls are growing and so are our welfare costs. Since tax money must go to help the disadvantaged might it not be better just to make it in the form of a direct payment and save the expense of administrative overhead and the humiliation the poor currently have to undergo when they get relief?

The problem of poverty is that the poor lack money.

Here are some plans to give it to them:

The Guaranteed Annual Income in the form of direct payments to the poor.

Robert Theobald, a leading proponent of the guaranteed annual income, would take the poverty level of a family of four – in Hawaii it's $4,200 – and guarantee families this basic income. The plan would provide for an annual five percent increase.

With automation knocking out jobs or making jobs meaningless to individual workers and with an economy that cannot create full employment, Theobald says the goal of America should be "full unemployment rather than full employment – a socioeconomy where choices are made on the basis of individual values rather than constrained obedience."

The Guaranteed Annual Income through the Negative Income Tax

A family would add up its income and subtract its exemptions. If the result is negative, that is, if it falls below that $4,200 poverty level then the government pays the family to raise to the poverty line.

Children Allowances

Of the 34.5 million Americans living in poverty in 1963, nearly one half were children. An even greater amount of children – about 20 million – were from families living below what the Department of Labor says is a "modest but adequate" living level. Giving money for children is a fact of life in 62 different nations. In Canada, a Gallup poll said 90 percent of all Canadians felt children allowances were a "good thing."

And for workers already employed . . .

The Guaranteed Annual Wage

This would eventually abolish the wage system and put workers on a yearly salary. If management can be on a salary why not workers? Lay offs in many industries are frequent in occurance and this program would force companies to plan their labor needs more efficiently.

Supplemental Unemployment Benefits (SUB) supplement your income if you are laid off. If you make $100 a week and are laid off and unemployment compensation only pays you $40, your SUB from the company would be $60. This is a first big step to the guaranteed annual wage or salary.

Hawaii State Federation of Labor President and Executive Board: L. to R. (front row): Jack Copess, V.P.; I.B. Peterson, V.P.; Yukio Arashiro, V.P.; Elmo Samson, V.P.; Tommy Sing, V.P.; Arthur Kam, V.P.; James Crane, VIP.; John Haleamau, V.P.; Walter H. Kupau, President; Dorian Gustaveson, V.P.; and John Cabral, V.P.

Founding Of The State Fed

The Hawaii State Federation of Labor, AFL-CIO, was founded in 1966, after the disolution of the Central Labor Council of Honolulu, formed in 1938.

Over fifty local unions are affiliated with the State AFL-CIO and they support the Federation by paying a monthly per capita tax for each member. Total State membership is over 20,000.

In addition to the State organization there are special trade councils which coordinate activities in their various fields of interest. There is the Building Trades Council, The Metal Trades Council, The Honolulu Port Council, and the Letter Carriers Association.

Grassroots participation in State AFL-CIO activities comes through the different island divisions of Oahu, Hawaii, Maui and Kauai. The largest is the Oahu Division which meets regularly, has functioning committees, and is headed by the Boilermakers' Jack Copess.

The State AFL-CIO is affiliated to the 14 million member National AFL-CIO with headquarters in Washington D.C. Policies of both the national and state labor bodies are made at conventions held once every two years.

Interim policies are made by executive boards such as the members of the Hawaii AFL-CIO Board pictured at left.

Why We Are Losing The

War On Poverty

By WILLIAM L. ABBOTT

We are losing the War on Poverty because our values are upside down.

This year the Federal Government is spending $335 million on public housing for poor people and $390 million to make 10,000 wealthy farmers and farm corporations richer.

In Mississippi, welfare payments to dependent children are limited to $114 a year but Senator James O. Eastland received $116,000 in government subsidies for his plantation.

About 15 million Americans go to bed hungry every night, and many are literally starving because we won't help them, but we pay $8.5 billion in subsidies to giant corporations and we give tax bonanzas like the oil depletion allowance to make billionaires out of millionaires.

The General Accounting Office has up to eighty people investigating funds spent on the poor but only five people checking military spending which is over thirty times the amount for all anti-poverty programs.

As a matter of fact, this nation's $63 billion military budget in 1966 cost $1,280 annually for

in infant mortality, 18th in life expectancy for males and our death rate is higher than that of any Western European country.

Government welfare costs have skyrocketed from $2 billion ten years ago to $7 billion. If you add private welfare the total comes up to $15 billion. People on welfare have swelled from 5.3 million in 1957 to 7.7 million in 1967.

But the poor are not being benefitted. The average monthly welfare payment in 1967 was $37. If there is a lot of money in poverty not much is getting to the poor.

President Nixon's welfare program doesn't scratch the surface. In Hawaii, the estimated allowance under his plan for one week amounts to $4.33. This is for food, personal and household items. It comes to about 21¢ per meal. Try to eat in Hawaii for 21¢. From this budget the poor must also pay for transportation, household operations, telephone, school lunches, baby sitting, and any spending money for their children.

And yet what outrages the average American is to hear about some wel-

individual has failed, not a system which if properly planned could provide an honorable income to all Americans.

We feel the poor are lazy leeches living off the fat of our tax money and that if they got out and did an honest day's work we would save all those millions in welfare.

Look at the facts: about 9.1 million people receive benefits under major public assistance programs. More than 4.5 million are children. Nearly two million are mothers with young children. Almost two million are aged. About 800,000 are blind. Only 80,700 of the total of 9.1 million are able-bodied employable males.

And observe the poor who do work. A Texas grapefruit picker makes a yearly income of $1,500. A California lemon picker was paid $10.37 for nine hours of lemon picking. But his net income for the day was only $1.12 after the employers association deducted for transportation, glove rental, housing and other items. The Rev. Theodore M. Hesburgh, President of Notre Dame who made a first-hand study of the plight of Mexican-American

vidual instead of on the social system.

We behave the way we do because it is hard to change the mental habits drilled into us by our culture. Class hate and race hate have in the past probably been more pronounced in Hawaii than on the mainland.

The white upper class divided the other races and classes in order to rule them with a stern hand. The technique was borrowed from the aristocratic alii who used the slave Kauwa class in the same way that Southern Negroes were used by the planter aristocracy to keep poor whites in line. Lower class whites felt less oppressed and exploited if they could feel superior to blacks. When the whites took over Hawaii they used different pay rates to perpetuate hostility of group against group. On the plantations at the beginning of the Century, Japanese were paid $13 a month and Portuguese doing identical work made $22.50 a month. Portuguese were not considered "Caucasian" and this kept the whites divided and resentful of each other.

Here is how skilled tradesmen were paid in 1910:

Caucasian, $3.85 a day; Hawaiian, $1.56; Portuguese, $1.49; Chinese, $1.27; and Japanese, $1.05.

The white employers based a man's value on money and money also determined the worth of

The poor are forced to live in homes like these because of society's failure to provide decent housing for all and also because the poor are not organized.

the different races and nationalities of Hawaii cured themselves. They united and through collective action told the persons running society that people were more important than money and that the people of every race and nationality were now going to have a say in running their own affairs. The people discovered they could only better themselves if everybody else bettered themselves as well.

Why We're Worried About Automation

The U.S. Census Bureau now uses 50 statisticians where it required 4,100 of them to do identical work in 1950. Bell Telephone increased its business by 50 percent; its workforce by only 10 percent.

In the rubber industry, the Akron Goodyear

ing more tires than ever before. The same process is taking place in all our basic industries.

In 1970, between 3 and 4 million young people will be looking for jobs. In 1960, the figure was 2 million. With fewer jobs facing us and more people entering the work force we need

subsidies for his plantation.

About 15 million Americans go to bed hungry every night, and many are literally starving because we won't help them, but we pay $8.5 billion in subsidies to giant corporations and we give tax bonanzas like the oil depletion allowance to make billionaires out of millionaires.

The General Accounting Office has up to eighty people investigating funds spent on the poor but only five people checking military spending which is over thirty times the amount for all anti-poverty programs.

As a matter of fact, this nation's $63 billion military budget in 1966 cost $1,280 annually for a family of four. Two-thirds of our Federal tax dollar goes for war spending. Relatively little goes for the health and welfare of people.

On the health question, 6 out of our 91 medical schools are on the point of closing for lack of funds. Only 7,400 physicians are graduated each year in the United States. We get another 7,000 per year in foreign trained physicians. Almost half of our doctors are trained outside the United States.

America ranks behind Europe in health care. Millions of the poor have no health treatment except in emergencies. Over one-fifth of draftees are rejected for medical reasons. We rank 13th

average monthly welfare payment in 1967 was $37. If there is a lot of money in poverty not much is getting to the poor.

President Nixon's welfare program doesn't scratch the surface. In Hawaii, the estimated allowance under his plan for one week amounts to $4.33. This is for food, personal and household items. It comes to about 21¢ per meal. Try to eat in Hawaii for 21¢. From this budget the poor must also pay for transportation, household operations, telephone, school lunches, baby sitting, and any spending money for their children.

And yet what outrages the average American is to hear about some welfare recipient who was caught trying to chisel a few extra dollars out of a department of social services. No outrage is expressed over the fact that Mrs. Horace Dodge Jr. inherited $56 million and put it all in tax exempt bonds therefore not paying a penny in taxes. Few people expressed anger at the way Atlantic Oil in 1965 paid no taxes whatsoever to the government.

We take our anger out on the poor person down on his luck and admire the wealthy man who may be cheating the treasury out of millions.

We punish the poor for being poor. Our entire welfare system is designed to make a person needing aid feel like a personal failure. The

The Working Poor. Six year old children must work in the fields so that their family will have enough to eat.

programs. More than 4.5 million are children. Nearly two million are mothers with young children. Almost two million are aged. About 800,000 are blind. Only 80,700 of the total of 9.1 million are able-bodied employable males.

And observe the poor who do work. A Texas grapefruit picker makes a yearly income of $1,500. A California lemon picker was paid $10.37 for nine hours of lemon picking. But his net income for the day was only $1.12 after the employers association deducted for transportation, glove rental, housing and other items. The Rev. Theodore M. Hesburgh, President of Notre Dame who made a first-hand study of the plight of Mexican American farm workers concluded: "This sounds to me like peonage." Yet, we exclude farm workers from the minimum wage and protection under the National Labor Relations Act.

Not only don't we give the poor the kind of break we would expect if we were in their situation but we go out of our way to degrade and humiliate them. When a group of mothers on welfare sought a court injunction against being subjected to unreasonable searches of their premises, harrassment from social workers, eavesdropping, and constant questioning concerning their sexual activities the court ruled against them, saying that they were fortunate to get any benefits and that it was up to the discretion of administrative functionaries as to whether or not they got any aid.

Why do we treat our poor in so base a fashion? One commentator, Eleanor Graham, feels the War on Poverty might more aptly be called the War on the Poor. For our welfare system which includes governmental anti-poverty social services are essentially paternalistic and "such a situation enhances the dependency upon aid recipients." She adds that this is the American way of meeting social welfare issues where the responsibility is placed upon the indi-

if they could feel superior to blacks. When the whites took over Hawaii they used different pay rates to perpetuate hostility of group against group. On the plantations at the beginning of the Century, Japanese were paid $13 a month and Portuguese doing identical work made $22.50 a month. Portuguese were not considered "Caucasian" and this kept the whites divided and resentful of each other.

Here is how skilled tradesmen were paid in 1910:

Caucasian, $3.85 a day; Hawaiian, $1.56; Portuguese, $1.49; Chinese, $1.27; and Japanese, $1.05.

The white employers based a man's value on money and money also determined the worth of an ethnic group. Money therefore dictated the worth of human beings.

These are sick values. They are insane values. But the values we hold explain why we are in such a mess today.

How do we cure ourselves? The same way

cause of society's failure to provide decent housing for all and also because the poor are not organized.

the different races and nationalities of Hawaii cured themselves. They united and through collective action told the persons running society that people were more important than money and that the people of every race and nationality were now going to have a say in running their own affairs. The people discovered they could only better themselves if everybody else bettered themselves as well.

Why We're Worried About Automation

The U.S. Census Bureau now uses 50 statisticians where it required 4,100 of them to do identical work in 1950. Bell Telephone increased its business by 50 percent; its workforce by only 10 percent.

In the rubber industry, the Akron Goodyear plant once employed 14,000 workers. Today it employs 9,500. The Firestone plant once employed 10,000 workers; today it employs only half as many; the workforce for the Goodrich plant has also been cut in half. But these plants with 5,000 fewer people each are producing more tires than ever before. The same process is taking place in all our basic industries.

In 1970, between 3 and 4 million young people will be looking for jobs. In 1960, the figure was 2 million. With fewer jobs facing us and more people entering the work force we need to create 25,000 jobs a week just to stay even.

The War in Vietnam with its accelerated spending is keeping the job level up but what happens when the War ends? This is why labor is insisting that there must be national planning now to avert a depression.

Negotiated Social Action Funds

(Continued from Page 1A)

able lives. If the union acts with firmness at the bargaining table, these managers can tell the stockholders they were blugeoned into good deeds.

What if, for example, every fair sized local union negotiated at least one full time union counsellor who would look after the personal problems of employees. This would take a load off management's back and increase efficiency through a happier work force.

There are signs that such an evolution in collective bargaining is already beginning to take place. The IBEW in New York City has negotiated an adult education center programmed by Columbia University. The Amalgamated Clothing Workers are in the process of negotiating college scholarships and child care centers.

The evolution of social action funds will probably come about this way: first apprenticeship training programs, vocational education centers, liberal adult education centers and programs, next resort and recreation facilities for union members – and for the poor. The UAW camp in Ottawa, Illinois, provides great resort and educational facilities for unionists (meals $3.75 a day, $8 a room, three beds in a room.) But when unionists are not using the facilities poor people, the mentally retarded and the physically handicapped use them. Next, full time union counsellors to help workers with personal problems, raise United Fund money and engage in community activities. Next, consumer cooperatives to help beat the high cost of living. Finally, full blown community unions similar to the one unions set up in Watts, California and which has proven that the idea can work.

The problem we have in getting social action programs started is lack of capital. You can get substantial capital from only one of two sources: government and business. The government's War on Poverty has become an extension of traditional social services because political leaders are not going to pay money to help poor people vote them out of office. Government programs are controlled by the government. This doesn't mean they are bad but it does mean they are not going to create social change which we need so badly.

This leaves business as the only remaining source of funds. But business has historically been opposed to most social change – although unions have forced change upon them, sometimes over their dead bodies. Certainly 19th century capitalism is dead and some wag remarked that our economic system today is socialism for the rich and free enterprise for the poor. Let's call the action unions should be contemplating free enterprise with the profit taken out of it.

Mr. Emory F. Via
Director of Resource
Southern Regional Council
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Emory:

Enclosed is a moderate honorarium which I hope will at least cover your expenses in connection with your participation in our recent Machinists Leadership School at the University of the South. We certainly appreciated your contribution and I hope we may be able to call on you again for similar programs. I understand that all in all this was one of the best Schools we've had at Sewanee in our many years with them.

I'm sorry I haven't seen you recently and that I wasn't able to come to Sewanee this year. Perhaps we'll meet at some conference somewhere soon. Do you ever get to Washington?

With very best personal regards,

Fraternally,

John

Dear John:

It was a pleasure to hear from you and thanks for the honoraium. I enjoyed being with the group at Sewannnee. The summer school struck me as a good one and I wished I could have spent more time there.

I trust that we will see each other in Washington or elsewhere soon. And certainly if I can ever be of service here in the South, don't hesitate to call on me.

Fraternally,

Emory F. Via, Director

Labor Movement

LABOR

Unions – General

They carry less clout overseas

Foreign unions don't have a professionalism or a power base like the AFL-CIO

Swedish conventioneers: the LO's Geijer and Prime Minister Palme at Stockholm meeting.

"It's not the AFL-CIO," said an American labor observer who attended an annual convention of Britain's Trades Union Congress (TUC) in seaside Blackpool, England, last week. The same thing could have been said of a convention of Sweden's Landsorganisation (LO) under way at the same time in Stockholm.

The meetings of the two important giants of the free world's labor movement showed clearly the differences that U. S. businessmen must adapt to abroad. With the spread of multinationalism, American industry's problems with labor have broadened. Many businessmen have found out, at a cost, that European labor cannot be dealt with in ways that work in the U. S.: The movements abroad, steeped in tradition, are old fashioned, Socialist in orientation, and amateur in comparison with the AFL-CIO's professionalism. They lack the centralized power that the U. S. federation has—and its broad identification with other economic and social groups that give it more clout than its 130 unions and 13.8-million otherwise would provide.

The AFL-CIO long ago learned to live with and exploit the capitalist system. Federations such as the TUC and the LO are still riddled with turn-of-the-century zeal for changing it. This, obvious last week in Blackpool and in Stockholm, can be one of the biggest frustrations of U. S. business abroad.

At Blackpool, some 1,300 delegates representing 142 TUC unions claiming 10-million members gathered at the Winter Gardens Opera House by day (at night the regular show went on, starring Britain's foremost purveyor of nonsense, comic Ken Dodd) to go through a ritual of approving decisions already made by the 37-member General Council, similar to the AFL-CIO's 39-member Executive Council. The council had worked all year to prepare a 391-page report, with resolutions to be acted on in Blackpool. Lord Cooper, general secretary (corresponding to a U. S. union president) of the 835,353-member National Union of General & Municipal Workers, ticked off and got "aye" votes on 488 paragraphs of the report and on some 50 motions.

Demonstrators, too. For a time, most of the action was outside the auditorium. Demonstrators carrying placards exhorted delegates to take up their causes. Old-age pensioners wanted more money. Young Socialists chanted, "Tories Out!" A few homosexuals of both sexes demanded equal job opportunities. And nuclear disarmament campaigners handed out leaflets exhorting the TUC to keep Britain out of the Common Market.

All were over-estimating the power of the TUC. It has been notoriously ineffectual in recent years in influencing sweeping social and political change, even when its allied Labor Party was in power—and its influence is nil with the party out.

Inside the auditorium, delegates bore some similarity to an AFL-CIO delegation. But there were more actual workers—in contrast to professional leaders—than at a U. S. federation convention. AFL-CIO delegates tend to be union officers and others on union payrolls; TUC and its unions have few paid officers.

Victor Feather: He's Britain's Mr. TUC, as George Meany is America's Mr. Labor.

The TUC's version of George Meany is its general secretary, Victor Feather. Paunchy and articulate, Feather is a leader without a union power base but with influence in and out of British labor because of his TUC office, his care in offending as few people as possible, and, some say, even his avuncular appearance. He is Britain's Mr. TUC, just as Meany is America's Mr. Labor.

Decentralized. While much of the work of the convention was routine and the delegates lethargic, a TUC session is democratic—perhaps even more so than an AFL-CIO convention. There is less centralized power. On issues that excite the delegate ranks, Lord Cooper and Feather can and do get slapped down regularly. It was on one such occasion last week that the U. S. observer said, "It's not the AFL-CIO." It was a shock to one who considers it inconceivable that Meany's wishes could ever be repudiated.

The convention went along with laconic "ayes" to demands for better educational opportunities, increased pensions, shorter hours, longer holidays and more of them, better fire protection, a reduction of industrial accidents, and similar AFL-CIO-like resolutions. Delegates also agreed that the British government should not sell arms to South Africa and that fraternal ties with international labor bodies should be encouraged. The latter position included Communist-bloc organizations that the AFL-CIO says no free-world labor union should recognize.

However, the TUC's official stand for an 18 pound ($43.20) weekly minimum wage was challenged and rejected in favor of a floor-demanded 20 pounds a week ($48). And, of course, the "pernicious legislation" of the Tory government of Prime Minister Edward Heath was attacked as angrily as the AFL-CIO's convention will lash out at the Nixon Administration's programs this fall. The TUC delegates were angry about Britain's new industrial rela-

tions bill (some delegates urged British unions not to comply with registration provisions; others demanded that the TUC bar affiliates from registering) and about Tory policies that the unions blame for "continued stagnation, spiraling inflation and high unemployment," a transatlantic echo of AFL-CIO's continuing criticism of this country's Republican government.

The convention also attacked the Tory government's decision to enter the Common Market as one that will mean higher living costs and take economic control out of the hands of the British people. Cries of "throw the Tories out" were commonplace, and the convention voted—unanimously and enthusiastically—to press for a general election before Parliament makes an irrevocable decision in favor of the Common Market.

> The TUC came out foursquare for ambiguity, and none but the militants seemed to mind

Labor legislation. When it came to the industrial relations bill, designed to modernize Britain's labor relations along the lines of U. S. statutes, Feather talked eloquently of the Tories' having "bludgeoned this piece of pernicious legislation through Parliament." Hugh Scanlon, head of Britain's second-largest union, the Amalgamated Union of Engineering Workers, with 1.2-million members, demanded "tougher" action by TUC against the new bill because "the merest scratch can lead to gangrene." Scanlon, with the manner of a mild accountant, is a firebrand beneath the surface. Another firebrand, Jack Jones, head of the country's largest union, the 1.6-million-member Transport & General Workers Union, supported Scanlon. So did such regular militants as Clive Jenkins of the Assn. of Scientific, Technical & Managerial Staffs and Tom Jackson, head of the British postal union, an official known for his luxuriant sideburns and moustache.

Still more militant, tweedy Vincent Flynn of the Society of Graphical & Allied Trades twitted Feather, rapped Lord Cooper for his apparent inclination to register his own union under the new law, and demanded that the TUC expel any union that goes along with the law of "MacHeath the Knife."

Prior to balloting after 24 speakers on the industrial relations law, a short, angry man demanded recognition on a point of order. He was shouted down and ruled out of order. As a result, while the TUC rejected Flynn's motion to expel unions that go along with the law, it approved both Feather's motion to "advise" against registration or compliance and, unwittingly at the same time, Scanlon's motion to "in-

Our 1971 Quonset: The one thing we didn't change is its 1946 price!

Our building systems division—Stran-Steel—has a growing market for farm buildings. And for good reason. Our new Quonset Mark III is strong, durable, expandable, and designed for quick construction. Yet it's available at the same low, deflationary 1946 prices. Surprised? You shouldn't be. We've been making hay in the metal building market since 1942 when we produced the original Quonset. To find out more, write for your copy of "If it's not a growth market, let's not even talk about it." National Steel Corporation, Grant Building, Pittsburgh, Pennsylvania 15219.

struct" affiliates not to do so. The TUC came out foursquare for ambiguity, and nobody except the extreme militants led by Flynn seemed to mind.

Ineffectual. The TUC, having made its positions clear, hardly expects them to change anything. Insiders concede privately that Britain probably will go into the Common Market, that chances of an early general election are slim, and that there is really no hope that the Tory government's economic policies can be shaken up, whatever the TUC might say or do.

Actually, the TUC ought to be more powerful than it is. It is the oldest of all such labor movements, with affiliates representing a much larger proportion of the nation's work force than does the AFL-CIO, and with close ties to the Labor Party. But the TUC lacks the clout of the AFL-CIO, partly because of British labor's amateurism, the power vested in union shop stewards who have the firmest labor base, and the jealous refusal of unions to cede power to the TUC plus the TUC's rejection of any proposal to take on more power.

> The Swedish expression for 'speed slowly' was heard a number of times in debate

After the convention, questions were raised about why it had been held. One leader shrugged and said, "Because it has been going on ever since 1868."

In Sweden. After the Swedish LO convention, on the other hand, leaders talked of its being "a trailblazer for the future." The 18th regular congress (sessions are held every five years) charted programs that provided a pretty good idea of what Sweden might expect in the 1970s. Swedish businessmen are hardly likely to lose much sleep, worrying. The programs are along broad lines followed by the LO in recent years; the Swedish expression "skynda laangsamt"—literally to speed slowly—was heard a number of times in debates.

The LO is made up of 29 unions, with a claimed membership of 1.7-million out of a total Swedish labor force of close to 4-million. It is headed by Arne Geijer, 61, chairman since 1956, who is convinced that what is good for the LO is good for the country. The LO has very close links with the Social-Democratic Party, which has now been in power for almost 40 years.

As were the TUC's delegates, the 300 delegates at the Swedish convention were given a pile of material—reports and recommendations—to be approved. In the case of LO's delegates, there were 10 pounds of reading matter that few had time—if the inclination—to go through.

Most took a moderate position on private enterprise. There were no de-

You have 24 hours to live.

Today, that is. So what are you doing with your time? Are you helping another human being toward the dignity you want for yourself? Are you doing anything to overcome the hate in this world—with love? These 24 hours can be a great time to be alive. If you live right.

Break the hate habit: love your neighbor.

Advertising Council — Religion in American Life

mands for nationalization (called Socialization by the Swedish), and Geijer said bluntly that the LO should never try to abolish profits. Workers could never win anything that way—profitable companies are needed because without the profit motive there would be no initiative, he said. But the LO urged more "industrial democracy," including worker representatives on boards and worker participation in planning and managing companies.

The LO took a soft line on multinational companies, located in large numbers in Sweden and often blamed for tax-dodging, but it took a step that parallels TUC's and AFL-CIO's position that there should be international agreements covering multinational operations.

> There is an effort to revive the 'Harpsund spirit,' which signifies the middle way

Action on the working environment stood high on the LO's agenda, largely as a result of a study that showed that 75% of LO members feel "psychologically pressed" in the workplace—and 23% feel "severe stress" from noise, dust, drafts, polluted air, and job hazards. The convention approved a program to alleviate these problems and a $4-million annual fund, financed in part by employers, for research into solutions for environmental problems.

'Harpsund spirit.' Despite the LO's ties to the government, the government did not escape criticism—for doing too little to stimulate investments and jobs, particularly in construction. The unemployment rate reached a high figure of about 4% during the convention, a figure that would be more like 2.5% to 3% on a basis similar to that of the U. S.

But one of the potentially significant things at the convention was an effort to revive "the Harpsund spirit," a reference to close collaboration of business and industry, labor, and Social-Democrat political leaders in the 1950s and 1960s, through talks at Harpsund, the official country residence of the Prime Minister. The Harpsund spirit signified the middle way in Sweden.

There has been little of this spirit in the last two years of wildcat walkouts by workers, business attacks on the government, and a breakdown of peaceful contract-making. Prime Minister Olof Palme, visiting the LO, made a major address seeking a labor, business, and government rapprochement. About the same time, the Federation of Swedish Industries made peace moves, and the LO reacted favorably.

This guarantees nothing except that, in the near future, everyone will sit down together again at Harpsund to consider mutual interests. ■

ILWU's Bridges Seeks Merger With ILA, But Sources Call Dock Union Tie Unlikely

union Dem

12/31/71

A WALL STREET JOURNAL *News Roundup*

Harry Bridges wants to affiliate his West Coast dock union with a larger longshoremen's union on the East and Gulf coasts. But the chances of a formal tie appear slim, according to a number of sources.

Mr. Bridges, president of his union, is flying to New York next Tuesday or Wednesday to meet on the matter with Thomas W. Gleason, prsident of the International Longshoremen's Association. Contract negotiations in San Francisco were recessed Wednesday. Mr. Gleason, on vacation and unavailable for comment yesterday, is scheduled to resume bargaining with East Coast employers next Tuesday morning.

Both unions have received hefty settlement offers, but an impasse continues. Mr. Bridge's International Longshoremen's and Warehousemen's Union rejected a wage-fringe package boost of $2.35 an hour spread over two years. Mr. Gleason's ILA informally was offered a three-year contract package totaling $1.97½ an hour Nov. 21, but there haven't been any negotiations since Dec. 7.

The ILWU's 15,000 members struck for 100 days until the federal government halted the West Coast strike by invoking the Taft-Hartley Act for an 80-day period that expired Christmas Day. But the ILWU has agreed to continue working until Jan. 17 while talks continue. In the East, the ILA's 57-day strike was stopped by Taft-Hartley bans that expire in mid-February.

The Nixon administration and many employers are worried the two unions are moving toward a simultaneous strike that, among other things, could deepen the nation's whopping balance-of-payments deficit. The White House, in fact, recently urged Congress to get cracking on a transportation-labor measure, submitted more than a year ago. It calls for compulsory arbitration machinery.

On Oct. 27 the two labor leaders—both in their 70s—met in New York and agreed to demand a national contract term covering the handling of van-sized containers. They also said they would work for a common contract-expiration date. And they said they would press jointly to make contract pay gains stick when such increases are laid before the Federal Pay Board.

But a number of ILA, ILWU and other sources yesterday said they doubted a formal merger, which would require approval by rank-and-file members, could be carried out.

In the East, an ILA local spokesman said it would be "too tough to pull off politically." The ILA is deemed to be rightist and the ILWU leftist. Several years ago Mr. Gleason went to Vietnam to advise on ways to unsnarl the Saigon waterfront. Mr. Bridges has been vocal in his opposition to the war. In addition, many local labor leaders on both coasts would ask themselves "what's in this for me?" according to this ILA source.

There's a special amount of rugged individualism among ILA local leaders, some of whom even ignored Mr. Gleason's call this year for strike in all ports.

And the president of an ILWU local on the West Coast said Mr. Bridges' merger call "doesn't reflect grass roots opinion in our local." He added, "A lot of our guys don't think the contract (negotiations) should be used as a wedge for the merger."

In the ILWU's newspaper, The Dispatcher, Mr. Bridges recently urged affiliation with the ILA as a means for his union to win its jurisdictional battle with the Teamsters union on container handling. The movement of ocean-borne cargo in trailer-size containers has been increasing rapidly in recent years.

Years ago the ILWU, in an alliance with the Teamsters, permitted the Teamsters to handle warehouse work near piers. That was long before the wide development of containerization in the early 1960s. Mr. Bridges wants his men to handle the container loading and unloading near the piers. In New York, Mr. Gleason's union, by contrast, has the right to handle all such container work within a 50-mile radius of the port.

Mr. Bridges formed the ILWU in a breakaway from the ILA in 1934. Later, the ILWU was expelled from the old Congress of Industrial Organizations because of its alleged Communist learnings. The ILWU presently isn't affiliated with the AFL-CIO.

The ILA was in the former American Federation of Labor, but for many years after the AFL-CIO's formation, it was expelled from that federation on charges it was influenced by racketeers. But it has been back in the AFL-CIO for many years and Mr. Gleason is a member of its executive board.

One informed labor observer said yesterday: "I can't conceive an ILWU-ILA merger. Gleason's people wrap themselves in the (American) flag at every opportunity and Bridges' people do the opposite. I think it's East is East, and West is West and never the twain shall meet."

He noted that Mr. Gleason received a "cold reception" at the ILWU annual meeting in Hawaii this year while Mr. Bridges was similarly treated at the ILA convention in Miami Beach.

Mr. Bridges, in his recent article in his union's paper, took note of the apparent fact that some of his members are warm toward neither the ILA nor the AFL-CIO when he wrote: "If I'm anywhere near right about the need for East Coast ties, then it's time for the rank and file . . . to take on those elements in our union who are always blasting away at the ILA its leadership and policies, or at the AFL-CIO and its head, George Meany."

An AFL-CIO spokesman in Washington, D.C., said he couldn't foresee any problem with the ILWU entering the parent house of labor organization if the dock union parties decide it's the favored course.

A management source feels the merger has been "brewing for quite a while." And he believes there's "some substance" to reports the two unions will try to get together. But he doubts they would seek, in their affiliation, a common contract expiration date. The union leaders would avoid this, he believes, to prevent pressure for compulsory arbitration legislation.

Black Wins High AFL-CIO Post

5/31/72

By NEIL GILBRIDE

HOUSTON, Tex. (AP)—William Lucy, a Negro, was elected secretary-treasurer of the 550,000-member AFL-CIO American Federation of State, County and Municipal Employees Tuesday.

Jerry Wurf, re-elected president of the union, said Lucy's new position was the most powerful in the nation's labor movement to be held by a black man.

Lucy, 39, has been an official of the union in various capacities for eight years and played a key role in the organizing of sanitation workers in Memphis, Tenn., during disturbances in which Dr. Martin Luther King was slain in 1968. Lucy is a native of Memphis. Lucy and King worked together in the labor dispute with the city at the time.

Lucy, in an interview, said he believed the union could play a key role in lobbying for federal and state programs to revitalize the nation's cities, where most of the unions members live and work.

"We live where it's at," Lucy said.

He said that in addition to seeking better wages, hours and working conditions for public workers, the union had a major interest in a broad range of social issues, including better schools, housing and other problems of the cities.

Lucy is a graduate of the University of California at Berkeley and joined the union after becoming an assistant materials and research engineer for Contra Costa County.

In addition to union duties, he has been active with civil rights groups.

Wurf and Lucy were elected without opposition.

Lucy's election followed a decision by Joseph L. Ames, secretary-treasurer since 1966, to step down to take a newly created permanent post of chairman of the union's judicial panel for settling internal union disputes.

A constitutional provision to make the nine-member panel's chairmanship permanent and appointed by the union president for a five-year term won out over opposition of some delegates.

UFW Suit Charges Sloan's Supermarkets Misused Union's Label

10/26/72

Number of Stores Allegedly Used Eagle Over Nonunion Lettuce; $35,000 and Injunction Sought

By WALL STREET JOURNAL *Staff Reporter*

NEW YORK—Cesar Chavez, director of the United Farm Workers, said the union has filed a $35,000 suit against Sloan's Supermarkets Inc. for allegedly misusing the union's label.

The suit, filed in a federal district court here, also seeks to enjoin the supermarket chain from displaying the UFW label, depicting a black Aztec eagle, over iceberg lettuce that isn't harvested by union members.

At a press conference, Marshall Ganz, UFW's national boycott director, charged that 10 Sloan's stores checked by UFW volunteers displayed the union label over nonunion lettuce. He said, however, that only five stores were actually named in the suit.

Last May, Mr. Chavez announced the union boycott of iceberg lettuce grown in California's Salinas and Imperial valleys. The UFW is demanding that it be recognized as bargaining agent for 60,000 to 80,000 agricultural workers producing lettuce and other vegetable crops. It already has signed contracts with four lettuce growers employing about 2,000 workers. Some 200 other growers haven't signed with the UFW.

Recognition by Label

Mr. Ganz explained that a consumer can only recognize UFW iceberg lettuce from its label, which is stamped on the carton or the cellophane wrapper. Because there are over 250 different lettuce brands, it's impossible for the consumer to recognize UFW lettuce by a brand name.

Mr. Ganz said that Sloan's Supermarkets was singled out for the suit because it was "the most deliberate" example. He charged, however, that other supermarkets—a Grand Union Co. supermarket at Third Avenue and 19th St. and a Shop-Rite supermarket in Long Beach, N.Y.—were also "fraudulently" posting the union label over nonunion iceberg lettuce.

Mr. Ganz said New York City is the largest market for Western iceberg lettuce outside California, accounting for about 9% of total shipments, or seven million boxes a year.

In response, a spokesman for Sloan's Supermarkets said all of the company's 24 stores in Manhattan and the Bronx sell either Teamsters union or UFW lettuce. He said the company's attorneys are currently studying the suit.

Teamsters and UFW

Later Mr. Ganz contended that in 1970, the lettuce growers solicited contracts with the Teamsters, but this move was rejected by the farm workers. Since then, the UFW and the Teamsters have signed a jurisdictional agreement in which the Teamsters recognize that farm workers are to be represented by the United Farm Workers, but the lettuce growers have refused to sign contracts with the UFW.

A spokesman for Grand Union Co. said it was the company's policy to carry union lettuce, either UFW or Teamsters. He said that if the Third Avenue store has mislabeled its iceberg lettuce, it was a mistake. Grand Union said that as of yesterday that store was only selling UFW lettuce.

A spokesman for Wakenfern Food Corp., a co-op for Shop-Rite stores, said that the company was unaware of any mislabeling and that if it did occur it was an isolated action of one individual. The spokesman said it was against company policy to misled the consumer in any way.

Hospital Workers

A Union With 'Soul'

By A. H. RASKIN

Where is the Union now, friend,
At the Strike's end?
Inside my heart, friend.

THERE is little soul music in American labor today. Most unions have become dispiriting mirror images of the corporations with which they bargain. Their leaders are men of substance, more comfortable at Moriarty's than at Le Pavillon but not strangers to either. They receive respectful hearing on Capitol Hill or at City Hall, administer billions of dollars in trust funds, build headquarters that rival the temples of the money-changers and serve on countless boards dedicated to civic uplift.

The bigger the union, the more remote its rank and file—hundreds of thousands of names in computerized files, new members brought in automatically under union-shop agreements, dues collected by employer checkoff in the same inexorable way that Uncle Sam plucks his taxes out of the pay envelope. The chief breaks in this disembodied pattern come when the members upset a proposed contract or insurgents challenge the entrenched leadership as Joseph A. Yablonski tried to do in the United Mine Workers before a murderer's bullets cut him down. Or the disruption can come from outside in the form of clamor by Negroes and other minorities against the monopolistic control over job opportunities exercised by unions in construction and other skilled trades.

In the spiritual wasteland these problems of success have created for a movement born of worker discontent, two unions stand out as nurturers of the old idealism, perhaps because they move into the nineteen-seventies still obliged to fight the elementary battles for human dignity that gave unions their great emotional appeal in the turbulent thirties.

One is the United Farm Workers Organizing Committee, headed by Cesar Chavez, which for four frustrating years has been striking the growers of California table grapes to gain some measure of security for the nomadic army of Mexican-American and Filipino pickers.

The other is Local 1199 of the Drug and Hospital Union, a New York-based organization that is combining soul power and union power to bring higher pay and a new sense of group identity to growing numbers of hospital employes across the nation, the great majority of them black and Puerto Rican. The Rev. Dr. Martin Luther King Jr. used to call Local 1199 his favorite union. Three weeks before his assassination, Dr. King told a "Salute to Freedom" rally conducted by the hospital union here: "You have provided concrete and visible proof that when black and white workers unite in a democratic organization like Local 1199 they can move mountains."

In this period of racial polarization, when even so sophisticated a city as New York has demonstrated through its still smoldering conflict over school decentralization how fragile are the bonds of tolerance that tie the community together, the experience of Local 1199 affords encouraging evidence that a racially integrated approach within existing institutions can redistribute power and thus begin to satisfy the yearnings of those in the cellar of opportunity for self-direction toward a place in the sun.

HERE is a union formed by Jewish drug clerks in Harlem and the Bronx at the start of the Great Depression nearly four decades ago. It went into the hospital field in 1958 almost by accident. A Negro porter at Montefiore Hospital compared notes with a relative working as a porter in a Bronx pharmacy. The hospital porter was earning $36 for a 44-hour week; the drugstore porter was getting $72 for 40 hours, plus employer-paid pension, health and welfare protection.

The Local 1199 member told the union's president, Leon J. Davis, that hospital workers could use its help. A day or two later, Elliott Godoff, now a vice president of Local 1199 but then an unemployed registered pharmacist, came into the union hiring hall seeking a job as a druggist. He stopped to chat with Davis, an old friend, who remembered that in the nineteen-thirties Godoff had organized workers in the municipal hospitals for the old United Public Workers. Out of that recollection came an assignment to Godoff and Ted Mitchell, a black organizer who had originally worked as a drugstore porter, to begin signing up members in Montefiore.

Workers in the city's voluntary hospitals earned so little in those days that many needed supplementary relief from the Welfare Department to feed, clothe and house their families. They were the left-outs in all the laws guaranteeing collective bargaining, minimum wages, unemployment compensation and other statutory protections for workers. They had neither Blue Cross nor sick-pay insurance, and it was a tragic joke in the hospitals that none of their nonprofessional employes could afford to be sick.

The philanthropists who sat on hos-

A. H. RASKIN is assistant editor of the editorial page of The Times.

pital boards did not cheer the advent of Local 1199. Bitter strikes in 1959 and 1962—strikes in which the union defied injunctions and found itself under constant attack for imperiling patients' lives—preceded full status in New York. Today, 36,500 hospital workers in the metropolitan area belong to Local 1199, more than seven times the 5,000 in the parent division of pharmacy employes. The current minimum wage of $100 for a 40-hour week is triple the pay floor of a little more than a decade ago.

THE upsurge here brought stirrings of unionization in other parts of the country, but the drive did not gain real momentum until a strike of 500 black hospital workers in Charleston, S.C., last year welded organized labor and civil-rights groups into an in-

(*Continued on Page 38*)

Rallying Round. *Local 1199 of the Drug and Hospital Union is white-led and New York-based, but its impact is felt mostly by black and Puerto Rican workers—and increasingly outside New York. At left, supporters of the union — many wearing its blue-and-white cap—march in Charleston, S.C. That nasty, 113-day strike ended in a union victory last year. Right, a union member, Belvina Phillips of the Brooklyn Community Hospital, celebrates an earlier victory, the 1968 contract guaranteeing a $100-a-week minimum in New York. Below, bearded Leon Davis, union president, with two organizers, Joseph Meneses and Arlene Ezratty.*

In a time when organized labor has become part of the establishment, Local 1199, the hospital workers' union, is still fighting the old-fashioned elementary battles for human dignity

A union with 'soul'

(Continued from Page 25)

domitable alliance. It took 113 days and more than a thousand arrests before the coalition won a full victory in that most Southern of cities, with its graceful mansions, moss-hung trees and a museum on the site of the old slave mart.

Even while National Guard men with fixed bayonets turned Charleston into a military compound, the dominant force in the strike was a massive spiritual involvement. When the first breakthrough was achieved on the strike's 100th day, the Rev. Ralph Abernathy, Dr. King's successor as head of the Southern Christian Leadership Conference, was fasting in the Charleston jail. A dozen of his associates from S.C.L.C. and Local 1199 came to his cell with a bail bond to free him so he could speak at a victory rally. His refusal to go until a complete settlement had been won sparked an impromptu revival meeting in which everyone linked arms and sang "We Shall Overcome." As the last notes cut through the 115-degree heat, all sank to their knees on the concrete floor and Abernathy led them in prayer.

When the imminence of an accord was announced in a crowded Negro church, the entire congregation wept and knelt in prayer. One man sobbed: "It's so terrible. We've been so together; now it's over." Dozens of letters after the settlement testified to the impact on the strikers, almost all of whom were women. Mrs. Claire G. Brown, an obstetric technician, who went to prison with several of her five children for strike activity, wrote of her surprise that organizations like Local 1199 and the S.C.L.C. "would risk jail, time, money and their very lives to help hundreds of poor people like me, whom a lot of other people may think wasn't important enough even to consider."

"It helped me to realize how important I am as a person, which I'm afraid I didn't quite realize before," Mrs. Brown said. "I further realized that the power structure isn't all-powerful, but that they are to do the bidding of the people, and the people can make them do it."

A similar realization on the part of many Baltimore hospital workers helped bring 7,500 nonprofessional employes there under union contract after the Charleston triumph. Progress was made easier by the decision of the most prestigious of the city's institutions, the Johns Hopkins Medical Center, not to hide behind the absence of any state law requiring hospitals to deal with unions.* Though far from joyous at the prospect of unionization, Johns Hopkins agreed to let the workers make their own decision through an election and the union won by a 2-to-1 margin. Wages, which had been $1.60 an hour before Local 1199 came on the scene last summer, are now up to $2.10. The present New York floor of $2.50 an hour and $100 a week will be reached next Dec. 1, an increase of more than 50 per cent in a little over a year.

***Fewer than 10 states have laws that firmly guarantee hospital workers the right to join unions, hold representation elections and bargain collectively, rights that most workers won 35 years ago. New York passed such a law only in 1963. Where there are no such laws, hospital administrators have generally interpreted their absence as a prohibition on dealing with unions.**

With organizers already at work in Pittsburgh, Philadelphia, Cincinnati, Detroit, Durham, N. C., and many Connecticut and New Jersey communities, Local 1199 has now become the founding father of a full-fledged National Union of Hospital and Nursing Home Employes. The goal is to enroll as many as possible of the country's 2.5-million hospital workers into locals that will acknowledge their paternity by retaining the 1199 number, with an identifying initial tacked on for each new city. Thus, Charleston is 1199 B, Baltimore 1199 E and Pittsburgh 1199 P.

So far as the labor hierarchy is concerned, the new union is an offshoot of the Retail, Wholesale and Department Store Union, the A.F.L.-C.I.O. international with which Local 1199 itself is affiliated. Having a local union sprout a whole treeful of affiliates under a distinct national charter is decidedly unorthodox, but the prestige Local 1199 enjoys and the diversity of the power centers with which it is linked made its own international decide it was the course of wisdom to bless the new venture rather than fight it. In a year or two the fast-growing infant may well dwarf its parent international and ask the A.F.L.-C.I.O. to give it the key to a house all its own.

WHAT gives Local 1199 its special magic is the extent to which it has coupled the substantial bread-and-butter gains it has brought its rank and file with equally solid progress toward making unionism a way of life, an integral element in the freedom struggle. New York City has given official recognition to the local's contributions in that direction by designating it as sponsor for a $30-million urban-renewal project to be built on the Harlem bank of the East River. The project will provide cooperative apartments for 1,350 families, many of them headed by hospital employes, on a 9.5-acre riverfront tract now populated mostly by rats. The union's aim is to turn the development into a center for interracial living through the inclusion of a dozen community facilities.

In all its activities, 1199 tries to prove that "a good union doesn't have to be dull." Its home-produced film, "Like a Beautiful Child," surpasses any television documentary in poignancy and

New York hospital workers ratify (above) the 1968 contract giving them a $100-a-week minimum. They have come a long way since the bitter strikes of 1959 (right) and 1962. But what happens when the present contract expires this June is a question that worries both union leaders and hospital officials.

effectiveness, an understated epic of workers in quest of "the little things that make the difference." The 1959 strike here led to publication of a book of poems in the Joe Hill tradition by Marshall Dubin, the union's educational director. (The poem at the start of this article is from that collection.) Live theater programs, seminars and $40,000 a year in college scholarships for the children of 1199 members are among the raisins in the union-baked bread.

Through all its four decades the local has been on the far left of New York's labor movement. It broke with the labor establishment to support Senator Eugene J. McCarthy for the Democratic Presidential nomination in 1968. It lined up with Ocean Hill-Brownsville and other champions of community control in their fight with the United Federation of Teachers. When the Central Labor Council went all-out to prevent Mayor Lindsay's reelection last year, the hospital workers put all their energies into insuring the Mayor a second term.

Despite such walkaways from conventional union "solidarity," the local has had vigorous support from the rest of labor in its organizational battles. Indeed, its leaders give a large share of the credit for their success in the make-or-break 1959 hospital strike to Harry Van Arsdale Jr., president of the Central Labor Council, who currently rates as a kind of ogre to many black unionists. When the hospitals dug in to repel unionization, Van Arsdale mobilized the construction trades —then even more lily-white than they are now—to walk the picket lines night and day with the Negro and Puerto Rican strikers. Equally important, he used his considerable political influence with Mayor Robert F. Wagner to put the heat on the balky hospital trustees and thus end the Lady Bountiful brand of economic feudalism.

Leon Davis, who has remained president of Local 1199 almost from its inception, is still an enthusiastic Van Arsdale booster, for all their fallings-out over Lindsay and the school strike. "When we were striking in Charleston," Davis says, "Van Arsdale couldn't have worked harder to rally help if it were his own electricians on strike."

Indeed, help in the Charleston strike came from labor nationally. George Meany took the lead in raising $100,000 from the A.F.L.-C.I.O. and its affiliates. The rival Alliance for Labor Action, headed by

66Most remarkable is the steady strengthening of ties between 1199 and the civil-rights movement in a period when white-black relationships in labor are more down than up.99

Walter P. Reuther, contributed $35,000. Perhaps the most potent assistance of all came from Thomas W. (Teddy) Gleason, tough-talking head of the International Longshoremen's Association, whose threat to shut down the port got a lot of Charleston businessmen interested in a settlement.

Davis, whose radicalism once made him a pariah to most other top unionists, is mildly amused by the eagerness they now show to embrace him and his organization. "For the labor movement," he says, "identifying with us is like going to church or synagogue. We are a badge of holiness, a mezuzah they can wear around their neck. They all want to help. A racket guy, a guy who runs a no-good union, sent me a $1,000 check to help the Charleston strike."

The most unusual testimonial to Local 1199's probity came from Simone Rizzo (Sam the Plumber) DeCavalcante, the New Jersey *mafioso*, whose tapped telephone conversations covered a couple of thousand pages of F.B.I. transcript. In one bugged talk, he advised Local 1199 to stop bothering a Plainfield nursing home. Murray Kempton, a man with an ear for such things, culls from the record these deathless words of DeCavalcante: "This is a slap in the face to me. . . . I got money in there. . . . You better watch your step where you put your feet. . . . Tell [Davis] he better not threaten people or I will wash every street with him. . . ." The union didn't scare and in two days DeCavalcante decided it would be smart to settle.

EVEN more remarkable, however, is the steady strengthening of the ties between 1199 and the civil-rights movement in a period when white-black relationships in the rest of labor are more down than up. When the Charleston strike ended, Abernathy's chief assistant, the Rev. Andrew Young, told the victory rally: "We won this strike because of a wonderful marriage, the marriage of the S.C.L.C. and Local 1199. The first of many beautiful children of this marriage is Local 1199 B here in Charleston, and there are going to be as many more children like 1199 B as there are letters in the alphabet."

The support for the local comes not just from moderates like Roy Wilkins and A. Philip Randoph but from such militants as the late Malcolm X. His enthusiasm for 1199, he said in a talk shortly before his murder, rose from the fact that its leaders were not "afraid of upsetting the status quo or the apple cart of those people who are running City Hall or sitting in Albany or sitting in the White House."

The heads of all the feuding national black groups got together for the first time in years to sign a joint declaration backing the Charleston strikers. Dr. King's widow, Coretta Scott King, is honorary chairman of the national organizing drive. She has helped to make the blue-and-white 1199 cap a countrywide freedom symbol.

One explanation for this united support is that 1199 has been a good deal more enterprising than have other white-led unions with a majority of "minority" members in seeking out, developing and utilizing leadership potential among its black and Puerto Rican rank and file. Typical is Fred Punch, a year ago an orderly at St. Barnabas Hospital in the Bronx, who has been running the whirlwind organizing campaign in Baltimore and is now a vice president of the new national union.

He is no token black in the Local 1199 command structure, either. Mary Moultrie, a nurse's aid in the State Medical College Hospital at Charleston, whose firing was one of the triggers of the strike there, not only got her hospital job back but is now president of 1199 B and a national union vice president as well. She was a featured speaker at the national convention of the A.F.L.-C.I.O. in Atlantic City last October, the first black rank-and-filer ever to make such an address.

The secretary-treasurer of the national union is Henry Nicholas, a male aide at Mt. Sinai in the 1959 New York

and enjoy
EVERY SEASON
VACATION LIVING
at HEMLOCK FARMS

Here at Hemlock Farms, 4200 acres of year-round recreational paradise, high in the Pocono Mountains, but less than 2 hours from New York City, you will find every type, style and price range of vacation home models waiting for your inspection, and, if you act NOW, you can make your selection, arrange your low cost financing, and begin to enjoy your year-round weekend and vacation relaxation this season.

Hemlock Farms offers every recreational facility available in this part of the country, **right on the property**, including skiing, swimming, sailing, fishing, horseback riding, hunting and a fully equipped Parents' Magazine designed Teen-Age Center . . . there is also golf and tennis at a private country club. You'll also find every facility and convenience to provide true urban comfort in this magnificent country setting, including year-round water supply, paved roads kept clear all year, fire and security protection, and trash removal.

Write now for detailed pictorial description of Hemlock Farms, or ride out this weekend and let us show you how easy it is to enjoy your own family vacation home NOW . . .

Mrs. Martin Luther King, honorary chairman of 1199's national organizing campaign, addresses a meeting of Baltimore hospital workers during the union's drive there last year. With her, from left, are Elliott Godoff and Fred Punch, 1199 vice presidents, and Doris Turner, who heads the union's hospital division in New York.

strike, who never got beyond elementary school in his native Mississippi but who played a lead role in Charleston and is currently top man in the effort to unionize Pittsburgh hospitals. Most prominent of all the up-from-the-ranks leaders is Doris Turner, a former diet clerk at Lenox Hill, who distinguished herself in the initial strike and now heads the entire hospital division in New York, with 20 area directors and organizers on her staff.

She is secretary of the national union and is about to move up to executive vice president of the New York local as part of a reorganization that will expand black and Puerto Rican representation on the 1199 staff. When the new structure becomes operative after the local's elections next month, 8 of the 15 vice presidents will be Negro or Puerto Rican. So will 8 of the 11 organizers.

DAVIS, born in Russia 57 years ago, will still head the cast, both locally and nationally. But he is not counting on seniority to keep him on top permanently. When asked how long he thinks he and other pioneers of the old Pharmacists Union can maintain seats of power in an organization now 80 per cent "minority" members, Davis replies cheerfully: "Oh, we'll have to go. We know that. The old leadership is here to prepare new leaders. They are coming from the hospital ranks, black, Puerto Rican, white. The assets they have are that they understand their own people much better than any of us. We have great practical and administrative experience, which they largely lack and which you need to run a union today."

But there is a great gulf between the cool rationality of such pronouncements and the black-power pressures that throb in the ghetto and find their way into the life of the union. Davis, a soapboxer from way back, is not above utilizing demagogy of the raw-meat variety in the crisis stages of contract negotiations. At such junctures, he often couples appeals to passion with strike threats—despite the fact that the New York law which opened up a statutory right to collective bargaining for hospital employes in 1963 specifically requires that disputes not settled through direct negotiations be submitted to binding arbitration. This heedlessness of a legal mandate to prevent the sick from becoming hostages in labor-management battles only worsens race divisions, in the view of hospital administrators.

So does the union's use of confrontation techniques—imprisoning hospital executives in their offices while black delegates "tell it like it is," and staging "high noons" at which all union workers walk out in a show of strength. In Baltimore, Elliott Godoff warned officials that the union "could make Charleston look like a poker game," and Fred Punch talked of "tearing the damn town down."

My own wanderings through the cavernous halls of Johns Hopkins after the peaceful contract signing there made it plain that the campaign had left a bad residue of racial friction, with most of the white workers in the bargaining unit—the bulk of them maintenance mechanics and engineers—sullen about the union's victory. Even the fact that they were earning more as a result had not turned them into boosters.

This carry-over of bitterness

Unusual Union

MOST American unions are overwhelmingly white and male. Local 1199's hospital divisions are heavily black and female. In New York the biggest single unit consists of 26,000 workers in hospital kitchens, laundries, wards and corridors, all performing relatively unskilled tasks. Eighty per cent of them are Negroes or Puerto Ricans and 60 per cent of them are women.

Their average wage now is $115 a week. Forty per cent of them never got beyond elementary school. The rest have some high-school education, although few stayed long enough to graduate. Almost none got to college.

The other big unit in the New York hospitals is the so-called Guild division, made up of 10,500 technicians, lay practical nurses, clerical employes, social workers and others outside the ranks of physician and registered nurse. Half of this group are Negro and Puerto Rican and nearly two-thirds are women. All are high-school graduates and roughly 30 per cent have gone to college. The average pay in this division is $135.

The drug division, which provided the funds and organizing talent to initiate the hospital drive more than a decade ago, is now dwarfed by its offspring. Its 5,000 members include pharmacists, soda clerks, porters and other general personnel. Only 20 per cent of its rank and file is female and 40 per cent is black or Puerto Rican. The pharmacists, all of whom have college degrees, are overwhelmingly white. The average wage in this division is $180 a week.

IN the newly unionized cities, the hospital divisions are much more heavily black than in New York. In Charleston, all the 500 strikers were black and all but 12 of them were women. In Baltimore, the 7,500 members are roughly 80 per cent black, with women predominating. In Pittsburgh, where the union is still struggling for a foothold, about 60 per cent of the nonprofessional employes are Negro.—A. H. R.

depresses Dr. Russell Nelson, president of the medical center. He is a thoughtful man, in tune with progressive trends in medicine and society, no counterpart of the union-baiters and their racist supporters in Charleston. It was largely his influence that prompted the Johns Hopkins trustees to authorize an election, despite their lack of legal duty to deal with the union.

"The campaign did polarize this institution," Dr. Nelson told me. "The tension is still here. One of the biggest challenges to both sides is to create the right psychological atmosphere for taking care of sick people. People can hate one another and make steel, but that kind of hatred is not good for treating sick people. I can see this union in this town being one of the most powerful social and economic tools in the black power struggle. They literally can control health services; until now they controlled only the streets."

He paused, and his gaze wandered around the dignified room, its furniture eloquent of the old South. "I can understand the mood. 'It's our turn; we're going to take over; we're going to get ours,'" he said. "At least in my time, it's a force that's going to separate, not unite—a negative force rather than a positive one."

When I told Punch of Dr. Nelson's fears, the union leader was sympathetic. "You say what you have to say in a campaign," he said. "They said a lot, too. After it's over, you have to live together. We know that, and we're going to work at it. We must build bridges on both sides. A few years from now, we'll be giving testimonials to one another."

A decade of union experience in New York offers considerable support for the Punch forecast—at least as far as day-to-day hospital operation is concerned. I talked to the directors of three of the biggest institutions under contract here—Drs. Martin Cherkasky of Montefiore, S. David Pomrinse of Mt. Sinai and Ray E. Trussell of Beth Israel—and found them in agreement that unionization had made their workers more prideful and

Anything goes with Nectarose.

America's most popular French rosé wine.

Imported by General Wine and Spirits Company, Browne-Vintners Division, N. Y. C.

thus helped raise performance standards. This year marks the start of a joint union-employer program for taking the dead end out of hospital jobs by upgrading blacks and Puerto Ricans at the bottom of the skill ladder to posts as nurses, technicians and clerical workers.

Turnover is down appreciably in a field in which workers used to leave after a month or two, and the hospitals themselves have been spurred to retain personnel experts and improve their whole approach to human relations, to the benefit of patients as well as workers. Dr. Pomrinse noted another side benefit: "The presence of the union has given minority groups a vehicle for expression so that there is less need for them to be intemperate or irresponsible."

But this applause does not extend to the union's conduct in contract negotiations. Dr. Cherkasky, who gave 1199 its first major victory by persuading the Montefiore trustees to recognize it without a strike in 1958, has no doubt of the genuineness of Davis's desire for racial harmony, but feels "he plays with fire on the theory that he always can cool it later."

THE future holds three very dissimilar challenges for 1199. One, of course, is the task of getting into hospitals that do not want it. In New York, nearly half of the city's largest hospitals—including Columbia-Presbyterian and New York Hospital—have so far managed to keep their employes contented without unionization. In Pittsburgh, the principal hospitals have countered 1199's organizing efforts with a two-step voluntary pay boost that has brought the minimum up from $1.60 to $1.95 an hour. ("The mere mention of 1199 is enough to send wages up," is the wry comment of Moe Foner, the union's executive secretary. "If we should announce we were going to Kansas City, there would be a 15-cent increase before the first organizer arrived.")

The second challenge is presented by the forces of black power and community control. Last year, a tiny but highly vocal group in New York contended that it was wrong for Local 1199, with its egalitarian tradition, to keep unskilled hospital employes and white-collar and technical groups in separate divisions. The insurgents argued that the separation catered to "prejudices and feelings of superiority based upon different skills or status or pay." The union leadership opposed a merger of the two divisions on the ground that each had special problems. In balloting last September, the service employes killed the merger proposal 8 to 1.

Currently, the union is in the middle of a battle between Beth Israel and a Lower East Side neighborhood council allied with the ultramilitant Health Revolution Unity Movement. Some union members employed at the hospital's Gouverneur Health Center teamed up with the neighborhood council in trying to take over the center, on the ground that it should come under community control.

When the rebels were fired, 163 of the union's 180 members at Gouverneur signed a petition saying that the ousted workers were mainly interested in disruption and deserved no support. On that basis, the union refused to authorize a strike for reinstatement. Davis issued a statement reiterating 1199's devotion to the principle of community control but denying that the community really backed the revolutionary movement.

Even though Davis emphasized that the local was fighting minority disruption and not the right of a community to make its own decisions, the whole union position had an embarrassing resemblance to the mumbo-jumbo U.F.T. statements on Ocean Hill-Brownsville. Undoubtedly, there will be more such difficult choices for 1199 as the hospitals become a new battleground in fights by widely divergent organizations to establish themselves as the only bona fide voices of their neighborhoods. None of this, however, has altered Davis's faith that poor people must be brought into the mainstream of society by giving them economic power and facing the risks that go with any exercise of power.

Finally, there is the challenge that will confront 1199 when its present two-year contracts with the New York hospitals expire on June 30. That challenge arises out of the bind in which all hospitals find themselves in an era when Medicare, Medicaid and Blue Cross account for 85 per cent of all income and the hospitals serve as middlemen for the public in deciding how

The late Malcolm X addresses an 1199 rally during the 1962 New York hospital strike. Sharing the platform are A. Philip Randolph, of the A.F.L.-C.I.O. executive council, and Dr. Anna Arnold Hedgeman, then assistant to Mayor Robert F. Wagner for race relations.

much people can afford to pay for a day of hospital care.

It was easy for 1199 to marshal public sympathy for its argument that hospital employes should not be expected to subsidize the patients when take-home pay for the pushers of trays and the ironers of bedsheets was $28 to $30 a week. But that sympathy may not come so readily now that the workers have crossed the $100 line and the cost of a hospital bed has soared above $100 a day.

The hospitals are making common cause with Davis in fighting to keep the state from putting them in a cost-control straitjacket, but even if they win they expect to have to turn to Governor Rockefeller and Mayor Lindsay for help in negotiating a new contract without a strike. The Greater New York Hospital Association estimates that the last agreement added $100-million to the labor bill of the voluntary hospitals and pushed up the cost of patient care by $25 a day.

The real decision on how much higher hospital wages ought to go will rest with the public. There are no more "philanthropists" now—not on hospital boards or in hospital kitchens. The public pays the bills. It sits in the employer's seat, even though the hospitals do the bargaining. Davis himself says: "We must make up our mind as a people whether we want to pay for high-quality care." As one who went to jail for 30 days in the New York strike of eight years ago and for eight days more in the Charleston strike last year, he has no illusions about the tests that lie ahead.

BUT there is more mellowness than belligerence in his tone as he speculates on what will replace the discarded ideologies of a disordered society. "The tragedy for us with a left-wing background is that we had everything worked out and we see how empty were many of our certainties," he says. "The kids are going through that now. We failed them by destroying their fantasies. In the old days kids could draw on the past for hope in the future. Now they look back on the Hitler period, the Stalin period. They see that the kitchen is a mess, full of broken dishes. The Socialist idea, the Communist idea, sustained people for a long time. They learned to make their peace with disappointments. Now no picture of hope comes forth, and people are turning against history in their search for hope."

He believes the labor movement could help open the doors of hope for the excluded if there were a young John L. Lewis around to enroll the 10-million unorganized in the service industries. But he sees no hope of that. When well-intentioned unions in New Jersey assigned some organizers to help 1199 in the hospitals there, Davis soon sent them back. "They came to work at 10 A. M. and went home at 3 P. M.," he explains. "They were ruining our organizers, who came in at 6 A. M. and were still working at midnight."

The Spartan tradition still governs the union's own salaries. Davis draws $335 a week; other top officers, $295, and organizers, $135. The local is about to move out of its gloomy three-story building on Eighth Avenue to a 14-story structure it is putting up two blocks south on 43d Street. Davis is a bit sheepish about appearing to emulate his fellow union chiefs in erecting monuments to themselves. "We probably could have rented the space more cheaply, but it is partly psychological for our members," he says. "It will give them the feeling: 'You were nobody yesterday, now you've put up your own tall building.'"

I have talked to a good many of these ex-nobodies in the last few weeks. There was about all of them a quality of self-respect, a joy in being able to make ends meet without welfare and, above all, a sense of collective strength in not having to worry about arbitrary dismissal or other humiliation.

"You can live without being scared to death that next morning you'll be out of a job," said Mrs. Mozell Smith, a 50-year-old food preparer at the Hospital for Joint Diseases. "The hospital is a happier place, not full of tension all the time." She told of the special pains she takes to make sure that the babies' formulas she works on are exactly right. "A little bit of elbow grease and work ain't going to hurt you," she said. Mrs. Smith, a nursemaid before coming to the hospital seven years ago, is a delegate to the union's monthly assemblies. All the meetings, dances and annual dinners are "just like a pot of flowers—black and white, no difference, we have a wonderful time." Her earnings now are $107 a week, "not a lot of money, but it's a lot if you're used to getting $65."

Technicians in the blood chemistry laboratory at Mt. Sinai Hospital in New York. They belong to Local 1199's Guild division, which also includes lay practical nurses and clerical and social workers.

A score of such testimonials made it hard to doubt that 1199 was living up to the pledge Davis gave in its name after Dr. King's assassination: "We will build no stone monuments to commemorate him. We will pass no pious resolutions. We will build our union in his image. We will raise high the banner of struggle in the fight against poverty, discrimination, ignorance, hate and war."

It is a fight that may never be wholly won, but it is a fight America cannot afford to lose. ■

Union on the Rise

A Tough Local Presses National Bid to Organize Low-Paid Hospital Help

Strike Threat, Sit-In Tactics Used in Pittsburgh Conflict; Higher Bills Could Result

Fears of Another Charleston

By THOMAS LINDLEY EHRICH
Staff Reporter of THE WALL STREET JOURNAL

PITTSBURGH—This old industrial city has seen plenty of labor union organizing, but nothing quite like the blitz of Local 1199.

Since coming here four months ago to organize hospital workers, the New York-based union has loosed a barrage of sit-ins, stand-ins, eat-ins, picket lines, street marches, "crack-of-dawn brigades" and "high noon" showdowns with hospital administrators.

Leading the charge is a small army of amateur organizers backed by such allies as militant students and black preachers. The drive, says one hospital official, is a bewildering blend of old-style union organizing and "the tactics of the SDS and black militants." Its immediate goal: Elections to determine whether a majority of the workers here want Local 1199 (or any union) to represent them.

Going National

The tactics may be unorthodox, but the hospitals here are taking them seriously. Last week about 225 union members struck the hospital in Uniontown, Pa. near here, and strikes have been authorized at three Pittsburgh hospitals. Indeed, hospitals across the country are casting worried glances at Local 1199, the National Union of Hospital and Nursing Home Employes.

As its name suggests, the union is an anomaly of the labor movement—a local union growing into a national one. After a decade of organizing in the New York City area, the 50,000-member union is now about a year into a national organizing drive. That drive aims at what one worried hospital spokesman calls "the greatest untapped source of union members in the country"—the service, maintenance and technical employes at voluntary, nonprofit hospitals.

This army of kitchen helpers, orderlies, janitors, nurses aides, secretaries and other nonprofessional workers numbers about 2.5 million nationally, is heavily nonwhite and is 90% nonunion, says Moe Foner, executive secretary of Local 1199. If the union could organize this vast force, the effects would be widespread. Among other things, hospital bills surely would rise.

Loosely affiliated with the Retail, Wholesale and Department Store Union of the AFL-CIO,

have been authorized at three Pittsburgh hospitals. Indeed, hospitals across the country are casting worried glances at Local 1199, the National Union of Hospital and Nursing Home Employes.

As its name suggests, the union is an anomaly of the labor movement—a local union growing into a national one. After a decade of organizing in the New York City area, the 50,000-member union is now about a year into a national organizing drive. That drive aims at what one worried hospital spokesman calls "the greatest untapped source of union members in the country"—the service, maintenance and technical employes at voluntary, nonprofit hospitals.

This army of kitchen helpers, orderlies, janitors, nurses aides, secretaries and other nonprofessional workers numbers about 2.5 million nationally, is heavily nonwhite and is 90% nonunion, says Moe Foner, executive secretary of Local 1199. If the union could organize this vast force, the effects would be widespread. Among other things, hospital bills surely would rise.

Loosely affiliated with the Retail, Wholesale and Department Store Union of the AFL-CIO, Local 1199 is widely known in labor circles as a maverick. Led by New York City Jews but comprised predominantly of Negroes and Puerto Ricans, it's known for a curious blend of moxie and black power that makes it as much a movement as an institution. "They're a cause, not a union," says a New York hospital official who has been through the 1199 wringer.

The people Local 1199 is trying to organize have been largely excluded from Federal and state labor laws that define the rights of most other kinds of workers to union representation. This makes the organizing tougher, because there is neither National Labor Relations Board machinery for conducting union-recognition elections nor legal definitions of fair and unfair labor practices. Also, the exemptions mean hospitals aren't legally required to recognize the union as official bargaining agent.

The Strike Threat

But the union has some leverage of its own. Once it gets a majority of the workers of a hospital behind it, it can wield the threat of a strike—and hospitals are particularly vulnerable to strikes. Right now, the union is riding the crest of some big victories.

After a bitter 113-day strike against Charleston, S.C., hospitals, the union won a compromise settlement and a major psychological boost. After some initial opposition last year, hospitals and nursing homes in Baltimore agreed to union elections and, after Local 1199 won representation, to contract talks. These produced a big settlement. Before those victories, the local had a series of successes in a decade of organizing New York hospitals.

Besides Pittsburgh, the union currently has organizing teams in Philadelphia, Harrisburg, Pa., Cincinnati, Dayton, Detroit and Durham, N.C. It says six other cities are on its immediate target list, but won't reveal their names. Shaken by this out-of-town upstart, local units of some other unions, such as the Service Employes Union (whose 350,000 members include some hospital workers) are stepping up hospital organizing efforts to protect their position.

All this activity has important implications for the cost of health care, which has been soaring lately. Putting a "union label" on hospital services would cost plenty, both hospital and union leaders agree. The Government's index of daily hospital service charges—part of the Consumer Price Index—jumped 12% in the past year; the wage gains by newly organized hospital workers will keep the costs rising this year.

Passing Costs On

"The consumer will pay for all of this," says a Pittsburgh hospital official who warns of possible increases in room rates and cutbacks in services if the union wins here. In Baltimore last December, Johns Hopkins Hospital announced room-rate boosts averaging $18 a day after signing its first wage contract with Local 1199. The daily rates, which had ranged from $51 to $74, are to be increased in three $6-steps tied to the wage-increase dates in the contract. Most New York City hospitals boosted rates $20 a day in 1968 after Local 1199 won a 32% increase, to $100 a week, in members' minimum pay.

If the union continues to win its battles, health insurance plans such as Blue Cross or Medicare also will be affected. These public and private plans cover up to 90% of the patients in nonprofit hospitals, health authorities say. They say higher premium rates for private health insurance and increased taxes to support the public programs will surely result if Local 1199 scores many more successes.

Officials of Local 1199 agree that unionization pushes costs up, but they argue that hospital workers have been subsidizing patients' care for years by working for unfairly low

'Soul Power Plus Union Power' Wins At Johns Hopkins Hospital in Maryland

SIDEWALK MEETING: Hundreds of Johns Hopkins workers gather outside hospital to meet Mrs. Coretta King, widow of Dr. Martin Luther King, who urged them to vote union.

BALTIMORE, Md.—The same organizing team and the same combination of "soul power and union power" that brought a union to 550 Charleston hospital workers has brought the RWDSU to 1,500 service and maintenance workers of the world-renowned Johns Hopkins Hospital.

The vote, held Aug. 28 and 29, was 807 for the union and 460 against. The management of the 1,250-bed medical center—one of the best and best known in the world—has said it will sit down and negotiate with the union in good faith.

MRS. KING GREETS WORKERS: Hospital worker shakes hands with Coretta King (center), shortly before Johns Hopkins vote.

In the talks, the union will seek a $100 a week minimum, pay boosts of $24 to $30 weekly, increased health and welfare and pension programs and job upgrading.

Several days before the vote, Coretta King, widow of Dr. Martin Luther King, paid a 90-minute visit to the hospital. Hundreds of the Hopkins workers, who are predominantly Negro, came out of the hospital to meet her.

Mrs. King said that the campaign in Baltimore "represents an extension of the winning combination forged in Charleston, a combination of soul power and union power."

In that battle, 550 workers struck two hospitals for four and five months to win their first union agreements.

A week before Mrs. King spoke, 500 workers attended a rally at the Emerson Hotel. Speakers included Local 1199 Vice-Pres. Doris Turner and John Lorden, acting AFL-CIO regional director. Dr. Ralph Abernathy, successor to Dr. King as leader of the Southern Christian Leadership Conference (SCLC), sent a message urging the workers to back the union.

The leaders of the Hopkins drive were '1199' Vice-Pres. Elliott Godoff, Org. Fred Punch and three of the Charleston strikers, Willene Meyers, Hermina Traeye and Stalin Bryant.

A week earlier, the union had won a 174-99 victory among workers at Lutheran Hospital in a vote conducted by the State Labor Commissioner.

In a third election in this important port city, at North Charles Hospital, the union lost an election conducted by the Labor Commissioner by an 87-75 margin.

The union, however, challenged at least 24 voters. Among these are a number of nonpaid volunteers that the hospital slipped onto the voting list.

In a highly unusual procedure, the commission official running the vote opened the challenges on the spot.

The union is certain that the vote will be set aside and another election held.

Dear Emory:

The Laundry Workers' Union has asked me to run a one-day training institute for stewards in Atlanta on Monday, September 29. It is going to be a large group, and I'll want to break it down in sections for grievance handling.

Would you be able to help at this part of the day? I plan also to use Joe Jacobs, Abercrombie, and Hall from the Laundry Workers. This way, we will have five groups.

I enjoyed seeing you, Margaret and your boy very much. Jane joins me in sending affectionate greetings.

Sincerely,

Frank

Dear Emory,

Here is the outline for the Institute. It is to be held at American Motel. We will have a planning session on Sunday evening for the discussion groups.

Best to all,

Frank

LAUNDRY DRY CLEANING AND DYE HOUSE WORKERS UNION LOCAL 218

"THE VOICE OF 8000 FREE AMERICAN WAGE EARNERS"
OFFICIAL ORGAN LAUNDRY, DRY CLEANING AND DYE HOUSE WORKERS UNION LOCAL 218

VOL. 4 - NO. 4 | JULY-AUGUST-SEPTEMBER, 1969 | ATLANTA, GEORGIA

Local 218 Negotiates Overall Annual Wage Increase of Over Two Million Dollars

No Increase of Membership Dues Scheduled

Atlanta, Georgia — Local 218's negotiating team comprised of E. L. Abercrombie, Executive Secretary-Treasurer, W. T. Archer, Jr., Director of Service & Organization and Mrs. Eloise Fair, Area Representative have been the main trio working to negotiate the greatest across-the-board wage increase in the history of Local 218 for the vast majority of the union membership.

The atmosphere and circumstances were extreme and difficult because no wage increase was due at this time. The union's current agreements with the various employers had an increase of approximately ten cents to fifteen cents per hour stipulated for December 1969 and/or January 1970.

Several conferences took place between Management and the Negotiating Team and the beginning conferences were initiated as early as this immediate past June. Two of the major employers reached a complete understanding about August 1st with the increase in wages to take effect in the individual plants as soon as the union team could handle the necessary details.

Brother Abercrombie said "At first, the employers were very reluctant to even talk about a wage increase at this time. However, we pointed out to the various companies the need for salary adjustments *now* and we offered a very strong argument on many valid reasons. Some of them are listed as follows:

1. Unreasonable increase in the cost-of-living and especially as to how it effects the low income brackets.
2. Increase of fare for public transportation which is used daily by most of the members.
3. Increased child-care costs — a vast majority of the laundry workers are working Mothers and in most instances — head of the household.
4. The high and exorbitant rents paid by many of the laundry workers because of the lack of public low-cost-housing and the slum landlords that profit from this factor charge as much as the traffic will bear in renting shacks not decent for human occupation.
5. The increased costs of hospital and medical expenses over and beyond what our insurance plan pays.
6. It was the general consensus of opinion that a large percentage of union membership were attempting to find jobs at a better hourly rate. Creating a problem of absenteeism that could be corrected to some extent by the company's consideration for a wage increase in advance of the stipulated dates.

In the arguments presented to Management for further consideration and evaluation it was shown that the cost-of-living as shown by the Index does not reflect the true picture as it honestly effects the low income people, because of their limited buying power. It was cited, for instance, if the cost-of-living Index shows an increase of one percent for the month, this is a cross-the-board reflection and would apply to automobiles, furniture, clothing, rents and groceries, etc. So due to the limited buying power the union member might be restricted to buying the items that increased the most, therefore their cost might have increased two percent instead of the one percent indicated by the Index.

Carl A. Jones, Jr. Appointed Local 218's President

Washroom to President

No one would have ever convinced Carl A. Jones, Jr., newly appointed President of Local 218, Dry Cleaning and Dye House Workers, that he would be appointed President. No one could have registered more sincere surprise when he learned that E. L. Abercrombie, Executive Secretary-Treasurer, by the powers vested by the Constitution and By-Laws, had appointed him to fill the existing vacancy. Mr. Jones realizes that his continuance as President rests in the hands and nomination of the delegates to the Twelfth Annual Meeting being held in Atlanta. Georgia, September 27th-29th. Mr. Jones will be the fourth president of Local 218 to serve the union in its history of operation, if elected.

Carl A. Jones, Jr. is the son of Mr. and Mrs. Carl A. Jones. Sr. of Quincy, Florida. His

We've Been Warned

Employer groups seeking to destroy the trade movement know that the American people won't support union-busting when it is called by its right name.

So some years ago they dreamed up the outrageously misleading "right-to-work" slogan to describe efforts to outlaw the union shop. And now we find the U. S. Chamber of Commerce is beating the drums for what it calls "labor law reform."

Reform is a good word. But the Chamber's idea of reform is to repeal the National Labor Relations Act to eliminate what it considers the "naively utopian" concept that the government should "encourage" collective bargaining.

The Chamber wants to strip the National Labor Relations Board of virtually all functions. It would write into law a virtual blank check for management and severe restrictions on unions.

As a first step, the Chamber has asked its businessmen members to use their "influence" with the Nixon Administration to get pro-management members appointed to the NLRB.

Its big goal, though, is the election of "reform-minded" candidates in the 1970 congressional election. By "reform-minded," the Chamber means congressman and senators who will vote for anti-labor laws.

Let no one say we haven't been warned.

Draft Reform

Earlier this year President Nixon asked Congress to remove the inequities in the draft law by establishing a lottery system and by making a young man's period of uncertainty only one year instead of the current five-year time frame.

Although the current draft law is the cause of much bitterness and frustration among draft eligibles and parents, congressional leaders have done nothing but drag their feet on the proposal.

Happily, the President has indicated that he is as tired of waiting for congressional action as are those affected by the law. He has decided he will make the necessary changes in draft procedures through his powers as chief executive.

Under the Nixon plan a youth will be eligible for the draft during his 19th year. If he is not called during that year—and he does not have a college deferment, say—he would be home free barring a national emergency of such a magnitude that the draft is expanded.

This should go a long way toward mollifying young men who find it difficult to start on a career when they don't know when they will get greetings from the draft board, especially when the accepted period for those greetings goes through a young man's 25th year.

The draft is not popular. It never has been. It never could be because it puts a man in uniform who never wanted to be in uniform in the first place. If he had he would have volunteered without any draft.

But as long as we play the role of major power we have got to have the draft or something just like it to keep the armed forces at the required strength levels. In an affluent society you just don't find that many men knocking on the doors of recruiting offices and asking permission to join.

So the draft should be as equitable as humanly possible. It should also be as painless as possible and as brief as possible. It should not be protracted and left hanging with uncertainty over someone's head while he tries to get started in a career.

'AW, C'MON AND BE FRIENDS . . . . AFTER ALL, YOU'RE BOTH WORKING FOR ME!'

President Ignores Us, Negroes Say

WASHINGTON — If President Nixon did not get the message from the nation's black elected officials over tea and cookies in the White House Rose Garden, administration leaders must have gotten it at the officials' institute at a hotel here.

The message is that Negro officials feel strongly the administration is insensitive to their problems and that the "new federalism" will compound the problems of the Negro.

Nixon charmed some of the officials with a tour of the Rose Garden when the Institute opened here, but by the time the institute ended, the administration had been accused of "invincible stupidity" for not consulting Negroes about their problems and of "not giving a "damm about blacks and poor people."

Georgia Rep. Julian Bond of Atlanta accused the President of "political adultery with the Cinderella bridegroom from South Carolina, Mr. Thurmond."

Nixon's top White House representative at the institute was Harry Dent, former aide to Sen. Strom Thurmond and architect of the Nixon-Thurmond alliance at the Republican convention.

Negro officials here viewed that alliance as a major factor in Nixon's decision to slow the pace of school desegregation.

Although administration leaders addressed the institute, some of their speeches seemed irrelevant or negative to the audience.

Herbert Stein, a member of the President's Council on Economic Advisors, talked about "future claims on the budget," which to blacks means no additional funds for their economic plight.

The Negro officials viewed Nixon's proposal for a "new federalism" that would give the states more control over federally financed programs as a version of federal-state programs of the new deal in which Negroes had little voice.

They noted that few Negroes are state officials and called state governments "conduits of tyranny" and "instruments of private control that have prevented black people from voting in the past. The whole attitude has changed and we are not sure Mr. Nixon is aware of the extent of the change. Black people are beginning to believe there is not much hope anymore. Racists of the worst type are moving forward again. In many areas trouble had stopped, but it has begun again." (S.S. No. 261-15-5361).

New President (from page 1)

year he was elected Shop Steward. He began to study the art of labor practice and made a firm decision to pursue a position in labor organization. He proved his merit and ability by helping organize many plants within the Tampa area and among the plants he helped organize were Uniforms for Industry, Tallahassee Linen, Pan-American Laundry, Dixie Linen Uniforms, Vogue Laundry and Cleaners, Sarasota Linen and American Uniform. In one of his efforts of organization at Broward Linen, Fort Pierce, Florida, Mr. Jones was arrested, put in jail and forced to make bond. (S.S. No. 445-26-2015). He was cleared of the charges that falsely caused his arrest.

President Jones is well aware of the many facets and complexities of Local 218's activity. He has worked closely with Paul Jones and Jim Bailey and recently he has participated in some of the activity of Mrs. Eloise Fair's territory while she served on the Negotiating Team for the wage increases. (S.S. No. 257-30-9734).

Although President Jones is unmarried at the present time, he is the proud father of four boys and one girl from previous marriages.

During the period of his Twelfth Annual Meeting, Carl Jones will preside over all sessions of the meeting. He will continue to work out of the Atlanta headquarters as his main operating base of activity.

All Delegates To 12th Annual Meeting Head For Atlanta September 26-29th

HARD WORK SCHEDULED FOR ALL

Local 218's headquarters are a busy place and will continue to be up until the day of the 12th Annual Meeting, at the American Motel, Atlanta, Georgia.

E. L. Abercrombie, Executive Secretary-Treasurer of Local 218, Laundry, Dry Cleaning and Dye House Workers Union said "I have scaled down almost everything on the agenda of the meeting and every delegate is going to be hardpressed to meet the demands of time. We have so much necessary detail to be presented to the delegates that I had to utilize part of Sunday to hold the Contract Discussion. It was with deep regret that I was forced to do this as I do like to have the visiting delegates have a little free time. I am truly convinced, however, that the Sunday afternoon and evening discussions will be worthwhile and rewarding for our fine Shop Stewards. I know they will exert their strength to cope with the requirements of this meeting."

W. T. Archer, Jr., Director of Service and Organization, says that "he is willing to match the service performance of his area staff with any union that has a similar group of representatives out in the field contacting the Shop Stewards and membership. I know that the Shop Stewards are going to work a little harder this time but hope we can inspire them sufficiently so that they can go back home and adequately present the facts they have learned while in Atlanta."

Carl A. Jones, Jr. will preside over the Opening Session and all other sessions where his role of President is needed. Mr. Jones was appointed President of Local 218 to fill the existing vacancy. President Jones said that "I hope I can measure up to the other presidents that have served before me. I realize my appointment by Mr. Abercrombie is subject to a nomination by the delegates. Nevertheless, if I am elected, it will be one of the biggest challenges that I have ever had in my entire life. I know with the help and prayers of my friends among the delegates and entire membership that they will pray that God gives me the insight and judgment to handle the task that will be entrusted to me."

It is hoped that the delegates to the meeting will be on time promptly and seated in the Grand Ball Room of the American Motel when the Opening Gavel is sounded by President Jones at 10:00 A.M., Saturday morning. Rev. W. C. Rouse, of Norfolk, Va., will give the opening prayer as he has done so many times in the past.

Saturday afternoon will be an important session because Brother Abercrombie will give his "Progress Report"; Brother Archer will make his "Report on Organization" and Attorney Joe Jacobs will tell of the disposition of the legal cases that confronted Local 218 within the past year.

Saturday night will be highlighted by the Reception and Banquet which is eagerly looked forward to by the visiting delegates. The keynote speaker for the evening will be Lawrence Palacios, General President of the International Union. Brother Abercrombie will, again, be Master of Ceremonies, a task he handles so well from the rostrum.

Saturday night is a fun session of the entire happening and the women grace the scene with their prettiest dresses. The male delegates are not too far behind with their colorful ties and handerchiefs of color relieving the somber hues of the men's suits.

Sunday morning will find the delegates going to the Wheat Street Baptist Church where they will be the guests of Rev. and Mrs. William Holmes Borders for the church services and afterwards at mid-day dinner in the Educational Building of the church.

Upon returning to the American Motor Motel Sunday afternoon the delegates will immediately begin Contract Discussions; what has been changed, what are the gains made from the recent contract negotiated and how to answer the questions of the members when they go back home.

On Monday morning, as is the custom of the previous annual meetings, a Memorial Service for the deceased members will be conducted by Mrs. Gladys Shannon.

The Shop Stewards Workshop has been designed to acquaint and educate the attending Shop Stewards into the role they must follow as duly-elected leaders among the respective laundry plants.

Frank McCallister will handle workshop techniques.

Local 218 was most fortunate in securing the services of Frank McCallister, Director of Labor Education Division, Roosevelt University, Chicago, Ill., who will direct and guide the delegates through the accepted standards that are utilized for successful leadership among union Shop Stewards. Mr. McCallister is well-known in organized labor. It would take too much space to recount his experiences and honors bestowed upon him in the labor field. The scheduled workshop is a challenging opportunity for the Shop Stewards who want to serve the cause of labor. A certificate certifying the successful completion of the seminar will be presented to each person successfully passing the course. William H. Strong, Chief Appeal Referee of the Georgia Labor Department, will hand out the certificates.

The annual meetings are necessary and vital to the life-blood of Local 218. The exchanges of experience, how to cope with daily problems and how to upgrade the quality of work performance are rewarding for the union officials and the entire membership as well. When your delegate gets back home ask them for a report because he or she is going to be prepared to share the annual meeting agenda with you in the weeks to come.

WAGE INCREASE NEGOTIATED

(Continued from Page 1)

Many other worthwhile reasons entered into the considerations of the Management and Negotiating Team and each side of the table had done considerable research to be able to argue forcefully on the matters under discussion.

The Union's position of thought was that the Company would also benefit by giving a substantial increase at this time. It was the candid opinion of the union that to some extent that the absenteeism would lighten up and the heavy turn-over of personnel could be curbed a great deal. Since the raises have been in effect there has been positive signs of improvement on these two items projected and Local 218 is pleased over it.

The rank-and-file union membership can do a great deal to make the Union's position sound and crystal clear by regular attendance at their jobs and avoiding unnecessary "lay out" from work.

We are not satisfied or proud of our wage status as a whole because we are still under the poverty level as far as basic minimum wage is concerned. However, a good portion of our laundry employees make far beyond the base pay level.

The union membership must remember also that our base pay with the new wage increase is now thirty cents an hour over and above that required by the minimum wage law for the laundry industry exclusive of the fringe benefits.

When the Laundry Workers Union came into being in the South, the laundry industry was paying the total sum of $4.75 weekly. There were no fringe benefits at all; no such thing as a holiday with pay; no paid vacation; no hospital or medical benefits anywhere and no overtime pay. I can recall most vividly where we had a very difficult time getting the employer to agree on Christmas Day as a paid holiday!

Today our base pay is $64.00 per week for forty hours. Compare that with the $4.75 weekly pay for sixty hours. Our gross pay for 52 weeks of forty hours a week is $3,328.00. This is more than most department store clerks make in the major department stores in the Southern states. We can count our blessings on some things.

We are not through with all of our negotiations. As we go to press, we have some companies with whom we have reached an agreement and with some others we are still negotiating and finalizing the areas of agreement. I can truthfully say that the majority of the companies operating plants are giving a good reception to our argued pleas. W. T. Archer, Jr., Director of Service and Organization, will be able to make a complete report at the forthcoming annual meeting.

The union is sound financially. A full report is made on page 5 for the membership to read. Despite the increase in wages the union officials did not see any need for raising the dues of each individual member. We guard our resources carefully and will continue to do so in this type of endeavor."

As Brother Abercrombie was closing out the interview he made a parting remark that was pertinent and challenging. He said "If anybody thinks it is easy to negotiate an increase of over two million dollars annually, just try it sometime!"

Indian River Certification Brings Bargaining

Indian River, Fla. — The decision of the National Labor Relations Board, completely affirmed the Award of the Trial Examiner, and entered an Order that the Indian River Uniform Rental Company recognize and bargain with Local 218, Laundry, Dry Cleaning & Dye House Workers Union as the collective bargaining representative for the laundry workers at this plant.

The Board decision was the last in a long series of efforts by the employees to obtain bargaining rights. The Board decision was a complete vindication of the Union's position.

The case was handled by Joe Jacobs, Counsel for Local 218, and Organizers James Bailey and Carl Jones.

Crown Laundry Cited For Contempt

Pensacola, Fla. — In one of the rare instances, the National Labor Relations Board has issued a citation for contempt against the Crown Laundry in Pensacola, Florida, contending that it has violated the Board Order in which it was adjudged to have been found guilty of unfair labor practices.

Some time ago, the Board found the Crown Laundry had violated the Act in its anti-union campaign against Local 218, Laundry, Dry Cleaning & Dye House Workers Union. As a result, two employees received a total of $3,146.83 because they had been wrongfully discharged. One of the employees, Mrs. Lois Farrow, was returned to her job.

Since that time, the Company's unfair labor practices have resulted in another employee being fired. Carl Jones participated in the hearing as a witness. The Board case was handled by Tom Johnston of the NLRB office in New Orleans, Louisiana and Robert Ignor of Washington, D.C.

Joseph Jacobs, Counsel for Local 218, said "It is regrettable that the Board has been so slow in moving against this Company. We shall see if it finally requires this Company to obey the Federal laws so that the employees can form and belong to Local 218."

Southern Industrial Stalls Bargaining In Tuscumbia

Tuscumbia, Ala. — The decision of the National Labor Relations Board, ordering this Company to bargain with Local 218, Laundry, Dry Cleaning & Dye House Workers Union, has been further delayed by stalling tactics of the Company asking the Labor Board to re-examine its certification of the Union.

The Regional Director overruled the Company's objections, and ordered the Southern Industrial Laundry to bargain with Local 218. The Company then appealed to Washington, and Washington dismissed their appeal. The Company now has pressed for a further review by the Board.

Executive Secretary-Treasurer Abercrombie stated, "We are continuing to do everything in our power to get a decision as early as possible, requiring this Company to bargain with our Union, so that these workers may be successful in their efforts to achieve decent wages and working conditions."

In Unity There Is Strength

Shop Stewards' Corner Local 218's Activity Among The States

Alabama

Birmingham—Howard's Oderless seems to have a variety type of news:

Wedding bells have rung out for Mr. and Mrs. Linell Nix on May 30th. Mrs. Nix was the former Miss Mary Lois Harris. Everyone wishes them happiness.

Alphonso McBride, of New York City, visited his Mother and Father, Mr. and Mrs. James McBride on August 8th. Sister Willie McBride declares that the time spent with their son went entirely too fast and she didn't get all her qucstions answered!

Sister Beatrice Davis has now returned to work after spending a major portion of her vacation with her daughter and son-in-law in Fort Dix, New Jersey.

* * *

It's always nice to be complimented about past performance and this nice courtesy was visited upon Sister Minnie White, Shop Steward for Howards Odorless.

A letter was sent to Local 218's headquarters and it said in part that "all of them wanted everyone to know and congratulate Mrs. White for the wonderful work she is doing as our Shop Stewardess.

"She is very understanding and always willing to help solve our problems. Since Mrs. White has taken over the job as Shop Stewardess things have been in more unity."

As a postscript the employees made the profound remark — "together we stand, divided we fall." It seems that the employees of Howards Odorless have found a devoted leader. Congratulations!

* * *

Sister Katie Patterson, of Birmingham Linen, had to take a sad journey to Erie, Pennsylvania, to attend the funeral of her brother-in-law, Mr. William Stewart. Sister Patterson stayed as long as she could to comfort her sister and returned to Alabama on August 20th.

* * *

The stork has made visits to several employees and among the proud Mothers are Sister Addie Mae Jackson and Mrs. Eula Mae Cannon and Sister Sadie Colston, who had a son. Paul Sylvester Abrams was a proud father when he learned of the birth of his new son too.

* * *

Sister Daisy Lee Moore has left her job as CRT girl and is now happily situated as a seamstress in the Sewing Room of Mobile Linen Service.

* * *

Brother Willie James Rollins gained a bride and Sister Willie Mae Robbins gained a new daughter. Brother Rollins is to be congratulated on his marriage to Miss Dorothy Jean and everyone wishes them much happiness.

* * *

Sister Crews enjoying vacation in Ohio

Mobile — This past August 10th, the Stone Street Baptist Senior Choir of which Sister Fannie Crews is a member were the guest choir at the Treelight Baptist Church's 24th year of Christian service to the community. The current pastor is Rev. Boykin and he has great plans for the 25th silver anniversary of its founding. The song service was enjoyed by all.

Sister Crews, who works for Mobile Linen Service, is currently on a four week's vacation. She is visiting in Cleveland, Ohio, and she has been sightseeing, enjoying family relationship and relaxing.

* * *

Florida

MIAMI, Fla. — Sister Freddie Stewart, Shop Stewardess at French Benzol, is shown delivering a check from Local 218's Welfare Fund to Mrs. Evelyn Nevola from the office of John Hurtar, Administrator for the Estate of the late Sister Maude Martin. Close friends of the deceased are looking on as this service is performed. Sister Martin was a long-time employee of French Benzol and was a good member of Local 218. She will be sorely missed.

Indiana

Columbus — Indiana Linen Service certainly does report their news! You know we do appreciate having it sent!

Sorrow and death have been a part of some members and deepest sympathy has been extended to Sister Ruby Ulmstead, who lost her beloved Mother; to Sister America Anderson, who has suffered the loss of her brother; and Sister Juanita Smith, who lost a newly-born grandchild.

Indiana

Vacations are eagerly looked forward to and the following folks used some of their vacation time to visit relatives, take medical tests and some just rested.

Sister Lula Littrell visited a sister in Detroit, Michigan and Sister Dorothy Staley visited relatives in Green Bay, Wisconsin. Brother Ora Alvey utilized his vacation time to take tests and consult with a doctor. We do hope it will be nothing serious. The nice thing about Brother Alvey is that he took the requirements gracefully and with humor.

* * *

Sister Flossie Dampiers had some anxious moments when her son, Calvin, underwent corrective surgery for old injuries received in a motorcycle accident sometime back. Both are employees of Indiana Linen Service and we hope the operation is successful.

* * *

Wedding bells rang in the Harsh family again! Sister Geraldine Harsh's son, Dwight was married July 26th to Miss Neysa Clarkson of North Vernon, Indiana. We wish the bride every happiness and offer the young couple our heartiest congratulations.

* * *

Sister Alice Helton has a new granddaughter named Loretta Arlene Graham. She weighed in on this good earth at 7 lbs. and 15 ozs. One of the nice things about Grandmothers is that they can spoil their second generation children . . . and it's so much personal joy to be able to do so.

* * *

Some time a lot of us just hanker for the good old days of yesterday year and some of us focus our hobbies in this direction. Sister Rosie House, one of the table girls is beginning . . . or we should say — she has started on what could develop into a profitable hobby. She has started raising chickens . . . the old fashioned way! She now has over 50 chicks hatched. Sister House was reared on a farm in Tennessee and she likes to reminisce over the good old days back home. We wish her a lot of good luck and good eating, too, from her venture.

North Carolina

CHARLOTTE, N. C. — Mr. and Mrs. J. W. Rhyne are the proud parents of a baby boy, Adrian Carlo Rhyne, born February 28th, weighing 6 lbs., 11 ozs. Sister Rhyne has been an employee of Carolina Uniform Rental for over twelve years.

Tennessee

NASHVILLE, Tenn. — J. B. Carlton took a giant step forward when he left his job as Tumbler Boy to Assistant Superintendent of the Nashville Linen Service. We are pulling hard for him to make good in his new promotion. He is now part of Management Team and we will miss him in the union.

Another person who deserves congratulations on a job promotion is Sister Dorothy Perkins who moved from the Flat Work section of Nashville Linen Service to the Front Office. We are sorry to lose her from the roster of Local 218 membership.

* * *

Sister Maud Alice Sims is still convalescing from surgery performed recently. We hope she will be able to come back soon to the plant.

* * *

The stork visited Sister Dorothy Lacy and she is the proud and contented Mother of a baby girl.

Texas

Longview—Longview Linen's capable News Reporter, Sister Addie Lewis, has sent in some news items and pictures. We are always glad to hear from this portion of the Lone Star State!

* * *

Miss Noreen Jackson

Mr. and Mrs. A. M. Jackson are very pleased over their daughter, Noreen Jackson, who received her high school diploma and now has her license from the state board of Cosmetology. The young lady plans to attend Jarvis Christian College this fall. Noreen's Mother, Sister Jackson works in the Sewing Room of Longview Linen.

* * *

Another young lady, Flora Ethel Cullors, daughter of Mr. and Mrs. Floyd Cullors is also a recent high school graduate and attended summer school at Praireview College. Her parents are so proud of her efforts to attain an education and that is one of the reasons that her Mother has worked as a Starch Shaker at Longview Linen Service.

* * *

Miss Janie Ruth String

Sister Gladys String, who works in the Industrial Department, was a happy Mother when she saw her daughter, Janie Ruth String, march down the aisle at Texas Woman's University, located in Denton, Texas, where she received her college diploma. She majored in Sociology. Congratulations!

IN MEMORIAM

Local 218 has been sorrowed by the loss of some good friends, a recent staff member and some dedicated members. It was Milton who said "Death is the golden key to the palace of Eternity" and our deceased have used this key just ahead of us where we all will eventually go. We mourn their passing, have tried to comfort their loved ones in their hours of grief and we shall miss them.

Mrs. James H. Matthews

Many of the Shop Stewards of Local 218 have met Mrs. Vallie Lou Matthews, wife of the first President of Local 218, who helped build Local 218 into the strong tower of strength it is today. E. L. Abercrombie, Local 218's Secretary-Treasurer was signally honored when he was asked to eulogize Sister Matthrews at her funeral held at the Beulah Baptist Church, Atlanta, Georgia, Sunday afternoon at 2:30 P.M. on September 7th.

No greater tribute could be paid to a woman than the words Brother Abercrombie gave at the funeral.

"Loved Ones: This is a sad day for the many friends and associates of Vallie Lou Matthrews. It is indeed a sad day for me and the other officers and staff of the Laundry, Dry Cleaning and Dye House Workers, Local 218, as well as the 8,000 members of this great organization that her late husband — Rev. James H. Matthrews — help build from the ground up and served as its president for over seventeen years. Not only now, but we are constantly reminded of his absence from our midst.

I must remind you, my friends that it was not an easy job for a black man to head an integrated union . . . and this was long before the word 'integration' became alive. But James Matthrews did and he mastered the job well.

I never heard him refer to Mrs. Matthrews as Vallie Lou but he often referred to her as "Honey" in a very affectionate way; most of the time, as I recall, he referred to her as "Mama" and it became very natural for me to call her "Mama" too.

"Mama" Matthrews was an inseparable part of James Matthrews. He counselled with her on all types of problems that confronted him whether it was business, social or religion. Many times he would say to me: 'Mama and I prayed over this last night and this is what we have come up with' . . . and you know, it usually was the valid solution to our problem.

I had the privilege to visit them in their home on many occassions and I was quite aware of the feeling that existed between them and I assure you it was a sincere love and devotion to each other, a solid bond breakable only by death.

Mama, we pray that all of us who loved you so well and so dearly, will also live in such a righteous manner; that we will be able to meet you at the Golden Gates.

She said to me many times since the passing of her husband: 'I will join him some glad day'. He used to say to her: 'Mama, we have seen the star in the east and we have come to worship.'

Now 'Mama' has seen the star in the east again and she has gone to meet her husband.

Now, don't you know this was a great reunion? So long, Mama, we love you."

Joe Bonowitz

Funeral services for Joe Bonowitz of Hollywood, Florida were held Sunday, September 21st at Spring Hill with burial in Crestlawn Cemetery. Rabbi Richard Lehrman officiated. Mr. Bonowitz had been a lifelong resident of Atlanta until his recent move to Florida. He was a professional football player for 17 years and had been on the team of the Atlanta Crackers.

Joe Bonowitz was a recent newcomer to the staff of Local 218 in the number of months of service but his work on behalf of Local 218 will be long remembered. E. L. Abercrombie, Local 218's Secretary-Treasurer said: "We can't begin to measure the data and reports that Joe Bonowitz has done for us. There are few men, if any, that can replace him or even match his work in the Occupational Engineering fields particularly concerning laundry equipment, methods and the laundry worker application. His many years of experience in the laundry field for Management and his keen sense of analysis on time and motion studies are almost impossible to find. His fact-finding made it possible for us to recently negotiate a wage increase and to work out better physical conditions for our many employees. We shall miss him terribly.

Mr. Bonowitz was survived by his widow; a daughter, Mrs. Eugene Oberdorfer II of Atlanta, three sisters and several grandchildren.

Harvey Anderson, Sr.

Harvey Anderson, Sr., went to his heavenly reward this past August 30th, 1969. Mr. Anderson had been ill for some time and after his operation it was announced that he was a victim of cancer, centered in the brain area.

Mr. Anderson was survived by his widow, Mrs. Savannah Anderson, Harvey Anderson, Jr., a staff member of Local 218, two step-sons, four brothers and one sister. He was also blessed with several grandchildren, great grandchildren and countless friends.

Funeral services were held at the Antioch A.M.E. Church in Decatur, Georgia September 3rd with the Rev. Doctor T. J. Flanagan officiating. Interment was in Washington Memorial Garden.

Mrs. Gussie Jackson

One of the best Shop Stewards that Local 218 ever had was Mrs. Gussie Jackson who had been a union member for twenty-one years. She departed this life Tuesday, August 19th, 1969 and her funeral was held at the New Pilgrim Baptist Church of Birmingham, Alabama.

Sister Jackson was a loyal, faithful and dedicated church worker until her sudden death. She gave of herself unstintingly because she practiced the Golden Rule and she felt she must help people in trouble and help them laugh in times of great joy.

Rev. John W. Taylor and Rev. Nelson H. Smith, Jr. presided over the funeral services and the expressions rendered from persons who were selected to represent a part of her life, were meaningful and sincere. Local 218 was represented at the funeral service by Mrs. Mary Robey.

She leaves to mourn her passing: her Mother, four daughters, two sons, two sisters, many nieces and nephews, a host of other kinsmen and many friends.

E. L. Abercrombie said when he was advised of her death; "This woman was a part of the history of Local 218 and I have lost a loyal friend who will be missed in our hearts for a long time."

Look For Your Social Security Number It is Worth $5

Maynard Jackson
Candidate for Vice-Mayor

Sam Massell
Candidate for Mayor

LOCAL 218 WILL ENDORSE MASSELL AND JACKSON IN ATLANTA RACES

The Executive Board of Local 218 has not had the opportunity to evaluate the many candidates who are running for posts in the City of Atlanta government positions, that will be determined in the October 7th election which is held on a non-partisan basis.

The only two candidates that carry Local 218's blessing at the time we go to press are Sam Massell and Maynard Jackson.

Mr. Massell has served as Atlanta's Vice-Mayor for eight years and is seeking the position as Mayor, now held by Ivan Allen, Jr., who decided not to offer for a third term.

Mr. Jackson, is a young Negro man, who made a phenomenal race against United States Senator Herman Talmadge and defeated him in the Fulton County votes, which indicated heavy white support.

Both men are eminently qualified and each man seems to have convictions, platform planks and attitudes that will serve the entire City of Atlanta to the best advantage of the white and black races. It will take wise counsel, the ability to communicate with each race and cool heads to maintain the excellent bi-racial climate that has been Atlanta's image through-out the nation.

The many other candidates running for aldermanic and school board posts among the wards will have a careful screening before final endorsements will be made for the consideration of the Atlanta union membership. The endorsements will be posted on the bulletin board of the laundry plants prior to Election Day.

NEW BOARD MEMBERS APPOINTED

Four new board members have been appointed to fill existing vacancies of four members on the board who resigned because of reasons of failing health or other personal reasons. Local 218 is happy to announce the following new appointments which are subject to nomination at the forthcoming Annual Meeting. The persons are: Mrs. Betty Brown, of Chattanooga, Tennessee; Mrs. Shirley Dessett, of Portsmouth, Virginia; Mrs. Eva M. White of Louisville, Ky.; and Mr. Wilbert Robinson of Beaumont, Texas. E. L. Abercrombie, Secretary-Treasurer, who was vested with the authority of the Constitution and By-Laws to make appointments said "each and every one of them are qualified to serve in this capacity because of their individual knowledge of our membership needs."

Editor's Note: Mr. Crane's refusal to cease printing the Atlanta Daily World were, in part, responsible for losing the Southern Laundry Worker's paper and the Retail Clerk's 1063 News.

Atlanta, Ga.—The telegram reproduced below was sent by Local 218 to protest the confirmation of Judge Haynesworth to the Supreme Court. During testimony before the Senate Judiciary Committee, many labor leaders heavily critized Judge Haynesworth for conflict of interest in connection with a labor decision in 1963. This immediate past week Haynesworth was questioned intensely about a stock purchase six weeks after litigation in his court. Other testimony concerning his segregationist attitudes has been presented.

TELEGRAM

Senator James O. Eastland
Chairman, Senate Judiciary Committee
Suite 2226, New Senate Office Building
Washington, D. C.

The nomination of Judge Clement F. Haynsworth to the Supreme Court should be held in abeyance until minute and detailed investigation can be made concerning Haynsworth's decision in holding that Deering Milliken, Inc. did not commit an unfair practice against the Textile Workers' Union. The subsequent $450,000 sale of personal stock in a vending machine company that serviced the three Deering Milliken plants indicates a mind dedicated to personal profit and gain instead of an impeccable judicial judgement. We, the eight thousand members of Local 218, Laundry, Dry Cleaning and Dye House Worker's Union bitterly oppose his appointment and urge your committee to deny him the confirmation to the Supreme Court of the United States.

E. L. Abercrombie
Executive Secretary-Treasurer

Re: Atlanta Daily World

A group of union printers, composed mainly of *Atlanta Daily World* strikers, picketed the Decatur-DeKalb News plant on DeKalb Industrial Way Saturday, September 6th. Led by A. M. "Bud" Gnann, president of Atlanta Typographical Union Local 48, the group was protesting the printing of the Sunday *Daily World* at the plant.

The Decatur-DeKalb News is published by William C. "Bud" Crane, a former Atlanta Typographical Union member. Mr. Crane printed the food section of the *Daily World* before the strike. Since the strike the presses of the Decatur-DeKalb News have run other issues of the Labor Relations Board Trial Examiner, Leo F. Lightner, in his findings of April 30, recommended that *World* publisher C. A. Scott be ordered to return all farmed-out work, including the food section, to his own plant.

The only part of the Decatur-DeKalb News that is organized is the pressroom. The pressmen came in Saturday to print the Sunday *Daily World* at overtime rates. *Daily World* publisher C. A. Scott is willing to pay overtime rates to have his Sunday paper printed, but he is unwilling to pay his striking mechanical employees a just wage.

No More Lunch Time Punching of Clock

One of the most aggravating requirements of the laundry worker has been utilizing the few minutes of a very short lunch period to punch out and in and out by the time clock at each plant.

Fortunately this factor is no longer demanded of the laundry worker in Local 218's jurisdiction, and in the event, you are still punching the clock for lunch it will be posted shortly in the independent laundries that it has been abolished.

When this request to waive the lunch-time punching of the time clock was first brought to Management, the argument was that many of the employees would take advantage of it and as a consequence there would be many lost man-power hours. It was agreed, however, to give the method a trial and it has proven to be very satisfactory.

Local 218's union officials are very pleased with the cooperation of Management and also the honest observance of the time angles of the lunch period from the union membership. It must be remembered, however, that if the employee leaves the plant, after reporting for work, that they must punch the time of departures so that the time cards will be correct.

E. L. Abercrombie, Local 218's Secretary and Treasurer said "that I was to express personally my appreciation to the membership for helping make this thing work out and it is most gratifying to know that none of the members have abused the privilege."

Editor's Note: Mr. Crane's refusal to cease printing the Atlanta Daily World were, in part, responsible for losing the Southern Laundry Worker's paper and the Retail Clerk's 1063 News.

Three Big Unions Plan Major Drive Based Out of Atlanta, Ga.

WASHINGTON—A powerful labor action alliance, formed last May and financed by three of the nation's largest unions, moved into Atlanta for its first major organizational campaign.

A spokesman for the organization, the Alliance for Labor Action (ALA), said that primary efforts will be directed towards the ring of industrial parks surrounding the city where he said some 50,000 nonunion workers are employed.

The goal will be to bring as many of the nonunion employes as possible into the ranks of three unions in ALA. The unions are International Brotherhood of Teamsters, the United Auto Workers and the International Chemical Workers Union. The three unions already boast a total membership of some 4,000,000.

He said the campaign would begin the week after Labor Day under the leadership of William Genoese, director of the AIA organizing committee.

Headquarters in Atlanta will be located at 1135 Spring Street, N.W., and the telephone number is 874-8675.

Atlanta was chosen for the all-important initial drive, it was stated, over several other cities because of the growth of the city and its importance as a commercial transportation and service hub.

It was also stressed that out of an estimated 1.5 million workers in Georgia, only 10 per cent are organized.

The spokesman said the ALA settled on Atlanta for the kickoff organizational campaign after a lengthy survey. He said no deadlines or quotas have been set for the area and that it is assumed the organizers will stay "as long as necessary."

The program was outlined last week in Atlanta by a host of high-ranking Teamster and UAW officials to some 200 Atlanta area Teamsters stewards and officials. The aid of the local officials was solicited by the professional organizers who will direct the campaign.

Although the Washington representatives were reluctant to admit it, the Atlanta campaign will be of primary importance to the infant ALA.

The alliance was announced with great fanfare here last May as a vehicle for a vast national labor organizational drive and for dealing with "critical political, economic and social problems."

The Atlanta campaign will be viewed as a critical test of the alliance's potency, and it is expected the organization will go all out to insure its success.

Editor's Note: There has been speculative thought about the prospective affiliation of Local 218 with the newly formed Alliance for Labor Action (ALA). The issue will be determined when it is presented and voted upon by the International Union when it meets in Chicago, Ill. this coming October 23rd.

Death Benefits Will Bring The Amount Up For A Total Of Over $360,000.00

Labor to Fight for Stronger Jobless Aid Bill Than Nixon's

Presdent Nixon's proposals to revamp the federal-state unemployment insurance system have received a mixed reception in Congress and outside. Some lawmakers hailed the proposals, others said they didn't go far enough. Also, said they fall "far short of assuring adequate income protection for jobless workers."

Nixon's plan, as submitted to Congress, would extend coverage of unemployment insurance to 4.8 million more workers. These would include 1.6 million in small firms with less than four employes; 1.8 million in nonprofit organizations; 600,000 in state hospitals and universities; 400,000 on large farms employing four or more workers in each of 20 weeks, and several other miscellaneous groups .

Also, states would be "urged" to raise benefit ceilings within the next two years so that at least four-fifths of covered workers would get half their normal pay when jobless. Nixon called for various other improvements, including 13 weeks of added unemployment benefits during severe recession periods.

One nationally known labor leader voiced his thought on behalf of organized labor. He said "the most important defect" is failure to provide federal minimum benefit standards.

It was further declared that Nixon is "right in setting a goal of 50 per cent replacement of lost wages but he is making a tragic mistake in leaving to the states, for another two years, the responsibility for achieving this goal."

Experience has shown, he said, that "without federal mandatory standards the states will not raise unemployment insurance to decent levels."

Urban League Pushing Its New Aims

The National Urban League last month accelerated its "departure" from a traditional course, which over most of the organization's 59-year history had been to provide "direct services" to aid the poor.

The point of departure was the initiation last of what the Urban League calls a "new thrust," designed to build greater self-determination, or what it calls "ghetto power," in poor communities.

At the league's 59th annual conference in Washington last month, the 3,000 participants discussed a wide range of issues around the theme, "Ghetto Power in Action."

But the emphasis of this year's conference appeared to have shifted slightly from attempts to build power in ghettos to changing controlling institutions. And the shift seemed to represent the organization's increasing frustrations as it attempts to get the Government's cooperation in putting across the broader Urban League programs.

Critical of Nixon

Whitney M. Young Jr., executive director of the national organization, criticized President Nixon for failing to put forth a massive commitment toward solving the nation's domestic problems. He further accused the Administration of encouraging a mood of repression in the nation.

Mr. Young made the charges at the outset of the four-day conference, but in the end, he said he had not given up hope.

"There's still time," he said, "but I have moved from cautious optimism to cautious pessimism."

And his pessimism compared with that indicated recently by similar organization, such as the National Association for the Advancement of Colored People and the Congress of Racial Equality.

During the annual conference, Mr. Young noted that the Urban League would establish a housing foundation, a plan to achieve "decent" low-cost housing, controlled and operated by the community. (S.S. No. 219-32-6330).

Another proposal called for an "economic security program" that would "erase poverty from our land."

A Plan To End Poverty

The plan would expand Social Security coverage, guarantee jobs for all who are able to work, guarantee income with a negative form of income tax for those with no other financial recourse, and establish a family allowance program through which "every child in America would get a check for $40 a month as a matter of right."

Mr. Young said: "Three out of 10 poor people are black. But seven out of 10 are white. Our program will end poverty for all."

Moreover, in the last year, he noted, the league's new activities such as voter registration drives and housing corporations have sprouted in more than 200 Urban League "outposts" in local communities from San Francisco to Sparta, Ga.

To meet its expanded goals, the Urban League found it necessary to allow for a wider range of tactics, such as picketing, boycotting and other strategies that are legal and nonviolent.

But the young people of the league, mostly college students hired in the summer youth program, have argued that there was a gap between the Urban League's new image and "reality."

Some of the students, all Negroes, disrupted the keynote session, calling for the ouster of James A. Linen, president of the league.

But by the last day of the conference, they had presented demands that were enthusiastically approved by the delegates and this seemed to be within the scope of the organization's new direction.

Mr. Linen, who is also president of Time, Inc., was the target of hostility by the black students of the interracial organization, because he is white and because he heads a large corporation.

But he made the point that white "backlash" played the dominant role in institutional resistance to change, and he said that, next to fear and selfishness, "the greatest contributor of all has been the lack of positive action on the part of millions of white moderates," who have not yet spoken but who potentially have the influence to move the nation.

"If those of us who are white really want to help — if we really want things to change," he said, "then the best place for us to make our personal stand is in the heart of the white community."

TESTING . . . TESTING

Here's a test for every union member: draw a circle . . . blow on it . . . if the circle turns green, see your physician . . . if it turns brown, see your dentist . . . if it turns yellow, see your psychiatrist . . . if it turns red, see your banker and if it turns purple, see your lawyer and make a will.

However, if the circle remains the same color, you are in good health and there is no reason on earth why you should not be active in the union.

Proposals by Nixon on Welfare, Manpower And Tax Sharing Receive Mixed Reception

Reactions were mixed to a series of wide-ranging proposals on the domestic front unveiled by President Nixon last month.

These called for a drastic overhaul of the welfare system; a start on federal tax sharing with the states; reorganization of manpower training plans; a move toward establishing on-the-job health and safety standards and a program of federal mass transit.

The welfare plan would, among other features, guarantee minimum payments throughout the nation for families on relief. In the case of a family of four the figure would be $1600 a year, paid by Uncle Sam, this to be supplemented in most states now paying a higher amount.

There would be a condition, however — jobless heads of families would have to take either a "suitable" job or job training in order to qualify. To stimulate work, such family heads would be able to keep the first $60 a month in outside earnings without reduction in relief payments; above that, 50 per cent of the earnings would be offset by reduced welfare payments. Day care centers would be set up for children of welfare mothers who work, or engage in training.

Further, persons now working who earn less than subsistence wages would get assistance payments to bring their earnings above the poverty level.

Various other changes are provided in order to overhaul a system which, Nixon said, has become "a bureaucratic monstrosity." The aim, he said, would be to convert welfare into "workfare."

The effect would be to federalize a system now largely under local control, and to open the way to add another 12 million poor people to the 10 million now receiving welfare aid. Nixon estimated the additional cost at $4 billion a year, after the new program starts in mid-1971, but he said this sum would decline as more adults are shifted from welfare to jobs.

Nixon predicted the new plan by narrowing the huge gap in welfare payments among the states — ranging from $39 a month in Mississippi to $263 in New Jersey — would curb the exodus of the poor from low-benefit states to those making much higher welfare payments.

Other Nixon Proposals

His manpower program would coordinate under a single setup about 30 present federal job training plans now, and would turn these over to the states and cities to operate, with the federal government paying 80 per cent of the cost.

His job safety plan would set up a five-member board empowered to lay down occupational health and safety standards for most industries throughout the nation. Where states meet those standards they would be left free to administer them. They would get federal aid to help reach those standards. (S.S. No. 248-07-4304).

OEO to be Skeletonized

In addition, Nixon proposed a sweeping overhaul of the Office of Economic Opportunity, which administers the war on poverty. It would be left largely as a shell, confined to experimenting with new ways to fight poverty. The plans it develops would be "spun off" to other government agencies.

For the most part, the welfare changes drew favorable comments in Congress and elsewhere, but generally with "reservations." Most pictured the Nixon program as a step in the right direction, though not adequate. Spokesmen for the larger states, such as Gov. Rockefeller of New York, declared it did not provide enough assistance to states which now bear the brunt of the relief burden.

Also, the National Council on Hunger and Malnutrition assailed the plan because it would eliminate federal food stamps for families covered by the $1,600 minimum. The Council said this would slash the buying power of the poor, forcing them to choose between food stamps and the $1,600 guarantee.

Dr. West of Fulton County (Ga.) Should Resign As Supt. of Schools

By E. L. Abercrombie

Atlanta, Georgia — The Eva Thomas High School, a Negro school, was re-opened by an order of Federal Judge Albert. The Fulton County School Board closed the school this year after a long dispute with the U. S. Department of Health, Education and Welfare and directed its 280 pupils be distributed among four other schools.

College Park Negro students and some parents demonstrated and several times took over the school physically despite an injunction signed by a Superior Court judge. One of the paramount figures in the demonstrations was Morris Dillard, Executive Director of Atlanta NAACP.

The Negro students were incensed, and rightly so, over the plan chosen for pupil placement when the simple choice of making one school a junior high school and leaving Eva Thomas as a high school would have met the demands of HEW. Both schools were within three blocks of each.

Paul West has never entered into desegregation plans with enthusiasm and has always appeared to be "buying time" to stay off the inevitable. Regardless of the fact that there were other alternatives that would be acceptable to HEW, it was decided that Eva Thomas High School was to be dissolved entirely, and the building used for other special educational training.

Many people applauded the efforts of the young Negro pupils who demonstrated so fervidly to keep the identity of their school as a part of their happy teen years. When Supt. Paul West refused to discuss matters with pupils and parents the group descended upon Paul West's office.

It is here that Paul West lost control of himself, shredded what little dignity he could muster and as a whole conducted himself as being absolutely unworthy of the high office he has had far too long.

His comments about the protesters as he sat in the Sheriff's office were shabby and made in the heat of anger that he didn't make any attempt to control. He had been refused police by the College Park Mayor, then he sought out Governor Maddox for state troopers and as a last resort he requested and got a restraining order from a Superior Court judge restraining the persons from occupying his office. He had refused to meet with the protesters unless the area of discussion embraced what he thought was open for discussion.

One of his most unfortunate remarks while in the Sheriff's office in an interview with a reporter went like this: "I wouldn't be in there with that scum" he said. "I'm going to have it fumigated before I go back . . . I've heard about the sanitary conditions there."

As a matter of truth, the protesters did no damage to West's office. They cleaned it up carefully after a lunch brought in from a nearby sandwich shop and browsed in West's personal library. (S.S. No. 255-64-3947).

If Superintendent Paul West had ever looked deep down into the hearts of the young Negro people he would have found a way to keep the nearly new Eva Thomas school open. It was named for a Negro school teacher and the $850,000 building was a source of pride to the Negro community. The closing of the school would have wiped out the name and left the Negro students to be merged into four predominantly white schools in the adjacent area. It doesn't seem impossible to dream that the school board and Mr. West could have dissolved one of the white high schools and sent some of the white pupils over to Eva Thomas.

Perhaps by the time the fall of 1970 comes around, the voters will have solved part of their problem by election of new school board members and perhaps a new superintendent who might favor the black community just once in a while.

Dear Emory:

It was a great pleasure having you work with us in our Stewards Work Shop at our last annual meeting.

For your participation, I am enclosing a check for $50.00 for the Southern Regional Council as a small token of our appreciation.

With best wishes and kind personal regards, I remain

Sincerely,

E. L. Abercrombie

MEMBERSHIP PARTICIPATION*

Information is necessary element to "Control"

1. No group, whether leadership or membership, can maintain effective control without having at its disposal appropriate information about the matters under consideration. The mere fact of knowing will not give the members control over the affairs of their union; however, they certainly will not be able to institute control unless they do have knowledge.

2. Communication is seldom a one-way process. If stewards inform members about union affairs, the members may respond by offering their reactions or ideas. If the steward makes some systematic attempt to solicit such action, a process of joint decision making may be under way.

Leader as Resource

3. A third important leadership function is that of resource person, a person to whom a member of the group can turn for assistance.

Interest in group member

4. One of the characteristics of successful leadership which has been demonstrated repeatedly in the industrial environment is a concern for, or interest in, the group member.

Steward is a key link keep informed

5. Through his role as grievance processor, decision maker, and communicator, the steward appears to be an important instrumentality for the promotion or the weakening of union democracy. He may or may not help keep the men informed, involve them in certain decisions, work for the achievement of their goals, and offer them a supportive relationship.

Member participation in a union does not just grow; it must be cultivated. It must be desired by the membership and fostered by the leaders.

Participation must be cultivated

LEADERSHIP WITHIN THE UNION

Jack Barbash
Professor of Labor Education and Economics
University of Wisconsin

I propose to deal with the subject at hand under three main headings: (1) assumptions as to the industrial relations environment and union leadership; (2) sources of union strength; and (3) sources of union weakness and vulnerability.

The dominant fact in the contemporary industrial relations environment has been the reversal of union ascendancy that began with the New Deal. If I had to put an arbitrary date for the seeding of this reversal, 1947 is as good as any and Taft-Hartley is as good a symbol as any. Union spokesmen, particularly from the mass production industries, attribute their difficult times to a management "hard line" fortified by the superior bargaining power growing out of automation. Whatever the cause, the unions have been confronting a changing order of problems and their posture has in general been defensive. There are, it should be noted, recent symptoms of union revival but it is too early to tell yet whether we have a period of union reascendancy in the making.

However we project the cycles of union growth or decline certain features of the union situation are probably here to stay. For all practical purposes the union is regarded as a public utility; that is, as being so extensively affected with a public interest that it is appropriate to regulate substantially the internal government of unions and many of the means and ends of collective bargaining. Just as the Wagner Act sought to limit management power vis-a-vis unions and employees, Taft-Hartley, Landrum-Griffin, state right-to-work laws, and a wide ranging corpus of case law are aimed primarily at limiting union power. The notion of the union as a private organization has no operative meaning today.

In the management community there is a pervasive feeling of renewed confidence and power which is to be distinguished from another period when management reassertion took place; namely, the period immediately following World War I. In the earlier period big industry sought the outright elimination of unionism. In this period there appears to be no such general disposition - rather the emphasis appears to be on the containment of union power and the recovery of what is regarded as lost ground.

Of longer run significance is the evolution of unionism in the United States toward function rather than toward social mission. More specifically the American union consensus has opted for partial unionism limited to economic interests rather than for unionism as a total way of

life. This tendency is underscored by the virtual disappearance of radical unionism as an important contender for power in the American labor movement. It is now well established that the primary function of the union is protection from the unbridled rule of management and from the insecurities generated by the employment relationship. It is the protective function of the union that is paramount, not the role of the labor movement as a contender for total power in the society. The average rank-and-filer and union leader at all levels is a bread-and-butter unionist. Now to be sure - and we shall say more about this later - the meaning of "bread and butter" has been enlarged. Wages, hours, and working conditions are defined differently in different situations and politics is a settled union function, but none of these really takes anything away from the acceptance of limited unionism.

So much for assumptions as to the industrial society. Now for some assumptions as to the relationship between leaders and followers in the industrial society. The administration of large groups necessarily requires the vesting of sizable authority in a relatively small subgroup to initiate and carry out policy quickly and decisively. This is an undeniable fact of group life. Everybody knows that when a group gets larger than ten or so it will shake down into a small active and a larger subgroup. When leadership is stabilized it will take on status perquisites in the style of behavior, in the mode of living, and in the sense of importance.

I have no serviceable standard to offer as to the substantive outcomes which union leadership should seek. Or to put it another way, I do not know how to handle the problem in any general way as to whether or not union leadership is optimumly (a) protecting the interests of its constituents, (b) negotiating competitive wage rates, or (c) showing a proper regard for consumer interests in avoiding inflation, etc.

The relevance of the remarks on unionism as function, on leadership dynamics, and on the substantive outcomes of collective bargaining is that I mean thereby to exclude them as grounds for criticism or praise and to accept them as given. It may be that this exclusion amounts to assuming the really critical problems of union leadership out of existence. I don't think that these are the critical problems and the limitations of this paper prevent me from detailing why I think so.

The most impressive quality of union leadership in the United States has been that it has resisted the great temptation to substitute the vision of the brave new world tomorrow for the tough task of winning a better working life for its members here and now. The approach has been pragmatic and experimental, not doctrinaire. At the same time there has emerged a large measure of social inventiveness and purpose rooted in the real problems confronting workers.

This resistance of American unionism to transcending ideologies has not impaired the power of the union in collective bargaining or in its role in the plant. No labor movement, whatever its doctrinal commitment, has on its own power exercised greater influence on the terms of employment.

A second source of strength has been the capacity of the labor

movement in the United States to yield up leadership for all levels of union policy making from its own ranks instead of having to rely on an extramural reservoir of politicians and wayfaring intellectuals. This is not meant as a testament to the superior stock from which American working people arise. Much of this capacity stems from forces rooted deeply in the history and culture of the nation, notably the availability of education and the egalitarian tendencies in American life that enable the worker to feel that he has both the ability and self-confidence to bargain with his employer.

The pragmatic bent of American trade union leadership has generated a flexibility in trade union strategy and tactics. Nowhere is this flexibility as evident as in the manner in which the unions oscillate between legislative enactment and collective bargaining in the pursuit of goals, particularly observable in recent times in the field of health insurance. With the avenue of legislative enactment closed - temporarily at least - union initiative has been responsible for the construction of a massive and fruitful system of health insurance via collective bargaining. But the route of legislative enactment has not been totally abandoned, at least for the health care of the retired worker. The diversity on such collective bargaining issues as escalator clauses, profit sharing, engineering methods in wage determination all indicate the willingness of union leadership to experiment.

The experimental character of union policy is being displayed currently in dealing with the problems of technological displacement. Emerging is an effusion of transitional devices designed to abate the harsher consequence of dislocation. Equally striking are the joint union-management mechanisms addressed to concrete problems in this area and the implementation of the traditional job rights concepts through employer payments in lieu of job rights.

The same flexibility is demonstrable in the union performance in politics. American unionism is, I think, emerging with a conception of its political role that is both realistic and responsible; realistic because political activities have a relationship to capabilities; responsible because the effective political goals go beyond parochial job interests and assert a serious union interest in the larger national and international community. This is not to say that leadership has bypassed self-interest politics but self-interest is moving away from the catch-as-catch-can of the wrestling ring.

The weaknesses in the union leadership performance have two wellsprings. What is a source of strength for one leadership purpose can become a source of weakness for another purpose. The stress on realistic and practical outcomes which has produced significant improvements in the worker's condition has, I think, also weakened the union leader's capacity to generalize and reflect in any competent way, at more than one remove from his immediate situation. With few exceptions he has difficulty finding a middle ground between self-serving congratulations or outrage on the one extreme and ponderous banalities on the other. Union leadership has almost no intellectually organized insight as to what it is doing and why. Nor is this regarded as a problem by union leaders.

There is, I hope, something more to this than a cry of anguish by an intellectual why labor leaders aren't more like intellectuals, nor is this a plea for a union ideology. What is involved here first is that to an unprecedented degree the purposes of trade unionism have to be made intelligible to a series of disinterested publics which, in general, accept but do not understand the function of unionism. Union leadership must take on this task of interpreting unionism from direct experience rather than leaving the field almost exclusively to the union-sympathetic or union-employed intellectual. Perhaps even more important, the capacity for generalized and reflective thinking is needed to assess the course of union policy in the new shape of industrial relations events alluded to earlier and to give perspective and direction to the membership. Unless I am seriously mistaken the time is fast passing when union leadership will be able to coast.

The second source of weakness is what may be called a lag between the reality of the union position in the society and the perceptions or images of that position which union leaders express. The conception of the union which union leaders characteristically voice is that of a fighting, submerged, underprivileged out-group seeking recognition and acceptance vis-a-vis the employer and the community. The union as reality - particularly the international union - seen in the effects of its collective bargaining, in its activities as an enterprise of substance, as an employer in its own right, and finally in its pathological manifestations of racketeering, cannot appropriately be jammed into a mold of primitive democracy. Now there may be some compatibility between image and reality forsome national unions and the image is, of course, an authentic representation of unionism of an extended period in past history. But this image when it goes beyond idle daydreaming can have unsettling consequences.

The perception of the union as a disadvantaged group underlies the belief in many circles that the ill fortune of the labor movement is attributable to a conspiracy of evil men. More specifically, the (probably) prevailing view is that the enactment of the Landrum-Griffin law was attributable to a fusion of hate-the-union elements headed by Senator McClellan and Senator Goldwater and "weak" liberals. There is undoubtedly an element of truth here. Senators McClellan and Goldwater are among the less enthusiastic partisans of unionism in the United States. And this is true of many of the people who voted for the Landrum-Griffin law. But McClellan and Goldwater were only catalytic agents. If one individual was responsible for the enactment of Landrum-Griffin it was Mr. James R. Hoffa, President of the International Brotherhood of Teamsters. This is not put as moral judgment, it is put as fact. The record and image made by Mr. Hoffa and his associates provided the indispensable leverage for the enactment of Landrum-Griffin. This sort of misguided animus against the legislators who voted for the law will get in the way of developing a viable legislative policy, of dealing with Mr. Hoffa, and most seriously, it will get in the way of correcting defects in internal union government.

There is another variation to the conspiracy theme - namely, that the media of public communications are engaged in a conspiracy to prevent the union case from being heard. What does a balanced judgment on this score reveal, if this is possible? There are indeed newspapers and

commentators who, as a matter of ideology, angle their labor stories against the union. But mainly the media err not in "class angling" the labor stories but in the prevailing news judgment which makes a union story newsworthy in a context of violence, conflict, and other sensationalism.

Operating on the conspiracy assumption many union leaders proceed (a) to proclaim the need for a massive public relations program to counter the influence of the "labor-hating" press, and (b) to justify the heavy-handed propaganda of their own labor press. Public relations is seen in the union scheme as it is seen generally as a kind of deodorant to cover up an otherwise bad odor or personal exploitation. The content of the union public relations program, with a few notable exceptions, turns on institutional self-praise, self-commendation, and the grossest kinds of puffery.

There is merit to the contention, I believe, that the best public relations approach to the charge of lack of democracy in unions is not an announcement that the union is awarding one hundred scholarships to deserving children of union members, or bequeathing an iron lung to a hospital. The scholarship program and the iron lung are each ends in their own right and should be undertaken for their own sakes. One public relations answer to a charge of lack of union democracy might be to open up the union journal to viewpoints other than that of the administration in power. In any case, the most potent public relations weapon which the union has is the way its members feel about the union. The multiplier effect of membership sentiment in the community has a power unmatched by any appropriation which a union could possibly command for a conventional public relations program.

The ingratitude of the rank and file is another piece of insulation by which union leadership on occasion seeks to protect itself from the hard facts. The theme runs something along these lines: the trouble is that the present crop of union members never had to go through the sacrifices and the deprivations in the building of a union. What they have today they have gotten without struggle and without the picket line, and thus value what they have less. The rank and file does not understand the role of the union in securing these benefits and attribute them to the beneficence of the employer.

There are several things wrong with the ingratitude theme. First, the worst way to get gratitude and appreciation is to ask for it. Second, it may be positively harmful because it obscures the real situation with a gloss of self-indulgent myth. Third, the real situation is that understanding of the union by the member must be attacked directly through concrete results and educational means. It will not come as a byproduct of gratitude. Fourth, the union leader has as a general rule not been treated badly by his constituency.

Then there is the union leader who has lived through the big organizing breakthrough of the late thirties and has enshrined this period (which at best did not last more than four years) as a model for the future. Many who have not lived through it have absorbed enough of the nostalgia to have experienced the big breakthrough vicariously. The big breakthrough motif expresses itself in fervent appeals for a reinvigor-

ation of union idealism and union commitment, a rededication to the sense of union mission.

The great upsurge of the thirties came from a labor movement that was emerging from a slough of despond, from a labor movement that was small in numbers, weak, and poor. It was the spokesman for the downtrodden. And the organizer was the great American hero. Circumstances have changed drastically. The labor movement is not weak, or at least most of it isn't weak. There are something on the order of 17 million members. The spirit of recommitment which stirred the movement in the 1930's can be reinduced only synthetically and therefore falsely, because the movement of the thirties is not the movement of the sixties. There are equally worthy and more authentic kinds of commitment that can be invoked in today's labor movement. This is in addition to the fact that the "rededication" appeal will not work today.

key

For many union officials the notion of the big breakthrough as a model for their future organizing activities has been a convenient excuse for doing nothing at all, since in the nature of events another big breakthrough of the magnitude of the late 1930's is out of the question for the short run future. The more realistic goal in the current turn of events is the slow, accumulative growth which would force them from idle daydreaming into action.

key

The most conspicuous consequence of the disparity between image and reality is to be found in the failure of trade union internal administration. An image of the union as primitive democracy will not produce ideas and practices of internal administration adequate for modern businesslike unionism. There probably are international unions that have a coherent personnel policy, but they have escaped my attention. This defect is most glaring in the staff and professional personnel; that is the representative, the professional researcher, educator, etc. For most unions the personnel policy with respect to this level of employment begins and ends with the review of expense accounts. Many unions have several hundred employees but I am not aware of any union which has a trained personnel administrator to deal with day-in-day-out problems of employment. The result is that these problems are dealt with by the political officers of the union on a political basis.

? and to what effect

My impression is that the staff employee of the union is at least a notch or two above the level of the comparable rank in private industry in the degree of commitment. But even this does not insulate him from the routine pressures of working for a living when the union has settled down to a necessarily routine existence.

It is the failure of top union administrators to recognize these vexations of working for a living - even working for a living within a union - that has been responsible for the outcropping of union staffers' unions. And I daresay that the problem of personnel administration in the union will not be dealt with by front office homilies on the blood, sweat, and tears that went into the making of the union. Here again the image of struggle may be valid for those who have lived through it but it is something less than meaningful to the employee of the "affluent union" for whom the struggle is of antiquarian interest only.

key?

The response of several top union executives who have been confronted with the threat of unionism on the part of staff is that such unions are immoral in terms of trade union morality. Well, maybe they are - or at least were - from where the union president sits. But union presidents, like other kinds of presidents, can hardly be expected to feel fully what it means to be a subordinate, particularly when the fields of combat have been converted into monuments.

We return to the theme which I keep repeating here; namely that a large union cannot eternally function as a mission. It can have elements of mission, but it must also function like a business enterprise. And in a business enterprise employees need some form of protection and it doesn't matter whether the managers of the enterprise are corporation executives, civil servants, or trade union presidents.

Except for the lawyer (and maybe the doctor in the health program), the average international union officer has little conception of professional status for the staff in education and research. Research and education have been politicalized; understandably and perhaps essentially when the union is a cause. But a union functioning as an enterprise needs to have a staff of independent, professionally competent personnel who should be immune from the political tugs and pulls of the union. Since most of the professionals in the unions are mission-oriented several have made themselves vulnerable to political treatment by taking sides with one faction as against another, either for or against the administration.

There are two reciprocal requirements for the professionalization of staff functions that do in fact require professional skills. The staff professional must conceive and execute his union role by professional standards, and relatedly the union principal to whom the professional is responsible must learn that the union performance will be improved if staff members of professional competence are used as professional instead of as chore boys. It is just conceivable that an acceptance of the autonomous professional status of research and education in the union - and this implies immunity from internal politics - will evoke a commensurately professional performance from the staff, that will strengthen the union in confronting the changed character of the times.

Except for a handful of unions the international union officers are innocent of any conception of the role of research in guiding policy. The function of research in most unions is not much more than servicing individual requests for information, or providing immediate "facts" to meet the bargining or debaters' needs of their principals. As a social scientist I am not prepared to say that social sciences have an undisputed body of fact that will yield clear answers for unions. I am prepared to say, though, that the research function of the union can be utilized to achieve a wider angle of policy vision for union leadership than it is now utilizing.

The union leader's conception of his role is that of a fireman putting out fires. There is little conception of the role as a fire <u>preventer</u> and the use of planned methods to help prevent fires. In large part this fireman's posture stems from external and internal

insecurity; his position vis-a-vis the employer is never quite so attack-proof that he can indulge himself in the luxury of reflection. Inside the union he is never quite so immune from internal harrassment that he can relax his guard.

The distinguishing essence of unionism in the United States is its concern with the protection of the worker's job, the improvement of his living standards, and the pursuit of ~~patic~~ public policies which will enhance these goals. The main line of the labor movement in the United States has never been a traditional socialist movement. It has no antagonism in principle to the enterprise system and the enterpriser. And indeed, the success and effectiveness of collective bargaining has been achieved by maintaining what, on the surface, seems a kind of paradoxical dichotomy. On the one hand, union principles have remained steadfast in their commitment to the idea there is a diversity of interest at the work site in which the role of the union is to protect the worker's side of that diversity. At the same time collective bargaining has worked because it has resulted in collective agreement with the employer. In short, diversity of interest and accommodation are parts of a process cycle in which one phases into the other.

Key

What I am leading up to by all of this is simply that the tone of a good deal of union propaganda - not the union performance - has a visceral, sophomoric, anti-business tone about it which, in my judgment, goes beyond the need of union leaders who operate in this style to make clear that they are not management stooges. This visceral anti-bossism, I believe, or at least I suspect, is one of the reasons why some union organizing efforts have not been as successful as they might have been - because it may have frightened some prospective union members who, if they have to judge as to who exercises greater power over them will invariably opt for the employer or at least against the union.

The quality of the union performance in two important bargaining areas - health and technology - will depend on the extent to which it is able to find collaborative instrumentalities with management. It is humanly difficult to maintain a collaborative relationship at the same time that you use your organs of public education to cuss out management as a class. Now, to be sure, the provocation is very great. Except for a few sports, managements have never publicly acknowledged the existence of the union in a constructive context, even where the relationship, in fact, has been constructive.

Relate most outlook & problems to union leadership

Key

Both unions and management can, I believe, profitably discard some of their juvenile postures without impairing their capacity to protect the interests in genuine conflict; and there are enough genuine interests in conflict without adding layers of irrelevant abuse and superfluous ideology.

Key

The performance of the union as a democratic institution is good in respect to the international union and extraordinary in the case of the local union. Having said this it is possible, I believe, to point out some shortcomings which are not beyond remedy. The concept of democracy which many union leaders have is one of busy-work participation and democracy as affirmation rather than of democracy as a process in which free give-and-take results in change. There are local union leaders

Key

who use participation as a cover for the condition that the membership does not, in fact, have anything important to say about the way the union is run. Participation does have byproducts and merits on its own in building a vital union, but these merits are not intrinsically related to democracy. The byproduct of participation is that participants tend to have a depper concern with issues than nonparticipants. To this extent participation is an aid to local union democracy. But participation can frustrate democracy by involving the membership in the pageantry of democracy without its substance.

The aspect of participation that receives the most attention from union leaders is attendance at membership meetings. But it is affirmation which leadership generally seeks at the membership meeting, not assessment and suggestion. Like the great breakthrough fixation, the failure to get wholesale attendance at union meeting is a good excuse for doing nothing at all about the member's involvement in the union. Candor requires recognition of the fact that the routine union meeting is a bore - just as all routine meetings are bores. They are all bores even though indispensable to the conduct of the organization's business; and only a handful of people can be expected to and do in fact involve themselves responsibly in routine. When critical issues are up the evidence indicates that there is substantial attendance at the union meeting.

The rank and file membership is smarter than the union leaders who keep droning away about membership meeting attendance as the excuse for all of their misfortunes. The membership resolutely resists all synthetic attempts to encourage attendance - door prizes, fines, beers, and shindigs in general - and if they had succeeded there is a serious question as to whether the membership meeting as an instrument of democratic government had not simply evolved into a social occasion, which would be fine for union conviviality but it is a mistake to confuse this with democracy.

The union member is loyal to the unio - there can be no question about that - but except for crisis it is for most union members a kind of disengaged loyalty. The union, as has been said, serves a function not a mission for the rank and file. And in principle this is to the good. The human purposes of a democracy are best served where there are no exclusive, monolithic loyalties. But it may be that the disengagement has gone too far and that union leadership must give sober reflection as to how the tie that binds a member to his union can be strengthened by a deeper understanding of the purposes of unionism in our time.

There are, for one thing, several noticeable lacks in the union member's understanding of his union. There is a feeling of insularity; for many a member his local is all there is to the union. Union citizenship, however, requires an understanding of the role of constitutional government in the local and of the role and function of the international and intermediate bodies. Secondly, it is also clear to me that the average union member does not have a clear understanding of the union's purposes in politics. This is not to say that he does not support the union in politics, but I think he does not understand the real needs of the union in politics and in legislation. As I have said on another NILE occasion, formal education instruction is not viable

for the average union member, nor can he be reached systematically by the union meeting. Other channels have to be found.

As to content I believe it is of primary importance that the union member understand his own union. The printed output of the labor movement in the United States is enormous but little of it is devoted to the fundamentals of unionism and to the plain facts about what the union is, how it spends its money, and how it governs itself. There are union leaders who become the idols of daily editorials and adult educators by sponsoring a wide range of programs on everything except how the union is run.

The first publication that a union needs above all others is a pamphlet on what might be called "union civics" or "union citizenship" - the kind of information about the union that the applicant for naturalization gets about his country. And if this kind of publication in union civics can be written without self-serving praise, without how this union is the best union in the world and these officers are the wisest officers in the world - not that this may not be true - all to the better.

I have noticed that opposition within a union will on occasion have an unsettling effect far out of proportion to the importance of the controversy. In large part this is due not so much to the cussedness of the leaders in office as it is to the absence of regular channels, short of an election campaign, through which criticism and opposition can express itself as a matter of course. The responsibility for maintaining civilized standards of controversy rests on both the in-leadership and the out-leadership. If every contest becomes a battle to the death it brutalizes the democratic process. In addition to making the official publications of the union available to conflicting views I think the labor movement will do well to explore further the kinds of grooves that can be cut in the normal structure of the union to admit the give-and-take of opinion within the union without making every controversy an explosive experience.

I predict only modest gains for the union if the leadership should take this kind of analysis seriously. I do not assert that the main quantitive tendencies in the development of the labor movement, let us say, since the enactment of Taft-Hartley would have been materially altered by changed perceptions and policies. But I do believe that the quality of the labor movement as a movement can be improved by sloughing off obsolete notions and forging a body of principles authentic to the union and to the times the union finds itself in. I have disparaged ideology but ideology is not the only form which intellectual commitments can take. There are principles, too, and as I see it the labor movement has now reached a stage where it must distill the essences of its experiences into principles - flexible principles to be sure - that are meaningful and provide some basis for moral cohesion and social insight.

December 1962

PROSPECTS FOR FUTURE UNION GROWTH

THE UNION LEADERSHIP FACTOR*

The sources of union growth are to be found in the economy. But even if the economic circumstances are propitious the actual process of union growth depends in part - not necessarily the largest part - on the quality of the union leadership performance. It is this union leadership component of the problem that is the focus here.

Union leadership, this appraisal runs, will have to come to grips with at least three main issues: (1) internal union administration; (2) union "responsibility"; and (3) union organizing. The plan is to discuss each of these main issues and to suggest some of the alternative directions which the leadership response could take.

Union Administration

A popular criticism - frequently voiced by union leaders themselves - is that the labor movement has lost the crusading spirit and its quality as a social movement. Much is said in union circles about the apathy of union members "who never had it so good;" and not having had to man the picket lines to achieve this state of affluence do not understand the meaning of a union. The need, it is said, is to recapture the spirit of the 1930's.

The 1930's did indeed experience a vast reshaping of the union scene. But the commitment which stirred the movement in the 1930's can be reinduced only synthetically, and therefore falsely, because the movement of the thirties is not the movement of the sixties.

The average union member probably has a pretty clear conception of what he wants from the union, and it can be put in a phrase: security from the absolute

*by Jack Barbash, Professor of Economics and Labor Education, University of Wisconsin, Industrial Relations Research Association, 15th Annual Meeting, Pittsburgh, Pennsylvania, December 28, 1962.

rule of management over wages, hours, and working conditions. His lack of "participation" in the routine activities of the union is not due to ignorance but to private concerns which he thinks are more important, and a general feeling that his union is doing adequately. In crisis he sheds these private concerns and comes to the aid of the union.

There are gaps in the member's perception of the union even from this functional standpoint from which he views the union. The most serious gaps are: (1) the failure to perceive the union as something more than the local union, and (2) an inadequate comprehension of the union's political function although he undoubtedly accepts it. The remedy which most union leaders think the situation calls for is exhortation - so they lecture their members in print and in person about their indifference, what a wonderful job they (the leaders, that is) are doing for them, and how politics are as important as bargaining. If exhortation had been the right remedy these problems would have been eliminated a long time ago; but they haven't, so exhortation is not the answer and the chances are that most exhortation hinders rather than helps.

I am not arguing here for the correctness of any special approach. But there is more than union folk-wisdom and fellow-feeling involved - indispensable as they are - in running the modern union, not only with respect to how the member feels about his union but with respect to the whole range of union administration.

The American international union has necessarily become an enterprise, and enterprise unavoidably enforces its own administrative logic on the underlying situation. The effect of this logic is to minimize the dependability of intuition as the exclusive path to policy making. This import of the union as enterprise is well understood in union circles when it comes to using technical skills in law, insurance, accounting, etc.; that is the skills necessary to comply with laws. But the use of objective professional skills in reaching creative policy conclusions in organizing, industry economics, internal union administration, and collective bargaining is for the overwhelming majority of

unions alien territory.

The social sciences do not have an undisputed body of fact that will yield clear answers for unions. But research can achieve a wider angle of policy vision for union leadership. This does not mean that control of the union must be turned over to professionals; it does mean that up-from-the-ranks union leadership must have the advantage of professional skills if it is to react to the altered industrial relations environment effectively. What is involved, in short, is the professionalization of their own skills and the wiser use of staff professionals.

Union Responsibility

The demand for "union responsibility" is nothing new in American industrial relations. In the earliest period union responsibility meant largely living up to agreements. Still later it meant concern with the employment effects of union policies. In the present period there has been an enlargement of the economic area over which union policy is said to have adverse effects - from the firm to the national economy to the international economy; and moreover, the criticism is now coming from friends of the union movement and not only from the traditional critics, the employer and the general economist. The common characteristic of the union responsibility theme in all periods is self-denial on the part of union leadership. The difference between then and now is due to the fact that unions are more important and the post-World War II economic boom has come to an end; some profess to see a causal relationship here.

The elements of the pessimistic climate against which union responsibility is asserted are well known and need only be stated here: (1) inadequate economic growth, (2) imbalance in the balance of payments, (3) the "cold war," (4) the "profit" squeeze, (5) the manpower flexibility demanded by changing technology, and until recently (6) wage-push inflation. The source of the demand for union responsibility determines the emphasis which each of these elements gets.

Business stresses the profit squeeze and its obverse, wage pressure on costs, and draws out the "featherbedding" implications of its need for flexibility in manpower utilization. The Kennedy Administration also is concerned with wages as costs but has emphasized growth, balance of payments, and cold war economics and pressures. The Eisenhower Administration and the economics profession have focused mostly on the inflationary consequences of union wage policy.

For the first time in a period of non-war the union responsibility issue is being raised by its friends and not alone by its standard critics. Moreover, specific solutions are being propounded. As the labor movement's friends formulate the challenge to union responsibility it might be put as then-Secretary of Labor Goldberg did:

> ". . . labor organizations, in formulating their wage and price policies and other policies, must now look beyond the counsel of their tradition and out into the broad fields of modern economic realities, both at home and abroad. A union has existed for the benefit of its members, and still must do so - but the policies to achieve that end must include both long-range and the immediate welfare. It may be fine to save a job but it may not be so fine if the precedent of that action endangers many other jobs over a period of time. . . .
>
> "The issues in labor-management affairs are far too complex, far too potent, and far too influential on the rest of society to be resolved on the old testing grounds of force and power. . . ." [1]

And instead of "the old testing grounds of force and power," Professor George W. Taylor urges "a substitution of analytical processes. . . if constructive decisions are to be evolved." [2]

The Kennedy Administration has intensified the challenge to union responsibility in several unprecedented ways. First, it has established "guidelines" [3], which, with all the hedging of the Council of Economic Advisers, represents the most explicit official definition of union responsibility which we have ever had short of the case-by-case regulation of a government agency in wartime. Second, the Kennedy Administration has been extraordinarily ingenious and persistent in substituting for the trials by ordeal and strike Dr. Taylor's "analytical

processes", in a variety of third party devices. Third, and most importantly, unlike many others who have charged the unions with responsibility, the Kennedy Administration has assumed a responsibility on its part to provide a public policy climate in which responsible collective bargaining can flourish, including extension of unemployment compensation benefits, depressed area legislation, and retraining programs. [4] Now, in all of this, the words indicate a management responsibility as well, but it is generally understood that the burden is primarily on the unions since they are in the posture of initiators.

The pressure of the times increasingly demands from union leadership a reflective judgment as to union responsibility. Hence, at this point I undertake to set out in summary form a sort of check-list of the grounds - favorable and unfavorable - on which a union position may conceivably rest.

First, the grounds which appear to argue against the idea of union responsibility as conventionally formulated:

(1) There are equally valid but potentially conflicting union responsibilities. (a) the most frequent formulation - union responsibility to the public interest; (b) union responsibility to the profitability of the enterprise; and (c) hardly ever formulated but critical to the union for its survival as an institution, the union's responsibility to its members. The explicit or implied view is that this last short-run, business unionism outlook of union leadership is likely to be at odds with its other responsibilities because it stresses immediate improvement to the exclusion of the "larger" view presumably expressed in (a) and (b).

(2) The content of union responsibility has been defined only in the vaguest terms. In this respect, however, the Kennedy Council of Economic Advisers, in contrast to previous CEA's, has moved from general admonition to admonition by guidelines.

(3) There is no conclusive relationship which economists will agree on between wage responsibility and general inflation. The large ground of

uncertainty that exists between, say, a wage policy - which is presumably what we want the unions to be responsible about - and the intended result, the avoidance of price inflation, raises a serious question as to the efficacy of the remedy. "The tragic fact is . . . that we have very little empirical foundations for our generalizations about the complicated interdependence of wages, productivity, profits and level of employment." [5]

(4) The exercise of union responsibility in this context runs afoul of other values which we want industrial relations to conform to, such as dispersion of bargaining power and the enlargement of union democracy. Union responsibility sets forces in motion in the contrary direction to centralized bargaining and weakening of local union influence.

(5) As a practical matter, a viable democracy cannot demand responsibilities unless it is prepared to reenforce this demand with corresponding rights. If you accept the social role of the union as an institution and therefore union leadership, you cannot ask him "to donate his interests . . . to a vague 'social good'" [6] without giving him some protection. (If you don't accept the role of the union it hardly seems relevant to ask it to be responsible.) In specific, this means that if you ask the union leader not to use economic power to reduce hours as a means of combatting unemployment he has a right to ask you to provide some effective measures of combatting unemployment - and we have not substantially ameliorated unemployment.

(6) Is it wise to expect the implementation of a critical public interest by "unguided, uncoordinated consciences of the chance leaders of the economic blocs?" [7] If we want to achieve a necessary public policy shouldn't this be achieved through public instrumentalities?

(7) Insofar as union responsibility is urged on grounds of curbing inflation isn't this the wrong battle? The issue now is not inflation but unemployment and underutilization of manpower.

What are the signs that favor union responsibility?

(1) Admittedly the economic answers are less than perfect. We cannot know for sure all of the facts relating to "the complicated interdependence of wages, productivity, profits and level of employment." The real question is not whether we have the last word, but do we have reasonable grounds. And certainly the Kennedy Administration can say that it does not start out with a predisposition against unions, so that its approach to union responsibility is not a piece of anti-union ideology.

(2) In a very real sense the "coercive evidence" in the form of plant shutdowns and relocation, automation displacements, and an almost continuous unemployment recession since 1957 is forcing the unions to be responsible. The coercive evidence has been an ever living presence for some unions (textiles, clothing) that they almost know no other way of economic life. In particular bargaining situations wage cuts and modification of work practices to favor management interests are frequent occurrences where the alternatives that the workers see are shut-down and plant removal.

There has been a tendency for the broad band of union leadership to face up to the possibility of self-denial at some removes short of disaster, and to do it on some planned, preconceived basis. What is arresting about this tendency is that it comes from unions that cannot be considered "soft" or classic models of labor statesmanship. For example: the West Coast longshore mechanization agreement. Note the early formulation of the problem by the ILWU caucus: "Do we want to stick with our present policy of guerrilla resistance or do we want to adopt a more flexible policy in order to buy specific benefits in return?" [8] The Armour Automation Committees with the meat-packing unions: a fact-finding and experimental approach involving third parties; the third-party devices in the steel industry to remove "certain problems from the crisis collective bargaining arena;" [9] the overtures of the Screen Actors Guild: suspension of wage increases for the next contract "to bring movie production back to Hollywood."

Union responsibility in the sense of the self-denying use of power is permeating the current strategy of the American unions as they respond to technological change. Outright obstruction is rare. In its place the unions and gradualist managements have worked out a series of accomodations based first on the "red-circling" principle, that is on leaving incumbents untouched; then to transition devices and collaborative mechanisms to ease displacement pains; and finally, to use the term revived by William Gomberg, the property rights approach which puts a reimbursable money value on the workers' rights affected by technology. [10]

The idea that unions and management can fruitfully explore the longer-run implications of their relationship on a "paracollective-bargaining" basis has long been a staple of Walter Reuther's philosophy. But the automobile managements rear back on every occasion that Reuther engages in a probing action on this issue; largely, one gathers, because the industry sees in these statements a variation on the "look at the books" theme. Soon after he succeeded Philip Murray as Steel Worker president, Mr. David J. McDonald enunciated a doctrine of "mutual trusteeship" which did not get beyond a series of joint plant visits by Mr. McDonald and Mr. Benjamin Fairless, Chairman of the U.S. Steel board.

(3) One of the ancestors of union responsibility is the classic "capital-labor cooperation" and "union-management cooperation." In both cases the weight of power for the establishment of such a scheme was on management side. It represented - whether the initiative came from management or the unions - an institutionalization of the union as an inferior partner in the determination of the employment relationship. The union became in these schemes a sort of administrative arm of management's personnel policy to lower unit production costs. Union responsibility today is rooted in firmer soil than in the past. It is founded in the first instance on the collective bargaining power of the union and not on the beneficence of the employer or on the self-acknowledged

inferiority of the union. If union acquiescence in union responsibility does not arise from inferiority, it does in this period arise from a weakened bargaining posture.

(4) The Kennedy Administration qualifies its union responsibility appeal. It goes beyond simple admonition but stops short of systematic regulation. As the Council of Economic Advisers puts it, the objective is the creation of "an atmosphere [my emphasis] in which the parties to such decisions will exercise their powers responsibly." [11] Union responsibility as used here is closer to psychology and politics as part of the "weaponry" of the cold war perhaps than to economics.

(5) If the Kennedy policy is viewed for what it is, there are grounds for believing that it has worked; that the unions have indeed, with steel as the archetypal example, held back on the full exercise of power, that unions have been impelled to exercise restraint.

(6) Unlike other counsels of restraint, the Kennedy policy has recognized the public's responsibility - not always effectuated, to be sure - by seeking to improve unemployment compensation, by developing programs to deal with automation displacement and retraining, and with depressed areas.

The Issue of Organizing

The no-union vote measured by NLRB representation elections or by valid votes cast has been higher within the last four years than it has ever been; or conversely that union vote is lower than it has ever been. [12] This may mean in part that those firms that are still unorganized are harder to organize and therefore the lower union batting average. However discounted, the record is not good.

On the optimistic side, to deal with the issue of inter-union rivalry the AFL-CIO has undertaken a coordinated "pilot organizing drive" in Los Angeles based on "cooperation from normally competing affiliates." [13] The

Industrial Union Department has sponsored similar programs.

There have been major organizing victories by affiliated unions among New York City teachers and New York State telephone employees. The Retail Clerks, the American Federation of Government Employees, and the American Federation of State, County, and Municipal Employees are in bouyant organizing situations - the latter two attributable to the upsurge of collective bargaining in public employment.

In general, however, the union attitude toward organizing is one of pessimism and the themes which recur in this pessimistic outlook may be summarized thus: (1) the lack of a genuine union will to organize - the possibility that Perlman's observation in the 1920's, "the psychology of a big majority of leaders today [is] a curious blending of defeatism with complacency," [14] is true for the 1950's and 1960's; (2) systematic anti-union militancy by management abetted by the "free speech" provisions of the Taft-Hartley law; (3) the management technique of providing the economic equivalent of unionism; (4) the difficulty in organizing small companies; (5) the indifference of the white collar worker; (6) inter-union rivalry.

There have been some scattered union attempts to be thoughtful about the organizing problem. Most of the self-questioning has been directed at the unions' performance in the white-collar and professional field. Does the feeling of separateness of the white-collar worker require special structural forms characterized by clear identification of the white-collar and professional character of the organizations? On the same count do the traditional union objections to merit rating and other individualistic work standards need to be reviewed?

The white-collar experience is causing some to reexamine traditional organizing appeals not only in relation to white-collar workers but in relation to unorganized workers generally. Are the appeals which worked in the evangelical days of unionism - the appeal to the "empty stomach" and the attacks

on profit-greedy employers - still effective in the "affluent" society, particularly since management is making an all-out effort to be admired by its employees and thus keep the union out? Does the long-run educational campaign have to replace the classic "blitz" campaign which is still the dominant image of the organizing process?

Still other questions are being asked about organizing techniques: has the day of the "outside" union organizer passed? Union executives responsible for organizing strategy are wondering whether an organizing campaign can succeed unless it is manned and carried through by authentic "insiders." There have been experiences in which the affiliated union has been able to win over to its side the leaders of the "independent" union, only to find that the leaders were deserted by their followers in the subsequent NLRB election.

Some are questioning the anti-business tone of union propaganda. Is its net effect to alienate new union recruits, who generally think their employer is more powerful than the union? Some unions have even gone so far as to use a formal survey technique to gauge the impact of propaganda on their prospects.

There has been an enormous union output of organizing manuals and organizing literature. Administratively, some unions have centralized organizing responsibility in a particular department and, as we have noted, the idea of "coordinated organizing" is frequently discussed. In a few instances preliminary starts have been made.

It is just possible that the failure to sustain new organizing at this juncture is not due to any defect in technique or conception at all; simply that the objective circumstances are proof against any effort. If the organizing issue is to be confronted candidly it will have to address itself to these problems, among others: (1) Organizing in the field is a young man's job. How do you get and train young men (and, very importantly, women) to subject themselves to the brutal regimen of the organizer, under the best of circumstances? (2) A continuing organizing effort requires a major long-run capital

investment before - if ever - the investment is recaptured. (3) Organizing as a function calls for skilled direction, systematic training of the organizing manpower, and the use of survey techniques.

In the past union leadership could function from a sense of outrage against injustice and be supported by a sympathetic Federal administration and by a sympathetic intellectual middle class. This situation was coupled with an optimistic assessment of the economy's ability to produce the essential improvements in the worker's situation.

The temper of the times has changed; the union is no longer regarded as underdog and so its excesses are not forgiven as readily. The economic atmosphere is pessimistic or at best uneven. The net effect is that outrage as the dominant mood of the union thrust must, I believe, be modified now to include analysis and reflection - and this is never an easy transition to make.

What is a source of strength for one leadership purpose can become a source of weakness for another purpose. The union leader's stress on realistic and practical outcomes which has produced significant improvements in the worker's condition has, I think, also weakened the union leader's capacity to generalize and reflect in any competent way at more than one remove from his immediate situation. With few exceptions he has difficulty finding a middle ground between self-serving congratulations or indignation on the one extreme and ponderous banalities on the other. Union leadership has almost no intellectually organized insight as to what it is doing and why. Nor is this regarded as a problem by union leaders.

I hope that this is not an anguished cry from an intellectual to labor leaders - why can't labor leaders be more like intellectuals - nor is this a plea for a union ideology or mystique. What <u>is</u> involved here first is a capacity for generalized and reflictive thinking which is needed to assess the course of union policy in the new shape of industrial relations events

and to give perspective and direction to the membership. Secondly, to an unprecedented degree the purposes of trade unionism have to be made intelligible to a series of disinterested publics (not altogether excluding union members) who, in general, accept but do not understand the function of unionism. Union leadership must take on this task of interpreting unionism from direct experience rather than leaving the field almost exclusively to the union-sympathetic or union-employed intellectual.

The inability of the union leader to move from outrage to analysis is not altogether - nor even in the largest part - due to an internal demon of his own making. The fact is, I believe, that except for a few sporting examples the management community has never publicly acknowledged the existence of the union in a constructive context, even where the relationship in fact has been constructive.

The public generally accepts the function of the union but it is a grudging, complaining acceptance. The sad thing about the criticism of the union in the community is not that criticism exists, but the poverty of the criticism. There is an underlying middle-class snobbishness in the public view of the union's place in the society that feeds the union outrage reaction. One day we will talk not only about the union's responsibility to the public but also about the public's responsibility to the union as an indispensable adjunct of our free society. [15]

Call for Volunteers

Nixon Plans to Foster Private-Group Attacks On Big Social Problems

Aides Advocate TV Appeals, A White House 'E' Award, Call Business' Role Basic

Following an FDR Example

By ALAN L. OTTEN
Staff Reporter of THE WALL STREET JOURNAL

WASHINGTON—Some things Richard Nixon hopes to make characteristic of American life during his Administration:

More companies offering after-hour reading and writing courses to their ill-schooled workers. More college students spending free time tutoring kids in nearby ghetto schools. More housewives shopping and cooking for elderly shut-ins. More business executives putting in extra hours to show Negroes how to run their own businesses.

These and scores of other grass-roots volunteer efforts will get a powerful White House push in coming months. Companies, trade associations, churches, unions, foundations, fraternal and service organizations, universities, PTAs and other community groups will be invited to help solve social problems, and ordinary individuals will be asked to act on their desires to make personal contributions toward a better America.

Inaugural Comments

"We are approaching the limits of what Government alone can do," Mr. Nixon said yesterday in his inaugural address. "Our greatest need now is to reach beyond Government, to enlist the legions of the concerned and the committed." He added that "to match the magnitude of our tasks, we need the energies of our people—enlisted not only in grand enterprises, but more importantly in those small, splendid efforts that make headlines in the neighborhood newspaper instead of the national journal." (See story on page 2.)

This determination to promote wider volunteer effort will, according to aides of the new President, show itself in these ways:

—Cabinet members will be directed to stress greater volunteer contributions in their special fields. Three already have shown enthusiasm for such efforts. Housing and Urban Development Secretary George Romney pushed a number of volunteer schemes as governor of Michigan; Health, Education and Welfare Secretary Robert Finch made the idea a major theme of his 1966 campaign for lieutenant governor of California and has co-authored a paperback urging wider volunteer effort; and Commerce Secretary Maurice Stans has indicated he is ready to push hard on business groups, which many experts think must make the biggest contribution of all.

—Mr. Nixon will plug the effort in television addresses and other appearances. He'll enlist the support of governors and mayors, business and civic leaders; invite groups to the White House to kick off new volunteer efforts and urge the mass media to publicize interesting volunteer projects. "Look what FDR did for the March of Dimes," one aide comments.

Role for a Computer

—A small White House office probably will be set up to stimulate the volunteer drive. It will serve as a computerized clearing-house, storing information on what volunteer groups are doing to cope with social problems in different parts of the country and feeding the facts to other areas where the solution can be copied or adapted.

—The President probably will set up some special reward—a periodic White House ceremony or a special insignia like the wartime E for excellent production—for individuals or organizations making an unusually large or imaginative contribution.

"The goal," says a Nixon adviser, "should be near-universal individual involvement in helping to solve the nation's pressing social problems."

One specific idea is to set up a youth volunteer agency that would combine the Peace Corps, the present Teacher Corps, a new Student teacher corps enlisting college and high-school students part-time, the VISTA slum-improvement workers and other youth service programs. Some Nixon men see high promise in getting big-city college faculty and students more deeply engaged in urban problems—by serving as think tanks to dream up solutions or working as interns in local government or tutoring slum children.

Enlisting Management Consultants

Some Nixonites also would like to get businesses to pool their efforts through trade associations. Management consulting firms might design and test a system to reduce hospital costs, they add, and defense and space contractors might agree to commit a small percentage of their research and development budgets to attacking social problems such as crime or drug addiction.

Individual and group volunteer work could be particularly helpful now, when Federal, state and local tax dollars for government-financed welfare programs are scarce. But the Nixon commitment to voluntary action seems more than a budget-balancing device. It fits Republican doctrine of trying to improve American society without big new government programs. It also fits Mr. Nixon's personal feeling—stemming, perhaps, from his Quaker background—that voluntary action is the traditional American way of solving problems, and that millions of Americans want to help but don't know how to go about it.

"I'm not sure why he believes in it so deeply," says one of Mr. Nixon's advisers. "But he does, and so does Romney, Finch and a lot of others. Two of the speechwriters—Ray Price and Jim Keogh—were writing about this long before they joined the campaign staff."

Broader citizen participation, indeed, is being urged not only by conservatives but by many liberals. They have concluded that one reason for frustration and unrest among intellectuals, young people and other Americans is that they have lost the sense of challenge and individual involvement in community problems.

The individual, said former Kennedy-Johnson speechwriter Richard Goodwin in a recent magazine article, must have a chance to "participate in the important enterprises of our society, from working in the underdeveloped world to improving the life of the ghettos. If citizens are to find a purpose beyond their daily lives, it will come from having a personal share in important public causes, and the causes must be large and worthy enough to tap moral will and energy."

Even the strongest advocates of voluntary action caution against exaggerating its potential. Says one Nixon man: "The thing about voluntary action is that it is voluntary—and that means you simply can't really do a very good job trying to channel and direct it."

Political attempts to encourage volunteer effort nevertheless have been increasing for some time. Many members of Congress have been adopting it in one form or another in their own proposals for meeting social problems; the late Robert Kennedy's program for rehabilitating the Bedford-Stuyvesant section of Brooklyn, for instance, involves considerable extra effort by businesses and private groups. The Johnson Administration bore down heavily on "wider involvement of the private business sector" in some of its efforts, such as the life insurance industry pledge to invest up to $1 billion in ghetto housing and factories.

Mr. Nixon has been talking about voluntary action in his campaign, too. There were important "volunteer" ingredients in his proposals on black capitalism and youth involvement, and one of his major radio addresses was devoted to "the voluntary way." In that talk Mr. Nixon estimated that there are more than one million volunteer organizations in America—churches, foundation, welfare agencies, fraternal and service organizations and the like. He then cited a Gallup Poll finding that 61 million adult Americans would be willing to contribute 245 million man-hours a week to voluntary activities.

A Pledge of Recognition

"In a Nixon Administration," he promised, "there will be a new measure of reliance on voluntary efforts, and a new level of official public recognition of their immense contribution to the betterment of life in America."

To make this pledge come true, Leonard Garment, a Nixon law partner who became a campaign adviser, has been assigned to study and think about volunteer activities. One of the 22 Nixon task forces set up after the election also was devoted to voluntary action. It was headed by Richard Cornuelle, a leading popularizer of the idea and co-author of the book with Mr. Finch.

The fifteen other task force members included such liberals as Mr. Goodwin and Irving Kristol, executive vice president of Basic Books Inc., along with National Association of Manufacturers Vice President Wright Elliott, Readers Digest Executive Committee Chairman Albert Cole, and Louis Nunez, executive director of Aspira, an agency that helps high school students of Puerto Rican extraction get into college.

The task force met early this month in New York with Secretaries Finch, Romney and Stans and White House urbanologist Daniel P. Moynihan. Though endorsing, with surprising unanimity, the idea of Government encouragement of volunteer effort, it split sharply over whether tax incentives should be offered to stimulate this activity.

The Cornuelle-Finch book argues for a wide range of stimulants such as tax credits and faster depreciation for business firms setting up plants in ghettos, unlimited deduction of charitable contributions by individuals, tax reductions for people who permit their land to be used for public recreation and special deductions for the value of time donated by old people working as volunteers on social projects. During the campaign, Mr. Nixon pledged a number of similar incentives.

But one task force member contends that "tax incentives are not voluntary action." He maintains that they use "traditional market mechanisms to achieve voluntary goals. Tax incentives tend not to work anyhow unless they're really massive, and then you have a huge revenue loss."

Actually, when the aficionados talk of voluntary action (or sometimes the independent sector) they're really talking of two different types of activity.

Business Projects

One type involves companies carrying on social projects in a normal or nearly-normal business capacity. Examples include building-materials makers experimenting with new types of low-cost slum rehabilitation, banks lending to Negro businesses on slightly easier than normal terms and employers training the hard-core unemployed for jobs with their own companies. Also included might be such an innovation as a Chrysler Corp. agreement to keep part of its funds in ghetto banks, so that the deposits can be used as the basis for loans to Negro-owned businesses.

The second major thrust would embrace a whole range of voluntary activities by nonbusiness groups, such as fraternal organizations or church auxiliaries or individuals. It also would include certain nonbusiness activities of businesses and businessmen: Young executives devoting one night a week to training Negro businessmen, or an industrial plant "adopting" a nearby ghetto school, or employers giving sparetime reading and writing courses to their ill-educated workers.

"We are talking both," a Nixon man asserts. "But certainly business involvement is basic. That is the place to start. They are organized, they're ready to go. You can reach the big guys, and it fans out to the smaller."

Lack of Negro Post-Graduates Laid to Job Gains

By Richard M. Cohen
Washington Post Staff Writer

A month ago David Reisman, author of "The Lonely Crowd" and a sociologist with a deep and sometimes critical interest in education, sat on a hotel couch here, shook his head back and forth and spoke softly and despondently about the dearth of black Americans in graduate schools.

Reisman blamed the situation partly on the efforts industry is making to recruit Negroes with college educations.

"The pressure on the black student is enormous," Reisman said. "He can get such a good job in industry. They take kids 24 years old and put them in charge of programs."

Now the Ford Foundation has completed a survey on the number of blacks in graduate school and the findings justify Reisman's pessimism.

Less than 2 per cent of the total enrollment in graduate schools of arts and sciences is black, the Foundation reported. And less than 1 per cent—0.78, to be precise—of all Ph.D.'s awarded went to blacks. Negroes comprise 11.5 per cent of the total population.

"Nothing less than massive, concerted and sustained efforts by the universities," wrote Fred E. Crossland, who directed the study for Ford's Office of Special Projects, "will bring about graduate enrollment parity for black Americans within a decade."

The Ford survey, which relied on estimates provided by administrators at 105 graduate schools of arts and sciences (most schools do not keep records on the racial composition of a class), found that while the total number of blacks receiving doctorates has increased, the percentage has not.

The lack of a positive trend—if anything, the percentage has slipped from a 1966-67 high of 0.83—has college administrators worried. They are worried because it comes in the face of an enormous increase in the number of blacks attending college in general.

There are now more than 400,000 black undergraduates. They represent about 6 per cent of the college population and their numbers have increased dramatically in the last two years alone. Based on projections made two years ago by the Census Bureau, there are now 100,000 more black students than anticipated. Clearly the recruiting efforts of predominantly white schools have begun to pay off.

But not in graduate school. And while several factors are involved, a principal reason is the very civil rights revolution that spurred the industry recruitment that Reisman mentioned.

"They're breaking their necks to get to these schools," an official of the College Placement Service said of industry's attempt to hire the graduates of Negro colleges. The Placement Service supported by the Ford Foundation, provides Negro colleges with career counseling.

But industry recruitment, at best, is only part of the story. "At various points along the line there are sieves," said Crossland in an interview. "The percentages change along the line. Of those who finish grammar school the black percentage in the school population may be down to 10. At the end of high school, the percentage may be 9. In college the percentage slips to about 5 and of college graduates not more than 3 per cent are black."

CHICAGO TRIBUNE JAN 18

Project Job Needs with New Method

Results of a new method of projecting occupational employment in the 1970s using research techniques have been reported by the Illinois State Employment Service.

The method was developed by the service in cooperation with William Himmelbauer of the graduate school of Business, University of Chicago.

For instance, in 1975, sizable decreases in the number of persons to be employed in agriculture, mining, construction, manufacturing, transportation, communications, and public utilities are forecast by the service based on their findings.

Training for Jobs

On the other hand, more jobs will be available in trade, finance, services, and public administration. In general, by 1975, the survey showed that jobs in which extensive and moderate amounts of training will increase and occupations requiring little or no training will decrease.

There will be a high employer demand in 1975 for workers in three occupational areas. Among the professional and technical jobs, the most acute shortages will be in the health field: Registered nurses, licensed practical nurses, medical laboratory technicians.

There will be more than 57,000 jobs for registered nurses in Illinois in 1975, reflecting the rapid growth and expansion of medical and health care in the last few years, the survey reported.

Clerical positions will increase more than 42 per cent by 1975. This includes typists, stenographers, secretaries, and office machine operators.

Jobs for 687,000

In the third category, service occupations, there will be jobs for 687,000 persons in Illinois. At least three jobs require vocational training in this area: Restaurant cooks, nurse and other hospital aids, and barbers and beauty operators.

As continuing research reveals an occupation is on the wane, Samuel C. Bernstein, employment security administrator of the I.S.E.S said, it should be systematically phased out of the curricula and new ones added to anticipate peak employer demand.

"There also must be greater penetration by vocational training into the inner city, where a major pool of future applicants for employment now lives and where the need for job training is greatest," Bernstein said.

Cleaning Jobs Scarce For Alexandria Group

By Maurine McLaughlin
Washington Post Staff Writer

The Alexandria branch of the Urban League is having trouble lining up jobs for participants in its program to train workers to run a cooperative cleaning service.

"Our most outstanding problem is selling our services," Ernest (Pete) Ward, branch director, said yesterday. "We have appealed to American Telephone & Telegraph Co. for some free expertise in how to develop the market and it is going to give us some advice."

The program, called SURGE, which stands for Services United for Responsible and Gainful Employment, got under way last July funded by $400,000 in Federal funds for a two-year period.

According to Ward, the objective is to curb "exploitation" of Northern Virginia domestic workers.

SURGE participants are trained in cleaning methods and guaranteed pay at the Federal minimum wage of $1.75 per hour for 40 hours a week plus free transportation and fringe benefits.

After being trained, they are bonded and sent out in pairs on cleaning jobs, which so far have been limited to Alexandria apartment houses.

At present not enough jobs have been found to keep the workers, all women, busy eight hours a day, Ward said. SURGE now has 18 workers, who put in about six hours a day, and seven other workers in training.

Earlier this month, Ward said, another problem was solved when the Urban League arranged to pay the workers itself. Previously they had been paid by the Virginia State Employment Commission, which administers the Federal funds, and complaints had arisen over delays in receiving pay checks.

Before the Federal grant expires, the League will help the workers form their own cooperative to take over the cleaning service. Persons who hire the service pay $7 a day and up depending on the size of the apartment to be cleaned.

CHRISTIAN SCIENCE MONITOR JAN 2

Job-training bill pushed

By the Associated Press

Washington

Rep. Charles E. Bennett (D) of Florida and 36 cosponsors have introduced a bill in the House providing tax credits to businesses that train hard-core unemployed.

BUILDING THE UNION

By William L. Abbott,
Education Director,
United Rubber Workers,
AFL-CIO, CLC

* Through individual needs
* Through social needs
* Through more effective thinking
* Through better communication

THE UNION MUST MEET CHANGING HUMAN NEEDS

"Working people do not hunger for the same things they did 25 years ago or even 15 years ago. We need to determine and evaluate present desires."

editorial in OCAW UNION NEWS

Modern students of the human personality show that the proper study of mankind is the whole man, many-faceted, complex, fascinating.

Let us follow the reasoning of A. H. Maslow, the motivational psychologist, who lists five fundamental human needs:

1. Physiological Needs. These are needs of the body. Examples: hunger, thirst, sex.

2. Safety Needs. These are the needs of survival. Examples: prevention of illness or injury.

3. Love Needs. These are the social needs. Examples: the need to belong, to find a place within the group, the need of friends, husband or wife.

4. Esteem Needs. Needs of the individual personality. Examples: self-respect, approval of others, achievement, recognition, freedom.

5. Self-actualization. Needs of the human spirit. Examples: justifying one's existence on earth, being the whole man, the best possible use of one's capabilities.

When a man satisfies his body needs, he moves on to attempt to satisfy his safety needs. He keeps moving up the scale of needs until he reaches the final need of "self-actualization" where he begins to really live and to develop his resources.

But each need must be met. Maslow says: "for the chronically and extremely hungry man, Utopia can be defined simply as a place where there is plenty of food. Life itself tends to be defined in terms of eating."

HOW THE UNION CAN MEET HUMAN NEEDS

Physiological Needs

In the 1880's Chicago doctors pronounced the average worker "dwarfed" because his diet was close to starvation. Unions meant food and later they meant meat on the table instead of mush.

Today, recreation is a mental and body need the union can satisfy through bowling, ball teams and other activities. There should be a Recreation Committee in the local union.

Safety Needs

Before the union children went to work dank mines or lint-loaded mills. They died an early death either through bad lungs or accidents. Union Safety Committees are changing all this. Too, union negotiated pension and hospitalization plans give members a vital form of protection.

The "union counsellor" can give union members advice on where to go to get help to solve their outside-the-plant problems. Thus, a Community Services Committee is fast becoming a necessity for a local union because of a changing need.

Social Needs

A social committee should do all it can to create a friendly atmosphere. A Ladies' Auxiliary can create a homey atmosphere by serving food and coffee after meetings and thinking up social events.

Why not a social room in the union hall where friends can meet and perhaps shoot a round of pool? Remember, the union hall can be used to show people on pension that the union has not forgotten them. The union should also show youth that it is looking their way. There should be a Pensioner's Club and a Youth Club.

Esteem Needs

The most important person in the union structure is the unpaid, unsung shop steward. He or she is the cord that binds the union together. Stewards should be honored at least once a year with a banquet to let them know the union appreciates their dedicated efforts.

A "steward of the month" feature in the local union paper would help greatly. Members who are outstanding in some field of endeavor should be written up and recognized. The local union

should also try to encourage its members to take part in community activities to give labor in general more recognition. A Public Relations Committee and a Fair Practices Committee can do much to satisfy these needs.

Self-actualization Needs

Are union goals sharply enough defined to convince members that they are fighting for a just and worth-while cause? An Education Committee can not only define goals but can arrange education programs and even art exhibits, for why not show off the talents of the membership?

Will success spoil the union by so changing the needs of members that unionism will have little meaning for them?

An increasing need is what to do with one's spare time? Moonlight? The union usually frowns upon such an activity. But could not the union promote hobbies and new interests which could substitute for moonlighting?

Many of the new needs of the modern worker are leisure time needs and to quite a few workers this has become a problem. According to Dr. A. R. Martin, chairman of the American Psychiatric Association's Committee on Leisure, free time can bring about low morale, feelings of guilt about wasting time, anxiety, depression, and even suicidal tendencies.

Relate to type of industry

If the union negotiates shorter hours and longer vacations, it has a responsibility to seriously consider the leisure time problem it and automation are creating.

Sociologists David Riesman and Warner Bloomburg, Jr., asked: "Are we coming to an era when workers have all the housing they care for and can no longer pour their energies into home-building? When possessions no longer lure them, when travel palls?

The new era is not far-distant according to British scientist Arthur C. Clarke: "There are no routine, noncreative activities of the human mind which cannot be carried out by suitably designed machines." He said that electronics will "ultimately separate men from their jobs."

Can the union rise to the challenge? As the need for self-actualization looms larger every year, unions must increase education, recreation, community services, and other programs. If unions cling to their old job-centered ways, they could well lose out to organizations equipped to satisfy the real and changed needs of workers.

Yet, what a future for unionism if it does change its orientation. Unions could play an important role in developing the whole man and they could give his life purpose and direction.

THE UNION AS A VITAL GROUP

In a discussion of "Trade Unions in the Welfare State as Seen by Their Members," M. Van De Vall, University of Utrecht, Netherlands, said, "the structure of the union members' needs is undergoing a change; there is less desire for all-around improvement than for individual advantages." He said the labor movement was "having difficulty adopting itself to these changing needs."

Youth saw the union in terms of individual needs and the image of the union was becoming blurred because the government was taking over so many welfare functions which were formerly identified as union goals. Whether the welfare state be Dutch or American the problem for unions is universal.

Unionism may well be on the downgrade if we do not heed Professor Van De Vall's suggestion: "the only effective solution would be to make union activities once more a part of the daily experience of the individual worker."

This is why the study of the union as a group becomes so important.

THE NATURE OF GROUPS

A group consists of interacting individuals who share activities, goals, values, beliefs, and patterns of action. They have common motives.

Why do people join groups? According to Hubert Bonner, author of "Group Dynamics," some people join groups to influence, lead or persuade others. Also, "being a social animal, man derives satisfaction from belongingness as such."

A survey of New England rubber workers, for example, showed a high number of union leaders drawn into activity because they wanted to influence the local (change its policies) or because of their social milieu. (They became active because of their family, friends or union social activities.)

Another reason why people join groups is that there is no other way to perform certain activities without a group. There would be no effective way to protest an injustice in the plant, for example, other than being a member of a union.

The group fulfills needs of the individual such as self-actualization, self-expression, recognition for individual abilities and skills.

The individual gives up a certain amount of his freedom when he accepts the "group norm." He adheres to the standards of the group. For example, in a work situation a "rate-buster" deviates from the group standards and is ostracized.

Groups are organized into a "functional hierarchy." People have roles to play. There is the expediter, the harmonizer, the dominator. What counts is the contribution of the member toward the achievement of the group goal.

Groups are also "ethnocentric"; there is a homogeneity about the members of the group which keeps them together. They are an "in-group" rejecting the "out-group." In a factory situation the union would be the workers' in-group while the foreman would be a member of the out-group. Because of the nature of the roles worker and foreman play, there is little physical distance between them, but much "social distance" often separates them.

MAINTAINING GROUP SOLIDARITY

Group solidarity is built through the following mechanisms:

1. Shared Norms. Certain standards of behavior are expected by members of the union. Those who violate the norms are expelled or punished in some way.

2. Morale. The identification of yourself with the cause of other people, a feeling of belonging together. The French term "esprit de corps" suggests a group mystique which gives its members the strength to persevere even in the face of impending calamity. It is the emotional involvement of a person in the group's goals, a team spirit.

3. Good Leadership. A leader both controls his group and is controlled by it. According to Bonner it is "the interaction between the total personality of the leader and the dynamic social situation in which he has his being." He is out in front but not too much so.

   An effective leader perceives group goals and functions and he devises ways of getting the group to its goal. He has more insight into the problem than others and he initiates more action than others to work the problem out. He must, however, share his activity with the group.

4. Group Attractiveness. The more attractive the group is to its members, the better its solidarity.

5. Effective Communication. The better the communication, the more cohesive the group. Why communication

6. Visible Goals. There must be some reason for the existence of a group. This is the existence of goals and the group is cohesive and dynamic in the relation to the clarity of the goals.

Group disruption is caused by the following factors:

1. Factionalism. Bitter factions with back-stabbing and intense intra-group hostility both divides and tends to paralyze a local union.

2. Giving Vent to Your Aggressions. Gossip, scapegoating, blaming others for your own faults are all divisive tactics in a group.

3. Escape from the Problem. If the problem seems tough, you run away from it instead of trying to solve it.

4. Disorganization. The group's morale breaks up when every member starts blaming every other member for the group's failures. The communication system breaks down. People feel isolated. This could be accompanied by a mass paranoia where members feel that everyone everywhere is "the enemy."

BUILDING THE UNION

Psychologist John Frederick Dashiell put the matter this way: "It can be fairly said that the problem of problems in the motivating of human beings is in the establishment and maintaining of morale."

Morale is the central union problem of today.

Remember, a union is still primarily a voluntary organization. The International Representative, the Business Agent, the President may be paid full time, but generally this is about all. One man cannot run a local union; it takes many people and many minds.

How is the local going to motivate the unpaid shop steward, the member of the committee, the unpaid officer? These people are the heart of the union; if the heart stops beating, the organism dies.

Dashiell examines morale which moves people into action. Good morale enables them to expend a greater amount of energy in more tenacious ways. Such ways are both more constructive and more concerted and they are reinforced by an emotional condition called "zest" or "hope" or "confidence."

Good physical health, confidence that one's cause is just, recreation, and "idealizing" one's cause are key elements in good morale.

The union member must know the goals of the union and have confidence in these goals, the union, and the leadership.

Here are some necessary steps for unions to take:

1. Have the Executive Board sit down at least once a year for a think session to redefine the goals of the union. Does the membership want different things? Has their attitude changed? What new goals has the international union developed to help the local? Is the leadership communicating new goals to the members?

2. Plan a short-range and a long-range program. The way to build confidence is to know yourself where you are going and to let others know you know where you are going.

3. Consider the disruptive facets in your local. The Education Committee, for example, can plan programs to help members creatively solve problems instead of running away from them.

4. Make members feel they are playing on the team instead of sitting on the bench. Good leadership delegates responsibility. Nothing is more demoralizing than an officer who tells an enthusiastic member, "No, we don't want you to try to do this thing." Such a statement creates inactive and even antagonistic members. If the thing the member wants to do will truly hurt the group, he can be tactfully steered into more socially-approved activity.

5. Idealize the union cause through programs which teach the history, goals, and traditions of labor and the local union.

   (a) Conduct a new member program. Historical films provide interesting content. Give each member a brief book on the history of labor and one on the history of the local.

   (b) Make the initiation of the new member a dignified one.

   (c) Talk up new labor and social ideas in the shop. Use your union paper, newsletter, and pamphlets.

   (d) See that the schools in your community teach children something about labor's history. Offer to provide schools and public libraries with union publications. Offer to speak to school classes. The Education Committee can undertake this activity.

   (e) Speak up. The image we want to create is an idealistic force doing battle for social justice, equality, and democracy. You don't fight by lying down and playing dead when attacked. When unions, when the poor, the oppressed, the unfortunate are under attack, the union must fight back through statements, letters, radio programs, literature, speeches to community groups, and, best of all, by offering positive programs.

6. Build the union through activities.

   Activity breeds activity. For want of a better name we shall call this principle "activism." A local which is alive has activity to offer its members.

   Another principle is that every member does not have the same interests. Therefore, a good local varies its activities to attract more members.

AFL-CIO's Community Services Activities illustrates the fact that people who never displayed any particular leadership in the union suddenly blossomed out into good leaders when it came to helping people with their outside-the-plant problems.

Many modern labor thinkers believe that non-job-related activities will supplant what are today called "bread-and-butter activities." The local union of tomorrow will be paying much more attention to community services, recreation, and education.

Creating more activities therefore becomes vital if the union is to have any meaning for the member. This is what Professor Van De Vall undoubtedly meant when he said union activities had to be made part of the worker's daily life experience.

Union activities should include handling on-the-job problems (Grievance Committees, stewards' meetings), general union problems (Education Committees), social and recreation problems (Recreation Committees), political and legislative problems (COPE or New Democratic Party in Canada), and internal and external communications (Public Relations and Community Services Committees).

HOW WE THINK

A California trade school says it "socially engineers" its graduates so they become "custom built men guaranteed to have the right attitudes from the employer's standpoint."

Would-be manipulators of the human mind, using modern psychological techniques, claim they can tell people what to like, what to think, and what to believe.

Time Magazine quoted Curtiss R. Schafer of Norden-Ketay Corp., who explored the future of biocontrol:

"The ultimate achievement of biocontrol may be the control of man himself... The controlled subjects would never be permitted to think as individuals. A few months after birth, a surgeon would equip each child with a socket mounted under the scalp and electrodes reaching selected areas of brain tissue... The child's sensory perceptions and muscular activity could either be modified or completely controlled by bioelectric signals radiating from state controlled transmitters."

Already, thought manipulators are starting to influence little children. "Children are living, talking records of what we tell them everyday," according to TV star Herb Sheldon.

Vance Packard wrote an authoritative book on the "Hidden Persuaders" operating below our level of consciousness. Ice cream ads were flashed upon a cinema screen, too brief for the audience to recognize them, but long enough to be absorbed subconsciously. The ads increased ice cream sales.

We think not only consciously but subconsciously through our prejudices and emotions. At a still more primeval level we think through instinct of which we are not even aware.

We can be fooled: A 14¢ item in a supermarket wasn't selling. Two were then offered for the "bargain price" of 29¢. Sales immediately went up.

People often react emotionally and compulsively in making political decisions. The "switch voter," according to one specialist, "switches for some snotty little reason such as not liking the candidate's wife."

WHY WE DON'T ALWAYS THINK RATIONALLY

Generalizing

Walter Lippmann said, "the attempt to see all things freshly and in detail rather than as types or generalities is exhausting." We cannot rationally analyze every person we meet or every situation in which we find ourselves placed.

We generalize or type or stereotype. We fit people into convenient mental slots. We often take a single trait in a person we see and then generalize this one trait into a stereotype.

We preconceive things: we imagine things before we actually see them. Very few have ever met an Eskimo but we all have an Eskimo stereotype in mind.

We pick our leaders this way. We cannot intelligently analyze all the candidates on a long ballot. We are asked to choose a Congressman, a state assemblyman, a state and county treasurer, a judge to the Supreme Court, a municipal judge, a coroner, an auditor, a sheriff, a county supervisor. How to choose? If we are Democrats, the tendency is to make up for any shortcomings the Democratic candidate may have by use of the "halo effect." We ascribe to this person all the attributes we feel a good candidate should have simply because of one trait - his political label. For all the Democrats knew, or cared, the Republican may have had superior personal qualities.

Symbols

We therefore think as an artist does when he wants to paint a picture. We use symbols which we paint on our mind as an artist applies symbols to the canvas.

Symbols unite people. Language is a collection of word symbols. We become united with others when we identify with a symbol like "American," "Christian" or "union." The social thinker Harold D. Lasswell calls this "multiple identification."

Take the problem of being a "Canadian." Multiple identification, Lasswell says, is "the inclusion of persons within a field of reference who are beyond the face to face experience of any one person." This would include the dead heroes who built Canada.

Canada speaks both English and French, and French-speaking Canadians feel they have been discriminated against. They wish to reassert themselves and their culture. Now they have to make a value judgment as to where their primary loyalty lies: in being an integrated Canadian first or a separate French-Canadian first?

Citizens of the state of Mississippi have a similar value judgment to make: Is Mississippi or the United States most important to them when the two loyalties come into conflict?

Values

"Most human endeavors are guided not by learned motives, but by learned values," says psychologist George A. Miller. Our values move us to action.

Miller says we are constantly being put into situations where we have to make a choice. We like to smoke, but we know it is not healthy for us to do so. Which is our greatest value? Money is important, but on occasion we may blow it all on something which, at the time, seems more important.

When the AFL-CIO expelled a number of unions for questionable practices, it tried to spell out a value system to help guide unionists in their everyday decisions. Is unionism a business or a social cause? The way unionists answer this question generally determines how they behave, how they conduct their affairs in the union, and even how they vote politically.

Notice the use of symbols in describing two different types of unionism.

Try out on the groups if level seems sufficient

"Business" can connote "efficiency," "respectability," "practicality," "success with money" or it can connote "amorality," "lack of understanding of people," "anti-democracy," "no idealism."

"Social" can connote "wild-eyed visionary," "radical agitator," "un-American," "fuzzy-brained egghead" or it can connote "people before profits," "a man with a warm heart and clear vision," "doing what's best for humanity."

You interpret these symbols through your own system of values.

Cultural Lag

A cultural lag is horse and buggy thinking in a space age.

Are unionists guilty of such a lag? In former times the employer, local, state, and federal government, the courts, the army, and public opinion whipped into hysteria by the press were all against unions. The union was like a fort bristling with guns pointed toward the surrounding woods. Men entered and exited through a secret tunnel.

This is the image many unionists still bear in their minds although the union has changed perceptibly in the last thirty years.

AFL-CIO Community Services Activities, to use a single example, has changed a hostile community into a community acceptance of labor playing a large role in health and welfare services. Before World War II there were less than 100 unionists on health and welfare boards across the land; today there are over 75,000.

Community Services shows how an a priori concept, an idea in this case, largely conceived by Leo Perlis, the present director of the program, can modify and even change the thinking of a major institution.

Community Services rejects the idea of Fortress Labor preaching social integration instead of class war.

A Priori and A Posteriori Ideas

The CIO was largely an a priori idea. In February, 1936, when an often-defeated, ragged band of rubber workers challenged the largest rubber company in the world - Goodyear - they reasoned from a general proposition, a priori, that they would win a struggle against impossible odds. Every previous "fact" said they would lose. Reason said they would lose. Too, these workers believed in industrial unionism although the idea had failed in mass production industries like steel.

The rubber workers were supported by a myth which became more powerful than the reality of no union. This was the "Myth of the Invincible Working Class," a myth which carried them to victory against tremendous odds and opened the floodgates of unionism to auto, steel, textile, and other workers who were struggling to build industrial unions.

A myth, said Alfred McClung Lee, in his book on propaganda, is "a stereotype of a cherished value usually based upon hope or fear."

The French social philosopher Georges Sorel, who advocated creating the myth of the Invincible Working Class, believed intuition played a strong role in man's thinking and therefore his destiny.

One word of caution. Myths often lose their usefulness. Today, ultra-conservatives are using the myth of the Invincible Working Class to attempt to pass restrictive legislation against unions. If workers are "invincible," then society must protect itself from them. And if workers still believe they are "invincible," they are guilty of a cultural lag and will not take steps to update their thinking.

The AFL is an example of a posteriori thinking. This is reasoning from a series of facts to a conclusion.

Samuel Gompers observed that the labor unions of his day were crushed because of their visionary idealism and their utopian political activities. He crossed such doings off his list.

What worked then? The craft system for one thing. Men of the same craft had a mutual goal and cohesiveness which gave them strength. Gompers watched craft unions in action and from their success drew a conclusion of putting them under one big tent called the American Federation of Labor.

Sensation, Perception, and Conception

Much of our knowledge comes from sensation. We feel that water is wet. Then we perceive that water is wet without having to feel it. We finally order or arrange our minds into a coordination of perceptions so that we can conceive of water everywhere, at all times, being wet.

A labor leader, for example, may be buffeted about from crisis to crisis in his local union. All grievances against the company, all gripes against other union members come to him. He is swamped. He feels he and the local union are getting nowhere. He feels uneasy, anxious.

Then he perceives the trouble. The steward body is weak. Stewards don't know what they're supposed to do. There is no delegation of responsibility to the other officers.

He conceptualizes his perception into a new administrative system. Complaints about the union are brought to the Executive Board. He involves them in thinking out ways to build a better union. He holds a training program for stewards so that they can better handle grievances.

The Syllogism

A syllogism has a major premise, a minor premise, and on the basis of both reaches a conclusion. This is how we think deductively. However, if a premise is wrong, the conclusion can also be wrong and therefore we have a false syllogism. Too, premises can be right and the conclusion wrong.

Dave Beck was a labor leader.
Dave Beck went to jail.
Therefore, all labor leaders should go to jail.

There is no logical conclusion drawn from either premise. This is an example of sloppy thinking. For example, the Right Wing uses this line of reasoning to try to abolish the income tax.

Karl Marx favored the income tax.
President Kennedy favors the income tax.
Therefore, both the income tax and J. F. K. are Marxist.

Morality

Is there such a thing as labor union morality. With AFL-CIO's expulsion of unions charged with unethical practices, with AFL's expulsion of alleged racketeers and CIO's expulsion of unions charged with following the Communist Party line, labor is making an attempt to define union morality.

Those who put personal gain or totalitarian ideologies above the interests of those they are supposed to represent are unfit to remain in good standing in the fraternity of labor. The fast buck or subservience to the policies of another nation have no place in labor.

A labor philosopher, Frank Tannenbaum, said a union has a "moral adhesion." Whereas the corporation "gave men no faith to live by and no credo they would die for..." The union, he said, "has attracted to itself the blind loyalty of men for more than a hundred years."

Thus the union becomes a quasi-spiritual entity because its moral adhesion commands loyalty of its members. This is the union's superiority over management and its very reason to exist. The Knights of Labor had a slogan: "An injury to one is the concern of all." We have empathy for our fellow worker; we suffer when he suffers. This binds us together in a large human bond of kinship.

Union morality also implies an answer to the philosophy of laissez-faire where every man is left free to pursue his own interest and somehow, according to the dogma, such self-interest will benefit society as a whole.

The doctrine of laissez-faire left the average person theoretically free but helpless. It destroyed his family and older patterns of society which took care of the aged, the infirm, the unemployed. Now, nobody cared. Thousands died in debtors' prison, slums grew up without sanitary facilities, men, women, and children led hopeless lives of "wage slavery." Children worked in the dark mines facing an early bitter death.

Labor's great contribution to American morality was to challenge the doctrine of laissez-faire. Society had a responsibility to those down on their luck, to the weak and helpless. Employers had a responsibility to their employees.

But if this is labor's moral role, then don't well-off American and Canadian workers have a moral responsibility to the weak and helpless all over the world? Should they not have a world-wide ideology? Hasn't the workers' "community" become the entire world?

HOW WE COMMUNICATE

Man is a social animal. He does not live in a vacuum. What we are, what we do is the result of communication between other people and ourselves.

Five factors are involved in communication:

1. The communicator
2. The communicant
3. The intended effect on the communicant
4. The content of the communcation
5. The effect achieved.

If, for example, the local union wishes to tell the employer the membership is solidly behind its wage demands, the content would carry weight if a strike vote resulted in an overwhelming majority of members first taking the trouble to vote and then voting to strike if necessary.

But what effect would have been achieved if the union made bombastic demands and refused to take a strike vote? Undoubtedly the opposite of the effect intended would have occurred.

THE PROCESS OF COMMUNICATION

We communicate three ways: (a) through written and spoken language, (b) through the para-linguistic aspects of the spoken language - rhythm, stress, pitch, etc., (c) through physical movements such as the smile and the frown.

Observe what happens when Mr. Smith talks to Mr. Jones:

1. An event occurs to stimulate Mr. Smith's senses.

2. Nervous impulses travel to his brain.

3. He begins to translate these feelings by arranging them in accustomed verbal patterns. He selects or abstracts.

4. Through sound and light waves Smith now communicates to Jones.

5. This stimulates the senses of Jones who repeats the same process.

But does Smith really communicate to Jones? How does Jones receive the message?

Smith must select the best possible words to express himself and he should know something about the communicant - Jones.

If Smith is a unionist and Jones is a member of the general public, he does not use the same words to describe a dispute with management that he might use with a fellow unionist.

The word "fight" in union circles means taking a complaint against management to arbitration if necessary. To a nonunionist the first image that enters his mind when he hears the word "fight" is a strike.

IS ANYBODY LISTENING?

Fortune Magazine once ran an article called "Is Anybody Listening?" The article was highly critical of management's communication system and it wondered out loud whether or not management officials were only talking to themselves.

Labor, by use of anachronistic symbols, often speaks only to itself. A youth entering the union in the 1960's simply does not have the same symbols or "frame of reference" as the unionist of the 1930's.

Worse, too many local unions do not even try to communicate with their own members let alone the general public.

There should be a new members program to acquaint new members with the traditions and programs of the union.

John D. House, URW Assistant Education Director, has developed a kit for new members which local unions can use. There should also be special educational meetings to which all new members are personally invited by the President.

There should be a Public Relations Committee to work with the press, radio, and TV and to provide speakers for community groups. An attack upon a labor or progressive viewpoint should be immediately answered by a letter to the editor.

There is no reason why city central labor bodies can't have a "Speak Up for the Union Day" in which teachers, clergymen, students, and members of the general public are invited to a brief but interesting program on labor's viewpoints.

Of course, nobody will listen if you don't speak up.

Good communication is helped by personal involvement. Don't be exclusive. The more people you can include in union

projects, the better your communication channels. Why not involve liberal-minded students in union political action programs? Why not housewives? Who does the work in political campaigns, after all?

CHANNELS OF COMMUNICATION

A major union problem is the breakdown of communications. There is a breakdown of communcation between membership and leadership when only from 1 per cent to 5 per cent of the members attend union meetings. This is typical of the large or medium-sized local union.

There is a breakdown of communications between unions and the public, for according to UAW news commentator Guy Nunn the majority of Americans support most of the causes unions favor but they show "a high degree of fear, animosity or distaste for trade unions."

Once the local union identifies or perceives this problem, it should develop a communications concept. What are then the channels of communication?

1. The Steward Body. Communication specialists agree that the higher degree of "personalism" communication contains, the more effective it is.

   Nothing beats personal contact. The steward scattered throughout the plant is the ideal communication network.

   Also, a good steward should be an "opinion leader." The members presumably have picked him to lead them in their union thinking.

   It is, therefore, of prime importance to keep stewards informed about all policy matters and to allow for a feedback to gain the following flow of information:

   officers - steward - members - steward - officers.

   Communication is a two-way street and it is important the higher union echelons have their finger on the pulse of the members at all times.

   Special steward's meetings or steward's newsletters are methods of keeping the stewards informed.

2. The General Meeting. A direct way of personal communication between members and leadership is the union meeting.

Good physical surroundings help attract members to meetings. Pay attention to the size of the hall. It could have a demoralizing effect if a few scattered people rattle around in a huge hall.

Is the atmosphere informal? Does the member feel free to speak up? A simple device of putting seats in a semi-circle and seating the chairman on the same level as the members may make the members feel more at home. A social hour after the meeting helps to break down barriers between members.

Has the chairman planned the meeting? Does he have an agenda? Will the meeting start and end on time?

Does the chairman have command of some parliamentary procedure? Are there rules, for example, like a time limit on speakers so that meetings will not become boring and drawn out?

Are the officers sensitive to the needs of the members? For example, personal grievances, unless an appeal is being made to the membership, should be taken up elsewhere. Dull subjects should be ommitted if possible. The Education Committee could be used to plan interesting meetings.

3. The Written Word. Wouldn't a new member feel much better about the union if he received a letter of welcome from the President? If the union sent a special letter to a member's house, just the novelty of the act would tend to make him read it.

   A number of local unions have printed newspapers or mimeographed newsletters. This is a method of carrying the union message.

   Because the quality of what is said in the written word is important, the local union should select an editor who has an interest in writing and send him to University training programs in journalism and good writing.

   What you say and how you say it is much more important than the quality of the paper your message is printed upon.

4. Mass Media. It is not uncommon for newspaper editors to complain that while labor denounces them, labor has never offered to work with them by supplying news or background material.

You may dislike the editorial policies of the newspaper but most of the time you will get a fair shake in the news stories. Remember that a reporter is himself a workingman. But also, a reporter cannot be an expert on every field he covers. He needs help and the local union can give him the help he needs by keeping him informed about union policies and opinions.

A simple device of getting your opinions to the public is the letter-to-the-editor column. It's free and it is well read. A good letter is better than buying a half-page ad.

Only AFL-CIO and the UAW have radio programs. But live wire publicity or Education Committees can get free radio and TV time by notifying mass media of an event like an education program in their local union.

100 ACTIVE UNIONISTS LIST 20 DIFFERENT MOTIVATIONS

One hundred active unionists from all over the United States* gave 20 different reasons for their initial participation in union activity. These were URW leaders attending one of three 1963 Legislative Institutes in Washington, D. C. They were asked to write down their reasons for becoming active in the union.

The most frequent reason given (32) was outrage over some injustice in the plant.

Twenty-three were influenced by their family and eight by their friends. Two became active because of their political ideology; two were dissatisfied with local union policies and became active to change them.

Two persons were motivated by abstract idealism; eight said they wanted to improve general working conditions; four found themselves suddenly elected stewards; one was a former businessman reacting against business, but another wanted to better labor-management relations via union work.

One said becoming active in the union was an obligation of citizenship and another said "unions mean democracy" and this is what motivated him. Two remembered the depression and

---

* The states included Alabama, California, Colorado, Connecticut, Delaware, Indiana, Iowa, Maryland, Missouri, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, and Tennessee.

wanted to create a full-employment society, and three said they just wanted to do something and the union was the handiest group around. One said he needed to be a member of a group and another said he wanted a voice and the union gave it to him.

In the order of general importance the primary motivations are (1) Getting mad over an injustice, (2) Family influence, (3) Idealism of one sort or another, (4) The need to belong to a group and to express oneself.

But if injustices decrease, and they must as the union keeps improving both the contract and the policing of it, unions must stress idealism and self-expression much more than they have in the past if they are to attract active members. This could be a matter of life or death.

LEADERSHIP AND MEMBERSHIP IN LOCAL UNIONS*

This is a trial run of a scale of leadership influence in the local union. The values on the scale begin with strong individual leadership on one end, fusing into successively weaker expression of leadership influence. The scale has two main segments: individual leadership and collective leadership. The raw material for the leadership values along the scale is derived from part of the sizable stock of local union case studies. Words like "scale" and "values" are used in a figurative meaning; there is no intent to suggest mathematical preciseness.

This paper is part of a general discussion dealing with the inter-relationships between public and private programs in the regulation of internal affairs of unions. My justification for discussing a topic that seems to be at several removes from this theme is that, I think, we need to know more than we do about prevailing private practice before we can sensibly talk about the public interest. As it is, this paper goes only part of the way in prevailing practice because it deals only with prevailing democratic practice.

I have been able to identify six main points of reference along the leadership scale: (1) the charismatic leader; (2) the ideological leader; (3) the leader as power "operator"; (4) the administrative leader; (5) collective leadership of one kind or another; (6) effective control by the membership.

The Charismatic Leader

The charismatic leader literally leads in a creative, imaginative way. By temperament he seeks the new because it is new and minimizes the old because it is old. He thinks in broad scope and magnitude. He is public relations-minded. He thinks in terms of plan and program.

We have undoubtedly an authentic charismatic leader in the man identified by Neufeld as the "business manager" of Local 3 of the International Brotherhood of Electrical Workers in New York City.[1] It is generally known that the "business manager" is Harry Van Arsdale. "The most important single force within the administrative life of the union is the personality, human sympathy, historical perception, philosophy and energy" of the business manager of Local 3. Under the business manager's leadership the local has grown from 7,000 to more than 30,000 members.

The core of the local's interest is, to be sure, the classic job control of the craft union but with the difference in Local 3 that job control has been given new dimensions. Van Arsdale has created the "welfare union" which is breathtaking even in a simple listing: death benefits, pensions, disability pensions, supplemental pensions, hospitalization and surgery, serious injury benefit, tool and work clothes replacement benefit, convalescent home benefit, scholarship benefit, a dental benefit, diagnostic and preventive services, a loan fund, housing projects, vacation expenses. "Yet," Fortune Magazine comments, "the industry seems to manage the burden." Contractors themselves have been beneficiaries of the welfare union. A surplus in the administrative fund of the welfare plan was spent for a $10,000 life insurance policy for two principals of each of the 600 member firms and for assessments of the New York State Disability Fund which are usually borne by the employers.

Charles Yale Harrison has said about Van Arsdale, "There are gaps in the man, in the human sense, but he is still basically a rank-and-filer. He thinks

*Presented by Jack Barbash, Professor of Labor Education, University of Wisconsin, Spring Meeting, Industrial Relations Research Association, Boston, May 2, 1959.

like his men and reacts like them, but with greater acuteness. He has the dedication of a crackpot, but he is enormously sane."[2]

The local meetings of Local 3 are, according to Harrison, "unbelievable . . . . There are long debates from the floor, with every man who has something to say getting his chance, items in the treasurer's report being challenged: '$600 for postage, that's a lot of money Brother Chairman, why can't we send postcards?'" It was "democracy carried almost to the point of tedium."

Van Arsdale "administers efficiently and often in a consciously ingenuous manner. His methods are controlled and tight. He surrounds these devices, however, with a democratic spirit of friendliness, openness, and genuine interest in individuals. The breat of freedom within the administration of Local 3 is, therefore, partly illusory and partly real."[3]

Another highly creative local union leader has been Harold Gibbons, director of the St. Louis Joint Council of Teamsters and currently executive vice-president under James Hoffa. Gibbons' base is the several locals of retail, wholesale and warehouse workers in St. Louis. His Labor Health Institute has been regarded as a pioneer and model of superior health care financed by a negotiated health and welfare plan.

Arnold Rose observes that "in December 1945 Gibbons received the CIO award for carrying out a no-discrimination policy. Among the activities for which the union received this award were (1) engaging in interracial sports in St. Louis's largest public park, thereby establishing a precedent which led to general use of the park's sports facilities by Negroes; (2) holding interracial banquets and balls in some St. Louis hotels, leading to a no-discrimination policy in at least one of them; (3) employing Negro office girls; (4) putting no-discrimination clauses into contracts with employers; (5) standing firm against wildcat strikes called to protest the up-grading of Negroes."[4]

When Rose asked a sample of the membership who they thought decides policies in the union 20% said the union's director - that is, Gibbons - 39% said the steward's council, 30% said the rank and file members, and 10% answered they didn't know. Under Gibbons' leadership the union has developed ambitious programs in education, in small group organizations and in community and political participation. The general concensus was that Gibbons was the most powerful labor leader in the city of St. Louis.

A New Republic article on Gibbons reports that he earns $15,000 a year as secretary-treasurer of his home local, including expense account. There has been criticism of Gibbons' "high living". His critics think Gibbons is "power mad" and Gibbons himself says, "Sure, I like authority - because it lets me get things done."[5] Subsequent to the Rose study Gibbons was a specific subject of a McClellan Committee investigation.[6]

Tannenbaum and Kahn describe another sort of charismatic leader.[7] The "Sergeant" local has 850 members and a long, militant history. At one of the regular union meetings of the local

> "strong sentiment had been mobilized . . . for strike action in order to obtain desired concessions from management. The proponents of this view had spoken vigorously, and the attending members expressed agreement with their ideas. There was an obvious majority in favor of strike preparations. Opposition was relatively weak and came mostly from some of the local offiers, who cautioned the members against rash action. Their appeal,

however, was ineffectual. Finally, the president arose. He expounded in simple, eloquent and forceful terms the need for the members to stand behind the bargaining committee. The bargaining committee, he felt, could get exactly what they wanted without striking. Furthermore the strike action advocated by some of the members would ensnare the union in some of the technicalities of the Taft-Hartley law. A ten-minute speech - listened to with great attention by the members - turned the tide and a voice vote completely supported the president's view."

The Ideological Leader

Further along the scale of personal leadership is the ideological leader. The ideology need not be, and is increasingly not, cast in the traditional Marxist mold. It is ideological in the sense that the leader has a conscious commitment to a large view of society, of labor-management relations or of the role of the union. The ideological leader has much in common with the charismatic leader in his disposition to move out ahead of the membership. But the ideological leader differs from the charismatic leader in that his reference for action is likely to be a well-thought out philosophy. Where the charismatic leader moves on the basis of intuition, the ideological leader moves on the basis of the larger view of the situation. Like the charismatic leader, he believes that it is the function of the leader to lead, and to lead vigorously.

The National Planning Association study of the relationship between the Hickey-Freeman Company and the Amalgamated Clothing Workers of America in Rochester provides us with an insight into one of these ideological leaders.[8] The leader here is Abraham Chatman, manager of the Rochester Joint Board of the Amalgamated Clothing Workers. (The "ideological" label is mine, not the NPA's.)

Hillman's philosophy of union-management cooperation has provided the foundation stone of Chatman's approach to the problems of the Rochester men's clothing market. The Amalgamated organization in Rochester is strong and Chatman's position as Joint Board manager is "unchallenged". In the opinion of workers, company executives and union officers Chatman "has retained his position through genuine popularity. . . . While many of the workers are aware that the leadership of their organization appears to be self-perpetuating, almost all vehemently asserted that this was the democratic expression of the membership and that no one, not even Abraham Chatman, could hold his office without rank and file approval."

What are the ingredients of the ideology in operation here? Essentially it can be characterized by what has come to be known as the Amalgamated's "industry" point of view. Union decisions nationally and locally are based on the health of the whole industry "rather than on temporary or local opportunities to gain a concession." The decisions may at times run counter to the sentiments of the rank and file "such as moderation in wage demands when costs are soaring, or strict adherence to a contract when, in the opinion of the workers, a strike or slowdown has been justified. And again the question must be raised: could a truly democratic organization maintain such a logical and reasoned course and still retain its effective unity? The answer here seems to be 'yes' and the reason is this: over the years the philosophy that only what is good for the industry can, in the long run, be good for the workers, has become thoroughly accepted by the membership."

Chatman's characteristic method of operation is illustrated by excerpts from the minutes of the Joint Board. For example: "Last week a group of pressers from Hickey-Freeman requested the office to secure an increase in wages for them. The manager informed them that such a move at the present

time is impossible; however, when the time comes that it will be possible to secure increases in wages, it will be done for all members in general, and not for any individual group."

Or at another meeting, "Brother Chatman stated that because time and one half for overtime [this was in 1936] cannot be enforced in other union markets at the present time, due to uncontrollable causes, he proposed that we follow the procedure in other markets. He urged the Joint Board to be on guard and under these circumstances, not place this market at a disadvantage with other clothing centers because in the long run our membership pays the price for it. The Joint Board adopted the recommendation."

The ideological leader as exemplified in Chatman, much like the charismatic leader, is concerned with effective identification and participation by the union member with his union. To this end he will press for better attendance at union meetings, involvement - not only in the local union but in the larger labor movement as well. Educational and welfare functions of the union have a high priority on the program agenda.

The "Operator"

The leader as "operator" is acutely conscious of what is required to remain in power and of the methods and tactics through which this is achieved. He tends to assess a situation both on its merits and the implication of the situation for the balance of power forces. He puts a good deal of stock in his ability to keep things from getting out of hand in the local union and to contain rival claimants for position and prestige who might by comparison reflect unfavorably on him.

The Rosens have provided many insights into this role of the leader as operator.[9] They base their observations on a study of 21 business agents on the staff of a regional union organization with about 40,000 workers "from many manufacturing crafts, and at all levels of skill." As the business agent sees his role, it is "to represent his constituency, not passively, but in an active way by molding their behavior and beliefs and by actually initiating bargaining issues and selling them to the membership. . . . [He] makes it explicit that 'bread and butter' membership demands cannot determine completely the union's operations in collective bargaining.

"There is little place in his scheme of things for a short-sighted view born of emotion rather than of logic. . . . The business agent recognizes that he must be sensitive to the demands of his membership, but he has faith in his power to shape many of these demands along appropriate lines." He is conscious of the need "to have his finger on the pulse of the rank and file and to know not only what they want but how badly they want it." Since he can't see the rank and file personally he builds up the shop stewards and the bargaining committee as channels of communication. The Rosens "frequently heard . . . such comments as these: 'You have to explain and teach (and often select) the stewards and committeemen so they will keep you informed and support you with the rank and file.'" But "conspicuous by its absence, however, is any mention of the stewards' or committeemen's active part in negotiations per se. Actually, in most cases, the bargaining committee plays only a supporting role.

"If the committee attempts to dominate the situation, pursuing its own interests or the specific demands of the membership, its action meets with strong disapproval from the business agents. Moreover, the business agents make quite a point of 'control of committee and stewards' in evaluating the competence of their fellow agents. The poor agent, in their eyes, is one who 'lets the committee get out of hand - loses control.'"

Another example of the leader with a strong sense of power awareness is the business agent of a Laborers' local in "Illini City." "Although the union met once a month and many issues were discussed, the business agent's recommendations were generally followed. His attitude was well typified by a statement that he wasn't one for letting one of his boys question his authority. It was either he or the steward (talking about a jurisdictional problem) and if he called a decision, the steward had better live up to it. . . . 'It's the case of him or me - one of us goes down the road. If I'm right, as long as I'm business agent, that's that. If I happen to be wrong, then I have to let somebody else take my job.' In negotiations, the business agent usually worked by himself, without a committee, but all agreements were voted on by the membership."/10] The business agent in question had held office for 14 years except for 2½ years when he was in prison.

A contractor whom the business agent dealt with sized him up like this: "You know it takes a certain type of man who is able to keep a bunch like that under control - especially when the union has men who aren't working. If there are 100 men out of work and an order comes in for 6 men, the 94 he doesn't send out will all hate him."

Or another "operator" type in "Illini City," this time the business agent of a Painters' local, who expressed himself as follows: "'My men will do what I tell them. I don't order them either. I sell my men. A lot of business agents don't operate that way but I do. I sell my men on everything before I do it. I explain to them point by point what we ought to do and why. I don't give them orders, I give them reasons and I don't have trouble with them either. They will listen to me. That is part of my job, selling my men on the best deal. If you can't do that then you have got trouble. I don't know, maybe if I wasn't so independent I could be an international man but taking a lot of that guff is too much for me.'"/11]

Although the contract provides for grievance machinery it's the union business agent who makes the "basic interpretation of the contract." A member talked about the business agent's power in these terms.

> "'Now [the business agent] he is honest. He won't spend money wrong nor has he kept any himself. He runs everything legal and he's honest, but the way I look at it there is just too much power and authority there for one man. It was voted to him - he came by it legal - but it's wrong I think. Well, here is where it is wrong. You take the assistant business agent - he's the president of the union - and he's appointed as assistant business agent by [the business agent]. Then there's the girl in the office - she's appointed by [the business agent]. Why, they are both appointed by [the business agent]. He has the power to hire and fire them or to hire and fire whomever else he wants. The next election I would like to see the rank and file vote on it. By God, that's just what the companies used to do. I think that all should rest in the rank and file.'"/12]

When the question of having a committee take an active part in the negotiations came up, the business agent opposed it and was successful in persuading the majority of the membership to vote down the use of a committee. But as one member put it, "We do vote on everything for final action and it isn't all his way."/13]

The Administrative Leader

The impulse of the local union leader to act on his own power is further diminished, but by no means eliminated, in the "administrative" leader. His primary orientation is the job at hand. For example, the business agent in the construction industry is intrinsically a one-man job. Now the building trades business agent may view his dominant role as a power operator or as an administrator, and perhaps a combination of both. Here I am trying to distinguish the local union leader who, while accomodating himself to the one-man character of his job, seems to orient himself more toward the membership rather than to his personal drive for control and power.

George Strauss has studied building trades business agents in 13 unions in a community of 400,000. He draws none of these distinctions or generalizations; nevertheless if I read him correctly, it is possible to infer this validly from Strauss' account.[14]

> ". . . . The most secure business agents, politically, are those who campaign 12 months a year. Their contacts with members on the job and at meetings serve the dual purpose of revealing what the members want and of advertising the effectiveness of their own leadership."
>
> ". . . . The business agent can satisfy only a few of the demands made upon him. In self-defense against these pressures he has two alternatives. The first is to establish a set, formal system of distributing job opportunities and other advantages. (This is often called 'going by the book' and corresponds to the formalized system of considering grievances utilized in some industrial unions.) The second alternative is to engage in out-and-out favoritism, to give the best plums to your friends, and to leave the crumbs for the rank and file. This is possible only when the agent has already strongly solidified his control of the union and has little fear of being kicked out. None of the business agents studied enjoyed such power."

Strauss concludes "that the locals in this community were democratic, to the extent that the business agents were forced to be responsive to the desires of the members - with defeat looming if they were not. The degree of membership participation and interest was higher than is common in industrial unions of the same size." He hypothesizes that "the effectiveness of the membership controls was to some extent a function of the local's small size and cohesiveness."

That the size of the community need not be a determining factor in the exercise of membership control is suggested in the Seidman group's study of a Plumbers' local "in one of the metropolitan centers in the Middle West," with a membership of about 4,000 journeymen and 400 apprentices. Seidman singles out the following comments from the rank and file concerning this Plumbers' business manager.[15]

> "We have a good organization now. We have democracy here. You can get up and speak without fear of reprisal. And that's always done. I've known steamfitters who had to leave the city because they became marked men who spoke against the leadership. This couldn't happen in our union. He [the business manager] is a different kind of fellow compared to what we had in the old days. . . . He believes in running the union with brains not brawn. . . . He cleaned up the union a long way from what it used to be.

"We all got a voice now; we can say what we like. It's not like the old days. If a guy tried to argue back with the leaders in those days, he'd get conked on the head with a spittoon. We didn't know how the money was spent and when you'd ask you'd more than likely get a beating in the alley behind the hall. Now it's not like that; we have our arguments and disagreements, but we discuss it and after it's decided we're all friends again."

Collective Leadership

When we get to the category which I have designated as collective leadership we reach a major division point. Instead of the individual leader as the prime mover in the local union, we now observe leadership by a collectivity within the union. This is not to say that one leader may not be more important than other leaders but the leverage for the exercise of power and influence comes from a group rather than an individual. Joint consent and participation of the leadership group is the dominant leadership characteristic here.

The tie that binds the collective leadership may be derived from common status interests as members of (a) full-time paid leadership, (b) strategic bargaining group, (c) ethnic kinship, (d) union old-timers, (e) high-wage and skill group, (f) constitutionally authorized group. Finally, the leadership group may be bound together because nobody else wants the job.

Ky

The interest of the full-time paid leadership group in preserving its position against inroads by the volunteer shop leadership is what holds together the 21 business agents in a midwest joint board.*

". . . . The local unions have formal autonomy on purely local matters and, in this union, shop bodies have the final say on shop matters such as contract negotiations. (Shops and locals usually are not coterminous, and shop matters, therefore, cannot be a local union concern.) . . . . It is the business agent assigned to the local or shop who makes recommendations to the unit and meets dissenting remarks or requests for clarification that come off the floor. Usually his recommendations are not solely as a result of his own thinking however. They tend to be either based upon established joint board policy (formal or informal) or to have been brought up at the business agents' staff meetings for discussion and decision in cases where policy is not clear. . . . The [business agents] group tends to reject any possible solutions to problems that would increase the authority of non-paid union officials even though a rejection of an alternative on this basis may have other undesirable effects."[16]

The influence of a key, strategically situated group within a larger group is another form which collective leadership takes. Local 3 of the IBEW is a case in point. Here we saw earlier the "charismatic" role of a union leader, but the power base of this union leader is derived from a key group of electrical construction journeymen in the local. As Neufeld observes, "All of the less skilled crafts and trades within Local 3 owe their organization, economic and social welfare, continued existence, and consequently, their administrative life to the power and good will of the electrical construction workers who have repeatedly voted special assessments upon themselves to aid their weaker brothers. These top craftsmen, in turn, give their undivided allegiance to their business manager when the votes are cast."[17]

---

*This is apparently the group that is discussed on Page 4 in connection with the leaders as "operators," but I think the same group in this instance can properly be used to illustrate two dominant tendencies in leadership style.

Consciousness of ethnic kinship forms the basis of collective leadership in several locals investigated by Sayles and Strauss. "One local has been the scene of a seesaw battle between Italians and Irish." A needle trades local "was the scene of a long-term struggle between Jews and Italians."/18]

Where the leadership does not come from a dominant ethnic group it may continue in power only so long as it maintains a balance of support among dominant ethnic groups. "In two situations, rival ethnic groups were of equal strength. . . . The local president was elected from the small minority of Anglo-Saxons. In each case the president's most difficult task was to avoid charges of favoritism by one group or another."/19]

Collective leadership is frequently exercised by the high skill group not so much as a result of a will to leadership by these groups as from the natural dynamics of the local union situation which tends to push the skilled groups to the fore./20]

Thus far we have been discussing extra-constitutional (not unconstitutional) factors in the location of power. There are local union situations, however, in which the reality of power conforms to where the local union constitution has actually vested power, most typically in an executive board, the bargaining committee and the stewards although local circumstances are likely to weight power in the direction of one group of leaders.

In a study of a Buffalo UAW local Shister and Hamovitch observe that power over job problems is located in the president and the shop committee rather than the stewards. But "this power cannot be exercised without restraint. There are real and important limitations on the use of this power, for these reasons: (1) the factionalism in the organization; (2) the active interest in union affairs displayed by the membership - witness the relatively high attendance at union meetings."/21]

The constitutional allocation of authority seemed to be the real thing in the 200-member Illini City electricians where "the active membership . . . had a strong voice in the organization. Committees were appointed by the President rather than by the business agent. Bargaining and grievance sessions of a general nature were conducted by committees rather than by a single individual." A comparable situation prevailed in the Illini City carpenters./22]

At the farthest end of the scale of leadership we encounter the situation in which the leadership situation is fluid and where the mass of the membership effectively carries out its end of the democratic bargain. "There seemed to be considerable evidence[in Illini City Garment Workers situation] that almost anyone [with a few exceptions] who wished to be a leader in the local could fulfill this desire. . . . A case in point is that of a worker who was fired after eight weeks at her first job in a garment factory. She was reinstated through the efforts of the union, and one week after her reinstatement she was elected steward and a member of the union's executive board."/23]

Another highly fluid leadership situation is reported in the Textile Workers' Union local in the American Velvet Company where the investigator found that "the membership is entirely responsible for actions of the union." There is constant turnover in the leadership not so much because of dissatisfaction but because "it is time to give someone else a chance." There have been eight presidents of the local in 13 years.

Membership meetings are well attended and lively, even after the "achievement of good employment conditions." The leadership is "intelligently questioned," and management proposals are subject to detailed debate.[24]

The seven local unions functioning in the Nashua Gummed and Coated Paper Company is another instance of where the "real locus of power . . . is in the membership." The membership exercises influence at various stages in the bargaining process: in drafting proposals, in instructing the bargaining committee and in the final approval of the contract. During protracted negotiations there are likely to be additional meetings. Officers and grievance committeemen are changed frequently, in one local by deliberate rotation. Membership attendance at meetings is average "yet on issues which affect the members more directly, such as approval of a proposed new contract, the membership attendance is greater" than 50%.

There was general agreement that membership participation in these locals was "important and that it did not have the 'rubber stamp' quality found in some other groups." On several occasions the membership rejected tentative settlements and the negotiators were directed to "go back for more."[25]

A similar situation seems to obtain in the United Steelworkers' local in the Lapointe Machine Tool Company where "the union's governmental processes are democratic in nature. There is ample opportunity for the expression of majority will and deep respect for the rights and opinions of the critical individual. These opportunities do not go by default. Members vote heavily on important issues and in elections for union offices, and many of them take a willing and active part in administering the union's day-to-day business. By all tests, local 3536 meets the standards of a democratic society."[26]

Concluding Thoughts

The aim here has been to lay out along a scale types of power interaction between leaders and members in the local union. Obviously these are not hard and fast types. In a real sense any given leader or group of leaders are likely to show all of these leadership qualities. The only claim that is made for this scale is that it seeks to locate the single most important quality.

All of the major points along the scale are consistent with the idea of democracy in the local union because, in everyone of these situations insofar as one can tell from the reports of first hand investigations, the ultimate sovereignty is effectively exercised by the membership.

There are two grounds for holding that all of the leadership values along the scale are consistent with democracy in the local union. First, reputable investigators studying the local situations at first hand have said they were democratic. Second, independent of such characterizations and relying on what we have in the way of facts in the accounts cited here, it is possible to say that these varying leadership styles are consistent with the theory of democracy.

This last brings us to the nature of democracy. The most penetrating analysis of the nature of democracy, I think, is that of the British political scientist, A. D. Lindsay in a most illuminating passage in The Modern Democratic State. Lindsay is writing here, to be sure, about the democratic state but it seems to me that his analysis is just as applicable to the democratic union.

"Democracy," Lindsay says, "is not, properly speaking, government by the people. For the people, if we mean by that as we ought to mean, all the members of society in all their multifarious relations, cannot govern.

"Government involves power and organization, administration, and decision. Even a small public meeting cannot administer or organize. It can only express approval or disapproval of the persons who govern or of their general proposals. . . .

"It is essential to any sound democracy to recognize what part the ordinary public can take in the government of a state and what it cannot. Experience has shown abundantly that, if in the name of democracy you ask the ordinary member of the public to do more than he can or will in fact do, the result is a sham. We must, therefore, distinguish between the various processes by which the government of a country is kept responsible to public opinion from the highly technical and specialized processes of government itself."[27]

The local union situations that we have examined here have shown differences in the "technical and specialized processes" of union government. These differences turn on (with some exceptions) whether the locus of power is in the business agent or his equivalent, or in the working plant leadership. For most union situations there is little choice as to which it will be because, as Kennedy has so perceptively analyzed the problem,

"the key role of the business agent in nonfactory unions is the product of all the employment and market factors which we have attempted to sum up in the term, 'nonfactory.' These conditions demand that a local union of any size have one or more full-time, salaried employees working out of the union office, performing a very wide range of functions, and exercising broad powers. By the same token, nonfactory employment conditions militate against the maintenance of an effective shop steward type of representation at the work level. The number of union members at each place of employment is usually quite small and the rate of turnover among them relatively high. The stratified management hierarchy which helps support a steward system in many factory situations is largely absent. Most of the crucial union business is conducted from the union office and is in the hands of the business agent. In the absence of large numbers in concentrated work groups needing frequent representation at the work level it is difficult to keep an effective steward system alive."[28]

The circumstances under which leadership must function in the nonfactory union tend to minimize shared power. The circumstances of factory unionism maximizes shared power.

There is room, however, for wide variations within the individual leadership segment and within the collective leadership segment. And in some instances we have seen the impact of "cultural lag" on union leadership - that is where the union grew its roots as a "business agent" oriented union and continues to apply this pattern in a later period to its factory union situations.

What does all of this discussion add up to for purposes of the general theme of this meeting?

1. There is more than one authentic expression of democracy in the local union, if democracy is meant to be relevant to legitimate function.

2. When local union government is examined in the setting of legitimate function the generating circumstance in the degree of shared power is to be found in "employment and market factors."

3. To the extent that public policy and opinion is concerned with union democracy it must take into account the diverse ways in which human beings accomodate union government to the circumstances of the environment, and not be taken in by excessively romantic or idealized images of democracy.

4. There is an enormous stock of case study literature dealing with local unions which has not been tapped for purposes of generalization. I hope that this paper has suggested some of the possibilities of generalization.

PRINCIPLES OF DEMOCRATIC LEADERSHIP

1. The principle of KNOWLEDGE

   a. Can't pool ignorance and provide leadership.
   b. Know individuals, the group, the subject.
   c. "Empathy" - the imaginative projection of oneself into another's mind; putting oneself into another's boots; knowing how others will react. — How To Get Knowledge to another

2. The principle of PARTICIPATION — for others

   a. If you think you helped do it, you are more ready to accept the outcome.
   b. People accept best the things they have helped to originate.

3. The principle of the GROUP MIND

   a. No one individual has all the answers.
   b. No one individual can develop all the angles.
   c. Exchange of ideas within a group may actually create new ideas.

4. The principle of PROCESS

   a. The way in which a thing is accomplished has a bearing on the result. Roughshod — Discussion — Foot dragging
   b. Situations should be viewed in terms of what people can learn in the process of accomplishing something.
   c. "Process" must be balanced against "Purpose" - there are times when a thing must be done NOW, with little regard to process.

* 5. The principle of PURPOSE

   a. The leader must know where the group is heading, and why.
   b. The group must also know, and it is a responsibility of leadership to so inform it.

6. The principle of DIRECTION

   a. The group may need it from the leader.
   b. The leader may need it from the group.
   c. The leader may need it from above. — organizationally
   d. Can't always wait for the group to direct you.
   e. Group thinking needs stimulation.
   f. The "action phase" needs direction.

7. The principle of CHALLENGE

   a. Challenge is stimulating:through challenge comes movement to knowledge.
   b. Make use of issues which are vital, rather than trying to squeeze by.
   c. Leadership must not be afraid to get behind the 8-ball. — Take a chance

8. <u>The principle of EXPERIENCE</u> and for others

a. Learn from watching, listening, reading, but most of all, from experience - from doing it.
b. Leadership may develop a program, but make the people do it; (principles of participation and process)
c. Provide opportunities for leadership practice.

9. <u>Principle of INTEGRATION</u> Committees in locals

a. Relate goals and methods of smaller groups to each other and to the total program.
b. Look for opportunities to work together on a common goal.

THE CLIQUE IN THE UNION

(adapted from the writings of A. Stanley Ezekial)

Word has been received by the Executive Board of your union that it is run by a clique. Upon investigation, we find this statement to be true. Furthermore, we find the clique is composed of faithful members who are present at every meeting, who accept appointments to committees, who give willingly of their time, energy and effort, and who sincerely believe that the more one puts into his union, the more he will get out of it.

There is no question that the enthusiasm, responsibility and efforts of these members are of inestimable value to your union. And we would, therefore, suggest that you join this clique. It is not a difficult matter to do so -- in fact, it is very easy.

Begin by attending meetings regularly - take a livelier interest in union activities; make helpful, constructive suggestions and accept responsibility to serve on committees. Show a continual interest in all affairs related to your union.

Before you realize it, you will have become a member of the clique, and you will be surprised to find out how anxious they are to have you!

Collective Bargaining

Democracy on the Job

THE EXECUTIVE BOARD - TO ESTABLISH GOALS AND A PROGRAM

1. LONG RANGE PLANNING

The idea of at least an annual meeting of the executive board and the standing committee chairmen (and maybe the other union actives too) to lay plans for the year's activities is a godd one.

This group can set organizational, collective bargaining, educational, recreational, community and political goals for the year and begin the planning of programs to achieve these goals. Each phase of the program can be related to the whole. Important meeting dates can be noted and plans for these meetings can be prepared. Meeting dates when interest may be slackened can be noted and special programs prepared to keep up the interest and attendance of the members. Recreational programs can be planned and if necessary plans can be made to improve the attractiveness of the meeting hall.

2. SHORT RANGE PLANNING

There is quite a bit to be said for the idea of a regular meeting of the executive board before each regular and special union meeting.

Some of the following things can be done:

a. Run through the correspondence, deciding what needs to be read in full, what can be summarized and what can be announced simply as received.

b. Discuss in detail the items which are known to be coming up at the meeting.

c. Prepare recommendations on the basis of this discussion to be acted on by the membership.

d. Lay plans for adequate discussion of the recommendations which are offered by the executive board.

e. Make sure that everything that should come up at the meeting is placed on an agenda, so that important deadlines relative to contracts, conventions, voter registration, elections, etc., are not missed.

TAKING THE UNION TO THE MEMBERS
- A Program for Home Visiting

The University of Wisconsin
University Extension Division
School for Workers

There is no better way to build understanding of the union and participation in union affairs than through personal contact between active union members and members who are less active - or workers who do not belong.

Union meetings, labor papers, leaflets, movies, radio programs and other union activities are extremely important in building the union. But you can't educate workers who are not at the meetings, who do not read labor papers, who are not present to see movies and who don't turn on the radio to hear labor programs.

In such cases, THE UNION MUST BE TAKEN TO THE WORKERS. If a good job of personal contact is done, workers will develop the union understanding which will make them want to be active and the union will be just that much stronger.

Just because the plant has been organized for sometime does not mean that the workers automatically become and remain union minded. The job of organization should continue. A personal contact program requires effort on the part of the active members but it can do more than anything else to increase the number of active members and in this way, make the job easier for everyone while making the union stronger.

A PERSONAL CONTACT PROGRAM CAN INCLUDE THE FOLLOWING:

1. Set up visiting committee: have committee meet to discuss approach to workers. Divide up those to be seen. Prepare notes and simple literature on union gains, what happens to dues, union structure, etc., which can be left with the person visited. Have committee meet regularly and exchange experiences on what approach worked, what failed, what questions or comments came from the people, and to exchange visits where one committee member has not had much success. It's a good idea to have teams of two for visiting. Committee chairman and members should make regular reports to the local meeting, and other members should suggest people to be visited.

2. The membership list should be broken down by area, address, shift and department. Visiting can be done by area or by department or both.

3. The most successful type of visiting is contact at the worker's home. But the program should include contact in the shop and phone calls (especially to remind workers of meetings and in arranging to pick them up and take them to the meeting).

4. Where the member is made active by a visit, she or he may be willing to help in visiting others in the neighborhood or department. When a worker suddenly sees the light, he is sometimes very effective in developing the same understanding among other workers.

5. Part of the visiting job should include visits to members who are sick at home, in the hospital, or who have suffered some personal tragedy.

6. The visiting program should be considered as a permanent part of the union's program, and not something that stops when all have been seen.

7. Visiting on straight union building can lay the ground-work for a more effective job in political action. The best work in this field is also accomplished through home-contacting and the precedent will have been set.

Youth: protest and the democratic process

by Tom Kahn

What's with these crazy kids? That's the way the question usually gets posed nowadays—as if some alien and mysterious force had suddenly appeared in our midst, some inexplicable phenomenon for which there is no precedent in the annals of western civilization.

And it must be admitted that some of the antics of some of the New Youth (everything today is New) seem so far out as to defy rational analysis. Take the weird costumes, for example, or the fascination with identity-changing chemicals, or any of the other systematic and self-conscious efforts to exchange old personalities for new.

Yet like it or not, the young are here, in droves, and they will make their mark felt on the labor movement as on every other major institution in American life. Many of them are young workers who are just coming into trade union ranks. They often have special problems and they need to be educated and trained for future leadership. They are a great challenge to the labor movement.

Many others are college students who will be the writers, journalists, professors, politicians and other public opinion molders of tomorrow. How they think and feel will be an important factor in the future of the liberal-labor coalition in national politics. Moreover, as the economy—and in turn the collective bargaining process—becomes more complex, unions will increasingly find it necessary to draw on the skills of college-trained experts.

So the young are important.

The first thing to be said about the young in America is that there are so many of them. Thanks to the post-World War II baby boom, nearly half the entire population is now 25 years of age or younger.

The ways, interests and tastes of young people have always constituted a kind of subculture; today it has grown into a mass culture—and a mass market. In music and clothes, radio and TV programming, commercials and advertisements, books and magazines, the accent is on youth. Our very vocabulary and the way we use it has been forever transformed. Thus quantitative reasons alone would dictate that this current younger generation, whatever its distinctive characteristics, would have a tremendous impact on the rest of society.

The second point is that today's youth are the best educated of any in the nation's history. There are nearly 6 million students in the colleges and universities today, compared with only 3.5 million in 1960. Moreover, a larger proportion of young people are going to college than ever before. About one out of every two high school graduates will apply to college this fall.

One doesn't have to be a sociologist to recognize that education can be a source of friction between the generations. It has become a legend that every Ameri-

TOM KAHN is Executive Director of the League for Industrial Democracy. The LID has been active in strengthening the ties between the labor movement and the intellectual and student communities.

• • • *The Stakes* • • •

The security of working people and their unions, the direction of domestic policy on social welfare programs, the control of Congress in the 1970s.

1. Working people and their unions are under the gun in 1970. Only the Congress remains as a safeguard of their interests. The national administration is at variance with many of the goals of the labor movement, and from some quarters in the administration there is open hostility. The Supreme Court faces a turn to the right, with several appointments probable in the near future.

Only Congress remains with a pro-worker balance, and conservatives are going all-out to capture it. How they will use it, should they win, was tipped off when the Fannin amendment was proposed last month to drive unions out of politics (Memo December 7 and December 22).

The Fannin-Right to Work Committee proposal was defeated. But it will be back if conservatives take over Congress, and the attack will range far beyond labor's political programs. Conservatives are taking dead aim, too, on placing unions under anti-trust laws; outlawing coordinated multi-union bargaining like that with General Electric; replacing the National Labor Relations Board with a so-called "labor court"; a national open shop law.

2. Only action by Congress has been able to restrain the administration's instinct to cut back progressive domestic programs. Congressional action salvaged some relief and reform in the tax bill after administration and conservative efforts to enfeeble it. Congressional action boosted social security increases to 15 percent—still inadequate, but a substantial improvement over the administration's proposed 10 percent.

3. There is added significance to state legislative elections this year. The legislatures elected in November will redistrict congressional seats, and because of this they will in large measure determine the make-up of Congress throughout the 1970s. Some legislatures presently under conservative control already have blueprinted redistricting plans that would seriously reduce progressive representation in Congress. So, if conservatives grab the state legislatures this year they will move to cement control of Congress for a decade.

JAN 1970

"We're spread too thin. One man can't do all the council work by himself."

"We've got the numbers but we can't get the locals to support a high enough per capita to pay the salary of full-time men."

"Everything we've done through our council has reaped dividends."

"The larger locals think they don't need to join the Council because they have full-time officers of their own."

"The small locals that need the help of a Council the most, won't join."

"We can't get enough locals to affiliate to gain a base for full-time operation."

"If we can't get more financial support, we're going to have to go back to part-time operation."

Straight talk about our District Councils

By Walter Allen, Director of Education and Information Department

The quotations listed above express the pride, disappointments, frustrations and conclusions of some of those who have been in the thick of the council programs.

A quick summary of these comments would conclude that strong support remains for the council idea, but few believe that their councils have come close to reaching their full potential. Nearly all complain of failure to obtain affiliation of all the locals in the council's area and of inability to get enough financial support to run a full-scale council program.

Also, a common concern is that, because of the voluntary nature of the councils, there is a continual threat that key locals may withdraw their support. It is recognized that many union members don't seem to understand the importance of the council programs or why additional financial support is needed to make councils function at maximum effectiveness.

What is a council?

Our union has two kinds of councils. One we call a District Council and we mean an organization formed by locals of a single branch of our unions, such as specialty worker locals. The other, which we call a District Joint Council, is composed of more than one branch of the union, usually all kinds of locals in an area, state or province.

Both kinds of councils are commonly referred to as "district councils," but most of the councils chartered by our Union actually are District Joint Councils. There are nine chartered District Councils, all except one composed of specialty worker locals. Each of the Specialty District Councils have full-time officers and have enviable records of achievement.

We define a District Council as an organization composed of duly-authorized delegates of kindred Local Unions within a limited geographical area. To the District Council is granted such authority and duties as are acceptable to the affiliated Local Unions and as prescribed in a Constitution adopted by member Locals by vote of their memberships. Although a Council is a voluntary association, the delegates and member Locals may jointly adopt rules and programs which may become mandatory upon each and all affiliated Local Unions and their members. Typically, dues are established on a per capita basis and each local has equal voting rights or voting is related to size of membership.

This article is intended to discuss the reasons why we need councils and these apply equally to District Councils and District Joint Councils. However, most of our discussion relating to problems are referring to those of the District Joint Councils.

Why councils?

The Printing Pressmen's Union has approximately 740 local unions, and about 116,000 dues-paying members. Of these 740 locals, more than half have less than 50 members, and nearly 200 of these have less than 25 members. Many of these small-sized locals are barely functioning. These 400 smaller locals account for only about 10% of the total membership of the Union.

Councils—In a Nutshell

If you went down to your auto dealer and bought a shiny new 1970 model car you would know that you would have to put gasoline in it to make it go where you wanted to drive it.

If you can't run your car to the next corner without gasoline, neither can you expect to get a council program moving without union members coming up with the necessary per capita payments to fuel the operation.

Simple logic, isn't it?

Yet, to show how inconsistent and illogical we can be, there are several councils suffering from financial anemia and badly in need of a financial transfusion. Worse than that we have about twenty District Joint Councils which have never been able to really get moving because affiliated locals have not been willing, in the past, to raise dues high enough to meet the expenses of a full time operation.

Bear in mind that the Councils are not seeking large amounts of money from the individual members who are in their affiliated locals. In most cases all that is needed is about 25¢ *per month, less than a penny a day.*

Further, in every instance in which a Council is operating on a full-time basis, the International Union has been matching expenses, *dollar for dollar,* **up to $1,000 per month.**

We are no longer talking about an idea or a dream of what Councils can do. In every instance in which a Council has gone on a full-time operation, the benefits have come back to the individual union members, just as we have said.

At the present time wage increases for our members have been averaging better than 20¢ *per hour.*

Doesn't it border on the ridiculous that members who have increased their take-home pay by more than $35 per month, could hesitate about investing a mere quarter (25¢) in increased support to a District Council?

The small locals

Smaller-membership Locals seldom are financially able to meet the expense of even minor labor disputes, particularly if there is a work stoppage or arbitration involved. Such small Locals cannot afford the services of full-time officers or business agents and, ordinarily, do little to police the inferior working conditions they are able to negotiate. They are badly in need of help at contract bargaining time and are seldom in a position to demand proper improvement. But that's only part of it.

The administration of a local union is becoming increasingly more complex and technical. Legal penalties for failure to do certain things, in a certain way, at a certain time, have added to the burden of the already over-burdened local union officers. Smaller locals have always been dependent upon those members who are willing to devote time, after regular working hours, to take care of the union's business. A token payment is usually made to officers but this can no longer make up for the many hours needed to take care of the details involved.

The larger locals

The larger sized locals, including those which have their own full-time salaried officers and business representatives, have reason to be concerned about wages and working conditions in other cities in their area. No local union can function effectively, if it acts as though it dwelled upon an isolated island. In America, United States and Canada, there are no trade or industry barriers erected at the geographical boundaries of our cities. Modern transportation and communication systems encourage a free flow of goods in all directions. What is produced in one city may be sold in another.

Need for standard conditions

It follows that labor unions need to guide their actions according to these economic facts of life and face the necessity of pooling their resources. Collective bargaining

(Continued on next page)

is seldom truly local in its effect. High wage scales and conditions obtained in one city are meaningless, if an employer who is in national competition decides to transfer his customer's orders to a plant where his labor costs are considerably less because a weaker union permits sub-standard conditions.

Suburban employers may underbid a major city employer for a customer's business for the same reasons as above.

A District Council can aid in standardizing area wages and working conditions and discourage competition based upon cheaper wages, etc. Thus, the larger locals gain if a council succeeds in bringing conditions up in the area and a better job is done in organizing non-union plants which threaten all union conditions.

Higher quality of services

District Councils can serve the needed function of revitalizing our local unions. This inevitably follows upon the stimulating transfusion of new ideas brought back to the local by council delegates.

Local unions become aware of their increased economic strength through their improved ability to bargain for their members, with the aid of full-time union officials.

Local unions which have never had the benefit of full-time officers, because they could not afford such from a limited treasury, now find that a small increase in dues can help support such leadership, if shared with other locals. Not only does this mean better bargaining policies, it means better policing of contract terms, speedy settlement of grievances, and proper attention to the organizing of non-union plants.

When each twig stands by itself it can easily be broken. When a number stand together, in the manner of a District Council, they cannot be broken.

Strong defense

District Councils, too, serve as a strong defense mechanism. Legal difficulties may be better avoided by a more informed leadership engendered by a council. If it is necessary to take defensive legal action, a local, supported by a District Council, is more likely to stand up for its rights rather than guide its defense by the size of its treasury.

Employers or government officials are apt to tread more softly if they know they may be dealing with District Council strength rather than that of a small local. This goes, too, for other Unions who may be contemplating raiding the plants of the small locals. Not to be overlooked, either, is the security given to larger locals in the knowledge that big city employers are not apt to run away to suburban or nearby towns, if a District Council affiliate is located there.

Leadership pooled

Perhaps the greatest bonus obtained in the formation of District Councils is found in the pooling of leaders. Obviously the quality and kind of leadership varies in each local. Opportunity for exerting leadership is certainly more limited in a small local. The same leaders serving as delegates may greatly expand their influence as their unique abilities become available to all affiliated locals.

Consolidation is the order of the day in this unprecedented age of merger. Labor unions are effective because they gather together the strength of many workers. Councils are effective because they gather together the strength of many locals.

Where does the International Union fit in?

When the council program was first promoted for our Union in the early 1960s, it was pointed out that the International Union could never successfully service all of the local unions by assigning International Representatives to scurry about. Not only was this prohibitively expensive, mainly because of ever-mounting traveling expenses. It was also expecting an International Union trouble-shooter to overcome the day by day failures of many locals to properly operate their affairs. The answer was better informed local leaders, aided by a full-time union agent covering a limited area and available for quick action.

This did not mean elimination of International Representatives. It meant that their services could be limited to the more difficult bargaining or dispute situations and allow greater time for organizing.

To prove full support of the council programs, the International Board of Directors agreed to share the cost of operating a council on a 50-50 basis. At first, the Board agreed to match every dollar collected in per capita from affiliated locals for the councils with a dollar from the International's general fund.

Later, this policy was modified to the matching of operating expenses, up to a maximum of $1,000 per month for any council. Additional special assistance has been granted to assist in promising council programs.

The International Union Officers and Representatives have aided in the formation of councils and have been available for advice and help upon request.

Financing has been the hang-up

When the district councils were being formed in the early 60s, it was assumed that a council would be sufficiently financed to support a full-time operation, if there were 1,000 members in affiliated locals and a per capita tax of 50¢ per member per month. This would be $500 income plus $500 from the International. If a council could muster more than 1,000 members it could possibly reduce the per capita needed. Ideally, however, a council that could raise a $1,000 more per month could receive a $1,000 from the International and be in a sound financial position.

Unfortunately these simple mathematical formulas for council financing have only rarely been put into effect.

The difficulty has either been in getting sufficient locals to affiliate to meet the 1,000-plus member goal, or affiliated locals have not agreed to a 50¢ per member council per capita. Those few councils which have obtained the minimum goals for financing are finding that present day expenses have increased so much that the original formula of 1,000 members x 50¢ per capita is insufficient.

The few District Joint Councils which have managed to raise enough income to hire a full time representative are, nevertheless, under-financed to do the two-fold job of service and organizing which is so obviously needed.

The great majority of the District Joint Councils have never been able to get enough income to launch a full time program. Either insufficient locals have affiliated to get the necessary numerical base or the locals which have affiliated have not voted for a per capita tax high enough to supply the necessary income.

Much has been gained

Fortunately, the years spent in part time operation of the District Joint Councils has not been a complete waste. Locals have been helpful to one another by sharing information and, sometimes, in helping with negotiating or organizing problems. Lines of communication between locals are much more open which is all to the good.

Unfortunately, a few District Joint Councils, after months or years of frustration and failure to gain sufficient financial support, have thrown in the towel. Some of these councils will some day be revived when locals realize how important it is to be functioning on an area rather than a purely local basis.

It is a sad but true fact that most district council leaders are on the horns of a dilemma. They know, full well, that a full-scale, full-time council program is badly needed and, once in operation, will pay for itself many times over by being able to achieve higher wages and better working conditions for all members and to add to each member's security by organizing the non-union plants.

But—these same council leaders are fearful of their ability to sell the membership of the affiliated locals that they must increase their per capita tax to a level which will get the councils into full operation. Many have tried again and again and have been rebuffed by the membership.

Time to move ahead

We believe that the facts for council support all go in one direction—for full support and approval.

We believe that it is time for each council to go back to the membership of affiliated and non-affiliated locals and make a new appeal for additional funds. In most cases less than a penny a day is needed.

IT IS TIME FOR FULL SPEED AHEAD IN OUR COUNCIL PROGRAMS!

20 IDEAS FOR STEWARD MEETINGS

BASED ON MATERIAL ORIGINALLY PREPARED BY INTERNATIONAL ASSOCIATION OF MACHINISTS' EDUCATION DEPARTMENT

1. STEWARD'S JOB

Ask the group to comment on the question, "What is the biggest problem a new steward faces when he takes office?"

If it is a large group, stewards can write their answers on a slip of paper and hand them in. As comments are made, a panel of experts, such as the local President, the Chairman of the Grievance Committee, and the Business Representative, add remarks. The session should be summarized by the chairman. who presents three or four main points that are important for a new steward to remember. This session is usually a good review for experienced stewards.

2. CONTRACT INTERPRETATION

It is not very effective to read the contract or lecture about it. Instead, prepare a sheet of five or six specific questions about one or two sections of the contract. For example: "If John worked 40 hours during the week and 8 hours on Saturday and his pay is $2.00 an hour, what should his gross earnings be?"

The group can then work out the correct answer. A couple of "experts" from the Grievance Committee can act as a resource panel for the group.

3. GRIEVANCE WRITING

Pass out a sheet of instructions on how to write up a grievance along with a sample grievance situation and blank grievance forms. Have the stewards discuss the contract violation involved in the sample grievance and then have them write it up as a grievance on the blank form. Go over the way various stewards have written the grievance and discuss how it should be worded.

4. GRIEVANCE PRESENTATION

Pass out a sample grievance situation or use the situation from a grievance film. Ask the stewards what they would do in preparing to argue this case with a foreman. Then have a couple of stewards role-play the grievance with one acting as the steward. After they have acted for two or three minutes, discuss the way they presented the grievance and what the "actors" did best. In order not to "stigmatize" an individual for playing the part of the foreman, it is sometimes a good idea to have them act it out a second time reversing their roles. They will often do a better job the second time.

FROM THE BEGINNING;

The Rise of American Labor

PUBLICATIONS OF LMRS Publ. Employee Unions

STRENGTHENING LOCAL GOVERNMENT THROUGH BETTER LABOR RELATIONS

No. 1—"Work Stoppages--A Tale of Three Cities" by John A. Grimes, former labor reporter for the Wall Street Journal.

No. 2—"Resources for Resolving Municipal Disputes" by Murray Seeger, former Washington reporter for the Los Angeles Times. SOLD OUT

No. 3—"The City Prepares for Labor Relations--the Experience in Detroit, Baltimore, Milwaukee and Pasadena" by Al Leggat, former Director of the Labor Relations Bureau of Detroit; Edward J. Gutman, former Labor Commissioner of Baltimore; James J. Mortier, City Labor Negotiator of Milwaukee and Frank LeSueur, Labor Relations Director, Pasadena, California.

No. 4—"A View of the Public Employee Unions" by William J. Eaton, Washington reporter for the Chicago Daily News.

No. 5—"Municipal Negotiations: From Differences to Agreement" by Allan W. Drachman, chief negotiator for the city of Boston.

No. 6—"The Supervisor: Key Man in Labor Relations" by Al Leggat, former director of the Labor Relations Bureau of the city of Detroit.

No. 7—"Public Employee Strikes: Causes and Effects" by Samuel M. Sharkey, Jr., former news editor and labor columnist of the Newhouse National News Service.

No. 8—"Facts About Fact-Finding" by Tim Bornstein, Associate Professor of Law and Industrial Relations, University of Massachusetts.

No. 9—"Municipal Revenues: Bits and Pieces" by Winston W. Crouch, Professor of Political Science, University of California, Los Angeles, with an introduction by William E. Besuden, Assistant Director, International City Management Association.

No. 10—"Cities Join Together for Bargaining--the Experience in Minnesota and British Columbia" by David L. Norrgard, Assistant Executive Secretary, League of Minnesota Municipalities; and Karl Van Asselt, Executive Director, New England Municipal Center, Durham, New Hampshire.

No. 11—"Change: The Impact of Unions on Local Government" by David T. Stanley, Senior Fellow at Brookings Institution.

No. 12—"An Alternative: Meet and Confer--The Experience in Santa Clara County" by Harold S. Rosen, Personnel Director, Santa Clara County, California.

No. 13—"Productivity: More Work for a Day's Pay" by Damon Stetson, chief labor reporter for the New York Times.

No. 14—"Arbitration: Last Stop on the Grievance Route" by Tim Bornstein, Associate Professor of Law and Industrial Relations, University of Massachusetts.

No. 15—"Negotiating for Productivity in Sanitation" by Prof. George W. Brooks, New York State School of Industrial and Labor Relations, Cornell University, assisted by Sara Gamm, Extension Associate.

No. 16—"Participatory Management--Employees are Creative!"by William V. Donaldson, City Manager of Tacoma, Washington, assisted by Severo Esquivel, Management Intern.

Single copies are $1 each postpaid to local government officials upon request to the LABOR-MANAGEMENT RELATIONS SERVICE, 1620 Eye Street, N.W., Washington, D.C. 20006. Other orders: $2 per pamphlet postpaid.

SPECIAL REPORTS: $5 each postpaid.

"A Spotlight on City Employee Benefits"—A report of the first national survey of employee benefits for full-time personnel of U.S. municipalities.

"Three Neighboring States--Three Different Approaches to Local Labor Relations"—A special report on New York, Pennsylvania and Maryland.

"The Role of Politics in Local Labor Relations"—A special report based on a survey of 78 U.S. cities.

LMRS NEWSLETTER published monthly with information for policymakers, practitioners, and universities. Subscription—$10 a year; $18 for two years; Bulk Rate—$5 per year for orders of 10 or more sent to one address. Single copies available at 50 cents each.

A THREE-RING BINDER for the pamphlets and LMRS monthly NEWSLETTER is available at $2.50 each and free with a two year subscription to the LMRS NEWSLETTER.

BINDER SETS including all pamphlets and copies of the NEWSLETTER are available to municipal personnel at $16 each and $32 to all others.

Special Pamphlet Rates: Educational institutions, $1.50 each; quantity order, 10 percent discount on orders from 10 to 50 and 20 percent on larger orders.

YOUR COPE DOLLAR DRIVE

As you go about your plant, or organization, one of the most frequently asked questions will be, "What do I get out of COPE?" or "Why should I give a dollar to COPE?" BE READY WITH THE ANSWERS. POLITICS COST MONEY -- Members of Congress are Very Important Persons . . . they can be friendly . . . or they can be unfriendly . . . to labor.

With COPE DOLLARS we must:

1. Educate members to the need for political activity.
2. Keep members informed of the candidates' records.
3. Take the issues and candidates before the public.
4. Assist endorsed candidates financially in order to help get them elected.

<u>YOU NEED COPE TO</u>:

Protect your rights as a citizen . . . as an American . . . and as a member of a labor union. You may ask, PROTECT - - PROTECT from what??

1. From the election of unfriendly legislators elected with the money from Big Business, which regularly pours millions of dollars into politics to try to elect conservative candidates, most of whom are ANTI-LABOR.
2. From political extremists who are intensifying their efforts to take over the county, many of whom have strong financial backing.

3. From repressive laws which protect the financial interests and expose the wage earners to the hazards of high prices and low wages.

4. From officials elected and controlled by the few, who have authority to harass and undermine the efforts of the working people to improve their conditions.

COPE depends on $1.00 contributions from individual workers and their families to help finance campaigns of candidates for federal offices. Union dues and assessments are not permitted by law to be used in federal campaigns.

Without such funds, only the candidates backed by the wealthy could afford to run for federal office, and such candidates are seldom friends of the working people.

These are the reasons WHY we have the annual COPE Dollar Drive - - the best way to assure a systematic effort to get every AFL-CIO member to participate in his union's political action programs.

HOW TO SET UP THE COPE DOLLAR DRIVE:

First, you need a chairman for your local union. The Chairman should have full knowledge of COPE, its activities and should have enough time to do a good, thorough job. He (or she) should divide the membership into small manageable units. From within these smaller units, the persons who will conduct the Dollar Drive should be selected.

Each should be given a list of 10 to 20 members within his department or section to contact during the COPE Dollar Drive. If you have union members who already have an active interest in political affairs, they should be selected.

TRAINING THE COLLECTORS:

Don't keep facts to yourself. Get all the literature you can, and this should be used in a training session or sessions for Dollar Drive collectors. The sessions should be conducted by the fund-raising chairman, and held a few days before the COPE Dollar Drive begins. Discuss today's legislative or political issues in case the collectors have to answer any questions.

TIMING:

The local union president should send letters to the membership announcing the start of the COPE Dollar Drive and asking each member to make his contribution.

Remember, paydays are good collection days. Don't embarrass members by asking for your COPE dollar when they are least likely to have money.

GET YOUR MESSAGE ACROSS:

Order literature and posters from National COPE. Announce your Drive in your union newspapers and bulletins. Run news stories, editorials, cartoons and advertisements. Use your imagination and your mimeograph, but if you need help, let your State COPE know about it.

Promote friendly competiton --

Keep your members informed --

Strive for 100 per cent success --

SAVE SOME IDEAS AND SOME EFFORT FOR THAT LAST BIG PUSH --

THAT IS WHAT GETS YOU OVER THE TOP!

There are other ways to raise money (for supplementary funds)

A. Banquets, dinners, luncheons, or picnics.

B. Dances, card parties or play bingo.

C. Raffles (if local law permits) or run a contest.

D. Sales - tie tacs, cuff links, other.

These methods have been successful. Taken step by step, the results will be surprisingly good. Good luck!

SECURING MEMBERSHIP PARTICIPATION IN UNION ACTIVITIES

WHY DO WE WANT UNION MEMBERS TO ATTEND LOCAL UNION MEETINGS?

1. To know policy of your union.

2. To maintain democratic control through broad participation by members.

3. To back up officers and the union programs.

4. To develop a feeling of brotherhood.

5. To locate new people for leadership.

6. To educate at the meeting on:

   Basic trade unionism
   Current collective bargaining program
   Legislative and political program

WHAT ARE YOUR UNION'S GOALS? (HAVE YOU EVER THOUGHT OF DISCUSSING THIS?)

Who decides your union's goals? Officers? Members?

Does your local have any goals?

Many locals have a poor attendance at meetings because their goals are too narrow. Many locals just have two goals:

1. To negotiate for better wages and working conditions.

2. To handle grievances (administer the contract).

If these are the only goals the local has, why hold meetings once a month? Contract negotiations come up once a year at most and a few meetings at negotiation time would take care of this. Grievances are settled in the plant by stewards and officers, so meetings don't help here except in the odd case where overall policy is involved.

SOME GOALS SUGGESTED BY UNION MEMBERS

1. Job Security

2. Fair Wages

3. Job Training

4. Supplying workers with information on matters that affect them.

5. Developing common views on social, economic and political problems.

6. Inspiring new interests.

7. Developing more knowledge and understanding of people and human relations.

8. Developing feelings of adequacy, importance and belonging in each member.

9. Helping the needy and disadvantaged.

10. Working with other organizations to create better social conditions, better community life, and better living standards.

OFFICERS SHOULD PLAN MEETINGS SO MEMBERS MAY PLAN FOR THE UNION

Develop goals that the members can help actively to achieve, that the members can get personally involved in. Members should not consider their union as a slot machine that hands out increases when they put in dues. But in some cases this is all the union does. Members want to DO something.

> Officers should not do the planning for the union. MEMBERS SHOULD!
>
> Officers should help the members plan by giving them alternative goals, problems to solve, and all facts relating to the situation which make the problems.
>
> This means that officers should plan the meeting.
>
> Officers should not attempt to sell their solutions to the members.
>
> Officers should help the members find their own solutions and define their own goals.

BUILDING AN ACTIVE UNION

Are Local Union Meetings the Best Place to Accomplish Objectives?

Many unions place a great deal of emphasis on getting the membership out to local union meetings. They feel that a large local union attendance will help accomplish some of the objectives listed above. However, it is doubtful that attendance can be substantially increased over a long period of time. It is quite apparent that the average member is not interested in the day-to-day routine business operations of his union. When local unions take up petty business they get petty attendance. When big issues like elections, strike votes, dues increase, contract negotiations come up the attendance is large. Because it is impossible to regularly schedule big issues on a regular basis it is difficult to increase regular meeting attendance to any great degree.

Even if it were possible to bring out all the members of a big union having more than 500 or 1,000 members it is doubtful that all the problems indicated above would be solved. If every local union did have full attendance this might not be any more democratic than the normal attendance of 5 to 10%. Mass bodies can only set general policy as is done at conventions through the use of resolutions. They cannot effectively handle the day-to-day routine operations required of local unions. Therefore other methods must be used if the local union is to be effective and democratic.

Getting Participation

Department meetings generally get much better attendance than do local union meetings. Because these meetings are generally held around a crisis issue it is difficult to hold them on a regular basis. They are used most successfully when workers either punch out an hour early or the meeting takes place immediately after the shift break.

Some large local unions elect representatives who conduct routine business. They in turn report back to department meetings. A mass membership meeting is held once a year or more often if necessary. This, in effect, serves the same function as a convention for an international union. Basic issues, like election of officers, are decided by referendum.

The normal day-to-day operations of the unions are primarily conducted by elected representatives who are expected to be specialists on these matters. They have a feeling of responsibility because they are given authority.

Local Union Operation

Unions find that many of their goals or objectives can best be dealt with by a small number of people working on a committee.

Some committees will be standing. Others will be elected or appointed for a short time to deal with a problem.

Main education efforts should be directed at officers, stewards, and committee members.

Check your committees by first listing your union goals and then indicating which committee could best deal with the problem. For example:

Major Objectives	Committees
High Wages Job Security	Stewards & Negotiating
Democracy in the Shop	Executive, Stewards
Good Housing Good Schools	Education, Legislative, COPE and Executive
Recreation	Recreation, Education, Community Services
Good Government	Education, Legislative, COPE
Good Ventilation and Sanitation	Safety, Stewards, Negotiating
Jobs for all	Education, Legislative, COPE
Better communication with members	Publicity, Education, Stewarts and Executive

Educating at Local Union Meetings

The active people who usually attend meetings are very important. They talk to people everywhere. If they get ideas from a speech, a film or a discussion,you have taken a big step toward educating your local union members.

Big membership turnouts generally mean there are big issues to be discussed and there is little time available for education. In large groups it is easier to arouse enthusiasm than to provide understanding. Show a film, sign union songs -- break them up in buzz groups to discuss one subject.

Plan to pass out a leaflet or union pamphlet at every local union meeting. Be sure someone describes the pamphlet before it is released.

Because 90 to 95% of the membership do not attend meetings other methods of informing them must be worked out. Many problems can best be talked about in a short education discussion. This will bring understanding and motions for action during the meeting.

Ways of Reaching Union Members

1. Word of mouth by stewards and officers.

2. Shop papers leaflets or handbills.

3. Education programs at union meetings and classes.

4. Training sessions, conferences, and discussion groups.

5. Bulletin Boards, Posters, Radio and TV.

Most effective method: Education work done by a steward in his department generally results in better attendance at local union meetings. Stewards or committeemen should keep workers in his department informed of what's going on. People will participate only if they are informed.

The use of other ways to educate, build solidarity, find leadership or get participation, does not mean the union meeting should become less interesting.

Locating New Leadership for Union Activities

This is one of the most difficult jobs for a union. The same amount of care ought to go into this process as was used in organizing the plant. A systematic effort must be made to sort out those seeming to have leadership qualities. Often a person originally opposed to the union can develop into a leader. It is important to look for the special interests of the individual. A person may be interested in legislative problems but not in the job of a steward. Such a person may be eager to serve on a COPE committee.

Developing a Feeling of Brotherhood

Social functions are often a useful device in getting people to know each other better. Often a program conducted in a department rather than on a plant level may be more successful in this field.

A sports program particularly among the younger workers can accomplish the same purpose.

An initiation program where new members are formally sworn in and welcomed by the membership can build brotherhood. The ceremony should have dignity. However, it must be realized particularly in a large local that it may be difficult to get people to attend an initiation if they live any distance from the meeting place.

Personal Contacts

Officers or stewards should have leisurely talks with workers to explain the union, give background on the union's positions on in-plant and out-of-plant issues. This will give individual members a chance to ask questions privately.

Many locals have found that house calls upon members are the most effective way to reach the membership. Each local union officer works from an assigned list so everyone is covered during a given period. (Warning: Don't get into arguments in a member's home.) Keep records of these house calls and report back to Executive Board meetings, Steward meetings, education, legislative and all other interested committees. Discuss ways of approaching workers and persuading them of the union way and its benefits.

BUILDING UNION UNDERSTANDING

THE PROBLEM

Most union officers and active members are concerned about the lack of participation on the part of too many union members in the affairs of their organizations. The severity of this problem varies from situation to situation. How accute it is depends largely on the degree of union understanding and activity which union officers and active members believe SHOULD exist. But whatever standards and goals may be set, there are few union members who feel that the problem has been solved in their organizations.

In order to attack this problem intelligently, it is necessary to uncover and understand some of the reasons behind it.

SOME REASONS FOR THE EXISTENCE OF THIS PROBLEM

1. The theory that union activity must be based on dissatisfaction: "I will come to the union meeting if I have a gripe", or "As long as I think that things are going OK, why should I participate?"

2. The relative prosperity of workers: the progress which workers have made through union organization has given many of them a feeling that they have a greater stake in keeping things as they are; there is less willingness to take chances. Many estimate that they have more to lose and less to gain through union activity than in the old days.

3. The absence of a tradition of trade unionism in a community: in some areas, there are few visible standards of comparison for older members between their situation and others; young people coming into industry and the crafts have little experience with or knowledge of the struggles of workers in other areas and other years.

4. Joint incomes: where husband and wife both work, the pressures on the budget are felt less keenly than by the man or woman who is trying to support a family alone.

5. Temporary employees: the introduction of temporary employees into the working force at different seasons of the year who have other sources of income or who are working only for extra cash, presents a problem to the local union.

6. Management publicity: as directly sponsored by some employers or their associations, or indirectly encouraged through outside "spokesmen"; either out-and-out anti-union material, or publicity designed to soften pro-union attitudes on the part of present union members, young people coming into industry and the public.

7. Lack of attention in the schools to unions as necessary and constructive parts of our economy, and our political and social life.

8. Age, and the difficulties of obtaining continued employment in the event of displacement or retirement.

9. The problem of unemployment: an unwillingness in periods of slack employment to call the company's attention to oneself by being active in the union, particularly in the area of grievances.

10. Out side attractions and activities: often made possible for the worker and his family by union wages and working conditions, but leaving little time for activity in union affairs.

11. Human nature: the willingness and enthusiasm with which many people seek "something for nothing", plus the unwillingness to accept responsibility: "let George do it".

BUILDING A PROGRAM FOR INCREASED UNION ACTIVITY

1. It must stimulate activity on the basis of the human motives to which it appeals.

People do things because they WANT TO, because they feel they SHOULD, out of HABIT, because they HAVE TO, or because they HAD BETTER, OR ELSE.

The union program should try to develop attitudes of personal desire (want to) and obligation (should). It should meet members at their own levels of knowledge and interest. It should . . .

... give personal satisfaction
... give personal enjoyment
... provide for personal growth
... require participation in order to maintain self-respect and the respect of others
... promote loyalty to the ideals and programs of the union
... develop a sense of individual and group responsibility
... develop a tradition of union participation

2. The setting of goals and standards of achievement.

The union should set its goals high but must realize that perfection cannot be obtained. The standards of achievement must be set considerably lower. Success cannot always be measured in mass terms - often it must be on an individual basis. A program for increasing union understanding and activity must be uncomplicated enough to offer some measure of success in order to avoid the feeling of frustration which may follow the failure of a program which is too elaborate and which falls short of its goals.

School for Workers

FIELD TRIP REPORT

Emory Via

CITY Waco STATE Texas

DATE February 27-28,1969 BY Ralph C. Smith

REASON FOR VISIT: CSA Program development. Unions — Community Services

PRINCIPAL CONTACTS

Roger Jones	New Chairman, CSC, McClennan Co.,CLU (ITU)
Rudolf Zalman	Co-Chairman, CSC (Operating Engineer)
Robert L. Herbert	Executive Director, United Fund
Dean Maberry	Executive Director, Planning Council
Jesse Sapp	President, CLU

February 27 Spent entire day with Roger Jones, new Chairman, McClennan Co.,CLU, providing orientation, materials and planning CSA Program development. Jones, age 32, is a family man with four children,(boys). A member of the Typographical Union,(ITU), owns and edits the "Waco Farm and Labor Journal." (Jones Printing Co.) He plans to change the name of the newspaper to "Waco Labor Journal" in the near future. Jones is a Sunday School teacher and a member of the Junior Chamber of Commerce. He is intelligent, aggressive and displays an excellent attitude regarding social welfare issues and educational programs. His address: 8730 Panther Drive, Waco, Texas 76710. Phone #772-2408/817

February 28 Met with Jones, Herbert and Maberry. Mayberry, Action Planning Council Director was enthusiastic and pledged full support and cooperation regarding development of educational programs. Herbert, United Fund Executive Director, was cordial and did not rule out the possibility of hiring Labor Staff. (He needs an additional staff member).

Met with CSC for discussion and orientation.

COMMENTS

The appointments of Roger Jones as CSC Chairman and Rudolf Zalman as co-chairman represent excellent selections on the part of CLU President, Jesse Sapp. Although the hiring of Labor Staff is a year, possibly two, away there is a distinct possibility provided the CSA Program develops as planned and labor participation increases.

RECOMMENDATION

All requested assistance should be provided. Despite the estimate of 8,300 union members in the area the potential for growth is there. "Manpower Trends" lists employees as Manufacturing-13,085; Construction-3,335; Trades-14,800 and Government-8,315. With other non-manufacturing listed at 19,060, this adds up to 58,595 non-Agricultural employees in the area! Another trip to Waco should be made while in the area.

IMPORTANT FOOTNOTE

Please make a careful study of the attached report, "Welfare, Welfare, Who Gets Your Dollar." As stated in the Foreword, "this material attempts to relate discussion of welfare to the local situation" and, in my opinion, material of this type should be made available in every county, particularly where there is a large city. Local statistics really provide a strong impact when used in institutes and educational programs involving people in a given locality. Breaking down the myths and commonly shared misconceptions regarding welfare is vitally important to the success of our total program. Material of this type would provide our lobbyists at the local, state and national levels with knowledge many now lack and would greatly enhance their effectiveness. Government officials, representatives of the News Media and Labor Leaders are generally unaware that such conditions do exist.

Bear these facts in mind:

1. The statistics contained in this type of study are readily available at state and federal welfare departments at the local and state level.

2. The maximum assistance provided to citizens, age 65 and over, is $110 per month with an average of $62 per month. The fact that over 4,000 senior citizens are receiving assistance in McClennan County as opposed to less than 1,000 parents and children receiving aid to families and dependent children (page three) graphically proves a statement made by Emory Via at the Texas AFL-CIO Institute in Wimberly. "A larger percentage of the aged are provided assistance because they vote."

3. The maximum for a family receiving aid is $123 per month regardless of the size of the family. (This will be cut to $115 a month, in the near future, due to a referendum vote recently conducted in Texas). Have babies to get more welfare?

4. Of the total of 5,324 individuals receiving aid, less than 3% are employable. Make those people go to work? (Aged-blind-disabled-minor children).

5. The infant mortality rate in McClennan County is the second highest in the state and this is the only county where the infant mortality rate has increased over the past ten years. (Malnutrition principle cause).

6. The federal government pays most of the "bill" in Texas (Page four). Counties relatively nothing.

It is long past the time when major organizations who are, or profess to be, dedicated to solving the social ills of our time should join in a concerted effort to eliminate the primary cause of unemployment, crime, low quality education, and other unmet needs. STARVATION.

This report is not meant as a criterion of McClennan County. These conditions exist in every county in the nation to one degree or another. This is why local statistics are so important. Too many people, including some who should know letter, would dismiss a report of this nature with a shrug and the thought, "That's McClennan County, not my county."

Local statistics are the only weapons available to prove to them. "This is your county."

ccs: Leo Perlis
Ed Carlin
Gus Shea
A. B. Smith

(This material was prepared for presentation to a group of adults at Central Presbyterian Church studying "Changing Society," a book by Dr. O. Z. White, of Trinity University. This material attempts to relate discussion of welfare to the local situation.)

WELFARE, WELFARE, WHO GETS YOUR DOLLAR?

We play a deadly game with words like "welfare," which usually charge the atmosphere of any adult discussion with considerably more heat than light. Webster defines "welfare" as:

> "the state or condition of doing or being well; good fortune, happiness or well-being of a person, community, or thing."

We easily make the word a dirty word and for even the well-meaning citizen, the word evokes thoughtless criticism unsupported by facts, which presents an unflattering image of people, an equally unflattering image of a program designed to meet the needs of less fortunate citizens; in the process we do a grave disservice to our community and disservice is based on a lack of knowledge of truth.

Let's play another game, equally deadly, for it may point the finger at us. Can you name the person who has ever made one of the following remarks, and not have to name yourself:

1. "We ought to make all those able-bodied men on welfare go to work."
2. "We just make it too easy for 'em. They'd certainly rather get those welfare payments than have to work at an honest job."
3. "Women on welfare have one baby after another, just to get more welfare money."
4. "I simply can't get anyone to do day-work for me - they're afraid their welfare payments will stop."
5. "No, she's not on welfare - she gets an old-age pension. You know, everybody in Texas over 65 gets it."
6. "If we didn't have all this welfare give-away, there wouldn't be so much crime. Those people just don't try to raise their children right."
7. "All those people on welfare are immoral - they live with anybody that comes along and all they're interested in is sex and liquor."
8. "Of course you can't get anybody to work. They'd rather lie around and draw unemployment compensation."

What does "welfare" mean in McLennan County, and what are "welfare funds" in this county? The facts are readily available from programs supported by state and federal welfare departments with McLennan County providing offices in Waco. There are some very specific categories of welfare assistance:

1. Old-age Assistance
2. Aid to Families with Dependent Children
3. Aid to the Blind
4. Aid to the Permanently and Totally Disabled.

What is the story in McLennan County with regard to the number of persons served and the number of dollars involved in service under these various programs? In 1968, 4,038 citizens in Waco and McLennan County received old-age assistance. The maximum grant under this program is $110.00 per month and the average payment is $62.00. Since all these persons are above the age of 65, it may be difficult to level against them the charge that they are "lazy, able-bodied men" and "immoral women."

In 1968, 195 families in Waco and McLennan County received Aid to Families with Dependent Children, representing a tofal of 771 children. The maximum grant for a family of four children and caretaker (mother, father or foster parent) is $123.00 per month. (That's $4.10 per day, to pay rent, buy groceries, pay utilities, buy clothing, for five people - or 80¢ per person per day.) Regardless of family size, the maximum grant is $123.00 a month. It may be questioned whether this is a "profitable" way of life. If it is true that crime can be traced back to families receiving welfare payments, under this category of assistance, the inclination to crime would seem to come more from too little, rather than too much give-away.

In 1968, 70 legally blind persons received Aid to the Blind, at an average payment of $73.50 per month. 250 persons received aid because they were permanently and totally disabled. This aid averaged $50.30 per month. It might be difficult to maintain that either the blind or the permanently and totally disabled are contributing to many of the typically tossed-about concepts of welfare abuse.

There still remains the question of unemployment compensation. Actually unemployment insurance is not welfare; it is an earned benefit. That doesn't keep us from blaming most labor problems on the person whom we contend would rather draw welfare or unemployment than work. To get the facts straight, to be eligible for unemployment insurance, an individual must have worked for an employer who has in the past year had four or more employees for at least twenty consecutive weeks. Employers not meeting this criteria are not required to make unemployment insurance payments. Obviously, this provision eliminates the day-worker, domestic and many unskilled workers. A second requirement is that an individual must have worked and earned enough wages to qualify him for the minimum weekly payment of $15.00. The maximum weekly payment is $45.00. The rate of payment is based on 1/25th of earnings in the highest three months of his base pay period. The maximum amount of benefits that can be drawn during a given year is based on total wages reported in a preceding twelve months period of convered employment. The maximum number of weeks per year that an individual may qualify for unemployment insurance is twenty-six, but the actual number is also based on previous employment and earnings. Further, to qualify for unemployment insurance, an individual must register for employment at the Texas Employment Commission and he must be able to work (not sick) and available (in town) for work. If he refuses a job offered for inadequate causes, he may be disqualified from further payments; he may also be disqualified if he leaves a job for inadequate reason. The obvious point is that an individual must have worked enough within a given year in order to qualify for minimum unemployment insurance, and the minimum is just above $60.00 per month. He must be laid off by employer (layoff)

For the record, the annual reports of the State Welfare Department for the last eighteen years reflect the following assistance provided in the assistance categories discussed above to residents of McLennan County:

See page 3

Key Note!

$712 a year
Grade $58.864 month

$90 Per Family Dependent
Separation Bill year
$120 month supplement

	Old-age Assistance		Families with Dependent Children			Aid to the Blind		Permanently and Totally Disabled	
Year	Persons	Dollars	Families	Children	Dollars	Persons	Dollars	Persons	Dollars
1968	4,038	$2,875,732	195	771	$173,539	70	$61,741	250	$151,049

1956	4,388	2,175,778	216	698	155,746	124	67,979		
1955	4,440	2,047,974	219	688	142,152	124	64,601		
*1954	4,456	171,038	180	549	10,778	115	5,229		
*1953	4,378	166,323	131	411	8,989	114	5,031		
*1952	4,388	148,824	129	409	6,930	122	4,825		
*1951	4,532	148,109	177	573	8,974	116	4,399		
*1950	4,696	157,577	228	697	10,360	130	5,187		

*Amount of assistance (dollars) reported from 1950 through 1954 represents payments for only the month of August of each year. Amount of assistance reported after 1954 represents the total payments for the state fiscal year.

The figures above relate entirely to McLennan County and represent payments made through the State Welfare Department. In the fiscal year ending August 31, 1968, Texas spent a total of $354,294,462.00 for its Public Assistance Programs in the four categories above and in Medical Assistance under Title XIX and in Refugee Assistance and Aid to U. S. Citizens Returning from Foreign Countries. The administrative cost of this problem was $18,640,501.00, or 5% of the total amount of funds expended. The following table gives the breakdown of both the category of expenditure and the source of funds for assistance which was granted in the fiscal year ending August 31, 1968:

Program	Amount			Per Cent From State
	Total	Source		
		Federal	State	
Total	$335,653,961.16	$251,511,457.42	$84,142,503.74	25%
1. Old-age Assistance . .	167,529,066.54	119,366,167.78	48,162,898.76	29
2. Aid to Families with Dependent Children . .	32,425,700.00	26,276,272.27	6,149,427.73	19
3. Aid to the Blind . . .	3,719,944.00	2,319,978.17	1,399,965.83	38
4. Aid to the Permanently and Totally Disabled .	10,020,681.00	5,773,561.75	4,247,119.25	42
5. Medical Assistance. . . Title XIX	121,890,159.06	97,707,066.89	24,183,092.17	20
6. Cuban Refugee Assistance	48,036.07	48,036.07	0.00	0
7. Aid to U. S. Citizens Returned from Foreign Countries	20,374.49	20,374.49	0.00	0

Thus far all of the "welfare" assistance talked about has come from state and federal sources. What about McLennan County itself and its financial responsibility toward its indigent citizens? The county has assumed certain responsibilities as follows:

1. Payment of Hospitalization and Emergency Care
2. Provision of Transportation to and from State Hospitals
3. Supplementing Nursing Home Care Where Necessary
4. Furnishing Some Clothing for Nursing Home Patients and Tuberculosis Patients
5. Pauper Burials
6. Provision of Groceries and Limited Aid in Emergency Cases.

In addition, the county department is responsible for certifying eligibility of persons for federal surplus commodities. The scale used in determining eligibility for commodities is the maximum allowable in Texas: a family of two with an income of less than $150.00 per month; a family of three with less than $170.00 monthly; a family of four with less than $190.00 monthly.

One does not need to make the claim that the planning, programs and projects which we describe as "welfare," are perfect. One can ask for care in seeking to understand both the problem and the efforts being made to meet the problem. Ill-informed, prejudiced remarks are depressing and destructive. They resolve no problem. On the other hand, informed criticism of agencies and the community is healthy and frequently welcomed, when based on facts. An immeasurable service can be rendered in a changing society by the citizen who cares enough to learn the truth and then uses his talents in an effort to solve problems which do exist. We do better to go to the dictionary, rather than to the gutter, for our words to define the word "welfare."

Alabama Unions Plan Low-Cost Housing Units

Tuscaloosa—The Alabama AFL-CIO has received federal approval for the drawing of initial plans to build low-income-family housing in Birmingham, Florence and Decatur, council officers reported at the eighth biennial convention of the state central body.

That means the start of preliminary work on 800 housing units to be built with federal loans costing $11 million, Pres. Barney Weeks advised 550 delegates from the state's affiliated unions. Eventually the state council hopes to sponsor low-cost housing in every Alabama city where union members are concentrated, Weeks said.

The convention gave Weeks and Sec.-Treas. A. G. Trammell new two-year terms, and authorized the executive board to proceed with its housing program.

Weeks reported a membership gain of 15,000 since the 1968 convention and noted the success of a state-wide prescription drug program launched by the state body. Since its start 18 months ago, more than 32 stores have signed contracts to furnish members of affiliated unions with needed medicines at actual cost plus what Weeks called "a small professional fee."

Members of AFL-CIO unions are saving more than $500,000 a year on drugs because of the program, Weeks estimated.

Among convention speakers were Gov. Albert P. Brewer (D), whose term in office expires Jan. 15; Chief Justice-elect Howell Heflin of the Alabama Supreme Court; Bill Baxley of Dothan, attorney general-elect; Jerry Beasley, lieutenant-governor-elect; Stanton Smith, AFL-CIO central bodies' coordinator, and Irma Angevine, executive director of the Consumers Federation of America.

The incoming state officials assured the delegates that labor and the consumer will get fair treatment when they assume office next January.

The convention called on the state attorney general to set up a consumer protection department, and Baxley promised the delegates he would do just that early in his new term of office.

Heflin pledged that labor will get a fair hearing in the state's top court, and Beasley announced that legislation of interest to labor will be referred to fair committees in the next session of the legislature.

The convention adopted a policy statement calling for a state minimum wage of $1.60 an hour. On the federal level, it voted to back the AFL-CIO drive for national health insurance and an occupational health and safety law.

Georgia Labor Asks Improved Minimum Pay

Augusta, Ga. — The Georgia State AFL-CIO laid the groundwork at its 14th annual convention for an all-out drive to boost the state minimum wage to $1.50 an hour.

The 650 delegates also called on the state legislature to extend coverage of the wage law to more workers. Through labor's efforts, the legislature earlier this year adopted the state's first minimum wage law setting a floor of $1.25 an hour for covered workers.

Delegates voted to increase monthly per capita payments from 10 cents to 12 cents. The additional income will be channelled mainly into COPE operations and legislative programs of the state body.

Pres. J. O. Moore told the convention that 8,000 new members were enrolled in the state body since the last convention to boost the total membership to 74,000 members.

Moore was re-elected to his second two-year term as president, defeating former Sec. J. W. Giles. In the contest for secretary, H. H. Marbry of the Carpenters was elected over Melvin Tate of the Pulp-Sulphite Workers. Mrs. Louise Dean was re-elected treasurer.

Speakers at the three-day convention included Assistant Sec. of Labor W. J. Usery and Georgia Commissioner of Labor Sam Caldwell.

Times, News Reach Pacts With Guild

New York—Wage increases as high as $100 a week are provided in new three-year contracts tentatively agreed upon by the Newspaper Guild and the New York Times and the Daily News.

Guild negotiators reached agreement a few hours before a scheduled walkout and sent the terms to a vote Nov. 9 by 2,600 Guildsmen at the Times and about 1,400 at the News.

No details were released pending unit votes, but a Guild spokesman said the papers offered the same 41.69 percent package increase won by the Guild at the Post, and by other unions from the publishers.

Under the pattern formula, top minimum wages for experienced reporters, copy editors and advertising salesmen will rise at the Times from $255.25 to $361.66 a week in the third year and at the News from $242.55 to $343.67.

Guild members have been working under a contract extension since Mar. 30. Besides wages, which will go up in yearly increments of 15, 11 and 11 percent, issues at the two dailies include a full union shop, percentage increases applied to top minimums in all Guild classifications, conversion of a six-minute reduction in working time per day to cash or other benefits, and improved pensions.

Theodore W. Kheel, chief mediator in the talks that started last February, said contract approval by members of the Guild and the photoengravers would close out the 1970 round of negotiations. Kheel was aided by federal and state mediators.

Eugene Goslee Named Labor Board Solicitor

The appointment of Eugene G. Goslee as solicitor of the National Labor Relations Board was announced by NLRB Chairman Edward B. Miller. Goslee, 48, is a veteran NLRB attorney.

Goslee succeeds William Feldesman, now on leave for an assignment on behalf of the International Labor Organization in Africa. On his return, Feldesman will become a special assistant to Board Member John H. Fanning.

Dear Sir:

We have received your request for a copy of the study on the "generation gap" in labor unions which was mentioned in the Wall Street Journal of April 1, 1969.

A complete report of the findings is being prepared for possible publication. In the meantime, we are enclosing all that we do have available at this time which is a copy of the advance summary which we released to the Milwaukee Journal and to the Wall Street Journal.

Thank you for your interest.

Sincerely,

Robert Ozanne

Questionnaire On

Union Leader Predictions

Dear Union Leader:

As you probably know, questionnaires were recently mailed to one out of every four Local 19806 members (a 25% random sample). More than 650 of the questionnaires have been answered and returned to the University of Wisconsin.

The object of this second short questionnaire is to have you, a union leader, PREDICT how you think the majority of the rank-and-file members answered certain of the questions on the earlier questionnaire.

INSTRUCTIONS:

1. Read each question carefully to make sure you understand it.
2. Place a check mark next to the answer you think the majority of the union members selected. Remember, you are to PREDICT their answers.
3. If you want to supply additional information about what you think the opinions of the union members are on any one question, write in your comments under the question.
4. DO NOT PUT YOUR NAME ANYWHERE ON THE QUESTIONNAIRE.

REMEMBER: WE DON'T WANT YOUR OPINION ABOUT THE QUESTIONS; WE DO WANT YOUR PREDICTION AS TO THE WAY YOU THINK THE UNION MEMBERS ANSWERED.

Original question number

4. Do you think present union dues are too high, too low, or about right? (Check one)

1 _____ Too high. 2 _____ Too low. 3 _____ About right

7. Do you think the union shows favoritism toward any department or group or not? (Check one)

1 _____ Yes, I think the union favors _____ (write in name of group or department you think members mentioned most often as receiving favored treatment)

2 _____ No, I think the union treats all groups and departments about the same.

3 _____ I don't know.

8. Do you think the funds of the union are properly cared for or not? (Check one)

1 _____ Yes, I think the union's funds are properly cared for.

2 _____ No, I don't think the union's funds are properly cared for.

3. _____ I don't know.

9. Which one of the following is the best way to find out what is going on in the union? (Check only the one way which you think most of the members checked)

1 _____ Reading the Chronicle
2 _____ Talking to a steward
3 _____ Talking to an officer
4 _____ Reading A. O. Smith Newsletter
5 ____ Attending the union meetings
6 ____ Going to the union office.
7 ____ Reading bulletin boards.
8 _____ Some other way

10. Do you think the union favors any particular age group or not? (Check one)

1 _____ Yes, I think the union favors the older people.
2 _____ Yes, I think the union favors the younger people.
3 _____ No, I think the union treats everyone about the same.
4 _____ I don't know.

12. All things considered, what kind of a job do you think the present union officers are doing? (Check one)

1 _____ I think they are doing a good job for the workers.
2 _____ I think they are doing an average job for the workers.
3 _____ I think they are doing a poor job for the workers.

13. In general, what do you think of the new contract? (Check one)

1 _____ I think it is better than contracts in most other plants in this area.

2 _____ I think it is worse than contracts in most other plants in this area.

3 _____ I think it is about the same as contracts in most other plants in this area.

4 _____ I don't know.

14. How good or poor a job do you think your steward does in handling grievances? (Check one)

1 _____ Good job.

2 _____ Average job.

3 _____ Poor job.

4 _____ I don't know.

15. How good or poor a job do you think your committeeman does in handling grievances? (Check one)

1 _____ Good job.

2 _____ Average job.

3 _____ Poor job.

4 _____ I don't know.

16. In future negotiations, which TWO of the following issues do you think it is most important for the union to push the hardest on? (Check only the two issues you think most members checked or wrote in.)

1 _____ Shorter work week.
2 _____ Improved grievance system.
3 _____ Improved transfer system.
4 _____ Improved seniority system.
5 _____ More vacation time, holidays.
6 _____ Improved insurance program.
7 _____ Improved piecework system.
8 _____ Higher wages, general increase
9 _____ Inequity increases in your classification.
10 _____ Others (What do you think they most often mentioned under "others"?)

_____

_____

_____

_____

_____

18. What do you think about the involvement of Local 19806 in politics? (Check one)

1 _____ I think our union should be more involved in politics.
2 _____ I think our union is involved too much in politics.
3 _____ I don't know.

_____

_____

_____

_____

19. Which one of these statements do you agree with (Check one)

1 _____ A person should be able to refuse to sell his house to anyone he doesn't want to.
2 _____ A person should be able to buy a house anywhere he wants to if he has the money.
3 _____ I don't know.

_____

_____

_____

_____

20. Do you think the government should help everyone rise above the poverty level? (Check one)

1 _____ Yes. 2 _____ No. 3 _____ I don't know.

21. What do you think should be done about the war in Vietnam? (Check one)

1 _____ Go all the way militarily, including use of atomic arms.
2 _____ Step up military pressure as much as necessary, except use of atomic arms.
3 _____ Follow LBJ's present policies.
4 _____ Stop the bombing, de-escalate, negotiate, gradually withdraw American troops, turn the fighting over to South Vietnamese.
5 _____ Pull out altogether as soon as possible.
6 _____ I don't know.

22. What do you think about the involvement of Local 19806 in civil rights? (Check one)

1 _____ I think the union should be doing more in civil rights.
2 _____ I think the union is already too involved in civil rights.
3 _____ I don't know.

31. If you had your way, would you want to make any changes in the way the union runs things or not? (Check one)

1 _____ Yes, I would make a lot of changes.
2 _____ Yes, I would make a few changes.
3 _____ No, I would not change anything.
4 _____ I don't know.

Write in the changes which you think most members would like to see:

_____

_____

_____

_____

PLEASE GIVE THE FOLLOWING INFORMATION ABOUT YOURSELF:

1. About how long have you been a member of Smith Steel Workers Union? (Check one)

1 _____ Less than 1 year.
2 _____ 1 to 4 years.
3 _____ 5 to 9 years.
4 _____ 10 to 14 years.
5 _____ 15 to 19 years.
6 _____ 20 to 24 years.
7 _____ 25 to 29 years.
8 _____ 30 to 34 years.

2. Have you ever been a member of other labor unions? (Check one)

1 _____ Yes.
2 _____ No.

3. If yes, for about how many years total have you been a member of other labor unions? (Check one)

1 _____ Less than 1 year.
2 _____ 1 to 4 years.
3 _____ 5 to 9 years.
4 _____ More than 10 years.
5 _____ I have never been a member of other unions.

4. About how old are you? (Check one

1 _____ 20 or under
2 _____ 21 to 25
3 _____ 26 to 30
4 _____ 31 to 35
5 _____ 36 to 40
6 _____ 41 to 45
7 _____ 46 to 50
8 _____ 51 to 55
9 _____ 56 to 60
10 _____ Over 60

FINAL INSTRUCTIONS:

1. Make sure you have made predictions for all the questions.
2. Make sure you have not written your name or identified yourself in any way.

THANK YOU VERY MUCH FOR YOUR COOPERATION.

THE UNIVERSITY OF WISCONSIN

SCHOOL FOR WORKERS

Madison, Wisconsin

UNION OPINION QUESTIONNAIRE

INSTRUCTIONS

Here is what you are supposed to do:

1. Read each question carefully to make sure you understand it before marking your answer.
2. For most questions you only have to put a check mark in front of the answer you want to choose. Like this ___✓___ .
3. If you want to supply additional information about what you think, turn to page 7, copy down the number of the question, and write in any additional comments you might want to make.
4. When you have answered the questions carefully, fold the questionnaire, put it in the envelope provided, and mail it to The University of Wisconsin in Madison. NO STAMPS ARE NEEDED. Just close the envelope and drop it in the mail.
5. DO NOT PUT YOUR NAME ANYWHERE ON THE QUESTIONNAIRE.
6. Please return this questionnaire by mailing it within the next TWO OR THREE DAYS.

NOW BEGIN WITH QUESTION 1

1. About how many union meetings have you attended in the last 12 months? (Check one)
   1 _____ None at all.
   2 _____ A few of them.
   3 _____ About half of them.
   4 _____ Most of them.
   5 _____ All of them.

2. Have you ever been a steward or committeeman or held any other office in the union? (Check one)
   1 _____ Yes.
   2 _____ No.

3. Please check the type of work you do at A. O. Smith. (Check one)
   1 _____ Office or clerical.
   2 _____ Piece work.
   3 _____ Shop day rate.

4. Do you think present union dues are too high, too low, or about right? (Check one)
   1 _____ Too high.
   2 _____ Too low.
   3 _____ About right.

5. Do you look on your job at A. O. Smith as being permanent or temporary? (Check one)
   1 _____ Permanent.
   2 _____ Temporary.
   3 _____ I don't know.

6. During the past year did you give a dollar to COPE, that is, did you buy a COPE ticket sometime during the past year?
   1 _____ Yes.
   2 _____ No.
   3 _____ I don't remember.

7. Do you think the union shows favoritism toward any department or group or not? (Check one)
   1 _____ Yes, I think the union favors _____.
   (Write in name of group or department you think gets favored treatment from union.)
   2 _____ No, I think the union treats all groups and departments about the same.
   3 _____ I don't know.

8. Do you think the funds of the union are properly cared for or not? (Check one)
   1 _____ Yes, I think the union's funds are properly cared for.
   2 _____ No, I don't think the union's funds are properly cared for.
   3 _____ I don't know.

9. Which one of the following is the *best* way to find out what is going on in the union? (Check only the way in which you get most of your information)
   1 _____ Reading the Chronicle.
   2 _____ Talking to a steward.
   3 _____ Talking to an officer.
   4 _____ Reading A. O. Smith Newsletter.
   5 _____ Attending union meetings.
   6 _____ Going to the union office.
   7 _____ Reading bulletin boards.
   8 _____ Some other way.

10. Do you think the union favors any particular age group or not? (Check one)
    1 _____ Yes, I think the union favors the *older* people.
    2 _____ Yes, I think the union favors the *younger* people.
    3 _____ No, I think the union treats everyone about the same.
    4 _____ I don't know.

11. How would you judge the working conditions at A. O. Smith? (Check one)
    1 _____ I think working conditions are better here than most places.
    2 _____ I think working conditions are worse here than most places.
    3 _____ I think working conditions are about the same here as most places.
    4 _____ I don't know.

12. All things considered, what kind of a job do you think the present union officers are doing? (Check one)
    1 _____ I think they are doing a good job for the workers.
    2 _____ I think they are doing an average job for the workers.
    3 _____ I think they are doing a poor job for the workers.

REMEMBER: IF THERE ARE ANY COMMENTS YOU WISH TO ADD, TURN TO PAGE 7, WRITE THE NUMBER OF THE QUESTION AND YOUR COMMENTS.

13. In general, what do you think of the new contract? (Check one)
    1 _____ I think it is better than contracts in most other plants in this area.
    2 _____ I think it is worse than contracts in most other plants in this area.
    3 _____ I think it is about the same as contracts in most other plants in this area.
    4 _____ I don't know.

14. How good or poor a job do you think your steward does in handling grievances? (Check one)
    1 _____ Good job.
    2 _____ Average job.
    3 _____ Poor job.
    4 _____ I don't know.

15. How good or poor a job do you think your committeeman does in handling grievances? (Check one)
    1 _____ Good job.
    2 _____ Average job.
    3 _____ Poor job.
    4 _____ I don't know.

16. In future negotiations, which TWO of the following issues do you think it is most important for the union to push the hardest on? (Check *two* only)
    1 _____ Shorter work week.
    2 _____ Improved grievance system.
    3 _____ Improved transfer system.
    4 _____ Improved seniority system.
    5 _____ More vacation time, holidays.
    6 _____ Improved insurance program.
    7 _____ Improved piecework system.
    8 _____ Higher wages, general increase.
    9 _____ Inequity increases in your classification.
    10 _____ Others. What? _____

    _____.

17. Who would you like to see elected President of the United States next month? (Check one)
    1 _____ Humphrey.
    2 _____ Nixon.
    3 _____ Wallace.
    4 _____ Somebody else. _____
    (Write in name of person if you want somebody else.)

18. What do you think about the involvement of Local 19806 in politics? (Check one)
    1 _____ I think our union should be more involved in politics.
    2 _____ I think our union is involved too much in politics.
    3 _____ I don't know.

19. Which one of these statements do you agree with? (Check one)
    1 _____ A person should be able to refuse to sell his house to anyone he doesn't want to.
    2 _____ A person should be able to buy a house anywhere he wants to if he has the money.
    3 _____ I don't know.

20. Do you think the government should help everyone rise above the poverty level? (Check one)

    1 _____ Yes. 2 _____ No. 3 _____ I don't know.

21. What do you think should be done about the war in Vietnam? (Check one)
    1 _____ Go all the way militarily, including use of atomic arms.
    2 _____ Step up military pressure as much as necessary, except use of atomic arms.
    3 _____ Follow LBJ's present policies.
    4 _____ Stop the bombing, de-escalate, negotiate, gradually withdraw American troops, turn the fighting over to South Vietnamese.
    5 _____ Pull out altogether as soon as possible.
    6 _____ I don't know.

REMEMBER: IF THERE ARE ANY COMMENTS YOU WISH TO ADD, TURN TO PAGE 7, WRITE THE NUMBER OF THE QUESTION AND YOUR COMMENTS.

22. What do you think about the involvement of Local 19806 in civil rights? (Check one)
    1 _____ I think the union should be doing more in civil rights.
    2 _____ I think the union is already too involved in civil rights.
    3 _____ I don't know.

23. About how long have you been a member of Smith Steel Workers Union? (Check one)
    1 _____ Less than 1 year.
    2 _____ 1 to 4 years.
    3 _____ 5 to 9 years.
    4 _____ 10 to 14 years.
    5 _____ 15 to 19 years.
    6 _____ 20 to 24 years.
    7 _____ 25 to 29 years.
    8 _____ 30 to 34 years.

24. Have you ever been a member of other labor unions? (Check one)
    1 _____ Yes.
    2 _____ No.

25. If yes, for about how many years total have you been a member of other labor unions? (Check one)
    1 _____ Less than 1 year.
    2 _____ 1 to 4 years.
    3 _____ 5 to 9 years.
    4 _____ More than 10 years.
    5 _____ I have never been a member of other unions.

26. Are you single or married? (Check one)
    1 _____ Single.
    2 _____ Married.

27. What is your sex? (Check one)
    1 _____ Man.
    2 _____ Woman.

28. About how old are you? (Check one)
    1 _____ Under 20.
    2 _____ 21 to 25.
    3 _____ 26 to 30.
    4 _____ 31 to 35.
    5 _____ 36 to 40.
    6 _____ 41 to 45.
    7 _____ 46 to 50.
    8 _____ 51 to 55.
    9 _____ 56 to 60.
    10 _____ Over 60.

29. About how many years of school have you completed? (Check one)
    1 _____ Some grade school (grades 1 to 8).
    2 _____ Completed grade school (8th grade).
    3 _____ Some high school (grades 9 to 12).
    4 _____ Completed high school.
    5 _____ Some college.
    6 _____ College graduate.

30. Have you had any special schooling or training besides that shown above? (Check one)
    1 _____ None.
    2 _____ Business school.
    3 _____ Vocational school.
    4 _____ Apprentice training.
    5 _____ School for Workers.
    6 _____ Other. What? _____

31. If you had your way, would you want to make any changes in the way the union runs things or not? (Check one)
    1 _____ Yes, I would make a lot of changes.
    2 _____ Yes, I would make a few changes.
    3 _____ No, I would not change anything.
    4 _____ I don't know.

REMEMBER: IF THERE ARE ANY COMMENTS YOU WISH TO ADD, TURN TO PAGE 7, WRITE THE NUMBER OF THE QUESTION AND YOUR COMMENTS.

32. If you answered yes, you would make some changes, what kind of changes would you want to make? List them below.

ON THE NEXT PAGE WRITE ANYTHING ELSE YOU WANT TO.

33. On this last page, please feel free to write anything about anything you want. If you want to comment on any of the previous questions, just write the number of the question or questions and write in whatever you would like to say. If you do not want to write anything, just leave this page blank.

FINAL INSTRUCTIONS

1. Make sure you have answered **all** of the questions.
2. Make sure you have **not** written your name anywhere or identified yourself in any way.
3. When you have made sure that you have answered all of the questions, then fold the questionnaire, put it in the envelope that came with the questionnaire and mail it to The University of Wisconsin in Madison. The address is already on the envelope.
4. Do **not** put your return address on the envelope. NO STAMPS ARE NEEDED.

THANK YOU VERY MUCH FOR YOUR COOPERATION

School for Workers
University of Wisconsin
Madison, Wisconsin

LABOR UNIONS AND THE GENERATION GAP: A PRELIMINARY REPORT

Is there a "generation gap" in labor unions or are organizations of working people, with their traditions of brotherhood and solidarity, immune to the inter-generational stresses felt by our society as a whole?

On the face of it one might guess that however young and old might diverge in the community at large the gap would be bridged in the work place where both young and old are presumably jointly concerned with improvements in their wages, hours and working conditions. Have there not always been younger and older workers and have their differences not always dissolved as they bargain with their employer?

A recent study conducted by the School for Workers of the University of Wisconsin finds, nevertheless, that the gap between old and young in the union, --as concerns their attitudes and opinions, --is apparently as pronounced in work society as in the rest of the community.

In October, 1968 the School for Workers' researcher Miles Galvin, under the direction of the School's Director and Associate Director Robert Ozanne and Irving Brotslaw, mailed 1,260 questionnaires to a random sample of 25 per cent of the membership of Smith Steel Workers' Directly Affiliated Local Union 19806, AFL-CIO. The results have been partially tabulated and provide insights into the current thinking of a cross section of today's working men and women.

Most earlier studies of the attitudes of union members had failed to distinguish between old and young, apparently assuming that whatever differences might exist were transitory. In recent months, however, many observers of the labor scene have warned that chronological homogeneity

is no longer the rule. A new type of young worker, --one who gives little indication of eventual mellowing, --is emerging and making himself heard.

The leadership of the Smith Steel Workers' Union, aware of the shift in outlook of their younger members, was anxious to learn more and cooperated with the University of Wisconsin in carrying out the opinion poll. Local 19806 Secretary Treasurer Robert Durkin was instrumental in obtaining the cooperation of the union's Executive Board, in counselling on the design of the questionnaire, and in making available the 5,000 member union's address list.

One of the earliest indications of the generation gap in unions was provided by a 1967 nation-wide survey of AFL-CIO membership. The union members polled tended to overwhelmingly support the union leadership on most legislative issues, but on certain items a difference in degree of support could be noted between old and young. Statistical evidence also began to emerge clearly indicating that the proportion of young to old in the labor force was shifting from an easily assimilated minority to a harder to handle majority. By 1967 a quarter of all union members were under 30 years of age and nearly half were under 40.

In certain industries the proportion is changing even more rapidly. Fifty per eent of Ford's male workers have less than four years of seniority.

The age change was taking place at both ends of the labor force. Older workers, who had begun to build seniority in the late thirties and early forties, were retiring in ever-increasing waves. Young workers were flooding in to replace them at the lower end of the ladder in what has been described as an "avalanche of youth."

In taking a close look at this phenomenon, the School for Workers found that the proportion of young and old workers at Smith Steel Workers' Union compared typically with the nation-wide sample. Fifty-five per cent are under 45 years old.

No precise dividing line between "young" and "old" can be established because of widely varying individual differences, but, on the average, a cutoff point of those older or younger than 45 seems to provide two sufficiently distinct groups for purposes of analysis and comparison.

Those over 45 have had direct experience of the depression, of the formative period of industrial unionism, and of the unifying process of World War Two. Most of those under 45 grew up in an era of relatively full employment, of seemingly endless cold war, of turbulent race relations and social problems, --and had stayed in school longer before going to work. Both groups came of age in different worlds, as it were, and now look at the world they jointly occupy in quite different fashion.

Both the leadership of Local 19806 and the School for Workers' researchers were gratified by the large percentage of union members, 650 in all--more than fifty per cent, who took the time to fill out and return the questionnaire. A 30 per cent response would have provided a statistically reliable sample from which it would have been possible to generalize about the membership as a whole with reasonable accuracy. The larger sample is, therefore, felt to be extremely accurate. The age distribution of the sample, for example, corresponds to the actual age distribution of the union's membership as a whole to within a percentage point.

A total of 33 questions were included. Most could be answered by simply checking off one of the answers given with the option of writing in supplementary comments if the respondent so desired. One question, for

example, asked "How good or poor a job do you think your steward does in handling grievances?" and the union members were asked to check either "Good job," "Average job," "Poor job," or "I don't know."

The questions are designed to elicit opinions about the internal administration of the union, about the collective bargaining relationship, and about social problems. The object was to ascertain what the rank-and-file members were thinking about relationships of the union with the workers themselves, with the employer, and with the larger community.

Data as to age, amount of schooling and other personal items were obtained which permit cross-tabulations which will hepefully reveal relationships between such variables as age and support of the union's collective bargaining goals, for example.

Complete anonymity was guaranteed the respondents by the School for Workers. Those members included in the random sample were asked not to identify themselves in any way. The questionnaires themselves, even though nameless, are not shown to the union's leadership. Only the combined results, as tabulated, are made public.

The guarantee of anonymity brought forth a torrent of spontaneous commentary. Nearly half of the respondents, 47 per cent, took the time to unburden themselves of miscellaneous suggestions, gripes, accusations, explanations. Virtually every conceivalbe category of union activity is included in the 720 individual comments, several respondents writing in more than one comment. The result is a difficult to analyze, but nevertheless potentially rich lode of sociological raw material waiting to be mined and assayed.

It is in this outpouring of comments that one of the clearly significant differences between young and old emerges. Only 39 per cent of those

over 45 volunteered comments while 54 per cent of those under 45 did so. Can this mean that young workers are not nearly so apathetic about their union as is generally charged? "The kids today got on a silver platter everything we had to fight to get and they couldn't care less" is the typical comment. Or, does it mean that older workers have given up hope to a greater degree? Or is the difference not the result of an age difference at all, but instead the manifestation of a greater facility with pen and pencil on the part of the better educated younger people?

Some of the results were easily predictable. Not surprisingly, the younger workers tend to want money increases now while the older members are much more interested in retirement benefits. The younger workers want more leisure, the oldsters aren't as interested.

But, other responses were not so foreseeable. When asked their opinion of the union's leadership, it turned out that 42 per cent of the older group think that the officers are doing a "good" job, while only 28 per cent of the younger group agree. Seventy-four per cent of the older members think tht committeemen are doing an "average" or "good" job at handling grievances but only 59 per cent of the younger people agree.

In fact, the younger group is consistently less supportive of the union leadership in virtually all of the union administration and collective bargaining issues, --grievance handling, union officers, the contract, working conditions, union meetings, union finances. The older group, on the whole, tends to be much more tolerant.

Conversely, the younger group is somewhat more supportive of the union as concerns at least some of the social and political programs the union officially espouses. Sixty-four per cent of the younger group, for example, favor open housing, but only 44 per cent of the older group do. Is this

a question of age, however, or of something else? The questionnaire provides no information as to race or color of the respondents, but it is known in a general way that a higher proportion of the older generation is white.

On other questions virtually ao age difference is discernable. Precisely 24 per cent of each age category is convinced that the union shows favoritism to a particular group within the union. Thirty per cent of each group, young and old, thinks the union should be more involved in politics with approximately equal percentages convinced either that the union is already overly involved in politics or has no opinion.

A question on the war on poverty provided a very depressing display of the extent to which the average citizen has been misled into believing that large numbers of able-bodied people are receiving welfare assistance. Thirty-six per cent of both age groups responded negatively to the government's attempts to help the poverty stricken. A large number of respondents, even of those supporting the poverty program's efforts, offered the provise that assistance be tendered only to those "willing to work." Apparently, a very large proportion of our citizenry is unaware that the vast majority of welfare recipients are the aged, the blind, the infirm, people unable to work.

The questionnaire was mailed out less than a month before the November presidential election and the union members were asked who they would "like to see elected President of the United States next month." The responses showed no significant age difference with approximately equal proportions of those under and over 45 making up the 51% who favored Humphrey, and the 18% who favored Wallace, the 17% who favored Nixon, and the 14% who were undecided.

Another indicator that perhaps young people are not as apathetic about their unions as is often charged, at least potentially, can be seen in the responses to the question "if you had your way, would you want to make any changes in the way the union runs things or not?" Sixty-eight per cent of the younger group said they would make some changes, but only 57 per cent of the older group.

Communication presents a problem, --indeed, perhaps it is the problem. Only nine per cent of the membership report that they attend all or most of the meetings, a figure that is probably representative of most union.. When queried as to what is the best way to find out what is going on in the union about a third of the yonng members indicated "attending union meetings;" another third answered that the best way is by reading the union's newsletter, (19806 Chronicle) and seventeen per cent thought reading the company's newsletter was the best way!

Of the 720 spontaneous written comments a total of 174 had to do with the grievance procedure, 145 commented on issues for future negotiations, 54 made suggestions concerning the officers, 43 about union meetings, 36 about poverty programs, 30 commented on the new contract, and smaller numbers wrote in petitions for greater or lesser militance and a variety of other issues.

The general tenor of the spontaneous comments is the perpetual demand for "more" and impatience about getting it, --especially among the younger group. Cracks in union solidarity along lines other than age can be perceived. When asked if they feel the union favors any particular group within the union the most typical answer is "yes, everyone but my group!"

For the observer who believes that vigorous, democratic labor organizations are essential elements in a democratic, progressive society, there

are both encouraging and discouraging signs. The younger element is better educated and apparently more willing than their elders to challenge social inequity in the larger community, but, although far from apathetic, appear to have less sense of solidarity on shop issues, less of a sense of sacrifice of individual advantage for the common good. A depressing aspect of the study results from a reading of the spontaneous comments in categorized, concentrated form, many of which are frankly petty and carping and which seem to indicate little appreciation on the part of the inactive members for the efforts expended in their behalf by the active members.

As always in studies of this sort more new questions emerge than are answers found to old questions. How typical is this particular union? Can we safely generalize beyond the sample? Will the attitudes of today's younger members change drastically over time and if so how? Is age really the critical variable or merely a proxy for something else altogether, -- wage differentials, occupation, amount of education, rural or urban origin, length of union membership? They probably all contribute to differences in attitude, but which are the most potent and what are the policy implications?

The Smith Steel Workers' Union has shown the way for other labor organizations interested in finding out what their members are thinking. The responses to the questionnaire made clear that among the thousands of anonymous rank-and-filers are scores of very thoughtful, concerned citizens of our industrial society. The problem remains one of constructively channeling their criticisms and frustrations into united, progressive action.

Job Pressures Induce Blue-Collar Workers To Opt to Retire Early

But Talks With Some Show End of Drudgery Presents A Problem: Keeping Busy

Soap Operas & More Sleep

5/22/72

By THOMAS ~~LINDLEY EHRICH~~
Staff Reporter of THE WALL STREET JOURNAL

SYRACUSE, ~~N.Y.—Until last January,~~ Albert Buono dragged himself out of bed at 5:45 each morning and faced the prospect of another exhausting day at the General Motors Corp. parts and accessories plant here. Noise, fumes and intense pressure from his supervisors to speed production were the main components of a typical workday, Mr. Buono says. But despite complaints, his work as a GM tool-and-die repairman continued day in, day out for 35 years.

Then, early this year, Mr. Buono retired. Now he gets up at 7:30 and spends a leisurely morning puttering around his apartment on the second floor of a small frame house on one of the many streets of small frame houses in this industrial city. After lunch, Mr. Buono sometimes goes fishing; or he may visit friends or run errands for his son, who owns a used-car lot. After supper, while his wife cleans offices at a local bank, Mr. Buono stays home and watches television.

"I get on that old box and see what's good to look at," he says. "I watch until 11 or 12, and that's the evening. Then I go to bed and get up and do it again."

A Dull Prospect?

To some Americans still on the job, a day in the life of Al Buono—or in the lives of countless other retired workers—seems so dull that the prospect of continued work is bright by comparison. But Mr. Buono jumped at the chance of retirement. Indeed, he even chose to retire early, at age 59, the age when many white-collar workers are just hitting the peaks of their careers, and six years earlier than the retirement age of most Americans.

And Mr. Buono isn't alone. Around the country, growing numbers of blue-collar workers are opting for early retirement. At GM's plant here, for example, about 125 workers, or 10% of the average blue-collar work force, have taken early retirement since the "30 and out" provision was put into the United Auto Workers union contract with GM eight years ago.

(Under the plan, as modified in the 1970 auto labor agreement, a worker with at least 30 years service can retire with a $500 monthly pension as early as age 58. The minimum age drops to 56 next October. Furthermore, any worker younger than 58 can retire early—although at a reduced pension—if he can muster 85 "points" by adding his age to his years of service.)

"The trend (toward early retirement) is definitely up," says Harry Davis, an economist

other retired workers—seems so dull that the prospect of continued work is bright by comparison. But Mr. Buono jumped at the chance of retirement. Indeed, he even chose to retire early, at age 59, the age when many white-collar workers are just hitting the peaks of their careers, and six years earlier than the retirement age of most Americans.

And Mr. Buono isn't alone. Around the country, growing numbers of blue-collar workers are opting for early retirement. At GM's plant here, for example, about 125 workers, or 10% of the average blue-collar work force, have taken early retirement since the "30 and out" provision was put into the United Auto Workers union contract with GM eight years ago.

(Under the plan, as modified in the 1970 auto labor agreement, a worker with at least 30 years service can retire with a $500 monthly pension as early as age 58. The minimum age drops to 56 next October. Furthermore, any worker younger than 58 can retire early—although at a reduced pension—if he can muster 85 "points" by adding his age to his years of service.)

"The trend (toward early retirement) is definitely up," says Harry Davis, an economist with the Labor Department's Bureau of Labor Statistics. "I talked to six companies in one week recently, and I was surprised. They estimated 40% of their people are going out before 65."

Special Package at IBM

Among various labor groups with early-retirement plans, the United Steelworkers obtained a "30 and out" provision in their 1965 agreement with steel companies. Recently, New York's dock workers won the right to retire after 25 years of service. And for four months last year, International Business Machines Corp. offered a special early-retirement package that was accepted by some 2,000 workers.

Certainly, not all workers yearn to retire early. "It seems to be more attractive to people in nonprofessional work where job monotony makes the option of retiring more attractive," says Robert Risley, dean of the New York State School of Industry and Labor Relations and vice provost of Cornell University. Adds the Labor Department's Mr. Davis: "The blue-collar worker, given the chance, will retire before the white-collar worker. His work is harder and duller, and he's having more trouble meeting production standards."

While those blue-collar workers who retire early may do so for a variety of reasons, some of them unrelated to the nature of their jobs, interviews with retirees here (most of them from GM) indicate the theories of Messrs. Risley and Davis are on target. Emerging from these interviews is the fact that the GM workers had a common early-retirement goal: to escape drudgery.

"Retirement means getting away from something you've learned to hate," says retiree Kenneth Finkler. Others say they found their work dull, exhausting or too pressure-packed. Some say they hated every minute in the plant. And all say they figured that retire-

And How's the Old Gang At the Plant? Who Knows?

By a WALL STREET JOURNAL *Staff Reporter*

SYRACUSE, N.Y.—With all their free time, recent retirees from General Motors Corp.'s plants here aren't about to spare a few minutes for a return visit to their former place of work.

Not one of a dozen retirees interviewed here has been inside the plant since he or she retired—even though several say they miss their plant friends. Indeed, most left the plant so quickly that they skipped a special retirement luncheon in the executive dining room.

Nor do all the workers treasure the plastic-bound retirement "diploma" that GM gave them on their departure. The document looks like a college diploma, has the worker's name hand-printed on it and is given "in acknowledgement of service and contribution to General Motors Corporation."

"A 'diploma,' they call it," scoffs retiree Angeline Oliva. "Now what are you supposed to do with something like this? How about a $25 bond? That would have been more like it."

Free at Last: Pressure on the Job Leads to More Early Retirements

Continued From First Page

ment, even a dull one, had to be an improvement.

But other conclusions also emerged from the interviews:

—Poor health—or fears of poor health—was a principal reason for leaving early. Many workers feared they would die before reaching 65.

—Racial tension was an inducement for some. "I had to get away from the niggers," says a white retiree, one of the Italian-Americans who, along with workers of German, Polish and Irish stock, once constituted almost the entire work force of the GM plant. (The work force is currently 12% black.)

—Retirement benefits, especially the $500-a-month pension and continued fringe benefits (including medical benefits and life insurance), seemed attractive. One worker figures that her annual income dropped little more than $1,000 when she retired.

—The workers don't expect much from retirement beyond peace and quiet and a chance to be their own bosses. They planned their retirement finances with care, building savings accounts, paying off mortgages, and, in some cases, even buying vacation homes. And now, most seem content to take day-to-day living as it comes.

—And they're finding retirement tolerable, although perhaps duller than they'd like. As with their former jobs, their retirement life is something to be accepted. In any case, they're trying hard to keep busy, and they don't for a minute regret having left the plant.

The drudgery, the workers say, had become unbearable. Work at the GM plant was never an easy job, they complain, and it got steadily harder in recent years as the company sought to offset wage increases by pruning the work force and speeding up production.

"I couldn't take it any more," says Angeline Oliva, a thick-set woman with short-cropped graying hair. Miss Oliva, called Angie by her co-workers, ran a hot-stamping machine that puts emblems on hubcaps.

"The speed was too much," she says. "They kept retiming the job. They wanted more all the time. Once when they couldn't raise the quota, the foreman still went behind the machine and turned up the speed. And the noise, the noise was terrific."

So were the fumes. "I couldn't take the smell again," Miss Oliva says. "It makes you sick to your stomach." And so rather than spend another summer at the plant, she took a cut in her pension (to $399.97 a month) and retired, after 29 years, last January 1; if she had waited until next October, she'd have had the full $500 monthly stipend.

Nowadays, Miss Oliva quietly putters around her small white house on the north side of Syracuse. She spends her days talking softly in Italian to her 80-year-old mother and turns on the radio only for the evening news. "I love music, don't get me wrong," she says. "I just need peace and quiet for a while."

Angie Oliva, like most of the other retirees, city. Nor does he know anyone there. But sitting at the table in his spotless, sparsely furnished kitchen, he talks hopefully of his trip.

Pulling out a dog-eared pamphlet he obtained from the Denver Chamber of Commerce, Mr. Finkler quotes Denver's selling points—particularly a low tax rate and good weather. "It's cold there," he says, "but there's no shoveling. I've had enough of this snow—157 inches last year."

"There used to be a trend to go to Florida," Mr. Finkler goes on, "but they're discouraging that down there. I thought of California, but that's as nutty as New York State. So I chose Denver. What the hell?"

Kenneth Finkler is an outgoing man, and he expects to make friends easily in Denver, especially among his fellow German-Americans. He admits he'll miss his neighbors in the hilly industrial town of Solvay, but he expects to keep in touch with neighborhood gossip by mail. "We'll really live it up out there," Mr. Finkler says. "We'll join the Turners (a club for German-Americans), and we'll make friends."

Don Fenner's story is different. He doesn't plan to budge from South Onondaga, a tiny town south of Syracuse, where he says he's thriving. "I retired to enjoy myself," says Mr. Fenner, a former paint-booth worker. "I'd like to enjoy a couple or three years before I die."

"It used to be I'd come home after supper, sit in the chair and fall asleep," he says. "When someone laid into me at the plant, I'd come home and be mean to my family. Now there's no pressure, and I enjoy my family. I used to be so tired."

With his new free time, Mr. Fenner's main chore is renovating an old house he bought five years ago. He claims the project is currently in high gear, although he adds that he can't concentrate long enough on any one room to see it through to completion. "My wife wishes I'd finish just one," he chuckles.

Keeping Busy

Houses play varying roles in the lives of the GM retirees. Some, like Fannie Torio and Angie Oliva, stay in their homes most of the time; their main interest is in maintaining their property. Others just as determinedly avoid the house. "I'd become an alcoholic if I stayed home all day," says Angelo Rossi, a former blow mold operator. "Or I'd watch the soap operas." Consequently, Mr. Rossi works an hour or two each day for his son, who owns a grocery, and is busy at the union hall organizing activities for retirees.

But all the retired interviewees, even the homebound ones, are fighting to keep busy. A case in point is Mike Komar, a retired Syracuse steelworker. Every morning before breakfast, Mr. Komar takes a 90-minute walk around the neighborhood. After breakfast, he reads newspapers until lunch. Every afternoon, he and his wife visit their daughter and then either read some more or stroll around one of five nearby shopping centers for an hour or two. After an early dinner, the Komars often take another stroll and then sit down in front of

spend another summer at the plant, she took a cut in her pension (to $399.97 a month) and retired, after 29 years, last January 1; if she had waited until next October, she'd have had the full $500 monthly stipend.

Nowadays, Miss Oliva quietly putters around her small white house on the north side of Syracuse. She spends her days talking softly in Italian to her 80-year-old mother and turns on the radio only for the evening news. "I love music, don't get me wrong," she says. "I just need peace and quiet for a while."

Angie Oliva, like most of the other retirees, doesn't have many plans. The kitchen needs painting, she says, and she's worried about the foundation on one side of her house; a neighbor piled snow there last winter and caused some rotting. Little major work, she says, has been done on the house since her father died four years ago.

Otherwise, Miss Oliva foresees little change in her life. She hopes to organize a group of retired GM women to attend the lively monthly meetings at the local union hall and then "make a day of it" downtown. And she also talks vaguely about travel. But she concedes that she's bound to her home for now by her semi-invalid mother and, besides, wouldn't know where to go. In her lifetime, Miss Oliva has only been outside Syracuse on three occasions.

Already Bored

Angie Oliva isn't alone in the basic formlessness of her future. Fannie Torio, another GM retiree in Syracuse, also says she doesn't have many concrete plans for the coming days. And she admits she's already bored. "I just wanted to get out of the rat race," says the 58-year-old former production-line inspector, who retired last October after 34 years at GM. "The high pressure and all the noise. I'd had it. And the getting up in the morning. I had to get up at 5:15. It was terrible."

"On our low salary, we were working for $7,000 to $8,000 a year," Miss Torio says. "Now I'm getting $6,000 for staying home. I can stand that little loss."

Nevertheless, the days drag slowly. Miss Torio enjoyed the camaraderie at the plant. In snapshots taken at two plant retirement parties, the short, dark-haired woman is shown flashing a broad smile that's missing now. She dresses somberly; and in her home she speaks softly despite the blaring television from the room where her mother watches soap operas.

Miss Torio spends most of her days in her small frame house, caring for her mother and drawing companionship from a little black poodle named Missy. She sleeps until about 8:30 and then spends the morning doing household chores: "There's sleeping and TV in the afternoon," she says, "and I watch TV at night."

"I wish there was something more to do with my time," she says. "I might do some volunteer work and join some clubs. I don't know yet. These are the thoughts going through my mind. I'm doing a lot of reading in my spare time. Church magazines and things like that. I'm just more or less staying home all the time."

"No Cares, No Worries"

"I didn't expect much," Fannie Torio says softly. "And I don't let it get the best of me. I just accept it. These could be the best years of your life. No cares, no worries. Everything's taken care of for you."

Kenneth Finkler expects more from his new freedom, including a change of scenery. The former machine operator retired Feb. 1, sold his house 10 days later, patched up his snowthrower to last out the winter, and is currently getting ready to move to Denver.

Mr. Finkler hasn't seen Denver since World War II, when he passed through the Colorado

All Two Qualified Voters Favor Texas Bond Issue

Special to THE WALL STREET JOURNAL

LEAGUE CITY, Texas—The entire eligible voting population of the Bay Ridge Utility District near here turned out last week to approve a $5,650,000 bond issue. The vote was two to nothing.

The district contains only six people, and four of them are ineligible. The funds from its bonds will be used for water and sewage systems and related work for a housing project.

League City vigorously opposed the bond issue. It would inherit the debt if it annexed the area.

ing activities for retirees.

But all the retired interviewees, even the homebound ones, are fighting to keep busy. A case in point is Mike Komar, a retired Syracuse steelworker. Every morning before breakfast, Mr. Komar takes a 90-minute walk around the neighborhood. After breakfast, he reads newspapers until lunch. Every afternoon, he and his wife visit their daughter and then either read some more or stroll around one of five nearby shopping centers for an hour or two. After an early dinner, the Komars often take another stroll and then sit down in front of the television for three or four hours.

"It's good to get out for at least an hour," says Anne Komar. "It breaks the monotony."

As crushingly dull as the Komars' routine might seem to some, the Komars nevertheless revel in their retired life. For one thing, they enjoy seeing one another for long periods of time—a novel experience since Mr. Komar used to work the day shift, and Mrs. Komar worked from three o'clock to midnight. Now they do chores around the house, eat regular meals, go out together and, Mrs. Komar says, "We get along a lot better."

Together Again

Togetherness is a new experience for most of the married retired workers. When Kermit Wagner, a former GM salvage inspector, retired six years ago at the age of 56, his wife retired at the same time after 38 years of office work. "We decided we'd might as well get some enjoyment out of life," Mr. Wagner says. "You never know when you're going to die."

Underscoring his point, Kermit Wagner tells of a 50-year-old fellow worker who stopped by Mr. Wagner's desk six years ago and wistfully said he wished he could retire, too. "I waved to him and said I'd see him Monday, my last day," Mr. Wagner says. "He dropped dead in a bowling alley that very night."

In the six years since their retirement, the Wagners have settled into a routine revolving around their summer home on Lake Ontario, where they fish, and their white frame house on the west side of Syracuse, where they spend the winters.

The Wagner home here in Syracuse is filled with furniture and treasures they've collected over the years. But the dominant piece is a massive color television console in the living room. Two sofas and all the chairs face it.

"I don't watch too much," Mr. Wagner says. "I watch maybe three or four hours a day, sometimes seven or eight. It's more for my wife. If she doesn't have anything to do, she'll have the TV on from 10 in the morning."

But reruns are starting to catch up with the Wagners, and they figure they might be getting to bed earlier because of that fact. "I like the shows," says Mary Wagner, "but they keep bringing back the old ones I've seen."

Transocean Drilling Co. Awards $16.5 Million Job To West German Firm

By a WALL STREET JOURNAL *Staff Reporter*

OKLAHOMA CITY—A contract for a new outrigger barge, semisubmersible drilling unit for Transocean Drilling Co., was awarded to Offshore Construction Consortium, Hamburg, West Germany, Transocean said. The estimated cost is $16.5 million.

Transocean Drilling Co. is 51%-owned by Transworld Drilling Co., a subsidiary of Kerr-McGee Corp. The remaining interest is held by four West German oil companies.

The West German consortium is composed of two companies, Howaldtswerke-Deutsche Werft and Ulrich Harms. Howaldtswerke constructed Transocean's first offshore drilling unit in 1964.

Designated Transocean No. 3, the new unit will be constructed at Hamburg, West Germany, and is scheduled for delivery in July 1973. The unit, which is designed specifically for North Sea operations, will possess both the drilling-while-floating characteristics of a semisubmersible rig and the towing qualities of a barge.

Designed primarily to drill wells to depths of 20,000 feet in water depths of 600 feet, the unit's operational capability can be extended into greater water depths.

The main-hull portion of the unit is 400 feet long, 58 feet wide and 23 feet deep.

MAY 20, 1957

Dist. 3 Chooses Committeemen For Convention

Delegates to serve on key committees at OCAW's convention in August were named recently by the District 3 Council at a meeting in Fort Worth, Texas.

Publicity Chairman Nora Romine reported that R. H. Burke, Local 3-580, was elected to serve on the constitution committee. Neil Youngblood, Local 3-489, was chosen alternate. J. M. Cole, Local 3-463, was named to the resolutions committee; R. L. Kolb, Local 3-202, alternate. Harold Taylor, Local 3-612, was elected to the credentials and auditing committee; L. G. Pierce, Local 3-235, alternate. And J. W. Henderson, Local 3-235, was named to the grievance and appeals committee; A. E. Schoonover, Local 3-487, alternate.

The council delegates also elected officers and held an education program at the two-day session. W. H. Webb, Local 3-588, was elected president; V. E. Kisinger, Local 3-463, vice president; L. W. Graham, Local 3-487, secretary; R. B. Stevens, Local 3-544, guard; and Charles L. Brown, Local 3-487, Nora Romine, Local 3-463, and Neil Youngblood, Local 3-489, trustees. Mrs. Romine was also named publicity chairman and Youngblood was named to the publicity committee.

The education session featured a panel discussion on "Do Local Unions Need to Develop Stronger Bonds with the International?" Leading the program was OCAW Asst. Research & Education Director Al Wickman. Participating on the panel were Dist. 3 Director E. Carl Mattern; Local 3-487 Sec. Tom H. Durham, also alternate Intl. Executive member; Local 3-202 Vice Pres. R. L. Kolb; Local 3-580 Sec. Roy C. Wall, also Intl. Executive Board member; Local 3-463 Sec. Nora Romine; and Local 3-235 Sec. C. O. Pryor.

NEWLY ELECTED DISTRICT 3 COUNCIL officers are, from left: Pres. W. H. Webb, Vice Pres. V. E. Kisinger, Sec. L. W. Graham, Trustees Charles L. Brown, Nora Romine and Neil Youngblood. Not pictured is Guard R. B. Stevens.

evening.

Labor World

Hosiery Workers Elect Ace Benet, Grace Stephenson

6/12/57

Adolph (Ace) Benet was elected first vice-president of the American Federation of Hosiery Workers at the convention held recently in Philadelphia, Pa. Brother Benet was formerly district manager of the Deep South Council of Hosiery Workers.

Grace Stephenson of AFHW Branch 102 was elected a national trustee. Grace has held practically every office in Branch 102 and is active in labor circles throughout the area. She is chairman of the education committee of Central Labor Union, a member of the screening committee for the Hamilton County Board of Education and zone chairman in labor's political education precinct work.

Other Tennessee unionists who were elected to office in the American Federation of Hosiery Workers are Carl Wallace, Clinton, Tenn., Branch 125; Richard Badgett, Humboldt, Tenn., Branch 204; Murphy Newton, Knoxville, Tenn., Br. 94.

Andrew Janaskie of Philadelphia was elected general president when General President Alexander McKeown retired. Major Banachowicz of Milwaukee was named general secretary-treasurer.

Advance 6/15/57

Miami Local 694 Welcomes Gladys Dickason on Visit

MIAMI, Fla.—The members of Local 694 gave Amalgamated vice-president Gladys Dickason, director of southern organizing, and Ed Blair, assistant director, a record reception when they visited this area recently.

An overflow crowd jammed the meeting hall, spilling out into the street and into the backyard. Murray Gerstein, National Office representative in Miami and southern Florida, introduced the visitors.

Sister Dickason spoke to the members about the hard up-hill fight needed to get the South organized. She discussed the difficulties and hardships involved in the fight against anti-union elements in the South.

She reviewed the history of the ACWA and pointed out how important it is to continue organizing and securing the hard-wor gains and decent working conditions.

Sister Dickason reviewed the organizing plans for the Miami area. The members responded enthusiastically to her address, and when she asked for volunteers to help in organizing, everyone present raised a hand.

Blair also discussed the problems of organizing the South.

At the end of the meeting, a number of workers in various shops told Sister Dickason how deeply satisfied they were with conditions in their shops, now under Amalgamated agreement.

Sister Dickason and Blair thanked the shop chairladies, executive board and members of the local for helping to make the meeting a success.

The local's officers are: Josephine Muncy, president; Gizella Brack, vice-president; Addie Dyess, recording secretary; and Rose Caccamo, sergeant-at-arms; Blanca Gonzalez, Ann Mille, trustees; Freda Owen, Roberto Alfonso, and Betty Barth, executive board members.

AT A MEETING IN MIAMI: Some of the officers and executive board members of Local 694 are shown, from left to right: Josephine Muncy, president; Gizella Brack, vice-president; Addie Dyess, recording secretary; Rose Caccamo, sergeant-at-arms; Ann Mille, and Blanca Gonzalez, trustees; Freda Owen, executive board; and Murray Gerstein, National Office representative in charge of the local.

James M. Massey Elected by CWA

James M. Massey, Georgia director of the Communications Workers of America, Tuesday was elected a vice president at the union's annual convention in Kansas City, Mo.

Joseph A. Beirne was reelected president by a vote of 173,070 to 83,937 over A. T. Jones, who also was defeated for reelection as a vice president by Massey. Both are from Washington.

Massey, 47, lives at 2122 McLendon Ave., NE. He has been state CWA director for a year and a half. Previously, he was CWA representative in Atlanta. He formerly was assistant director of the CWA's Western Electric division in New York.

Beirne has been president of the 250,000-member union functioning in 46 states since 1943.

Atlanta Constitution
6/14/57

SPITZER AWARDED SCROLL: Gus Zeidman (right), vice-president of Local 33 and president of the wholesale group, presents scroll to Morris Spitzer, manager of the Detroit Joint Board, for his outstanding work in developing the local now celebrating its twentieth year.

Despite Intimidation of Workers

ACWA Wins Victory In Anti-Union Marianna

MARIANNA, Ark.—The Amalgamated Clothing Workers of America has achieved a significant victory in a National Labor Relations Board election among the workers employed by the Marianna Mfg. Co.

The victory by the ACWA, by a vote of 78 to 50, means more than the figures indicate. Its real significance can be appreciated when it is considered that Marianna is located in a traditionally vicious anti-union section of eastern Arkansas, where unions are bitterly opposed by management, the local Chamber of Commerce, and usually, by city authorities. It is also a "right-to-work" state.

Marianna is only 30 miles from Brinkley, where recently an attempt was made to run two ACWA organizers out of town by an unidentified group of men who invaded the privacy of the organizers' apartment and ordered them to "get out of town, or else." The experience did not stop the ACWA organizers from continuing their union activities in this anti-union area and they were compensated by the Marianna NLRB election victory.

Organizing Despite Odds

The area is under the direction of Richard Brazier, ACWA vice-president. The organizing campaign here is being carried on unremittingly despite tremendous obstacles. Every achievement is a source of encouragement to the people engaged in the drive and increases their determination to liberate the workers from industrial autocracy.

In the case of the Marianna Mfg. Co., which is engaged in the manufacture of dress pants and is a subsidiary of Chas. Meyers Co., of St. Louis, the firm laid off nine workers as soon as the employees showed a desire to organize. The layoff was an obvious effort to intimidate and scare away the workers from joining the union.

This move on the part of the firm backfired. It did not scare the workers, but, instead, tended to solidify them and make them more determined than ever to get the protection and security of an Amalgamated contract.

Then, boasting that there "never have been any unions in Lee (Marianna) County and there never will be," 25 members of the local Chamber of Commerce came into the shop and made speeches telling the workers that they should be happy to have the opportunity to work for $1 per hour, and that the plant would close if the union came in.

Using the same arguments, the Marianna newspaper came out against the union. Charges of interference, restraint, and coercion, were filed with the NLRB against the company, the Chamber of Commerce, and the newspaper, but were later waived temporarily so that the election would not be delayed.

When management and the Chamber of Commerce realized that the union was still making progress and that the old close-down threat and discharges would not work, they called eight of the nine people back to work and, in effect, reversed their close-down story by saying that no new industry would locate in town if a local union were established. The employees were not fooled by this latest maneuver, and the business men began a name-calling campaign against the union in a desperate move to discredit the Amalgamated. They also tried to divide the workers by calling the employees who lived outside the county outside agitators and announcing a new policy of hiring only people who lived within Lee County.

But the employees would not be sidetracked or intimidated in their determination to have their own organization to represent them at the bargaining table and to get for themselves and their families a better job and a better future.

On the scene were ACWA National representative Arthur Hebner, Launa Everett, and Bill Becker, the Arkansas director of organization.

Valuable advice and assistance was rendered by William C. Hall, assistant regional director, who was the featured speaker at the last two organizational meetings and was present during the final week of the campaign.

The election union observers were Alberta Walton and Willie Jane Dailey. All legal work was handled by Philip Lampert, regional council.

"Wreck" Law Blocked In Connecticut

WASHINGTON—The attempt to foist a "right-to-work" law upon the industrial state of Connecticut has been rejected overwhelmingly by the Republican-controlled legislature.

Meanwhile, in Louisiana, the Senate has voted down by a decisive 25-to-8 margin an effort to restore the "wreck" law that was repealed last year. In Idaho, where a "right-to-work" drive was beaten earlier in the legislature, a new "Freedom to Work" committee has been set up to circulate petitions for an initiative in the 1958 elections.

SOUTHERN STUDENTS: At the left is the group of representatives from 11 locals attending the Southeastern Clothing Regional Board's second summer school. Above, board manager Ruth Vaughn speaks at the graduation exercises. Seated is Clarence Burckhart, of Local 611, Somerset, Ky.

The Education Department Reports:

Southern Locals Hold 2nd Annual Parley

CLAIRMONT SPRINGS, Ala.—Nearly 60 representatives from nine Palm Beach locals and two other locals attended the second summer school under the auspices of the Southeastern Clothing Regional Board.

Members of the Palm Beach locals came from Cincinnati, Ohio; Somerset, NewPort, Danville, and Erlanger, Ky.; Blackville, S. C.; and Roanoke and Talladega, Ala. Also represented were locals in Leeds, Ala., and Newberry, S. C.

Held amidst the lovely hill country of Clay County, Ala., in the Clairmont Springs Hotel, the delegates had plenty of time for recreation, swimming and an opportunity for exchange of information and experience, in addition to the formal education program.

The school was directed by southern education director Eric Polisar, and Ruth Vaughan, Southeastern Regional Board manager, assisted by Emil Starr, national education director, and Ray Brown, assistant southern education director.

Two main morning classes, held in the spacious open air pavilion, concentrated on national and international problems. Such aspects of the American economy that affect working men and women, legislation, civil liberties and ethical practices in the trade union movement were throughly aired.

As in the previous Palm Beach school, the students were divided into small discussion groups led by the education staff and the business agents.

Different pieces of reading material from the AFL-CIO on labor, economic and social issues were read by by the groups and then reports were made by selected representatives at a general session later in the afternoon.

Such topics as the "right-to-work" laws, myth of a labor monopoly, workmen's compensation, a fair federal tax policy, what's ahead for the economy in 1957 were included.

The evening sessions usually consisted of a film followed by discussion of the issue presented. Some of the films shown were "Labor's Witness," involving Walter Reuther's appearance before the Gore Sub-Committee on Elections, which takes up the problem of campaign expenditures and lobbying; "The Search", a film on automation, "People of the Cumberland" and "Valley of the Tennessee".

Special events of the week included a trip to nearby Talladega to visit the Palm Beach pants shop and a dance on Thursday evening. Members and their families from the surrounding area attended the latter function.

Highlight of the school, following the end of classes, was the regional board meeting on June 9 attended by ACWA, executive vice-president Hyman Blumberg and Charles English, assistant southern director. This meeting will be reported in the next issue of "The Advance."

Friday evening, the delegates combined seriousness with hilarity by putting on skits on various aspects of the school, the union label and labor laws, as well a: composing two school songs. This was followed by a cook-out.

Graduation exercises were held on Saturday evening following the board meeting. Clarence "Shorty" Burckhardt, of Local 611, Somerset, was elected as the student speaker by the delegates. He summed up the week's experience in the following manner:

"We are grateful for this opportunity to come from the many towns and cities of this vast country as part of the Amalgamated family to gather in fellowship and to discuss ways and means of improving our country and our union. We must act as spearheads of the organization in the locals and in the communities where we come from."

Polisar, Brown and Starr made brief comments on the school's accomplishments and the tasks that lie ahead. Ruth Vaughan thanked the entire staff for their wholehearted contribution in making this second Palm Beach school an unqualified success.

ACWA vice-president and southern organizing director Gladys Dickason sent her regrets at not being able to attend.

The following delegates received leadership training certificates:

Local 608, Newport, Jean Wainscott, Evy Buckler, David Huber, Eunice Steger, and William Clapp.

Local 609, Erlanger, Jane Boggs and Iona Wainscott.

Local 610, Danville, Hallie Newby, Esther Jones, Georgia Stipes, Stella Damaree, Lillian Hainsworth, Edna Rogers, Nora Evans, and Nellie Carrier.

Local 611, Somerset, Clarence Burkhardt, Magdalene Muse, Jean Rogers, Marie Ragle, William Stringer, Melvin Hall, and Anna Barnett.

Local 612, Talladega, Grace Camp, James Bynum, Mary Hudgins, and Susie Vincent.

Local 613, Roanoke, Dorothy Albright, Hazel Gray, Ola Pauline Muldren, Erma Jean Stitt, Alma May, and Betty Butler.

Local 614, Blackville, Lydia Johnston, Lore D. Lain, Keturah Cook, and Mae Sease.

Local 90, Knoxville, Stanley Jones, Betty Rockwell, Peal Hensley, Marie Roberts, Nadine Riley, Virginia Wright, Estelle Wolfenbarger, Gladys Yarnell, Joy Romines, Nova Atkins, Arvil Cupp, Estelle Hansley, and Bill Warwick.

Local 640, Leeds, Avarilla Stone, Freeman F. Macon, Jeane McLaughlin, and Amos Ragsdale.

Local 675, Newberry, Martha Watts, Lillie Caldwell Ophelia Dominick, and Boyd Boozer.

The following business agents participated in the school: Rachell Hill, Locals 608, 609, 610, and 611; Geneva Sneed, Local 90; Iva Brooks, Locals 612, 613, and 640; Lucretia Neal, Locals 614 and 675.

Reading groups were a part of the curriculum at the school, conducted at Clairmont Springs, Ala. Instructor for this group was Ray Brown, assistant southern education director, seated at the right. Material affecting labor and the public was included in the course.

Ark. Local 598 Conducts Union School

BLYTHEVILLE, Ark.—The regional and national group setup of the Amalgamated Clothing Workers of America and the correct grievance procedure for members and officers of the local to follow was the subject of discussion at Local 598's union training school here on May 21 and 22. William Elkuss, western educational director, was in charge of the school. Attending the school were officers and members of the local.

The first night of the school there was a pot luck supper for everyone attending. Fifteen officers and members receiving certificates for participation in the union training school were: Adele Taylor, president; Thomas Johnston, financial secretary; Mittie Henry, recording secretary; Rachel Forshee, Lillian Jackson, Dorothy Mitchell, Jean Hatly, board members; Dorothy Smith, Berlin Privett and Opal Fisher, shop stewards; Carolyn Grammer, social committee; and Anita Boyd and Lucy Koonce, community relations committee.

On May 23, Local 598 held its regular monthly meeting. Adele Taylor, president, presided. Newsletters and correspondence were commented upon by Thelma Cantrell, business agent. The legislative chairlady, Mae White, reported on a communication from Jacqueline Kienzle, of the National Office staff.

Sister Taylor also reported that 350 letters were sent from the members of the local to U.S. Senators and Congressmen on the Morse-Kelley Bill and the Kelley Bill. Also read was Senator Gathings' answer to a telegram sent him on the Morse-Kelley Bill.

Comments were made by several that attended the union training school

The fact that several members attended the second night of the school despite a flash flood and some of them came through water up to parking lights on their cars was very pleasing. The attendance would have been much larger, if nature had been more kind.

Advance 7/15/57

2 New Shops Organizing In Charlotte

CHARLOTTE, N.C.—RWDSU Local 28 has two new shops under organization and gives other evidence of moving ahead at a steady pace in its drive to build the membership. Org. Bill Griffith, aided by rank and file leaders, has signed up nearly half of the workers in one shop and has made a good start at another shop with 150 employees. According to Griffith, organization in several other shops seems very likely.

Elsewhere in Local 28, improved sick benefits went into effect Oct. 1 for the employees of Ralston Purina Co. The new benefits, paid by the company, pay up to $2 a week more than the old plan.

At the Buckeye Cotton Oil plant, shop stewards are busy signing up workers returning to the job as the new season begins. Their goal is a 100% union shop before contract negotiations begin a few weeks from now. There have been some job transfers in the shop with pay cuts, which the shop leaders will take up as part of the contract talks.

Local 28 members mourned the death of Robert Watters, a member for the past 11 years. He was employed by the Ralston Purina Co.

5 Memphis Shops Settle With '19'

MEMPHIS, Tenn. — Contract settlements in five shops affecting close to 300 members of Local 19 have been completed in the past few weeks, Int'l Rep. George Boone reported.

At the largest plant, Buckeye Cotton Oil's Hollywood operation, 110 workers gained 3 cents an hour in wage increases. The contract will run for 2 years, with a wage reopener at the end of the first year. The increases are effective Sept. 28, 1957.

The Quaker Oats and McMillen Feed mill workers settled for 3 cents an hour in a cost-of-living adjustment effective Sept. 1.

At the Nutrena feed mill, Local 19 won 6-cent hourly wage boosts, one additional paid holiday, vacation improvements, 2 days' paid funeral leave in case of death in a worker's family, and 10-minute rest periods twice a day with pay. The contract, effective Sept. 27, runs for two years, with a reopener in one year. At Swift Cotton Oil, the workers also won wage boosts of 6 cents an hour in a one-year pact beginning Sept. 20.

A. Cohen Branch Organized in Ga.

ATLANTA, Ga.—Teamwork between two locals of the RWDSU has again resulted in the organization of a new shop. The employees of A. Cohen & Sons, a well-known giftware wholesale firm with headquarters in New York, have joined the RWDSU here after an organizing campaign led by Organizer Guy Dickinson.

District 65 has the firm's main warehouse and office in New York under contract.

Org. Dickinson signed up the 13 Atlanta workers in a few weeks. Once again the relationship that '65' has with the company helped out here, as the local management started to make things tough for the newly organized workers. The New York RWDSUers were told of the manager's activities, and they in turn spoke to top management in New York. The hard time the Atlanta workers were getting promptly stopped.

A petition for an NLRB election was filed about two weeks ago.

American Bakery Plant Goes RWDSU in Wilmington, N. C. Vote

WILMINGTON, N.C.—Sixty employees of the American Baking Company's plant here voted for the RWDSU in a National Labor Relations Board election on Oct. 17, Regional Dir. Irving Lebold reported. The vote was 33 for the RWDSU to 21 for no union.

LEADERS OF NEW RWDSU LOCAL meet at union headquarters in Birmingham, Ala. They represent more than 200 workers at White Dairy Co., who voted overwhelmingly last month to affiliate their independent Local 101 to the RWDSU. L. to r., seated, Sec. Bill Hardy, Pres. Lloyd McKay. Treas. Bob Bradley. Standing, l. to r., Committeeman Dewey Allen, Vice-Pres. John Kirkpatrick, Committeeman Grady Yother, and Bill Balcomb.

The baking plant employees are members of the Bakery & Confectionery Union. Those who joined the RWDSU are route salesmen here and in 14 other cities in this state where the company operates distribution depots, as well as the retail employees who operate the company's Thrift Store. This is a store attached to the plant where one-day-old bread is sold at reduced prices.

The company is best known in this area for its Merita bread, and its plant here sells at wholesale to retailers throughout the state.

The organizing campaign was a careful one, Lebold said, lasting over a period of about 10 weeks. Its success, he said, was due in large part to the earlier victory at the Sealtest Dairy in Florence, S.C., about 100 miles from here. Working under Lebold's direction were Org. R. W. Parker and AFL-CIO Org. Ray Schnell.

In addition to higher wages, the men are very much interested in the RWDSU Southeastern States Health and Welfare Plan, which covers, among other members in the South, the route salesmen at American Baking in Gadsden, Ala. Also important is establishment of job security and the correction of such conditions as the requirement to load and unload trucks and to do unreasonable amounts of paperwork.

Earnings Below RWDSUers

Although the company handed out commission increases shortly before the election, bringing their rates to 7½%, the earnings of the routemen here are far below those of the RWDSUers in Gadsden, Ala., Lebold said.

Lebold credited Organizer Parker with having carried out a tough job well in working on this campaign. The regional director pointed out that Parker, who is only on the full time union staff a short time, visited the company's depots in 14 cities and signed up the men on the spot.

Long Meadow Dairymen Await NLRB Election in Durham, N. C.

DURHAM, N.C.—As the day of a National Labor Relation Board election draws near, a majority of the employees of Long Meadow Farms are meeting regularly to plan measures to insure a victory in the balloting, and to guard against possible unfair labor practices by the company.

An organizing campaign has been under way among the 80 workers at this large independent dairy during the past few months. Directing the drive is Regional Dir. Irving Lebold, and working with him is Org. R. W. Parker.

There have been several indications of the company's disposition to fight unionization of its plant here. Not long after the union came on the scene, wage increases ranging from $2.50 to $4 a week were handed out, and it appears that further wage boosts are likely.

This move was immediately interpreted by leading rank and filers in the plant as proof that the union has made progress. They feel also that once organized the workers can confidently demand substantial wage increases in negotiations to improve the present poor conditions.

Since the union petition for election was filed, the company has tried to challenge the NLRB's jurisdiction, but was turned down. The latest company move has been to insist that the employees of five plants in other cities be permitted to vote in one election, in the hope that the weight of a majority of unorganized employees in the other plants would defeat the pro-union vote at the one plant here.

This case is now before the national office of the NLRB for decision. Lebold said it was unlikely that the labor board would uphold the company in this maneuver, and that an election at this time will be held only among employees of the company's plant in this city.

7c Raise and Health Plan Won at Bremner Biscuit

BIRMINGHAM, Ala.—The Bremner Biscuit workers, due for an automatic 7-cent wage boost on Oct. 1, came out of negotiations with management with the 7-cent raise intact, plus coverage under the RWDSU Southeastern States Health and Welfare Plan.

Actually, the shop went into the talks with the modest aim of using part of the 7 cents to get company-paid coverage under the union plan, it was reported by Ass't Area Dir. Frank Parker, who led the negotiations. The final agreement provides for extension of the contract for another year. The pact, covering more than 100 workers, was due to expire in October, 1958.

With Parker on the negotiating committee were Bobby Hardin, Ray Spruill, Claude Greene, Victor Parker (no relation), and Lomax Smith.

Rushton Toy Co. Talks Move Ahead

ATLANTA, Ga.—Agreement has been reached on two major issues in negotiations between the RWDSU and the Rushton Toy Co., but the main parts of a first contract for this 350-worker plant have yet to be ironed out, Ass't Area Dir. Frank Parker reported.

Management has agreed to the workers' demand for department seniority, and to the establishment of a grievance procedure. Still open is the question of arbitration as the final step in the grievance procedure, which the workers also seek.

Although further talks will be needed to round out this part of the contract, Parker said the issues already settled represent important progress, since job security is the main question as far as the workers are concerned.

Wage increases are also sought, with the aim of raising the piece rates which are the basis of earnings for the overwelming majority of the employees. Also on the list of demands is union security and a voice for the union in determining qualifications for promotion to better paying jobs in the plant.

With Parker and Organizer Guy Dickinson in the negotiations is a rank and file committee headed by Mrs. Williams.

The workers, who make stuffed animals, voted for the RWDSU just a year ago this month. Negotiations were delayed until late last summer by the company's use of various means provided by the Taft-Hartley Law and the Republican-dominated National Labor Relations Board to stall collective bargaining.

3 December 1965

Mr. Holgate Young
Education Director
Communications Workers of America
1925 K Street, N.W.
Washington, D. C. 20006

Dear Hoagy:

The Face of the South was produced by the Department of Social Education and Action of the Board of Christian Education of the Presbyterian Church of the USA. The technical end of the film -- shooting through editing -- was done by Frank Willard Productions, 1842 Briarwood Road, N.E., Atlanta Georgia.

The word is that the film cost about $3,000. However it was an early film for the company and can not be used as a gauge to costs then or now. Willard would now estimate costs for a similar film at about $1,000. per minute.

If you are interested in producing something and want to tap a valuable source of information on inexpensive productions I would suggest that you be in touch with Oscar Cohen, Anti-Defamation League, 515 Madison Avenue, New York.

Hope this helps.

Sincerely

Emory F. Via,
Director, Labor Program

Dear Jim:

The Board ruling Re: J. P. Stevens must have been heartening news despite getting no order to bargain. Among other things, it is worth plenty these days to have a unanimous ruling.

I hope I'll be your way before too long.

Sincerely,

Emory F. Via

Mr. Carroll Hutton
Education Director
United Automobile Workers
8000 East Jefferson Avenue
Detroit, Michigan 48214

Dear Carroll:

It was good seeing you in Detroit. Many thanks for the hospitality which you and the UAW extended to those of us attending the meetings. I am very sorry that our schedules were so packed that there was no time to really talk. I will be in touch with Herb Green here and will soon send you a copy of the kind of program which we are proposing to the state labor bodies. It will give you some idea of the sort of activity which might be available to UAW members through the state body or more directly through their own locals if they and you should desire. This will not be the only kind of activity in which the labor program here will engage but it is one of several that hold some promise.

Sincerely,

Emory F. Via
Director
Labor Program

"Face of the South"

Discussion Ideas

1. This film was made about 10 years ago and predates much of the current civil rights activity. Does it have interest for unionists today?

   problem that it deals with has become more prominent in the last 10 years.
   explains history of racial issue.
   makes point that liberty is based on a measure of economic equality.

2. Is George Mitchell's solution the same or different from today's civil rights movement?

Civil Rights emphasis:	George Mitchell's emphasis:
political equality as the road to economic gains.	economic equality as the road to political freedom.

3. This is not a high budget film.
   What do you think of its effectiveness as a film?

   has something to say.
   colorful personality of Mitchell.
   uses some simple variations — photographs, blackboard.
